Carnegie Mellon University in Qatar

Carnegie Mellon University in Qatar
Foreword

This catalog is intended to detail the University’s academic programs, policies and services for use by current undergraduate students, faculty, and administrators. We appreciate that applicants, prospective students, and many other people will read this material, as well, for some understanding of University programs and culture.

Information in the catalog is current as of August 2014; the next Catalog will be published in August 2015. In the interim, new courses will be announced in the course schedules which are usually available in November and April and on the Web (www.cmu.edu/hub).

The program requirements and academic policies set forth in this Catalog are subject to change. As a consequence, students are expected to consult with their individual college or department for the most up-to-date information about program requirements, and should consult the University’s policy website for the most current statements of University policy.

Any changes or updated information from any member of the campus community should be directed to John Papinchak, University Registrar.

Michael C. Murphy
Vice President for Campus Affairs

Jonathan D. Samuels, Assistant Registrar for Records & Undergraduate Catalog Editor

Published August 15, 2014

Statement of Assurance

Carnegie Mellon University does not discriminate in admission, employment, or administration of its programs or activities on the basis of race, color, national origin, sex, handicap or disability, age, sexual orientation, gender identity, religion, creed, ancestry, belief, veteran status, or genetic information. Furthermore, Carnegie Mellon University does not discriminate and is required not to discriminate in violation of federal, state, or local laws or executive orders.

Inquiries concerning the application of and compliance with this statement should be directed to the Vice President for Campus Affairs, Carnegie Mellon University, 5000 Forbes Avenue, Pittsburgh, PA 15213, telephone 412-268-2056.

Life Trustees

JOEL ADAMS, General Partner, Adams Capital Management.
JOHN R. BERTUCCI, Chairman, MKS Instruments, Inc.
FRANK BRUNCKHORST, Boar’s Head Provisions Co., Inc.
ERROLL B. DAVIS, JR., Interim Superintendent, Atlanta Public Schools.
LINDA A. DICKERSON, Principal, 501(c)(3)².
PHILIP L. DOWD, Sherick Enterprises, LLC.
FRANCISCO D’SOUZA, President and Chief Executive Officer.
DINA DUBLON, .
HOWARD ELLIN, Partner, Skadden Arps Slate Meagher and Flom.
EDWARD H. FRANK, Founder and Sole Proprietor, Compass Vineyards; Co-founder and CEO, Cloud Parity.
YOSHIKI FUJIMORI, President and Chief Executive Officer, LIXIL Group Corporation.
IRA J. GUMBERG, President and Chief Executive Officer, J.J. Gumberg Co.,
TORRENCE M. HUNT, JR., .
LARRY JENNINGS, Senior Managing Director, ValStone Partners, LLC.
TOD S. JOHNSON, Chief Executive Officer, The NPD Group, Inc.
RAYMOND J. LANE, Partner Emeritus, Kleiner Perkins Caufield & Byers.
BRUCE MCWILLIAMS, Chief Executive Officer and President, SuVolta.
AMBAR PAUL, Director, Caparo Group Limited.
E. KEARS POLLOCK, Retired Executive Vice President, PPG Industries, Inc.
JAMES E. ROHR, Executive Chairman, The PNC Financial Services Group, Inc.
JONATHAN ROTHBERG, Founder and Chairman, Butterfly Networks, LAM Therapeutics, Quantum-Si, Hyperfine Research, and 4 Combinator.
DAVID S. SHETTY, Retired Chairman of the Board, Janssen Pharmaceutica.
ROY J. SHANKER, Consultant.
THOMAS TULL, Founder, Chairman and Chief Executive Officer, Legendary Pictures.

Term Trustees – Terms Expire in 2016

KUSHAGRA BAJAJ, Vice Chairman, Bajaj Group.
RONALD BIANCHINI, President and Chief Executive Officer, Avere Systems.
ARISTIDES CANDRIS, President and CEO, Westinghouse Electric Company, Retired.
ERIC COOPER,.
DAVID COULTER, Vice Chairman and Managing Director, Warburg Pincus LLC.
RUSSELL CROCKETT, Senior Advisor, C14 Strategy LLC.
DIRK GATES, Chief Executive Officer, Krrus, Inc.
ERIC GILER, Chief Executive Officer, WiTricity Corporation.
EDWARD GREFFENSTETTE, Chief Investment Officer, Dietrich Charitable Trusts.
JEFFREY HOUSENBD, President and Chief Executive Officer, Shutterfly.
MANU NARAYAN, Performing Artist, Actor and Musician.

Term Trustees – Terms Expire in 2017

JOHN ANDERSON, President, Illinois Institute of Technology.
KEITH BLOCK, President and Vice Chairman, Salesforce.com.
JEANNE CUNICELLI, Partner, Bay City Capital.
JAMES GIANOPULOS, Chairman and Chief Executive Officer, Twentieth Century Fox Film.
DAVID MCCORMICK, Co-Chief Executive Officer, Bridgewater Associates.
WILLIAM MEANEY, President and Chief Executive Officer, Iron Mountain.
ROY J. SHANKER, Consultant.
AJIT SHETTY, Retired Chairman of the Board, Janssen Pharmaceutica.
LIP-BU TAN, Chairman, Walden International; Chief Executive Officer, Cadence Design Systems.
THOMAS TULL, Founder, Chairman and Chief Executive Officer, Legendary Pictures.

Ex-Officio Trustees

SUBRA SURESH, President, Carnegie Mellon University.
BRUCE KRAUS, President, Pittsburgh City Council.
KRISTEN KURLAND, President, Andrew Carnegie Society; Teaching Professor, School of Architecture and H. John Heinz III College, Carnegie Mellon University.
WILLIAM PEDUTO, Mayor, City of Pittsburgh.
SCOTT SANDAGE, Chair, Faculty Senate and Professor, Associate Professor, Department of History, Carnegie Mellon University.

Life Emeritus Trustees

PAUL A. ALLAIRE, Former Chairman and Chief Executive Officer, Xerox Corporation.
ARTHUR H. ARONSON, Retired Executive Vice President, Allegheny Teledyne.
CAROL R. BROWN, Former President, Pittsburgh Cultural Trust.
ROBERT M. BROWN, III, President, B-III Capital LLC.
FRANK V. CAHOUET, Retired Chairman and Chief Executive Officer, BNY Mellon.
DOUGLAS D. DANFORTH, Retired Chairman and Chief Executive Officer, Westinghouse Electric Corporation.
W. LOGAN DICKERSON, President, Lindwood Farm, Inc. and Protos Foods, Inc.
EDWARD DONLEY, Former Chairman, Air Products and Chemicals, Inc.
WILLIAM B. ELLIS, Retired Chairman and Chief Executive Officer, Northeast Utilities.
CYNTHIA FRIEDMAN, Co-owner, Union Real Estate Company of Pittsburgh.
HENRY J. GAILLIOT, .
CLAIRE W. GARGALLI, .
WILLIAM GOLDSMITH, Chairman of the Board, Nucon Energy Group.
RICHARD D. HAMILTON, Former Director of Product Supply, Procter and Gamble.
WILTON A. HAWKINS, .
THERESA L. HEINZ, Chairwoman, Heinz Family Philanthropies.
ORION HOCH, Chairman Emeritus, Litton Industries.
T. JEROME HOLLERAN, Chairman, Precision Medical Products, Inc..
W. LEE HOSKINS, Retired Chairman and Chief Executive Officer, The Huntington National Bank.
JUSTIN M. JOHNSON, Retired Judge, Superior Court of Pennsylvania.
PATRICIA ASKWITH KENNER, President, Campus Coach Lines.
DAVID M. KIRR, Partner, Kirr, Marbach & Company.
HANS W. LANGE, .
EDWARD E. LUCENTE, .
THOMAS A. MCCONOMY, Retired Chairman of the Board, Calgon Carbon Corporation.
JACK E. MCGRATH, Retired Senior Vice President, Booz & Company.
REGINA GOUGER MILLER, Owner/Artist, Ginger and Spice; Regina Gouger Miller Studio.
LINDSAY J. MORGENTHALER, .
ALESSANDRO OVI, Executive Vice President, Fondazione Popoli.
NORMAN F. PARKER, Retired President, Varian Associates.
CHARLES J. QUEENAN, JR., Retired Senior Counsel, K&L Gates LLP.
JOHN G. RANGOS, John G. Rangos, Sr. Charitable Foundation.
DAVID M. RODERICK, Former Chairman and Chief Executive Officer, United States Steel Corporation.
VINCENT A. SARNI, Retired Chairman and Chief Executive Officer, PPG Industries, Inc..
JOYCE BOWIE SCOTT, J. Bowie Scott Studio.
RAYMOND W. SMITH, Chairman, Rothschild Continuation Investments.
WILLIAM P. SNYDER, III, President and Chairman, The Wilpen Group, Inc.
W. LLOWELL STEINBRENNER, Retired Former Chairman, Contours, Ltd..
JAMES M. WALTON, President Emeritus, Carnegie Institute.
KONRAD M. WEIS, Former President and Chief Executive Officer, Bayer Corporation.
Frequently Asked Questions

Q: What is the Undergraduate Catalog?
A: The Undergraduate Catalog, published every year, contains information about and academic requirements for each course of study or program available to undergraduate students at Carnegie Mellon, as well as course descriptions and university policies.

Q: For whom is the Undergraduate Catalog relevant?
A: The Undergraduate Catalog is most relevant for students entering in the year of publication. However, returning students should also use the Undergraduate Catalog to look at new programs and courses of study that may interest them.

Q: How often is the Undergraduate Catalog updated?
A: The Undergraduate Catalog is published every year. The next Catalog will be published in August 2015.

Q: The requirements for my major are different here than when I entered Carnegie Mellon; will my classes still count the same towards graduation?
A: Yes. A student’s requirements for graduation are determined by the year he or she enters Carnegie Mellon. If a program or major’s requirements change in a later catalog, these changes will only affect students entering during that Catalog year.

Note: The only exception is for courses which stop being taught or change course number. You should confer with your academic advisor each semester in order to be sure you are on track for graduation. You can also use the Academic Audit (https://enr-apps.as.cmu.edu/audit/audit) tool to check on your progress.

Q: Does the Catalog include course times and locations?
A: No. Current information on course times and locations can be found on Student Information Online (https://s3.as.cmu.edu/sio), under the Course Schedule tab.
Look at Carnegie Mellon

Excellence in Practice and Learning for Life

Carnegie Mellon emphasizes a deep connection between theoretical knowledge and practice: the university's interdisciplinary approach to education stresses the practical application and analysis of knowledge in institutional, social and historical contexts. “On a campus of 110 acres, research and teaching are conducted in more than 30 different fields of the arts, humanities, engineering, the sciences, social sciences, management and public policy. Students and faculty in these areas are in daily contact with one another, pursuing interdisciplinary projects, redefining fields of knowledge, pushing their own visions of the possible and contributing to the world around them,” writes Jared L. Cohon, the eighth president of Carnegie Mellon in “The Innovative University,” a volume of writings that celebrated Carnegie Mellon's centennial in 2000. Carnegie Mellon graduates are excellent practitioners in their chosen fields. The university is in the process of enriching and complementing this education to ensure that our students also gain broader, well-informed perspectives that will help them grow and change with their professions; interact wisely with the natural environment; and be responsible and informed citizens in an increasingly technological world and complex global culture.

From Technical School to International University

In a letter written in 1900, industrialist and philanthropist Andrew Carnegie offered to give the city of Pittsburgh $1 million in bonds to found a technical institute. The city provided 32 acres of land near Schenley Park, and the institution became known as the Carnegie Technical Schools. According to Carnegie's plans, the institution would train youth and daughters of working-class families in five schools: Science and Technology; to train draftsmen and engineer's assistants; Fine and Applied Arts, for designers and artist workers; Apprentices and Journeymen, for mechanics in manufacturing and construction; and Margaret Morrison Carnegie College, for home economists or secretaries. Within two decades, the Carnegie Technical Schools offered bachelor’s, master’s and doctor's programs, and fittingly changed its name to the Carnegie Institute of Technology.

In 1967, the trustees of the Mellon Institute and the Carnegie Institute of Technology merged the two institutions and adopted the name Carnegie Mellon University. In 1968, Margaret Morrison Carnegie College closed and the university organized a new College of Humanities and Social Sciences. New graduate-level colleges and schools also flourished, including the Graduate School of Industrial Administration (GSIA), the Heinz College of Public Policy and Management, and the School of Computer Science. As time progressed, new research centers and institutes developed on and off campus in specialties ranging from art conservation to sustainable computing. In 2004, GSIA was renamed the Tepper School of Business after alumnus David A. Tepper.

The Carnegie Institute of Technology has developed from a regional, technical college into Carnegie Mellon University, a selective, international research university that consistently ranks among the nation’s best colleges in U.S. News & World Report, Newsweek and BusinessWeek magazines. The university is also a leader in environmental sustainability and energy efficiency, and is home to the nation’s first Leadership in Energy and Environmental Design (LEED) certified dormitory. University Business magazine identified Carnegie Mellon as one of the nation’s Higher Education Sustainability Stars.

Undergraduate students can pursue majors in six of the university’s seven colleges: the Carnegie Institute of Technology (engineering), the College of Fine Arts, the Tepper School's business administration program, the College of Humanities and Social Sciences, the Mellon College of Science, and the School of Computer Science. Carnegie Mellon also has campuses in California and Qatar and is expanding its presence in Europe, Australia and Asia with master's programs and other educational partnerships.

A Unique Educational Experience

The university’s diversity, focus on strong student-faculty ties and commitment to education outside the classroom combine to create a learning environment that is as uniquely Carnegie Mellon as the Tartan plaid on the kilts of its bagpipers.

Carnegie Mellon strives for a campus culture that reflects a fundamental respect for different ways of living, working, and learning so every student has the opportunity to reach her or his potential. The university community is diverse, with roughly 12,000 students, nearly evenly split between undergraduates and graduates, and more than 1,400 faculty members. About 10% of undergraduate students are underrepresented minorities and 17% hail from countries outside the U.S. Faculty and graduate students also come from across the globe. The university’s small student-to-faculty ratio gives students the opportunity for close interaction with their teachers - an essential component of academic success. But while professors spend a great deal of time with students, they also expect them to develop initiative, to critically assess their own progress and to work as teams. Working together, students and faculty create real-world projects with immediate impact. A design professor might critique a student’s sketches of a company logo, or a team of students will work with professors and researchers to design an autonomous robot for a race across the desert. Faculty at Carnegie Mellon take an interest in their students’ questions and concerns beyond the classroom. Some serve as academic advisors, while others seek undergraduate assistance with research projects or oversee student-proposed projects.

Equally important to the Carnegie Mellon education is the meta-curriculum, the learning that occurs outside classes through community service, interacting and learning in the university’s international community, or even just living in the residence halls.

Structure to Succeed, Freedom to Explore

A Carnegie Mellon education is marked by its strong focus on fundamental and versatile problem-solving skills in a specific discipline, but the university respects and values students’ varied talents and interests that often span many specialties. At Carnegie Mellon, students can explore more than one field of study during their undergraduate years. For example, the former industrial engineering program that led to the business school became the Tepper School of Business, named for close interaction with their teachers - an essential component of academic success. But while professors spend a great deal of time with students, they also expect them to develop initiative, to critically assess their own progress and to work as teams. Working together, students and faculty create real-world projects with immediate impact. A design professor might critique a student’s sketches of a company logo, or a team of students will work with professors and researchers to design an autonomous robot for a race across the desert. Faculty at Carnegie Mellon take an interest in their students’ questions and concerns beyond the classroom. Some serve as academic advisors, while others seek undergraduate assistance with research projects or oversee student-proposed projects.

Though academic interests may differ, the university has structured its programs so students develop skills vital to all professions, with communication and reflective practice acting as the common threads connecting these skills. In order to excel in any field and lead a life of social responsibility and lifelong learning, students must be able to understand the theoretical basis and practical implications of knowledge and action, convey ideas and information effectively, and be reflective practitioners. Carnegie Mellon instructors and students are continuously innovating, and the new knowledge they create and the methods they discover routinely benefit classroom learning. Each college and dozens of special centers focus on issues and developments that affect the world beyond Carnegie Mellon.

Researchers in the Mellon College of Science received a $13.3 million grant to develop the National Center for Networks and Pathways, which will generate molecular bio-sensors that will change the way scientists look at living cells. A study by researchers in the College of Engineering found that cell phones and other portable electronic devices can interfere with the learning that occurs outside classes through community service, interacting and learning in the university’s international community, or even just living in the residence halls.

Strength in Research and Artistic Creation

At Carnegie Mellon, faculty members aren’t just devoted teachers. They conduct groundbreaking research, create new and exciting art, and contribute to a growing global scholastic community. The university’s faculty are continuously innovating, and the new knowledge they create and the methods they discover routinely benefit classroom learning. Each college and dozens of special centers focus on issues and developments that affect the world beyond Carnegie Mellon.

data to develop new sales and marketing strategies. Students and faculty in the university’s School of Design have collaborated with local foundations to create Explanatoids, cartoons designed to illustrate the importance of science, math and technology to the Pittsburgh region while stressing the role girls play in the careers of the future. Just down the road, faculty in the Heinz College are breaking new ground with studies on the different ways men and women negotiate.

Exploring Research and Creative Projects

Faculty aren’t the only people busy with research on campus. Research is a vital component of undergraduate education at Carnegie Mellon. Students can initiate projects of their own or become involved with existing ones on campus. The Department of Biological Sciences, for example, has faculty mentors who help interested students find research opportunities that support their own intellectual curiosity. Drama students participate in every facet of productions, from set construction to acting. Students across campus are encouraged to work with faculty to pursue their own interests, and most departments offer courses for independent study that allow undergraduates to work on projects of their own design under the guidance of a faculty member.

Research projects often come with a financial cost, but Carnegie Mellon offers many sources of funding for students conducting independent research and creative projects. One popular source of funding is the university’s Small Undergraduate Research Grant (SURG) program offered through the Undergraduate Research Office. (For more information, see the Undergraduate Research Office section in this catalog under “University Services.”) These types of funding programs combined with the support and encouragement offered by faculty and staff on campus bring research - traditionally the mark of graduate education - into the undergraduate realm.

The World of Carnegie Mellon

Carnegie Mellon is often described as a competitive place - and it is. The university selects students from among the best in the world, so attending Carnegie Mellon means that you’ll be with students who, like you, were at the top of their classes in high school. The university also stresses collaboration and teamwork, often across disciplines, where students share common goals and tasks while still bringing something unique to the interaction. Carnegie Mellon students are serious scholars who want to excel. The atmosphere is intense and demanding, but also encouraging and rewarding. Carnegie Mellon graduates enter society prepared to assume even greater challenges and equipped with an awareness of their own strengths and abilities.

But Carnegie Mellon students still have fun, and spend their free time engaged in many activities and forging some of the strongest friendships they’ve ever known. Students don’t just develop a solid work ethic at Carnegie Mellon - they develop a strong sense of community. Through residence hall living, community service, group projects and numerous activities and clubs, students find they can belong to a range of communities. Carnegie Mellon also has the tradition of Spring Carnival, an annual three-day event whose buggy races and booths involve students and alumni from a multitude of academic and cultural backgrounds.

Carnegie Mellon Impacts the World

As a Carnegie Mellon graduate, you’ll join a highly respected group of individuals who have changed the world as we know it. Whether pursuing further education or entering the work force, alumni consistently achieve the goals they’ve set for themselves in a wide variety of academic and professional fields. One alumna wrote the songs for “Godspell,” while another won the Tony Award for Best Performance by a Leading Actress in a Play for her performance in the Pulitzer Prize-winning “Doubt.” Carnegie Mellon alumni have contributed in a wide variety of academic and professional fields. One alumna wrote the songs for “Godspell,” while another won the Tony Award for Best Performance by a Leading Actress in a Play for her performance in the Pulitzer Prize-winning “Doubt.” Carnegie Mellon alumni created and starred in “Hill Street Blues,” “L.A. Law,” “NYPD Blue,” “ER” and “Lost.” More than 2,000 of our graduates are corporate chairs, presidents or vice presidents. Some 1,400 alumni are university professors and another 30 are deans. Most major symphonies around the country include Carnegie Mellon alumni. The university’s graduates are also prominent in government, and include a former White House staff assistant, a U.N. delegate and a former first deputy chairman of the presidium of the USSR. An astronaut who walked on the moon holds a Carnegie Mellon degree, as does the project director of NASA’s Pioneer Interplanetary Probe. Five Carnegie Mellon alumni have gone on to win the Nobel Prize (three in economics, two in physics), and the works of many former art students hang in the permanent collections of more than 50 international museums.

Our Vision

Carnegie Mellon will meet the changing needs of society by building on its traditions of innovation, problem solving, and interdisciplinarity.

Our Mission

To create and disseminate knowledge and art through research and creative inquiry, teaching, and learning, and to transfer our intellectual and artistic product to enhance society in meaningful and sustainable ways.

To serve our students by teaching them problem solving, leadership and teamwork skills, and the values of a commitment to quality, ethical behavior, and respect for others.

To achieve these ends by pursuing the advantages of a diverse and relatively small university community, open to the exchange of ideas, where discovery, creativity, and personal and professional development can flourish.

Our Values

- **Dedication**, as exemplified by our commitment to the critical issues of society and our uncompromising work ethic.
- **Collaboration**, as exemplified by our interdisciplinary, our external partnerships, and our capacity to create new fields of inquiry.
- **Measuring excellence by impact**, as exemplified by our focus on issues critical to regional development, national interest, and global welfare.
- **Entrepreneurship**, as exemplified by openness to new ideas, prudent use of resources, and readiness to act.
- **Depth driving breadth**, as exemplified by our issue-driven research, our context-based general education initiatives, and our focus on problem solving and creative production at all levels.
- **Compassion**, as exemplified by our focus on human welfare, on the betterment of society, and on the personal development of the members of our community.
- **Integrity and inclusion**, as exemplified by our attention to the highest ethical standards in all domains, and our commitment to being a community which welcomes talented minds from diverse backgrounds and challenges them individually and collectively to achieve their best.

Carnegie Mellon’s undergraduate educational programs are designed to help students acquire the following:

- **Depth of knowledge** in their chosen areas of specialization and genuine intellectual breadth in other fields.
- **Creativity and intellectual playfulness**, moving beyond established knowledge and practice to create imaginative ideas and artifacts.
- **Skilled thoughtfulness and critical judgment**, which allow them to evaluate new ideas, identify and solve or explore problems, and appreciate a variety of different forms of analysis and thought.
- **Skills of independent learning**, which enable them to grow in wisdom and keep abreast of changing knowledge and problems in their profession and the world.
- **A set of values**, including commitment to personal excellence and intellectual adventure, concern for the freedoms and dignity of others, and sensitivity to the special professional and social responsibilities that come with advanced learning and positions of leadership.
- **The self-confidence and resourcefulness necessary to take action and get things done.**
- **The ability to communicate with others on topics both within and outside their chosen field of specialization.**

Most instruction at Carnegie Mellon is focused on fundamentals useful in later learning, rather than on particulars of knowledge and techniques that may soon become obsolete. Advanced courses provide students with the opportunity to refine their skills by applying and exercising the fundamentals they have acquired in earlier courses and by exploring new analytical and creative directions. In a world that has sometimes placed too little emphasis on skill, Carnegie Mellon takes pride in educating students who display excellence in application-students who can do useful things with their learning.

Values, including sensitivity to the feelings, needs and rights of others, are learned in part through example. To this end, the faculty and staff of Carnegie Mellon work to provide a supportive and caring environment that values and respects intellectual, philosophical, personal and cultural diversity. The faculty strive to identify and discuss with their students, both in formal classroom settings and in a variety of informal contexts, their
responsibilities as professionals, citizens and human beings, and to teach through example.

The undergraduate programs at Carnegie Mellon are designed to help our students become accomplished professionals who are broadly educated, independent and humane leaders.
Degrees Offered

The following list shows all primary degrees offered for both undergraduate and graduate students at Carnegie Mellon University. For a list of minors, please see Undergraduate Options (p. 64).

**Carnegie Institute of Technology**

**Interdepartmental**
- M.S. in Engineering and Technology Innovation Management
- M.S. in Energy Science, Technology and Policy

**Biomedical Engineering**
- B.S. in an engineering discipline and Biomedical Engineering (link) (p. 125)
- M.S. in Biomedical Engineering
- Ph.D. in Biomedical Engineering

**Chemical Engineering**
- B.S. in Chemical Engineering (link) (p. 131)
- M. Chemical Engineering
- M. Chemical Engineering and Colloids, Polymers and Surfaces
- M.S. in Chemical Engineering
- M.S. in Chemical Engineering and Colloids, Polymers and Surfaces
- M.S. in Colloids, Polymers and Surfaces
- Ph.D. in Chemical Engineering

**Civil and Environmental Engineering**
- B.S. in Civil Engineering (link) (p. 134)
- M.S. in Advanced Infrastructure Systems
- M.S. in Civil and Environmental Engineering
- M.S. in Civil Engineering
- M.S. in Civil and Environmental Engineering/M. of Business Administration (jointly with the Tepper School of Business)
- M.S. in Computational Mechanics
- M.S. in Energy Science, Technology and Policy (jointly with Materials Science and Engineering)
- M.S. in Environmental Engineering
- M.S. in Environmental Management and Science
- Ph.D. in Advanced Infrastructure Systems
- Ph.D. in Civil and Environmental Engineering
- Ph.D. in Civil and Environmental Engineering/Engineering and Public Policy (dual degree offered with Engineering and Public Policy)
- Ph.D. in Civil Engineering
- Ph.D. in Computational Mechanics
- Ph.D. in Environmental Engineering
- Ph.D. in Environmental Management and Science

**Electrical and Computer Engineering**
- B.S. in Electrical and Computer Engineering (link) (p. 137)
- B.S. in Music and Technology (jointly with the Department of Music and the School of Computer Science)
- M.S. in Electrical and Computer Engineering
- M.S. in Music and Technology (jointly with the Department of Music and the School of Computer Science)
- Ph.D. in Electrical and Computer Engineering

**Engineering and Public Policy**
- B.S. in an engineering discipline with an additional major in Engineering and Public Policy (link) (p. 144)
- B.A., B.S., etc. in DC, MCS, or SCS and an additional major in Science, Technology and Public Policy (link) (p. 145)
- M.S. in Engineering and Public Policy
- Ph.D. in Engineering and Public Policy
- Ph.D. in Engineering and Public Policy and an engineering discipline
- Ph.D. in Engineering and Public Policy and Statistics (jointly with the Department of Statistics)

**Information Networking Institute**
- M.S. in Information Networking
- M.S. in Information Security Technology and Management
- M.S. in Information Technology - Information Security
- M.S. in Information Technology - Mobility
- M.S. in Information Technology - Software Management

**Mechanical Engineering**
- B.S. in Mechanical Engineering (link) (p. 149)
- M.S. in Computational Design and Manufacturing
- M.S. in Mechanical Engineering
- Ph.D. in Mechanical Engineering

**Materials Science and Engineering**
- B.S. in Materials Science and Engineering (link) (p. 153)
- M.S. in Materials Science
- M.S. in Materials Science and Engineering
- Ph.D. in Materials Science and Engineering

**Silicon Valley Campus**
- M.S. in Software Engineering
- M.S. in Software Engineering - Development Management
- M.S. in Software Management

**College of Fine Arts**

**Architecture**
- B. of Architecture (5-year program) (link) (p. 165)
- M.S. in Architecture
- M.S. in Building Performance and Diagnostics
- M.S. in Computational Design
- M.S. in Sustainable Design
- M. of Tangible Interaction Design
- M. of Urban Design
- D. of Professional Practice in Architecture
- Ph.D. in Building Performance and Diagnostics
- Ph.D. in Computational Design

**Art**

Undergraduate Admission

Michael A. Steidel, Director of Admission
Office: Warner Hall, Admission Lobby, First Floor
http://www.cmu.edu/admission

Admission Philosophy

At Carnegie Mellon, we select our freshman class from a large group of very qualified candidates. We don’t use a calculation to arrive at our admitted class. Calculations can’t take into account all of the factors we like to consider when making admission decisions. We treat every application individually and take great care in making our admission practices fair, thorough and sensitive. We are interested in students who can be successful at Carnegie Mellon and take full advantage of all the university has to offer and enriching our campus community.

Admission Criteria

The majority of our applicants are admissible and could be successful at Carnegie Mellon. We use a variety of factors to select our first-year class from those admissible candidates. High school performance weighs most heavily in our admission decision because it is the most meaningful measure of a student’s abilities. We pay close attention to the type of courses taken and to the grades received, and to the challenges you’ve given yourself in the classroom. If you are applying to programs in the arts, your artistic performance will be either the main factor or a significant factor (depending on the program) in our admission decision.

Standardized test scores add to our knowledge of a student’s ability, but we cannot make decisions simply on the basis of test scores alone. The high school record and standardized test scores (SAT Reasoning Test or ACT with Writing and SAT Subject Tests) work together to make up the academic portion of a student’s evaluation.

Carnegie Mellon is an exciting campus because of the positive qualities and experiences our students bring with them. For this reason, we’re interested in the kinds of things students do beyond the classroom, whether they participate in extracurricular activities, work part-time or pursue hobbies. Knowing what students like to do on their own time gives us a feeling for each student’s personality, motivation and sense of responsibility. All of this is an important part of the admission process.

Expressing an interest in learning more about Carnegie Mellon can only enhance a student’s application. We strongly recommend that students come to the Carnegie Mellon campus to interview with a member of our staff, although it’s not required. This adds a personal touch to our evaluation and gives students a chance to ask questions. If you cannot make it to campus, consider talking with a local Carnegie Mellon alumni representative. There are a number of other ways to show interest and learn more about Carnegie Mellon. Students can come to one of our Sleeping Bag Weekends, attend an information program in or near their town, interview in their hometown with one of our staff members or alumni, or enroll in one of our summer programs. Information about a number of these events is included at the end of this section.

Different Criteria for Different Colleges

Each college at Carnegie Mellon has special admission criteria specifically related to each course of study.

Admission to the Schools of Drama and Music is based primarily on an audition or portfolio review. Applicants to the Schools of Art and Design will be evaluated not only on the basis of their portfolio but also on their academic performance. Students applying to the School of Architecture are required to submit a portfolio of creative work for review, in addition to having their academic performance evaluated.

Candidates for the Carnegie Institute of Technology (the College of Engineering), the Mellon College of Science, and the School of Computer Science will be evaluated on the basis of academic performance, and we will look additionally for strength in mathematics and science. Academic performance is also the main criteria we use to evaluate applicants to the Dietrich College of Humanities and Social Sciences, the Information Systems program and to the Tepper School of Business’ undergraduate program. In these cases, we emphasize reading and comprehension abilities as well as mathematics courses.

No one single grade, factor or score will automatically grant or deny a student admission to Carnegie Mellon. Students should be aware of all the admission requirements-secondary school preparation, standardized test requirements, nonacademic information, counselor, teacher and interview recommendations-when submitting applications. We will use the sum total of these different factors when making our admission decisions. Because we want to have a sense of who the student is as a person, we look closely at the essay and personal statement the student is asked to write, the guidance counselor’s evaluation and the teacher’s recommendation.

Freshman Application Instructions

1. Applicants must apply online by completing the Common Application and submitting the $75 application fee. We require this fee of all applicants except in extenuating family financial circumstances. A College Entrance Examination Board Application Fee Waiver, an ACT Application Fee Waiver, or a letter from a secondary school counselor or principal requesting an application for a waiver must be submitted.

2. Request that your secondary school counselor submit all high school transcripts, including senior year courses and mid-year grades, and a school profile to the Office of Admission, preferably online, as close to January 1 as possible.

3. Apply for admission only to the specific college(s) or programs in which you’re interested.

   • Rank your program and/or major preference.
   • You may apply to up to three colleges/programs.
   • If you’re applying to more than one college/program, there’s no need to submit multiple applications and there’s no additional application fee.
   • Be sure to meet the admission requirements for each college/program.
   • Early Decision and transfer candidates will only be considered for their first choice college/program.

4. If you’re applying to the Carnegie Institute of Technology (the College of Engineering), Dietrich College of Humanities and Social Sciences, Information Systems, Mellon College of Science, School of Computer Science and Tepper School of Business, We strongly urge you to indicate a program and/or major preference at the time you apply. Although you might not declare a major until the end of your freshman or sophomore year, we do limit access to certain majors, such as electrical and computer engineering, computer science and business.

5. If you’re applying to the College of Fine Arts (CFA), you must apply specifically to one of the following schools: Architecture, Art, Design, Drama or Music. (See specific instructions to follow.)

6. If you are applying to the School of Music, the additional audition fee is $50 and if you are applying to the School of Drama the additional audition fee is $85 and only payable online by VISA or MasterCard, at the time of reserving your audition on http://www.cmu.edu/admission/finearts.

7. Take the SAT Reasoning Test or ACT with Writing and SAT Subject Tests preferably by November, but no later than December. If you are applying to art, design, drama or music, SAT Subject Tests are not required.

   • Scores must be official scores from the Educational Testing Service (ETS). Copies should not be sent. When registering for the tests, request an official Score Report be sent directly to Carnegie Mellon. This request can also be made later by getting an Additional Report Request Form from your guidance office. The Carnegie Mellon code is 2074.
   • Register for your tests at least six weeks prior to the test date.

8. The Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) should be taken if your native language is not English. Carnegie Mellon requires TOEFL scores of 7.5 or above. Please arrange to have these scores sent no later than January 1.

9. If you are applying to the College of Fine Arts’ Schools of Art, Design, Drama, or Music, you must complete portfolio review or audition requirements. If you are applying to the School of Architecture, you are required to submit a portfolio of creative work. Please go to www.cmu.edu/admission/finearts for further information. The Schools of Art, Architecture, Design and Drama require that students apply to the university before registering for an audition or portfolio review. There is no Early Decision consideration given for the acting, directing, music theatre, composition, flute, music and technology, piano, violin, voice, or the BXA programs.

10. You must sign the "Confidentiality Statement" on the Common Application School Report Form and give it to your secondary school counselor for completion. Your counselor should return this form, along with the school profile and your transcript.

11. Choose a teacher to complete the Common Application Teacher Recommendation Form and make sure it is submitted to the Office of Admission by the application deadline.
12. Our Regular Decision application deadline is January 1. The Schools of
Drama and Music’s Regular Decision deadline is December 1.

13. If you are applying for financial aid, complete a Free Application for
Title IV code is 003242. You must also complete the CSS PROFILE at https://
profileonline.collegeboard.com and submit signed copies of parent and
student tax documents. See www.cmu.edu/admission for more details.

Application Notification

• Students applying under the Early Decision Plan will be notified of our
decision by December 15.

• Students applying under the Regular Decision Plan will be notified of
our decisions by April 15.

• Students who are applying for financial aid will also receive financial aid
decisions by April 15. After they submit their financial aid forms
by the preferred financial aid deadline of February 15.

If you are offered admission and wish to enroll at Carnegie Mellon, you are
required to pay an $800 non-refundable enrollment deposit by May 1
(Candidates General Reply Date), even if you are receiving financial aid,
in order to reserve places in the freshman class and in university housing.
This deposit will be credited to your first semester’s charges. The admission
staff assumes that a student’s deposit to Carnegie Mellon is his or her
only deposit. We reserve the right to cancel our offer of admission if a
student posts a tuition deposit at another university. During the summer,
information concerning registration, enrollment, insurance, orientation,
housing and dining services, etc., will be sent to all students.

Deferred Admission

If you are admitted to Carnegie Mellon and wish to defer your admission for
one year, you must submit a request in writing to the Office of Admission.
If permission is granted, your enrollment deposit must be paid in order to
confirm enrollment for the following year. You cannot enroll in a degree
program at another institution in the interim.

Application Plans

Early Decision Plan

If Carnegie Mellon is your first choice, you may wish to consider applying
Early Decision. Under this plan, applicants are notified of our admission
decision early in the senior year. If you are accepted Early Decision, we
expect you to enroll in Carnegie Mellon. Under the Early Decision plan, we
encourage you to submit applications to other schools. However, if you are
accepted to Carnegie Mellon, we require you to withdraw your applications
from other schools.

Early Decision is available to all programs, with the exception of acting,
music theatre, directing, composition, flute, piano, music and technology,
early decision. Early Decision Applications are due November 1 and students will be
notified of an admission decision by December 15. If you are admitted under
Early Decision, you are required to withdraw all admission applications to
other colleges or universities and post a non-refundable enrollment deposit of
$800 within two weeks of your admission notification.

Regular Decision Plan

Regular Decision is our most popular application option. The deadline
is January 1 (December 1 for drama and music applicants). You will be
notified of our decision by April 15. Admitted students will have until May 1
(Candidate’s General Reply Date) to accept our offer of admission.

Early Admission

Through the process of Early Admission, the university admits certain highly
qualified applicants at the end of their junior year in high school. In general,
Early Admission candidates are highly mature and responsible students who
have usually exhausted the courses offered at their high schools without
receiving a high school diploma. We expect students who apply for early admission to follow the same procedures as regular freshman applicants. We also strongly encourage applicants to have a personal interview with a member of the Office of Admission staff. It is important to note that the College of Fine Arts very rarely accepts Early Admission applicants.

Transfer Applicants

Transfer students are admitted to Carnegie Mellon under policies that vary
from college to college. If there is space in the requested program, we will
base our decision on your college grades, college recommendations, high
school grades and test scores (SAT Reasoning Test or ACT with Writing and
SAT Subject Tests, if available). In the College of Fine Arts, most transfer
applicants compete with freshman applicants for a place in the entering
class.

Transfer Application Instructions

1. Apply for admission to the specific college of interest, noting
departmental preference. If interested in music or drama, student
should specify the option. Transfer students will be considered only to
their first-choice college. Please do not apply to more than one college.

2. Enroll in a non-refundable fee of $75 (and audition fee if applicable).
This application fee is required, except in extenuating family financial
circumstances.

3. Send all transcripts that reflect secondary school and college/
university studies to the Office of Admission. We also require a copy
of course descriptions from a college catalog from each college/
university you attended. Course descriptions should be sent by email to
mailto:undergraduate-admission@andrew.cmu.edu with the subject line
“Transfer Course Descriptions.” Course descriptions should be copied
and pasted into a single .doc or .pdf document, and must have your
name and address on the first page.

IMPORTANT: If you have applied to Carnegie Mellon within the past
three years, you must resubmit an updated application with fee (and
audition fee if appropriate) and all other materials required of transfer
students. You do not have to submit high school records.

4. If you are applying to the Schools of Architecture, Art, Design, Drama or
Music, you must complete any portfolio or audition requirements. You
must complete and submit the application for admission by December
1.

Give this form and your completed application for admission to a
dean or an advisor at the college you attended (or are currently
attending). Your dean or advisor should complete and return the form
and application directly to the Office of Admission.

IMPORTANT: Carnegie Mellon prefers that all forms and documents be
submitted at the same time. If they must be sent separately, make sure
to print your full name and social security number at the top of each
document.

6. Transfer application deadlines are as follows:
• Spring transfer: October 15
• Fall transfer: March 1 (December 1 for CFA applicants)

7. If you are applying for financial aid, complete a Free Application for
Title IV code is 003242. You must also complete the CSS Profile at
https://profileonline.collegeboard.com and submit signed copies of
parent and student tax documents. See http://www.cmu.edu/admission
for more details.

If planning on:
File FAFSA by this date:
Spring transfer November 1
Fall transfer (CFA) February 15
Fall transfer (all other colleges) May 1

IMPORTANT: If you are applying for financial aid as a transfer student, you
must send a Financial Aid transcript of aid applied for and/or received at
all colleges previously attended. Even if you didn’t receive any aid, federal
regulations require that the college(s) attended complete the form.

Admission and financial aid award notification dates for transfer students:
Spring transfer: December 15 or soon after
Fall transfer(CFA): April 15
Fall transfer (all other colleges): During month of June

Make arrangements to have a final copy of your college transcript(s) sent to
Carnegie Mellon.
Deposit Information for Transfers
If you are offered admission for the spring semester, Carnegie Mellon does not require a tuition deposit (due to the short time interval between December 15 and the start of the second semester). If you are offered admission to the College of Fine Arts for the fall semester, you must pay a non-refundable deposit of $800 by May 1, even if you are receiving financial aid. If you are offered admission to CIT, DC, IS, MCS, or SCS for the Fall semester, you must pay a non-refundable $800 deposit by June 15, even if you are receiving financial aid. The enrollment deposit will reserve your place at the university and a place in university housing if available. It will be credited to the first semester charges.

IMPORTANT: If you accept our offer of admission, Carnegie Mellon assumes that the tuition deposit to Carnegie Mellon is your only tuition deposit. We reserve the right to cancel our offer of admission if you post a tuition deposit at more than one university. Enrollment deposits received after the deadline may be returned if space is no longer available.

University Housing for Transfers
Carnegie Mellon expects to accommodate most transfer students who request university housing, however, it is not guaranteed. The Off-campus Housing Advisory and Referral Service is available to help you locate housing accommodations in the local area.

Transfer Credit Evaluated on Individual Basis
Carnegie Mellon's departmental faculty will determine transfer credit for courses you've taken at other universities. Transfer credit is considered on an individual basis. We may award elective credit for courses with no Carnegie Mellon equivalent. In some instances, the College Council may recommend a special program of study for you to meet the university's graduation requirements.

Transfer credit for courses you are taking while we review your existing college record depends upon successful completion of each course. Grades are not transferred - only credit is. You may receive transfer credit for elective courses you've taken but will still have to take Carnegie Mellon courses to fulfill the elective space in your chosen degree program.

Sometimes transfer students have to take specific courses and accumulate a larger total number of credits than the normal amount required for graduation. The time it takes for you to graduate will depend on the time you need to complete the full university degree requirements - not on class standing at a previous institution.

If you transfer into CIT, IS, MCS, or SCS in the Fall semester, you will receive an estimate of the additional academic work that you must complete in order to fulfill the university degree requirements. If you transfer into DC in the fall or spring semester, you'll receive a credit and requirement review of the work you've completed at your previous institution(s). It is best for transfer students in CFA to assume freshman status. Occasionally advanced standing is awarded based on review of previous college courses.

Application as an International Student
International students should apply to Carnegie Mellon using the same procedures outlined for either freshmen or transfer students. Also note this additional information:

• Before submitting the Common Application and other application materials, please submit the Preliminary Application for International Students at https://www.as.cmu.edu/international/. Because Carnegie Mellon does not offer financial aid or installment plans to international students, we use this application to verify each student’s ability to pay for a Carnegie Mellon education. International students are not eligible for application fee waivers.

• If your native language is not English, you are required to take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS). Carnegie Mellon requires 102 or better on the iBT TOEFL or an IELTS score of 7.5 and above. Please arrange to have these scores sent no later than January 1.

Advanced Placement Consideration
Advanced Placement Program
Carnegie Mellon recognizes the Advanced Placement program and may grant advanced placement and credit for test scores of four or five. We encourage eligible students to take the AP examinations. We will receive the test scores in early summer for those students who have requested that their results be sent to Carnegie Mellon. The appropriate academic deans will evaluate your scores, and in late summer, you will be informed of the AP credit awarded.

College Level Course Work
The university may also award placement and credit for college work completed during high school. Applicants who have taken college courses should arrange to have their college transcripts along with course catalogs or descriptions sent to the Carnegie Mellon Office of Admission for transfer credit evaluation and advanced placement.

International Bacalaureate Program
Carnegie Mellon also recognizes the International Bacalaureate Examination and may grant advanced standing and/or credit in various fields if scores on the higher level examination range from six and seven. The results of the IB exams should be sent to Carnegie Mellon, where the appropriate dean will evaluate the scores. In late summer, you will be notified of the credit that has been awarded.

BXA Intercollege Degree Programs
Bachelor of Computer Science and Arts (BCSA)
The Bachelor of Computer Science and Arts (BCSA) Program is an intercollege degree-granting program. It is designed for students who would like to combine their interests in the fine arts and computer science rather than pursue a conventional major and degree in either the College of Fine Arts or the School of Computer Science. To be considered for the BCSA program, you must apply and be admitted to both CFA and MCS (you must check the CFA box and MCS box on the Common Application). This program is designed for students who would like to combine their interests in the fine arts and humanities/social sciences rather than pursue a conventional major and degree in either the College of Fine Arts (CFA) or the Dietrich College of Humanities and Social Sciences (DC). To be considered for the BHA program, students must apply and be admitted to both CFA and DC (you must check the CFA box and DC box on the Common Application). This program is not open to music theatre or acting majors. Not all students admitted to both colleges are selected for the BCSA program.

Bachelor of Humanities and Arts (BHA)
The Bachelor of Humanities and Arts (BHA) program is an intercollege degree-granting program. It is designed for students who would like to combine and blend their interests in fine arts and humanities/social sciences rather than pursue a conventional major and degree in either the College of Fine Arts (CFA) or the Dietrich College of Humanities and Social Sciences (DC). To be considered for the BHA program, a student must apply and be admitted to both CFA and DC (you must check the CFA box and DC box on the Common Application). This program is not open to music theatre or acting majors. Not all students admitted to both colleges are selected for the BHA program.

Bachelor of Science and Arts (BSA)
The Bachelor of Science and Arts (BSA) program is an intercollege degree-granting program. It is designed for students who would like to combine studies in both the fine arts and natural sciences/mathematics rather than pursue a conventional major and degree in either the College of Fine Arts (CFA) or the Dietrich College of Humanities and Social Sciences (DC). To be considered for the BCSA program, a student must apply and be admitted to both CFA and MCS (you must check both the CFA box and MCS box on the Common Application). This program is not open to music theatre or acting majors. Not all students admitted to both colleges are selected for the BSA program.

With the BXA programs, you must include with your application a statement of intent (essay) describing your interdisciplinary goals in both academic areas and how the BXA program would provide the opportunity and framework for you to accomplish these objectives. This essay is a central component in the selection process. The BXA statement of intent fulfills the essay requirement on the supplement. You do not need to complete another essay. If you are selected for this program, you will be notified in your admission decision letter. These programs are not available under Early Decision.

College of Fine Arts Requirements
Deadlines
• Early Decision applicants must submit a complete admission application, including any required artistic evaluation, by November 1 (Drama applicants must meet this deadline if they choose the November audition date).

• Regular Decision applicants must submit a complete admission application by January 1 (or December 1 if applying to drama or music) and all auditions or portfolio review reservations should be made before this date.
Communication of Information and Admissions Decisions

- Once you have registered for the appropriate audition or portfolio review at http://www.cmu.edu/admission/finearts, you will receive further instructions from us via email.
- Final admission decisions are not made at the time of your audition or portfolio review. We will consider the artistic evaluation as part of your application along with your other credentials and notify you by April 15 (December 15 for Early Decision applicants).

Please visit http://www.cmu.edu/admission/finearts for details regarding the specific requirements for fine arts auditions and portfolio reviews.

Exploring Carnegie Mellon

Visiting a campus is one of the best ways for you to discover which school is right for you. We strongly recommend that you attend an information session or interview with a member of the admission staff while on campus. Admission interviews allow us the opportunity to get to know our applicants. Interviews are considered in the admission process and help the admission committee make better, more informed decisions with determining the freshman class. During the interview, you’ll have the opportunity to ask questions about admission requirements, financial aid, student life, Pittsburgh - and much more!

On-campus auditions and portfolio reviews usually include an interview with a member of the Fine Arts faculty and a campus tour. Therefore, only one campus visit is necessary for fine arts students.

Campus Tours

Campus tours are conducted by Andrew Ambassadors and leave from the Office of Admission, 101 Warner Hall. On most weekdays during the academic year, we conduct four tours daily. Please visit the website (http://admission.enrollment.cmu.edu/pages/tour-campus) for exact dates and times campus tours are offered.

Hometown Interviews

Although we strongly recommend a campus visit, we realize that it is not always possible for you to come to campus. The Admission staff does travel to various parts of the country interviewing students in their hometowns. Information about making an appointment will be mailed to students prior to the time we arrive in your city. Students who interview on campus do not have to schedule another interview in their hometown. The specific dates and locations for Hometown Interviews are listed online at http://admission.enrollment.cmu.edu/pages/interviewsWith-the-office-of-admission

Alumni Interviews

We encourage students to talk with a member of the Carnegie Mellon Admission Council (CMAC). CMAC, a select group of alumni, helps the Admission staff reach out to prospective students. Alumni interviews are as valuable when making admission decisions as interviews with the Admission staff. If you’re interested in interviewing with a member of CMAC, please visit http://admission.enrollment.cmu.edu/pages/interview-with-alumni.

Sleeping Bag Weekends

The more information you have, the better decisions about college you’ll make! The Admission staff invites you to learn more about Carnegie Mellon by living like a university student for a day and a half in our Sleeping Bag Weekend program. Visits begin on Sunday morning and last through Monday afternoon.

Information Sessions

The Office of Admission offers two different information sessions throughout the year, both on and off campus. Carnegie Mellon Preview Sessions, offered in the Spring, are meant for freshmen, sophomores and juniors in high school, who are looking for a general overview of the college search process. Carnegie Mellon’s Information Sessions for High School Seniors, available in the Summer and early Fall, offer an in-depth look at the university. During the informational program, you’ll have the opportunity to learn more about Carnegie Mellon’s areas of study, the admission process and admission requirements, how to apply for financial aid and our campus and alumni through exciting video testimonials. Check out the schedule and register at http://admission.enrollment.cmu.edu/pages/information-sessions.

Call Carnegie Mellon for Assistance

If a student will need assistance while visiting the campus, due to a physical or learning disability, he/she should call us at 412-268-2082, and we will help meet the student’s needs during his/her visit at Carnegie Mellon.

Directions to Campus

Directions to Carnegie Mellon’s campus from the north, east, south, west and the airport are available at http://admission.enrollment.cmu.edu/pages/maps-directions. Please call (412) 268-8343 to listen to a recorded message of these directions to campus by phone. If you are using a GPS, the following address will take you to the East Campus Parking Garage: 5040 Forbes Avenue, Pittsburgh, PA 15213.
Summer Opportunities

The campus is in full operation during the summer, populated by students and faculty from a variety of programs. The university continues to have outstanding, innovative educational programs extending beyond regular involvement with its degree candidates. Six such programs are offered during the summer for high school students: the Pre-College Programs in the Fine Arts (Architecture, Art & Design, Drama and Music), the Advanced Placement Early Action Program and the Summer Academy for Mathematics and Science. Three sessions of summer school are held for college students who wish to make up or advance their degree program studies. Every service and support organization is available to summer students: the Computer Center, the Health Center, the Counseling Center, the libraries, the Office of Admission, the Career Center, Student Activities, etc.

Summer Pre-College Programs for High School Students
Office of Admission, Warner Hall 2nd Floor

The Pre-College Programs are designed to preview an actual college experience. Our programs afford high school students many opportunities for personal growth and development within a university setting. A wide range of social, cultural, and recreational activities are planned by a staff of resident counselors to fully integrate the students’ lives on campus and in Pittsburgh. Movies, dances, museum and gallery visits, field excursions or attendance at professional theater productions, concerts, and Pittsburgh Pirates games are just a few of the sponsored activities.

Summer Academy for Mathematics and Science

Students with diverse backgrounds who are entering their junior or senior year and considering careers in engineering, science and other math-based disciplines are eligible to participate in this rigorous program. Traditional classroom instruction, along with creative “hands-on” projects will allow students to apply concepts and principles.

Advanced Placement Early Admission Program

Overview

The main purpose of the Advanced Placement Early Admission (AP/EA) Program is to provide the opportunity to take university courses at Carnegie Mellon for talented, motivated high school students. Students earn college credit while working in an academic environment mirroring that which the student would encounter during the first year of college.

Students who complete two courses in the AP/EA Program and who can graduate early from high school have the unique opportunity to apply Early Admission. By attending the AP/EA program during the summer of 2013, students who will be high school juniors in the fall of 2013 will have a strong understanding of college life and academics. These rising juniors are eligible to apply Early Admission by January 1, 2013, and if accepted can start as full-time degree students here in the fall of 2014. Students admitted under Early Admission are not obligated to accept the offer of admission until May 1.

All AP/EA students may also apply to Carnegie Mellon during their senior year, through Early Decision (various deadlines in November and December depending on the college) or Regular Decision (January 1 deadline, or December 1 for the College of Fine Arts).

Regardless of whether students choose to apply to Carnegie Mellon, successful AP/EA students can leverage their experiences here as demonstration of their ability to succeed in college. AP/EA courses are college courses, not AP Classes, and as such they count toward graduation requirements here and are widely accepted elsewhere. Students applying to another college or university can request an official Carnegie Mellon transcript be sent to that institution. Any use of AP/EA courses to satisfy high school requirements should be approved ahead of time by an appropriate high school official.

While most of the participants in the program will have just completed their junior or senior year of high school, suitably qualified students at early grade levels can participate. However, in order to stay in university housing, students must be at least 16 years old. This does not apply to commuters.

AP/EA Coursework

Our APEA courses are regular Carnegie Mellon classes, so you should anticipate intense, college-level work. Many of the APEA faculty members are the same faculty who teach during the regular school year. Upon admission to the program, students will select their courses from the Schedule of Classes. View the 2014 AP/EA course list (http://admission.enrollment.cmu.edu/media/1s2lsljwMTQvMDIvMjYxMjYwMTYwMDE5VQ9Db3MyV2VlOTl5dC520%20Course%20List.pdf?sha=11d7777f) for more information.

As an APEA student, you’ll be required to take two courses during the summer. This two-course schedule completed in six weeks is comparable in demand to the typical five-course schedule completed in a semester.

The flexible APEA program allows you to take:
- Two math/science/engineering courses
- One math/science/engineering course and one humanities/social sciences course
- Two humanities/social sciences courses

Some features of the APEA classes include:
- meet daily
- small class size
- personal learning environment
- supplemental tutoring
- taught by faculty selected for their enthusiasm and experience teaching college-level material to younger students

Pre-requisites

High school preparation is necessary for some AP/EA classes. For more details, consult the course descriptions or contact the program director.

Calculus requires:
- Algebra, trigonometry and geometry. Pre-calculus or an equivalent course is recommended.

Computer science requires:
- Knowledge of computers or some computer experience in high school is helpful but not required. PSAT Math of 65 or higher, or SAT Math of 650.

Physics, chemistry and biology requirement:
- Students enrolled in physics, chemistry, biology or engineering must have completed a physics, chemistry or biology high school course.
- Students with special qualifications may apply for permission to enroll in a third course with an additional non-refundable charge. Carrying three courses in the AP/EA program is not generally recommended.

Pre-College Architecture Program

Overview

The study of architecture is an exciting multidisciplinary activity that combines design creativity, historical perspective, technical excellence, social responsibility, and global and environmental leadership. The Pre-College Architecture Program is structured to introduce you to each of these areas and for you to experience studying architecture in a university setting.

Primary Goals of Pre-College Architecture

Pre-College will provide you with a strong foundation and give you a clear idea of what to expect at a college level architectural program. The mix of seminars, workshops, drawing and digital media classes will introduce you to some of the theory, process and methodology of current design practice. The experience of working in the studio environment is quite different from the traditional classroom that you may be used to, giving you the opportunity to begin to develop your own design sensibility as you work iteratively through the creative process.

The Value of Attending Pre-College

Pre-college is a good opportunity to test the fit of architecture with your career goals and expand upon your creative and technical skills, providing a solid head start if you decide to enter this field of study. Project work is partnered with a focus on documentation and techniques to communicate your ideas visually. We run workshops to assist you in photographing your work and creating a strong portfolio, which is an essential part of a student’s presentation package.
Coursework
The studio curriculum is designed to allow you to move freely between physical and virtual/augmented realities to investigate theoretical projects represented through image and model, and installation projects created at full-scale. Installations are produced collaboratively and will immerse you in on-hand-making, approaching the work in terms of material behavior, tectonic systems, and perceptual experience. These full-scale projects allow you to learn from physical engagement with the spaces you have designed; this experience and spirit of experimentation will inform and strengthen your individually created theoretical work. No prior design, drawing or computer experience is necessary; if your skills in these areas are more advanced, our faculty and program will challenge you to develop them further. The ratio in the design studio is 1:12. At the conclusion of the summer program, you will have a private consultation with your design professor and receive a written letter of evaluation regarding your progress and aptitude in all courses. You will also receive 9 units of elective credit at Carnegie Mellon should you later enroll in the School of Architecture as an undergraduate student.

Pre-College Art and Design Program

Overview
The Pre-College Art and Design program motivates, stimulates and prepares you as emerging artists and designers. Exploring traditional tools and new technologies in a variety of media leads you to develop conceptual and technical skills as well as your portfolio—all excellent preparation for applying to and succeeding in college-level art and design programs. Challenging courses, stimulating workshops, museum and gallery field trips, and energetic interaction with dedicated faculty and talented peers introduce you to the spirit and substance of an art and design school culture and environment.

Coursework
During the Pre-College Program, you will attend morning and afternoon classes, Monday through Friday. You'll work in our beautiful, spacious studios in the historic College of Fine Arts building and Margaret Morrison Carnegie Hall.

The Pre-College faculty at Carnegie Mellon are accomplished artists, designers and educators who share their expertise inside and outside the classroom. With small class sizes, you'll benefit from their individual attention, intense instruction and substantial constructive feedback. Instructors provide written evaluations of your work upon completion of the program. Your instructor to student ratio will be about 1:13, promoting opportunities for questions and discussion. Although the pre-college program has its own particular aspects, the underlying philosophy is similar to the first year of our regular undergraduate art and design curriculum. At the end of the program, each student meets with a faculty member to discuss his/her performance in the program, and to address questions regarding documentation and presentation of work and portfolio preparation. The program concludes with a celebratory note, inviting parents and friends to see the unique work produced over the course of the three-week or six-week session.

Studio Environment
Students work together in a large studio with individual workspaces. Sessions include individual instruction, in-class work sessions, critiques, lectures and field trips.

There is an array of events and opportunities to enhance and supplement studio work, including:
- Weekly figure drawing
- Visits to local galleries such as the Carnegie Museum of Art
- Visits to Pittsburgh based design firms
- Evening presentations by faculty on their own art and design work
- Exhibitions of Carnegie Mellon student work
- Portfolio preparation and critique sessions

Pre-College Drama Program

Overview
The Pre-College Drama Program gives students the chance to participate in a professional training program with three options: acting, music theatre and design/technical production. The program focuses on the exploration of a conservatory training program with emphasis on creativity, craft and discipline.

Coursework
The Pre-College Drama curriculum focuses on process rather than results. Nevertheless, the culmination of the program is an audition or portfolio review. These events are mandatory for all students whether or not they plan to apply to Carnegie Mellon for admission.

The audition/portfolio reviews take place during the last two days of the program. Acting and music theatre students will perform two contrasting, two-minute monologues. In addition, music theatre students will participate in dance and vocal auditions. Design/Production students will experience portfolio reviews and interviews with faculty.

Every student will receive an evaluation of his or her coursework along with advice for future development in the profession.

Pre-College Music Program

Overview
Instruction is challenging, creativity is expected and the responsibility of making music and training musicians is taken very seriously. At Carnegie Mellon, we are proud of our history in which tradition and technology coexist. The School of Music has graduated superb musicians who are known worldwide as performers, composers, conductors and educators.

The Program
The Pre-College Music Program offers a unique view of the life of a music student at Carnegie Mellon in a supportive environment of study and performance. It is an ideal opportunity to experience a world-class conservatory program and discover your potential for a career in music. Coupled with the rich cultural life of the city of Pittsburgh and varied campus activities, the Pre-College Music Program is an extraordinary way for young musicians to spend their summer.

The Pre-College Music Program will give you the opportunity to see what college is like. This is not high school and it is not camp. You get to live on campus, take classes with conservatory professors, play, rehearse, perform and enjoy the freedom of college life in a safe environment.

National High School Game Academy

Overview
The National High School Game Academy (NHSGA) explores the video game industry and the skills needed to be successful in it. The program includes an exciting blend of hands-on exercises combined with traditional lecture and discussion. Students are encouraged to expand their own creative possibilities in a unique blend of left- and right-brain college-level work.

Inspired by the Carnegie Mellon graduate program, Entertainment Technology, the NHSGA is structured to give students a taste of the current state of video game development and provide guidance toward embarking on their own career in the video game industry.

Video games are now a major force in the world of popular entertainment. Video game sales, in the U.S., have outgrown the film industries annual box office sales. Plus, this industry is still growing with the emergence of casual gaming, online gaming and serious gaming, so companies are continually looking for passionate, creative and talented individuals.

The program encourages all students to apply. No particular technical or artistic skills are needed. Regardless of your background, if you are interested in exploring the world of video game development, the National High School Game Academy is the program for you.

While creating a real college-level environment, students are encouraged to explore their interests, expand their technical knowledge and develop their interpersonal skills. They will learn about job opportunities in the industry and what is needed to be competitive in this job market. There is a misconception that if one is good at playing video games then they will be good at creating video games. Students in this program will discover just how much hard work and talent is needed to be successful.

Coursework
The six-week program consists of daily lectures on various topics concerning video game development and the industry itself, followed by four-hour studio sessions in the afternoon where various specific skills classes and workshops are held. All of these courses will be hosted at the Entertainment
Technology Center which is located just off main campus. Students will be bussed the short distance to and from the main campus every day.

Upon applying for the National High School Game Academy, students will need to declare an Art Focus or a Programming Focus. While all students will take classes in all three areas of art, programming and game design, their declared focus will dictate the length of time they spend in each area. On the first day of class, each of these two focus areas will then be split into three additional groups (Beginner, Intermediate and Advanced) in order to aid us in providing a challenging level of study for all students. If a student is a beginner, or unsure of which focus to take, or is an accomplished programmer already then it is suggested that they choose the Art Focus so that they can explore a new area of study at the NHSGA.

While the emphasis of the National High School Game Academy is to acquaint the student with the process of video game development, that effort is focused through the building of playable game demos and game assets. Students will develop a portfolio of their completed work and will present them for play testing and critique. Parents are again encouraged to attend this final afternoon session and see firsthand what has been accomplished.

At the end of the program, every student will receive an evaluation of his or her coursework along with advice for future development in college studies that would help him or her best prepare for this profession.

Further Information

Requests for applications and further information should be addressed to:

Pre-College Programs
Office of Admission
Carnegie Mellon University
5000 Forbes Avenue
Pittsburgh, PA 15213-3890
(412) 268-2082
FAX: (412) 268-7838
Division of Enrollment Services

Lisa Krieg, Director of Enrollment Services / Director of Risk Initiatives / Associate Vice President for Campus Affairs
Office: Warner Hall A19
http://www.cmu.edu/hub

The Division of Enrollment Services includes six administrative departments: The HUB, University Registrar’s Office, Student Financial Aid, Student Accounts Office, Summer Studies, and Campus Affairs Systems. The division leads and delivers integrated administrative services that support students’ academic goals from enrollment through graduation. At the same time, the staff strives to champion collaborative administrative services and counsel for all CMU campuses and programs in alignment with the university’s strengths in technology and effectiveness.

2014–2015 Cost of Attendance

The budgets depicted below reference a typical Resident, Commuter or Off-Campus Student. The university reserves the right to change its charges without notice.

The academic year tuition charges are for all full-time undergraduate students. A full-time student is one registered in a degree program and carrying a schedule of at least 36 units per semester. A student enrolled for less than 36 units per semester will be charged tuition on a per-unit basis.

Note: All incoming freshmen are required to live on campus. Permission to live off-campus must be granted by Student Affairs.

Footnotes:

1. The commuter dining amount is based upon 14 meals per two weeks.
2. Off-Campus room rate is resident room minus $500 and off-campus board is resident board minus $310. Non-freshmen resident board is freshmen resident board minus $310.
3. These expenses will not appear on your Student Account Invoice. Design/Architecture/Art Students: No additional add-on for books.
4. Transportation for resident and off-campus students varies based on home state.

Health Insurance

In addition, minimal health insurance coverage is required at an estimated cost of $1,144/year, unless a waiver is granted because you are covered under your family’s health plan. Enhanced health insurance coverage is suggested for international students at an estimated cost of $2,500/year. Complete information about the university’s Health Insurance Policy and options, as well as the waiver requirements, is available at http://www.cmu.edu/health-services/student-insurance/.

The HUB

Brian Fernandes, Associate Director of Enrollment Services
Office: Warner Hall A12, 5000 Forbes Avenue, Pittsburgh, PA 15213-3890
Phone: (412) 268-8186
Fax: (412) 268-8084
E-mail: thehub@andrew.cmu.edu

The HUB staff delivers comprehensive service and counsel to students and families regarding financial aid, billing and payment, registration, academic records, and ID Card services. In direct support of student enrollment and persistence, The HUB offers students and families highly integrated information through personal attention and technologically responsive tools in a professional, forward-thinking, and accessible environment.

The Assistant Directors in The HUB serve as contacts for specific colleges and assist enrolled students with key aspects of the enrollment process – financial aid, billing and registration. Contact information for assigned HUB Assistant Directors can be found on The HUB website (http://www.cmu.edu/hub/hours.html). Assistant Directors can be contacted for specialized enrollment questions.

For general questions and information, please e-mail thehub@andrew.cmu.edu or call (412) 268-8186 during regular office hours.
hours: Monday, Wednesday, and Friday between 8:30 a.m. and 4:30 p.m. or Tuesday and Thursday between 10:30 a.m. and 4:30 p.m.

ID Card Services
Office: The HUB, Warner Hall, 5000 Forbes Avenue Pittsburgh, PA 15213-3890
Phone: (412) 268-5224
Fax: (412) 268-8084
E-mail: idplus@andrew.cmu.edu

One of the most important items you will need at Carnegie Mellon is your official identification card. Your ID Card identifies you as a member of the Carnegie Mellon community. Your ID Card will be part of your everyday life on campus and is used to access the following:

- University Housing Residence Halls
- Computing Services & Computer Clusters/Labs
- University Libraries
- Local Port Authority Transit (bus, incline, etc.)
- Dining Services Meal Plans
- Computer Stores
- University Center Retail Shops
- Athletic Facilities

For a full list of services that can be accessed using the ID Card, visit www.cmu.edu/idplus/services.

Plaid Cash
One beneficial feature of your ID Card is Plaid Cash. Plaid Cash is a prepaid, stored-value/debit account that is accessible via your ID Card. It is a convenient, cashless way to pay on and off campus. You can use Plaid Cash for textbooks, school supplies and laundry tokens. Many of the area’s most popular businesses accept Plaid Cash; it can be used to pay for restaurant meals, take-out, delivery and more. View a list of participating businesses at www.cmu.edu/idplus/plaidcash/locations.html.

Student Advantage
A four-year Student Advantage membership can be added to your ID Card. With Student Advantage, you can receive discounts of up to 50% off at more than 20,000 locations nationwide. Learn how to add Student Advantage at www.cmu.edu/idplus/advantage.

University Registrar's Office
John Papinchak, University Registrar
Fax: (412) 268-6651
E-mail: university-registrars-office@andrew.cmu.edu

The University Registrar’s Office (URO) performs the essential roles of administering the collection and maintenance of student records, ensuring their accuracy and integrity, and enforcing academic policies while providing the best possible services. The University Registrar’s Office aspires to provide exceptional, environmentally-conscious services, while anticipating and meeting growing customer requirements with innovative processes, training and self-service applications. The office strives to foster and promote an environment of professional development and appreciation.

The University Registrar’s Office produces a complete calendar of important dates and deadlines for the academic year, which can be found on The HUB website (http://www.cmu.edu).

Undergraduate Enrollment
Enrollment is the process whereby eligible students notify Enrollment Services that they will be attending the university by registering for courses and settling their student accounts. Enrollment must be completed before students may begin classes and before they may utilize university facilities.

Complete information about the enrollment process, as well as registration and payment deadlines, are listed on the Official Academic Calendar, located on The HUB website (http://www.cmu.edu).

Registration
Registration is the process of selecting courses for the upcoming semester and discussing those selections with an academic advisor. We strongly encourage you to meet with your academic advisor before you finalize your selections and register for courses using Student Information Online (SIO) (https://s3.as.cmu.edu/sio/#schedule-registration).

For most entering freshmen, registration is accomplished during the summer, with the assistance of Associate Deans and department heads. Academic placement and elective choice information is collected by mail questionnaires during June and July. Most freshmen receive their schedules and enrollment information prior to the first day of classes.

Currently enrolled students select their courses for the upcoming semester during Registration Week, prior to the end of each semester. The Schedule of Classes is available online prior to Registration Week, listing available courses along with general enrollment information. The university reserves the right to make changes to hours, units or instructional staff when such changes seem necessary or advisable. A link to the online Schedule of Classes is provided on The HUB website (http://www.cmu.edu). Although faculty advisors are provided, it is the responsibility of students to have clearly in mind what they intend to do, what elective courses they wish to pursue and what irregularities exist which may affect their present schedule.

Students are not permitted to register in courses for which the prerequisites have not been satisfied. Exceptions to the rule may be granted only upon the recommendation of the teaching department concerned. Unless the prerequisites are satisfied or special approval is obtained when the student enters the course, no credit can be allowed for the course.

PCHE Cross-Registration
Cross-College and University Registration Guidelines - PCHE (Pittsburgh Council on Higher Education)

Cross-registration provides opportunities for enriched educational programs by permitting full-time paying undergraduate and graduate students to cross register for one course at a Pittsburgh Council on Higher Education (PCHE) Institution. Students who are paying full-time Carnegie Mellon tuition (per the requirements of their home college) are eligible. The PCHE course may not count towards full-time status. There is no additional tuition charge, except for special course or laboratory fees. Carnegie Mellon students do not acquire status at the Host Institution, but are given library and bookstore privileges. Credit and grades are transferred directly to the home institution. Cross-registration is not applicable during the Summer Session(s) or during intersessions.

For more information, visit http://www.cmu.edu/hub/registration/undergraduates/cross/.

Faculty Course Evaluations (FCEs)

Students play an integral role in the academic life of the university when they participate in the evaluation of the faculty through the Faculty Course Evaluation process. FCE data is important in the evaluation of teaching and learning, as an important piece of the promotion and tenure process and as part of the process of course design and improvement. Student participation in the FCE process is critical to the university’s commitment to quality teaching and academic excellence. Students are strongly encouraged to participate in the process with constructive feedback that is relevant to teaching and course content. More information on the University Course Assessment process and results from previous years can be found at the FCE website (http://www.cmu.edu/hub/fce).

Student Financial Aid
Linda Anderson, Director of Student Financial Aid
http://www.cmu.edu/faid/

In alignment with the university’s enrollment goals, Student Financial Aid consistently optimizes the utilization of all financial aid resources in order to recruit and retain a high quality and diverse student population. Student Financial Aid strives to deliver superior services that exceed the expectations of students, parents, and internal and external constituencies. Student Financial Aid identifies, creates and delivers strategies that facilitate the integration of financial aid policies. These policies align with current and future university recruitment, retention and enrollment priorities.

How Aid Works
Our financial aid program is need-based, meaning that all aid eligibility is determined by a student’s family’s financial circumstances. While a student and his/her family have the primary responsibility for paying for college, financial aid can bridge the gap between the total costs and the family’s ability to pay.

We use a standard method to carefully review a family’s financial circumstances and establish an expected contribution from the student and family. If we determine that the family cannot meet the student budget
Types of Financial Assistance Available

There are several types of financial aid available to students, such as the following:

- Federal and Private Loans
- University Scholarships
- Outside Scholarships
- Federal and State Grants
- Student Employment

A full listing of these, as well as more information on each type, is available at http://www.cmu.edu/financialaid/undergraduate/types.html.

Carnegie Scholarship

Carnegie Mellon offers a Carnegie Scholarship to incoming freshmen. Carnegie Scholarships are awarded to academically and artistically talented middle income students who qualify for little to no need-based financial aid. Carnegie Scholarships are open to all qualified U.S. citizens and permanent residents, regardless of race or national origin. Students must apply for need-based financial aid to be considered.

Students must submit the 2014-2015 FAFSA in order to be considered for Carnegie Scholarships. Besides the FAFSA, if awarded a Carnegie Scholarship, students must complete the CSS PROFILE and submit all required tax documents before the scholarship will be credited toward the student’s account. Scholarship winners will be notified in their notification of financial aid.

The Carnegie Scholarship is renewable for 8 semesters of undergraduate education (ten semesters for Architecture students), if satisfactory academic performance is maintained and you are assessed Carnegie Mellon tuition. The scholarship is only awarded to incoming freshmen during the admission process and renewed annually if the student meets the cumulative 2.0 QPA requirement.

Students with a parent who is an Carnegie Mellon employee who qualifies for tuition remission are not eligible for a Carnegie Scholarship.

Satisfactory Academic Progress

The Department of Education requires recipients of Federal Title IV Financial Assistance to meet academic progress standards each year. Federal Title IV Financial Assistance includes the Federal Pell Grant, Federal Supplemental Educational Opportunity Grant, Federal Perkins Loan, Federal Work-Study, Federal Direct Student Loan and Federal Direct PLUS Loan Programs. Each university determines its own policy regarding sufficient progress standards. Federal academic progress standards must include two elements: cumulative QPA and cumulative units. At Carnegie Mellon, we define this as follows: first-year freshman students must pass 80 percent of all cumulative units attempted at Carnegie Mellon and have a 1.75 cumulative QPA after the first year, all other students (excluding graduate students in the Tepper School of Business and Heinz) must pass 80 percent of all cumulative units attempted at Carnegie Mellon and have a 2.00 cumulative QPA.

Carnegie Mellon has established a maximum time-frame of twelve (12) semesters for students to finish a program and receive financial aid.

Outside Scholarships

If you receive outside scholarships, they will be used to meet your unmet financial need and where applicable, offset/reduce loans and workstudy.

Institutional grants and scholarships will not be reduced due to the receipt of outside scholarships unless one of the following conditions occur:
1. If you receive federal grants or loans, these funds, in combination with any outside scholarships, cannot exceed your financial need.
2. All outside scholarships, in combination with all aid received, cannot exceed your cost of attendance.

Outside scholarships are not from federal, state or institutional (school) sources, such as a Federal Pell Grant or FSEOG. Examples of outside scholarships are: Coca Cola, Rotary scholarships, etc.

Students Pursuing a Second Bachelor’s Degree

If you are enrolling in a second bachelor’s degree program, you are not eligible for grants/scholarships. However, you may be eligible to receive funds from student loan and student employment programs. Eligibility for student loan funds is contingent upon the student’s prior loan indebtedness.

Study Abroad

There are three ways to pay for study abroad at Carnegie Mellon: exchange programs (departmental or university-wide), sponsored study abroad, and external programs. For more detailed information, visit the Office of International Education website (http://www.studentaffairs.cmu.edu/oie).

Undergraduate Tuition Exchange Programs

Carnegie Mellon University assesses the standard tuition charge for the undergraduate tuition exchange programs.

Since Carnegie Mellon assesses the tuition charge, the student can be considered for all forms of institutional, state, and federal aid for which the student may have eligibility with the exception of any student employment program.

Undergraduate Study Abroad Programs

Carnegie Mellon University does not assess the tuition charge for undergraduate Study Abroad Programs.

Since Carnegie Mellon does not assess the tuition charge, the student is not considered for any institutional grants and scholarships. However, Carnegie Mellon will consider any student participating in an approved Study Abroad Program for all state and federal student aid programs for which the student may have eligibility with the exception of any student employment program.

The U.S. Department of Education and Carnegie Mellon University define an approved Study Abroad Program as one which is part of a contractual agreement between Carnegie Mellon and the host institution. Additionally, courses taken in the Study Abroad Program must be accepted for transfer to Carnegie Mellon by the Dean of the student’s college.

Undergraduate Sponsored Study Abroad Programs

Carnegie Mellon assesses full tuition charges and all applicable fees to students participating in an undergraduate sponsored study abroad program.

Undergraduate International Students

Documentation Eligibility (U.S. Citizenship or Eligible Noncitizen)

You must be a U.S. Citizen or Eligible Noncitizen to receive federal student aid. If you are a U.S. Citizen, but were not born in the United States, please send us documentation of your citizenship (e.g., a copy of your passport or naturalization certificate). If you are an Eligible Noncitizen or refugee, send us verification. Acceptible forms of verification include a photocopy of both sides of your I-551 or I-551C card.

Undergraduate international students are ineligible to receive any federal or state student financial aid. Additionally, Carnegie Mellon does not award any institutional financial aid funds to undergraduate international students.

Student Accounts Office

Brian Hill, Director of Student Accounts
E-mail: student-accounts@andrew.cmu.edu

The Student Accounts Office serves the university’s various academic and administrative departments by processing and invoicing all student-related financial activity and managing the corresponding student financial obligations resulting from this activity. The office strives to serve students by accurately reflecting and communicating these financial obligations, providing timely and consistent responses to inquiries, and instilling financial responsibility and accountability with clear and concise guidance.

Billing Information

University Charges

All charges incurred at the university are reflected on your student account. Charges include tuition and fees and may include housing, dining, sorority or fraternity charges, health insurance, Plaid Cash, DineXtra and any miscellaneous charges incurred. Miscellaneous charges may include, but are not limited to, music lessons, library fines, parking fines, or emergency loans.
Student Account Invoices (E-Bills)

Student account invoices (E-Bills) are produced on the last day of each month. Invoices detail all transactions processed in the month, as well as any charges due in the future. Students receive an e-mail notification from the Student Accounts Office when a new E-Bill is ready for viewing on Student Information Online. Payments for amounts due from a monthly E-Bill must be received by the 15th of the next calendar month.

All student account invoices are available to view, print, or download through Student Information Online (SIO). Students can log onto Student Information Online (https://s3.as.cmu.edu/sio/#home) with their Andrew ID and password.

Billing Authorizations

Since paper student account invoices are not produced and mailed, students can authorize Carnegie Mellon to send a copy of their E-Bill to another individual (parent, spouse, etc.) or other individual bill payer’s e-mail address. After completing the authorization process, designated recipients will receive an e-mail with a PDF attachment of the E-Bill and any related billing messages.

More information can be found at http://www.cmu.edu/hub/ebill-mps-instructions

Student Account Interest Charges

Any amounts not paid by the stated due date are subject to a 1.5% interest charge each month until the balance is paid in full.

Tuition Assessment

The tuition charged to each student will be automatically adjusted on the 10th regularly scheduled class day (refer to the specific date noted in the Official University Calendar (http://www.cmu.edu/hub/calendar.html) as the “last day to add courses”) based upon each student’s schedule at that time. The tuition charged will be increased whenever the number of units added justifies tuition charges greater than those paid by the student at the time of fee settlement. After that time, no tuition adjustments will be made, with the exception of second minis for that particular semester.

For additional information, see University Policies (p. 43).

Payment Options

Carnegie Mellon University is pleased to offer a wide variety of payment options to students and their families. A full listing of these, as well as more information on each type, is available at http://www.cmu.edu/hub/billing/payment/index.html.

Refunding

Refunds

If a student account has a negative balance resulting from an overpayment, financial aid, or a reduction of charges, the Student Accounts Office will review the account and issue a refund. If you have a negative balance and do not want a refund to be generated, please contact The HUB so they can update your account.

Electronic Refunds

The Student Accounts Office encourages all students to authorize electronic deposit of their student account refunds directly into their U.S. checking or savings accounts. Taking advantage of this opportunity eliminates the need to stand in line at The HUB to pick up a refund check and makes the funds available to the student within two business days. To enroll, students simply need to add a bank account on Student Information Online (https://s3.as.cmu.edu/sio).

Paper Checks

If you have not signed up to receive electronic refunds, your refund will be generated as a paper check that must be picked up in The HUB. Students who are issued a paper check for a student account refund have six months to cash the check. If the check is not cashed within six months, it will be voided and credited back to the student account and applied to any outstanding charges.
University Policies

http://www.cmu.edu/policies

Policy on Cheating and Plagiarism

Students at Carnegie Mellon are engaged in preparation for professional activity of the highest standards. Each profession constrains its members with both ethical responsibilities and disciplinary limits. To assure the validity of the learning experience a university establishes clear standards for student work.

In any presentation, creative, artistic, or research, it is the ethical responsibility of each student to identify the conceptual sources of the work submitted. Failure to do so is dishonest and is the basis for a charge of cheating or plagiarism, which is subject to disciplinary action.

Cheating includes but is not necessarily limited to:

1. Plagiarism, explained below.
2. Submission of work that is not the student's own for papers, assignments or exams.
3. Submission or use of falsified data.
4. Theft or unauthorized access to an exam.
5. Use of an alternate, stand-in or proxy during an examination.
6. Use of unauthorized material including textbooks, notes or computer programs in the preparation of an assignment or during an examination.
7. Supplying or communicating in any way unauthorized information to another student for the preparation of an assignment or during an examination.
8. Collaboration in the preparation of an assignment. Unless specifically permitted or required by the instructor, collaboration will usually be viewed by the university as cheating. Each student, therefore, is responsible for understanding the policies of the department offering any course as they refer to the amount of help and collaboration permitted in preparation of assignments.
9. Submission of the same work for credit in two courses without obtaining the permission of the instructors beforehand.

Plagiarism includes, but is not limited to, failure to indicate the source with quotation marks or footnotes where appropriate. Plagiarism includes, but is not necessarily limited to:

1. A phrase, written or musical.
2. A graphic element.
3. A proof.
4. Specific language.
5. An idea derived from the work, published or unpublished, of another person.

Computing and Information Resources Code of Ethics

The ethical principles which apply to everyday community life also apply to computing. Every member of Carnegie Mellon has two basic rights: privacy and a fair share of resources. It is unethical for any other person to violate these rights.

Privacy

- On shared computer systems every user is assigned an ID. Nobody else should use an ID without explicit permission from the owner.
- All files belong to somebody. They should be assumed to be private and confidential unless the owner has explicitly made them available to others.
- Messages sent to other users should always identify the sender.
- Network traffic should be considered private.
- Obscenities should not be sent by computer.
- Records relating to the use of computing and information resources are confidential.

Resources

- Nobody should deliberately attempt to degrade or disrupt system performance or to interfere with the work of others.
- Loopholes in computer systems or knowledge of a special password should not be used to alter computer systems, obtain extra resources, or take resources from another person.
- Computing equipment owned by departments or individuals should be used only with the owner's permission.
- University resources are provided for university purposes. Any use of computing for commercial purposes or personal financial gain must be authorized in advance. Many of the agreements that the university has specifically forbid this activity.
- Computing and information resources are community resources. Theft, mutilation, and abuse of these resources violate the nature and spirit of community and intellectual inquiry.

System Administration

- On rare occasions, computing staff may access others' files, but only when strictly necessary for the maintenance of a system.
- If a loophole is found in the security of any computer system, it should be reported to the system administrator and not used for personal gain or to disrupt the work of others.
- The distribution of programs and databases is controlled by the laws of copyright, licensing agreements, and trade secret laws. These must be observed.

This code of ethics lays down general guidelines for the use of computing and information resources. Failure to observe the code may lead to disciplinary action. Offenses that involve academic dishonesty will be considered particularly serious.

Policies on Examinations

Preamble

The Faculty Senate adopted the following policies on the administration of examinations for the undergraduate courses (defined as courses that are numbered 6xx or below). These policies represent an understanding between faculty and student concerning an important but often stressful period, especially at the conclusion of each academic semester and at mid-semester. There should be no expectation that the following points will cover every conceivable situation. The student should anticipate the demands of the exam schedule, plan accordingly and early, and be prepared. The faculty should recognize that the student is encumbered with many tightly orchestrated and intensive obligations during this period over which he or she has no control: expectations should be reasonably consistent with the number of course units and, of course, should be made known to the student well in advance of the final examination period, preferably as part of the course syllabus.

In order to help students plan their time and study optimally for examinations, this document lays out in some detail the policies regarding final and in-term examinations. Instructors are requested to provide notification of the major in-term examinations in the course syllabus. The final examination date is posted early in the semester. It is the responsibility of the student to give his or her instructor sufficient notice and to work with the instructor to reschedule examinations if this is needed.

Definitions

- Final examination period. The university's official final examination period begins on the Monday immediately following the last day of classes and continues through the last day of scheduled final examinations, with the exception of reading day(s).
- Scheduled final examinations. Scheduled final examinations are those scheduled by Enrollment Services.
- Self-scheduled examinations. An instructor may choose not to fix a schedule for the final examination, but instead allow each student to choose the examination time; such exams are called self-scheduled examinations.
- Final examinations. Final examinations can either be comprehensive, covering all course materials, or non-comprehensive, covering only a part of the course.
- In-term examinations. Major examinations during the semester are referred to here as in-term examinations.

I. In-Term Examinations

1. All in-term examinations should be given during the regularly scheduled class time. However, if the exam requires additional time to complete,
then examinations may be administered outside of regularly scheduled class time.

2. No examinations given outside of class time (excluding make-ups and self-scheduled examinations) shall be administered on a Friday after 4:30 pm, or at any time Saturday or Sunday.

3. The instructor administering an exam (or another required class event) that falls outside class time must make every reasonable accommodation to provide an alternative time to students who have conflicts with the proposed time period, including those conflicts due to activities, meetings, other classes, etc. (provided that the instructor is notified of such conflict in a timely manner).

4. No student shall be required to take more than two final examinations during the final examination period on the same day. It is the responsibility of the student to notify the instructor in a timely manner of his/her circumstance so that appropriate accommodations can be made.

II. Final Examinations

1. All scheduled final examinations are held at the end of the semester during the university's official final examination period. Comprehensive final examinations are not required for each course, but are given at the option of the department or instructor. The reading day and weekend preceding the examination days shall never be used for final examination purposes of any kind, unless a student opts to take a self-scheduled examination during this time. Non-comprehensive final examinations or final projects (but not both) are allowed during this final examination period only in courses that do not give a final comprehensive examination.

2. Instructors are expected to return all work assigned no later than the last regular day of classes in courses for which there is a final examination. In cases when this is not possible, an answer key, solution sets or equivalent feedback should be provided unless the final examination will not cover material in work that has not been returned.

3. No other coursework, including laboratory or studio work, will be due during the final examination period unless it is assigned in advance and in lieu of the course's final examination. Regardless of whether there is a final examination in the course, no classes other than review sessions shall be held during the final examination period. Review sessions should be scheduled for optimal attendance, and a serious effort should be made to accommodate students who cannot attend. In appreciation of the time required to prepare for final examinations, no other examinations, portfolio reviews, critiques or juries shall be scheduled for the last class day of a course with a final examination.

4. Instructors shall never exert or submit to pressures to move an examination so that people can leave earlier nor pressure students to take an examination on a reading day or weekend preceding examinations.

5. No student is required to take more than two scheduled examinations that start within a 25-hour period. A student who has more than two examinations scheduled within a 25-hour period or has two examinations scheduled at the same time should first contact the instructors of the courses for assistance in resolving conflicts. If the problem cannot be resolved by that means, the student should contact the associate dean of his or her home college.

6. Take-home final examinations shall be given for any 24-hour period of the student's choosing during the final examination period.

7. Students are expected to present themselves at the place assigned at the start of the examination; late arrival will reduce the total time a student has to complete the examination, unless the instructor's course policy indicates otherwise. Instructors reserve the right to require attendance within a specific time period. Students who miss an examination with a reasonable excuse and wish to petition for a make-up final examination should report to the student's college office. If it is determined that taking the test at a different time or date would not be feasible, instructors are encouraged to include late arrival policy and make-up exam policy in the course syllabus.

8. Any student shall be permitted to review his or her corrected, graded final examination in the presence of an instructor or a teaching assistant. Any controversy arising from this review shall be dealt with in accordance with the university procedure for the appeal of grades and academic actions. A final examination that is not returned to a student will be kept available for a year for review. In the event that the instructor or teaching assistant is not available for the review, the responsibility shall rest with the department head of the instructor offering the course or his or her designee. Since instructors are expected to return all work assigned before the final examinations, they may not be able to hold a make-up examination for students who are not responsible for unclaimed coursework.

9. Concerns related to final examination, complaints about violations of the final examination policy or alterations of the final examination schedule should be directed to the department head of the instructor offering the course or to the associate dean of the student's home college.

Final Examination Conflict Guidelines

Recognizing that students will, on occasion, encounter foreseeable or unforeseeable conflicts with scheduled final examinations, the following guidelines have been approved by the University Education Council (UEC), the Associate Deans’ Council (ADC), and the Associate Deans for Graduate Programs (ADGP) to inform the actions of students and the decisions of instructors.

Forseeable Conflicts:

Before negotiating any exam conflicts, students should recognize the following expectations. Students should carefully consider the dates of each semester’s final exam period as reflected in the university's official academic calendar. Until the university publishes the detailed final examination schedule (usually by early October in the Fall semester and by late February in the Spring semester), students should plan according to the assumption that their final exams could be scheduled for any day/time during the final exam period. Therefore, students should avoid making any personal arrangements (such as travel) that could ultimately conflict with the final exam period.

In developing the final examination schedule, the University Registrar’s Office deploys significant effort in consultation with associate deans to minimize direct and 24-hour conflicts for individual students. Once the final exam schedule is published for the semester, each student should immediately review the schedule to determine whether there are conflicts. If the student’s schedule presents any final exams that directly conflict with each other, or if the student’s schedule presents more than two final exams to begin in a twenty-five hour period, then the student is responsible for immediately initiating the following process so that the relevant instructors can reach a timely and effective resolution that is consistent with university policy (noting that no action is necessary if a student voluntarily elects to take the exams according to the published schedule):

1. The student should begin by discussing the conflict with all relevant instructors to determine if they can suggest a resolution. This discussion should be completed at least two weeks prior to the exams.

2. If one of the course instructors offers an alternate time for the exam, the student must agree to that resolution unless another exam conflict(s) with the alternate proposed time.

3. If a resolution cannot be found, the following hierarchy is recommended for compromise (Student’s Home Department> Student’s College> Smallest Course Size> Higher Course level):

   - If one of the courses is offered in the student’s home department, the home department should be the first to accommodate.
   - If the course is offered within the student’s home college, then the student’s college should accommodate a course that is not within the student’s college.
   - An instructor teaching a smaller course size should accommodate before an instructor from a larger course size accommodates.
   - If a conflict still has not been reached, an instructor teaching a higher course level should accommodate before an instructor from a lower course level accommodates.

At any point during this process, the student’s academic advisor or academic associate dean from the home academic college may be consulted to verify the existence of the conflict and assist in the negotiation and resolution.

Other foreseeable conflicts may be personal in nature, such as a religious holy day or observance, or a singular, significant obligation. As stated earlier, students are expected to review the final exam schedule as soon as it is published to identify such conflicts. A student faced with such a conflict should first exhaust all reasonable means to otherwise resolve it. If such efforts are unsuccessful, then the student should immediately contact the instructors and explain the circumstances, recognizing that the current Policy on Examinations (http://www.cm.edu/policies/documents/Exams.htm) does not require the instructor to offer an alternate exam time in response to foreseeable, personal conflicts. The mutual respect and goodwill between instructor and student should guide their negotiation of such conflicts, they may attempt to balance the student’s needs with those of the academic enterprise. At any point in the process, the student’s academic advisor, academic associate dean and/or student affairs liaison may be consulted to assist in identifying reasonable accommodations or solutions.

Students hoping to resolve cases involving foreseeable conflicts should expect that their instructors may require them to take a rescheduled final

Unforeseeable Conflicts
In exceptional circumstances, a student may encounter a medical, personal or family emergency that unexpectedly interferes with his/her ability to participate in a scheduled final examination. When encountering such a situation, the student should contact the instructor as soon as is reasonably possible, and ideally before the final examination has been administered. The student’s academic advisor, academic associate dean and/or student affairs liaison may serve as both advocate for the student and point of verification for the instructor. After reviewing the matter, should an accommodation be granted by the instructor, the instructor may elect to institute one of several options, including: rescheduling the exam for later in the final examination period; assigning an “I” incomplete grade until a make-up exam can be administered in the following semester; or utilizing another method for resolving missed exams that has been outlined in the course syllabus.

Student Health Insurance Policy
Reason for Policy
The high cost of health care in the United States presents a potentially serious health and financial risk to students and their accompanying dependents. The absence of adequate insurance coverage can result in temporary or permanent interruption of a student’s education. The university is committed to offering student health insurance that provides access to quality health care and achieves a balance between premium cost and adequate coverage without overburdening students’ financial resources. This balance is best achieved through a mandatory/hard waiver insurance program that mitigates the effect of adverse selection.

Policy Statement General Requirements
All full-time students are required to carry health insurance and will be assessed a charge for the individual basic mandatory plan offered through the university student health insurance program. The charge will appear on the invoice of the first semester of attendance in the academic cycle. The student is required to take one of the following three actions:
1. Enroll in the basic plan as charged.
2. Upgrade the benefit plan by enrolling in the enhanced student health insurance options during the open enrollment period.
3. Apply for a waiver from the mandatory plan.

Requirements for Waiver
Application for a waiver from the university student health insurance plan must be made to Student Health Services by the last day of the open enrollment period. Students applying for waiver must provide documentation of continuing coverage verifying that they are enrolled as the dependent, partner/spouse or principal in an employer or government-sponsored insurance plan. Additionally, the plan must meet minimum standards for coverage as set forth below:
• It must offer at least 75% coverage for inpatient and outpatient medical services in the Pittsburgh area.
• It must include mental health benefits.
• The deductible must not exceed $500 per accident or illness.
• It must offer medical benefits of at least $50,000 per accident or illness.
• It must cover pre-existing conditions.

Contact
Questions should be directed to Student Health Services, (412) 268-2157.

Carnegie Mellon Freedom of Expression Policy
Freedom of Expression Policy
Carnegie Mellon University values the freedoms of speech, thought, expression and assembly - in themselves and as part of our core educational and intellectual mission. If individuals are to cherish freedom, they must experience it. The very concept of freedom assumes that people usually choose wisely from a range of available ideas and that the range and implications of ideas cannot be fully understood unless we hold vital our rights to know, to express, and to choose. The university must be a place where all ideas may be expressed freely and where no alternative is withhold from consideration. The only limits on these freedoms are those dictated by law and those necessary to protect the rights of other members of the University community and to ensure the normal functioning of the University.

Rights
On Carnegie Mellon’s Campus, anyone may distribute printed material, offer petitions for signature, make speeches, and hold protests or demonstrations outside university buildings. All such activities must be peaceful, avoiding acts or credible threats of violence and preserving the normal operation of the university. No event shall infringe upon the rights or privileges of anyone not in sympathy with it, and no one will be permitted to harm others, damage or deface property, block access to university buildings or disrupt classes. The enforcement of these conditions will not depend in any way on the message or sponsorship of the act or event. When guests are invited by a recognized campus organization, they may express their ideas not because they have a right to do so, but because members of the campus community have a right to hear, see, and experience diverse intellectual and creative inquiry. Defending that right is a fundamental obligation of the university. Controversy cannot be permitted to abridge the freedoms of speech, thought, expression or assembly. They are not matters of convenience, but of necessity.

Responsibilities
Freedom of expression must be at once fiercely guarded and genuinely embraced. Those who exercise it serve the Carnegie Mellon community by accepting the responsibilities attendant to free expression. University organizations that sponsor invited guests to campus are expected to uphold Carnegie Mellon's educational mission by planning carefully to create safe and thoughtful experiences for those involved. Hosts are responsible for the behavior of their guests and should exercise due care to ensure that all participants abide by relevant university policies.

Considerations for Planning Campus Events
Consistent with the rights and responsibilities outlined in the university’s policy on Freedom of Expression, university hosts must follow all applicable policies related to space reservation, use, safety and security, keeping in mind the responsibility to have campus police present for any event with 100 or more persons in attendance.

Hosts should consider the items below as guidance in planning campus events, recognizing that not all of the items will apply to all events:
1. A public declaration of the event, its purpose, the identification of sponsors and co-sponsors, and contact information for those seeking further information.
2. A plan for advertising the event, including advance notice to relevant members of the community who may wish to co-sponsor, protest, or host other events in response to the planned activity.
3. Where appropriate, a clear and detailed contract with outside speakers, artists, or suppliers of services to ensure continuity of purpose and the ability of the host to control the event reasonably, consistent with the host’s intent.
4. A plan for access to the event, including notifying the community of reserved seats, ticketing, queuing protocol, or other relevant details or restrictions well in advance of the activity.
5. A provision for security before, during, and after events, managed in coordination with the University Police. Specifically, non-university security personnel must have their allowable duties clearly delineated, in partnership with the University Police, with their role generally limited to personal security and not to space management.
6. A plan for participant engagement at the event, such as through a question and answer session, if relevant, with a clear delineation of the planned ground rules for the event set out well in advance.
7. A strategy for hosting of additional events, discussions, or town meetings before or after a principal event to help provide a context in which the principal event may be best experienced.

The Office of Student Activities and the Office of the Dean of Student Affairs may assist in, or directly coordinate, some aspects of campus events, such as fostering discussions preceding or following an event, or accommodating an opposing view at an alternative event. It is assumed that the spirit of community, both among people with groups with opposing views, as well as between event sponsors and the Student Activities and Student Affairs staffs, will foster communication and cooperation in the planning of campus events. Wherever possible, Student Affairs will work in concert with University Police to notify occupants of buildings in advance of any potential disruption caused by such events.
Security Personnel Statement
At times, members of the campus community or their invited guests may have a legitimate basis for being accompanied by independent security personnel. It is incumbent upon the host of such an individual to ensure that University Police approve in advance the presence and scope of involvement of any such security personnel.

Human Subjects in Research at Carnegie Mellon
The university is committed to the protection of the rights and welfare of human subjects in research investigations conducted under the jurisdiction of the university. The university believes that review independent of the investigator is necessary to safeguard the rights and welfare of human subjects of research investigations. All research involving human subjects is conducted in accordance with federal regulations, including Title 45 of the Code of Federal Regulations, Part 46 (45 CFR 46). Under federal regulations, human subjects are defined as: living individual(s) about whom an investigator conducting research obtains:

- data through intervention or interaction with the individual, or
- identifiable private information.

An Institutional Review Board (IRB) is established under the provost to ensure adequate safeguards. The provost is responsible for the composition of the IRB with respect to: (1) the qualifications of IRB members in terms of educational background and research or other relevant experience, and (2) broad representation of relevant university interests.

This IRB is responsible for reviewing investigational procedures involving human subjects prior to the initiation of the research procedure in reference to (1) the rights and welfare of the individuals involved, (2) the appropriateness of the methods used to obtain informed consent, and (3) the risks and potential benefits of the investigations. The IRB is responsible for determining when additional expertise is required for adequate review and for obtaining that additional expertise. The IRB is further responsible for maintaining records of its review activities and decisions and for ensuring that records of informed consent are developed and kept by investigators where appropriate.

It is the responsibility of investigators who plan to use human subjects in research to obtain written consent from the IRB prior to conducting an investigation involving human subjects. It is the investigator's further responsibility to take whatever steps are determined necessary for the protection of the subjects, and to meet the reporting requirements established by the IRB.

Student Immunization Policy
Reason for Policy
Vaccine-preventable diseases continue to occur on American campuses and pose a significant threat to the public health of the campus community. Outbreaks not only impose a significant cost to infected individuals in terms of mortality and morbidity but also can be costly to the university by disrupting university activities.

Policy Statement
The goal of the Student Health Services and the university is to provide adequate protection of the campus community against vaccine-preventable diseases by requiring students to be vaccinated against certain highly contagious diseases. This goal can best be achieved through a mandatory prematriculation immunization requirement. The following requirements are consistent with Pennsylvania State Law and with the recommendations of the American College Health Association, the Advisory Committee on Immunization Practices.

Requirements for All Full-Time Students
All entering full-time students born after 1956 must demonstrate proof of immunity against measles, mumps and rubella by either providing dates of inoculation of two doses of the measles vaccine and at least one dose of mumps and rubella or providing blood titers that demonstrate immunity to these infections or providing documentation from a physician of having had the infection.

Additional Requirements for Students Residing in University Housing
- All students residing in university housing must demonstrate immunity against Hepatitis B by either providing documentation of having initiated or completed the three dose vaccination series.
  - The student is expected to complete the series within six months of initiation of the series.
  - All students residing in university housing must provide documentation of having been vaccinated against meningococcal meningitis within three years prior to enrollment in the university.
  - All full-time international students must provide documentation of having had a PPD skin test to screen for tuberculosis within one year prior to enrollment in the university regardless of prior BCG inoculation. If the results of the skin test are positive, a chest x-ray is required.

Request for Waiver
- A student may request a waiver from any vaccination for medical reasons or if vaccination conflicts with personal or religious beliefs. Application for waiver is to be made in writing to Student Health Services prior to the first day of classes in his/her first semester of attendance at the university. In the case of an outbreak of a contagious disease on campus for which the student has not been immunized, the university reserves the right to ask the student to leave campus until the outbreak is over.
- A student may request a waiver from tuberculin skin testing if the student is from a country that has been identified by the Centers for Disease Control as having low prevalence of tuberculosis.

Penalty for Noncompliance
- If the student fails to comply with the immunization policy, the Student Health Services will notify Enrollment Services who will place a hold on the student's registration until the requirements are met and assess a fee of no more than $50 to the student's account.
- Additionally, if the student is a resident in university housing and fails to comply with the immunization requirements, he/she will be removed from housing.

Contact
Questions should be directed to Student Health Services, (412) 268-2157.

Related Policies and Procedures
The university complies with OSHA regulations regarding occupational exposure to blood-borne pathogens. Questions regarding these regulations should be directed to Environmental Health & Safety, (412) 268-8182.

Additional recommendations
A PPD skin test for tuberculosis is recommended for domestic students who have traveled to an area where tuberculosis is endemic. All students should have a booster dose of tetanus/diphtheria every ten years after completion of the primary series.

Intellectual Property Policy
1. Purpose
The policy reflects the following goals:
- To create a university environment that encourages the generation of new knowledge by faculty, staff, and students.
- To facilitate wide transfer of useful inventions and writings to society.
- To motivate the development and dissemination of intellectual property by providing appropriate financial rewards to creators and the university, and administrative assistance to creators.
- To ensure that the financial return from the development of intellectual property does not distort decisions and operations of the university in a manner contrary to the mission of the university.

The policy is based upon the following principles relating to the university and society:
- The mission of the university remains the generation and dissemination of knowledge.
- Intellectual property will be generated within the university, and there must exist an obligation to disseminate it. An interface is needed if better technology transfer is to be achieved, and the university will provide mechanisms for that function.

The policy is based upon the following principles relating faculty, staff and students to the university:
• Intellectual property is created by individuals, or by groups of individuals, who are entitled to choose the course of disclosure; academic freedom of individuals is a higher priority than possible financial rewards.

• There exists a historical tradition allowing authors to retain ownership of intellectual property rights from textbooks and works of art.

• The university is the support of the whole campus community, and is thereby entitled to share in financial rewards.

• There should be incentives for all parties to pursue financial rewards together, consistent with the expressed goals of the policy. The distribution of these rewards should reflect, insofar as possible, the creative contributions of the creator, and the resources contributed by and risks assumed by both the creator and the university in developing intellectual property.

• Since it is frequently difficult to assess risks meaningfully, resources and potential rewards, negotiated agreements are to be encouraged whenever possible.

2. Definitions

Certain terms are used in this document with specific meanings, as defined in this section. These definitions do not necessarily conform to customary usage.

Intellectual Property includes any patentable invention, any copy-rightable subject matter, or trade secret. It also includes works of art, and inventions or creations that might normally be developed on a proprietary basis.

University means Carnegie Mellon.

Student means any full-time or part-time graduate or undergraduate student, regardless of whether the student receives financial aid from the university or from outside sources. It is the responsibility of students who are also employees of other outside entities to resolve any conflicts between this policy and provisions of agreements with their employers prior to beginning any undertaking at the university that will involve the development of intellectual property.

Faculty means members of the university’s Faculty Organization as defined in the Faculty Handbook, plus instructors and special faculty appointments (even in the first year), and part-time faculty.

Staff means any employee of the university other than students and faculty as defined above. If a student is also a part-time university employee, he is considered as staff with regard to intellectual property developed as a result of his employment, and as a student with regard to other intellectual property. A full-time non-faculty employee who is also taking one or more courses is considered to be staff. Visitors to the university who make substantial use of university resources are considered as staff with respect to any intellectual property arising from such use. (The distinction between faculty and staff does not affect intellectual property rights except for representation on the Intellectual Property Adjudication Committee [see Section 5].)

Creator means any person or persons who create an item of intellectual property.

Net proceeds to the university means all proceeds received by the university on intellectual property that it assigns, sells or licenses, minus any application, litigation, interference, or marketing costs directly attributable to the intellectual property being licensed. Deducted costs shall be reasonable and fair, and shall be properly disclosed; the sources and amounts of compensation shall also be properly disclosed.

Net proceeds to the creator means all proceeds received by the creator from intellectual property owned by him that he sells, assigns or licenses, less the costs of application, legal protection, or litigation, interference, travel and other marketing costs directly attributable to the intellectual property being exploited. Such net proceeds do not include compensation legitimately received by the creator for consulting services or interest or other return on invested labor or capital. Deducted costs shall be reasonable and fair, and shall be properly disclosed; the sources and amounts of compensation shall also be properly disclosed.

Substantial use of university facilities means extensive unreimbursed use of major university laboratory, studio or computational facilities, or human resources. The use of these facilities must be important to the creation of the intellectual property; merely incidental use of a facility does not constitute substantial use, nor does extensive use of a facility commonly available to all faculty or professional staff (such as libraries and offices), nor does extensive use of a specialized facility for routine tasks. Use will be considered “extensive” and facilities will be considered “major” if similar use of similar facilities would cost the creator more than $5000 (five thousand dollars) in constant 1984 dollars if purchased or leased in the public market. Creators wishing to directly reimburse the university for the use of its facilities must make arrangements to do so before the level of facilities usage for a particular intellectual property becomes substantial. (This provision is not intended to override any other department or university policy concerning reimbursement for facilities usage.)

In general:

In any given year the equivalent figure for a particular amount of money in constant 1984 dollars will be obtained by multiplying that amount of money by the ratio of the most recent quarterly Disposable Personal Income Deflator divided by the average monthly Disposable Personal Income Deflator for the year 1984.

As used in this policy, the masculine gender includes the feminine gender, singular or plural, wherever appropriate.

This section states the policies concerning ownership of intellectual property created at the university. In order of precedence, ownership of intellectual property shall be as follows:

3-1. Externally Sponsored Work

Ownership Provisions: Intellectual property created as a result of work conducted under an agreement between an external sponsor and the university that specifies the ownership of such intellectual property shall be owned as specified in said agreement. If the university declares itself to be a sponsor, but does not declare itself to be the owner of the intellectual property, ownership shall be determined in accordance with 3-6-4 below.

Procedural Provisions: It is the responsibility of the Office of Sponsored Research of the university to inform each person whose intellectual property rights are limited by an externally sponsored contract of the intellectual property provisions of that contract in advance of the beginning of work thereon. Such notice is to be in writing and the university may require written acknowledgment of such provisions by any person working on externally sponsored projects. A summary of external sponsorship agreements limiting the intellectual property rights of potential creators will be maintained by the Office of Sponsored Research and will be available to the general university community.

If the university fails to notify a creator, effectively and in advance, of limitations imposed on his intellectual property rights by external sponsorship agreements, the creator is entitled to receive from the university 50% (fifty percent) of the net proceeds to the university resulting from his intellectual property.

3-2. Internally Sponsored Work

Ownership Provisions: When the university provides funds or facilities for a particular project to the extent of substantial use, it may also choose to designate itself as sponsor of that work. The university may declare itself the owner of intellectual property resulting from such work. In such cases the university must specify in advance the disposition of any intellectual property rights arising from the project. If the university declares itself to be a sponsor, but does not declare itself the owner of the intellectual property, ownership shall be determined in accordance with 3-6-4 below.

Procedural Provisions: It is the responsibility of the Office of Sponsored Research of the university to inform each person whose intellectual property rights are limited by internally sponsored work of the intellectual property ownership rights specified by the university as to that work in advance of the beginning of work thereon. Such notice is to be in writing and the university may require written acknowledgment of such provisions by any person working on internally sponsored projects. A summary of work for which university sponsorship limits the intellectual property rights of potential creators will be maintained by the Office of Sponsored Research and will be available to the general university community.

If the university fails to notify a creator, effectively and in advance, of limitations imposed on his intellectual property rights by internal university sponsorship, the creator is entitled to receive from the university 50% (fifty percent) of the net proceeds to the university resulting from his intellectual property.

3-3. Individual Agreements

Ownership Provisions: Intellectual property which is the subject of a specific agreement between the university and the creator(s) thereof shall be owned as provided in said agreement. Such agreements by the university and the faculty are encouraged.

Procedural Provisions: Except where limited by external sponsorship agreements, creators and the university may negotiate individual agreements to govern ownership of intellectual property regardless of the applicability of any other provision hereof.
3-6. In General

Unless governed by sub-parts 3-1, 3-2, 3-3, 3-4 or 3-5 above, owner of intellectual property created at the university shall be determined as follows:

3-6-1. Traditional Rights Retained

Ownership Provisions: In keeping with academic traditions at the university, the creator retains all rights to the following types of intellectual property, without limitation: books (including textbooks), educational courseware, articles, non-fiction, novels, poems, musical works, dramatic works including any accompanying music, pantomimes and choreographic works, pictorial, graphic and sculptural works, motion pictures and other similar audio-visual works, and sound recordings, regardless of the level of use of university facilities. This provision does not include computer software (other than educational courseware) or data bases.

Procedural Provisions: The types of intellectual property listed in the preceding paragraph share the attribute that they display information or visual or auditory appearances which are fully revealed to the purchaser or consumer. Thus, for example, source code listings would also be considered within this category. On the other hand, most computer software and data bases do not share this attribute; they are characterized by their capacity to perform tasks. Because of their utilitarian nature, ownership rights with respect thereto are governed by 3-6-3 or 3-6-4. Educational courseware is included in this provision in all cases because of its role in furthering the primary educational mission of the university.

This provision applies regardless of any university sponsorship of the work, and it may be modified only by a specific prior agreement between the creator and the university. The use of university-owned computers and other facilities in the preparation of books and similar works does not alter this provision, though other university policies may limit such use or require reimbursement to the university. Similarly, the use of externally sponsored resources does not alter this provision, unless the creator is effectively notified in advance of such limitations to his rights in accordance with 3-1.

3-6-2. No Substantial Use of University Facilities

Facilities Ownership Provisions: The creator owns all intellectual property created without substantial use of university facilities, including intellectual property rights in computer software and data bases.

3-6-3. Substantial Use of University Facilities - No External or Internal Sponsorship

Ownership of intellectual property created with substantial use of university facilities, but not directly arising from externally sponsored work, or from work for which the university has declared itself as sponsor, shall be determined as set forth hereinafter depending on whether the creator or the university develops said property.

3-6-3-1. Development by Creator

Ownership Provisions: The creator originally owns intellectual property created with substantial use of university facilities but no external or internal sponsorship, and retains said ownership by commercial development of said property subject to the following:

(i) the university shall receive 15% (fifteen percent) of the net proceeds to the creator above $25,000 (twenty-five thousand dollars) in constant 1984 dollars from all sources (in the case of patents and copyrights, this provision shall be limited to the life of the patent or copyright), and

(ii) the university shall receive a perpetual, non-exclusive, non-transferable, royalty free license to use said intellectual property. In the case of software, this license includes access by specified university personnel to the source listings, and the university shall require each person to whom a disclosure is made to execute in advance a binding confidentiality agreement in favor of and enforceable by the creator. If the intellectual property is created solely by a student or students, the creator is exempt from the obligation to pay to the university a fraction of his net proceeds, but not from the provision of this paragraph for a non-exclusive license to the university.

Procedural Provisions: If the creator develops an intellectual property that is covered by this provision, he must make full and fair disclosure to the university of all such sources of compensation relating to that intellectual property.

3-6-3-2. Development by the University

Ownership Provisions: When intellectual property is created with substantial use of university facilities, but not directly arising from sponsored research, the creator will originally retain the rights to the property, provided that he desires to commercially develop the property himself or to make it available to the public. If, however, the creator elects not to commercially develop same or fails to show diligence in pursuing such development, then the ownership rights to that property may be acquired by the university.

Intellectual property acquired by the university in this fashion will be treated as in 3-6-4-1 below.

Procedural Provisions: At the time the intellectual property is disclosed to the university’s provost as required under Section 4-1, or at any time thereafter, the university may request that the creator decide whether he will develop the intellectual property or will grant the rights to the university, and execute documents to pass on the title. Such a decision must be made within one year of the request or the creator will automatically lose his rights in favor of the university.

3-6-4. Substantial Use of University Facilities - External or Internal Sponsorship

Ownership of intellectual property created with substantial use of university facilities and directly arising from work sponsored under an agreement between an external sponsor and the university, or from work for which the university has declared itself a sponsor, but for which neither the external sponsor nor the university have specified the ownership of resulting intellectual property shall be determined as set forth hereinafter depending on whether the creator or the university develops said property.

3-6-4-1. Development by University

Ownership Provisions: The university originally owns intellectual property created with substantial use of university facilities provided by an external or internal university sponsorship and retains said ownership by commercial development of said property, subject to the following: in all cases, the creator shall receive 50% (fifty percent) of the net proceeds to the university.

Procedural Provisions: When an intellectual property is created with substantial use of university resources provided by an external research contract or a specific university sponsorship agreement, and when that contract or agreement either does not specify the disposition of the intellectual property rights arising from that sponsorship, or it permits the university and/or creator to retain or acquire such intellectual property rights, the university will originally retain the rights to such intellectual property.
3-6-4-2. Development by Creator

Ownership Provisions: When intellectual property is created with substantial use of university facilities provided by external or internal sponsorship, the university will originally retain the rights to the property, provided that it does not subsequently develop the property or to make it available to the public. If, however, the university elects not to commercially develop same or fails to show diligence in such development, the ownership rights to that property may be acquired by the creator. Intellectual property acquired by the creator in this fashion will be treated as in 3-6-3-1 above. This assignment of rights to the creator may be prohibited by the terms of an external sponsorship agreement with the university or by an internal university sponsorship declaration, but in such cases the creator must be notified in advance, as in Provisions 3-1 and 3-2.

Procedural Provisions: At the time the intellectual property is disclosed to the university's provost as required by Section 4-1, or at any time thereafter, the creator may request that the university decide whether it will commercially develop the intellectual property or execute an assignment of the intellectual property rights to the creator. Such a decision must be made within 120 (one hundred twenty) days of the request or the university automatically waives its rights in favor of the creator, and it must execute an assignment of these rights to the creator.

3-6-5. Consulting Agreements

Ownership Provisions: Work done by individuals as consultants to outside firms is presumed not to involve unreimbursed substantial use of university facilities, and the rights to intellectual property created under consulting agreements are retained by the outside firms or the individual as specified by the terms of the consulting agreement and the terms of Provision 3-6-2 above.

Procedural Provisions: Under university policy consulting work must not make substantial unreimbursed use of university facilities except by explicit prior agreement. Any member of the university community who is engaged in consulting work or in business is responsible for ensuring that provisions in his agreements are not in conflict with this policy of the university or with the university’s commitments. The university’s Innovation Transfer Office will, upon request, provide assistance in this respect. The university's rights and the individual’s obligations to the university are in no way abrogated or limited by the terms of such agreements. Each creator of intellectual property should make his obligations to the university clear to those with whom he makes such agreements and should ensure that they are provided with a current statement of the university’s intellectual property policy. Appropriate sample contract wording to cover various possible external consulting arrangements shall be available from the university provost.

4. General Procedures

4-1. The creator of any intellectual property that is or might be owned by the university under this policy is required to make reasonably prompt written disclosure of the work to the university's provost, and to execute any document deemed necessary to perfect legal rights in the university and to enable the university to file patent applications and applications for copyright registration when appropriate. This disclosure to the provost should be made at the time when legal protection for the creation is contemplated, and it must be made before the intellectual property is sold, used for profit, or disclosed to the public. Whenever legal protection for intellectual property is anticipated all persons engaged in such creative activity are encouraged to keep regular notebooks and records.

4-2. Whenever the university undertakes commercial development it shall do so, if possible, in a fashion that provides for the widest possible dissemination, avoiding suppression of inventions from which the public might otherwise benefit, providing for non-exclusive licensing at reasonable royalties, and giving consideration to more favorable or royalty-free licensing to non-profit charitable institutions, minority businesses or enterprises in developing countries.

4-3. The university's share of any proceeds under this policy will be used to reimburse the university for its expenses for commercial development of intellectual property. Any additional return to the university will be used to further the academic purposes of all the disciplines of the entire university.

5. Resolution of Disputes

This policy constitutes an understanding which is binding on the university and on the faculty, staff, and students upon whom it is effective according to the terms of Section 6 below, as a condition for participating in research programs at the university or for the use of university funds or facilities.

Any question of interpretation or claim arising out of or relating to this policy, or dispute as to ownership rights of intellectual property under this policy, will be settled by the following procedure:

- The issue must first be submitted to the university's Intellectual Property Adjudication Committee in the form of a letter setting forth the grievance or issue to be resolved. The committee will review the matter and then advise the parties of its decision within 60 days of submission of the letter.
- If any of the parties to the dispute is not satisfied with the committee’s decision, the party may seek binding arbitration in Pittsburgh, Pennsylvania and in accordance with the Rules of the American Arbitration Association then in effect. Judgment upon the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof. The arbitrator(s) will give some weight to the decision of the Intellectual Property Adjudication Committee in reaching a decision. The losing party of the arbitration hearing will pay for all costs of the arbitration unless the arbitrator(s) specifies otherwise.

The Intellectual Property Adjudication Committee will consist of a chair who is a member of the tenured faculty, four other members of the faculty, and four other members representing, respectively, the university administration, the technical staff, and the graduate and undergraduate student bodies. Initially, half of the members of the committee (including the chair) will be appointed for two-year terms of office, and the remaining half will be appointed for one-year terms. After one year, new members of the committee will be appointed for two-year terms of office. The chair will be appointed by the chair of the Faculty Senate, with the advice and consent of the Faculty Senate Executive Committee, and the remaining eight members of the committee will be appointed by the president of the university or his designee. At all times at least one of the faculty members will have had significant practical experience with intellectual property development and exploitation. The faculty members appointed by the president of the university will be selected from a list of nominees prepared by the Faculty Senate or its designated committee and nominees with experience in intellectual property development will be identified as such by the Faculty Senate. The staff representative will be selected from a list of nominees prepared by Staff Council, and the administration representative will be named directly by the president of the university or his designee. The graduate student representative will be selected from a list of nominees prepared by the Graduate Student Organization. The undergraduate representative will be chosen from a list of nominees prepared by the Student Senate. The committee will use the guidelines set forth in this policy to decide upon a fair resolution of any dispute.

If possible, the committee will also provide on request informal advisory opinions to creators and the university indicating how it is likely to interpret the provisions of this policy as it applies to special cases.

6. Effective Date of Policy

This policy will become effective August 27, 1985. Once effective this policy will be binding on new faculty, administration, and staff when hired, and on graduate and undergraduate students when admitted. Current faculty and staff will also become bound by this policy when they sign new employment contracts in the result of the appointments or promotion. Other university personnel, including tenured faculty, and current staff and students may choose to become bound by this policy for future and pending intellectual property by voluntary written consent. Unless the creator and the university agree to a different arrangement, intellectual property that is already partially developed at the time this policy becomes effective will be treated according to the provisions of the patent policy by which the University creator is currently bound. Similarly, members of the university working under contracts signed before the effective date of this policy who do not choose to accept this policy will remain bound by the patent policies that already apply to them. With respect to intellectual property developed during the course of employment at the university, this policy shall bind on any person whose relationship with the university becomes terminated. The university should take all administrative steps necessary to ensure that employees and students sign, upon initial employment, registration or at other appropriate times, forms that indicate their acceptance of this policy.

7. Amendments of the Policy

Amendments of this policy may be proposed by the Faculty Senate, Staff Council or university administration. Proposed amendments must be approved by a two-thirds majority of votes in the Faculty Senate and subsequently approved in a referendum administered by the Faculty Senate that is open to all members of the faculty as defined by this policy and to the exempt staff, provided that this majority constitutes at least 25% of those eligible to vote. This referendum must be preceded by an open meeting and public discussion open to all interested faculty, administration, staff and students. Amendments that are supported by the faculty and staff must then be approved by the president of the university and adopted by the university.
trustees. Once adopted, amendments will become binding on new faculty, administration, and staff when hired, on existing faculty and staff when they sign new employment contracts, and on graduate and undergraduate students when admitted. Other university personnel, including tenured faculty, and current staff and students may choose to become bound by this policy for future and pending intellectual property by voluntary written consent. Intellectual property that is already developed or under development at the time that an amendment to the policy is ratified will not be bound by the terms of the amendment without the voluntary written consent of both the creator and the university.

Footnote:
1. This document presumes the existence of a university office to facilitate technology transfer. Such an office would serve as a clearinghouse for contacts with outside partners, would perform patent and copyright tasks, and would develop an effective marketing capability.

Policy on Student Privacy Rights

Policy Statement
Under the Family Educational Rights and Privacy Act (FERPA), you have the right to:

• Inspect and review your education records;
• Request an amendment to your education records if you believe they are inaccurate or misleading;
• Request a hearing if your request for an amendment is not resolved to your satisfaction;
• Consent to disclosure of personally identifiable information from your education records, except to the extent that FERPA authorizes disclosure without your consent;
• File a complaint with the U.S. Department of Education Family Policy Compliance Office if you believe your rights under FERPA have been violated.

1. Inspection
What are education records?
Education records are records maintained by the university that are directly related to students. These include biographic and demographic data, application materials, course schedules, grades and work-study records. The term does not include:

• Information contained in the private files of instructors and administrators, used only as a personal memory aid and not accessible or revealed to any other person except a temporary substitute for the maker of the record;
• Campus Police records;
• Employment records other than work-study records;
• Medical and psychological records used solely for treatment purposes;
• Records that only contain information about individuals after they have left the university;
• Any other records that do not meet the above definition of education records.

How do I inspect my education records?
• Complete an Education Inspection and Review Request Form (available online as a PDF document or from The HUB, 12C Warner Hall) and return it to The HUB.
• The custodian of the education record you wish to inspect will contact you to arrange a mutually convenient time for inspection, not more than 45 days after your request. The custodian or designee will be present during your inspection.
• You will not be permitted to review financial information, including your parents' financial information; or confidential letters of recommendation, if you have waived your right to inspect such letters.
• You can get copies of your education records from the office where they are kept for 25 cents per page, prepaid.

2. Amendment
How do I amend my educational records?
• Send a written, signed request for amendment to the Vice President for Campus Affairs, Carnegie Mellon University, 610 Warner Hall, Pittsburgh, PA 15213. Your request should specify the record you want to have amended and the reason for amendment.
• The university will reply to you no later than 45 days after your request. If the university does not agree to amend the record, you have a right to a hearing on the issue.

3. Hearing
How do I request a hearing?
• Send a written, signed request for a hearing to the Vice President for Campus Affairs, Carnegie Mellon University, 610 Warner Hall, Pittsburgh, PA 15213. The university will schedule a hearing no later than 45 days after your request.
• A university officer appointed by the Vice President for Campus Affairs, who is not affiliated with your enrolled college will conduct the hearing.
• You may bring others, including an attorney, to the hearing to assist or represent you. If your attorney will be present, you must notify the university ten days in advance of the hearing so that the university can arrange to have an attorney present too, if desired.
• The university will inform you of its decision, in writing, including a summary of the evidence presented and the reasons for its decision, no later than 45 days after the hearing.
• If the university decides not to amend the record, you have a right to add a statement to the record that explains your side of the story.

4. Disclosure
Carnegie Mellon generally will not disclose personally identifiable information from your education records without your consent except for directory information and other exceptions specified by law.

What is directory information?
Directory information is personally identifiable information of a general nature that may be disclosed without your consent, unless you specifically request the university not to do so. It is used for purposes like compiling campus directories.

If you do not want your directory information to be disclosed, you must notify the University Registrar's Office in writing within the first 15 days of the semester.

Notifying the University Registrar’s Office covers only the disclosure of centralized records. Members of individual organizations such as fraternities, sororities, athletics, etc. must also notify those organizations to restrict the disclosure of directory information.

Carnegie Mellon has defined directory information as the following:
• your full name,
• local/campus address and local/campus telephone number,
• email User ID (Andrew ID) and address,
• major, department, college,
• class status (freshman, sophomore, junior, senior, undergraduate or graduate)
• dates of attendance (semester begin and end dates),
• enrollment status (full, half, or part time)
• date(s) of graduation,
• degree(s) awarded,
• sorority or fraternity affiliation.

For students participating in intercollegiate athletics, directory information also includes:
• height, weight
• sport of participation.

What are the other exceptions?
Under FERPA, Carnegie Mellon may release personally identifiable information from your education records without your prior consent to:

- school officials with legitimate educational interests (“School officials” are Carnegie Mellon employees in administrative, supervisory, academic or support staff positions; Carnegie Mellon trustees; individuals and companies with whom the university has contracted, such as attorneys, auditors, or collection agencies; and individuals assisting school officials in performing their tasks. School officials have a "legitimate educational interest" if they need to review an education record in order to fulfill their professional responsibilities);
- certain federal officials in connection with federal program requirements;
- organizations involved in awarding financial aid;
- state and local officials who are legally entitled to the information;
- testing agencies such as the Educational Testing Service, for the purpose of developing, validating, researching and administering tests;
- accrediting agencies, in connection with their accrediting functions;
- parents of dependent students (as defined in section 152 of the Internal Revenue Service Code);
- comply with a judicial order or subpoena (after making a reasonable effort to notify the student in advance of compliance so that the student can take protective action, except in cases where the university is legally required not to disclose the existence of the subpoena);
- appropriate parties in a health or safety emergency, if necessary to protect the health or safety of the student or other individuals;
- officials of another school in which the student seeks or intends to enroll;
- victims of violent crimes or non-forcible sexual offenses (the results of final student disciplinary proceedings);
- parents or legal guardians of students under 21 years of age (information regarding violations of university drug and alcohol policies);
- courts (records relevant to legal actions initiated by students, parents or the university);

5. Complaints

If you believe the university has not complied with FERPA, you can file a complaint with the:

Family Policy Compliance Office, Department of Education, 400 Maryland Avenue, S.W. Washington, DC 20202-4605

Policy on Restricted Research

Universities have two primary purposes: to create knowledge and to disseminate knowledge. Carnegie Mellon University recognizes the importance of open intellectual communication within a research group, within the university, and within the larger community outside. Ideally, all units of the university would disseminate the results of research as quickly and as widely as possible. Some members or units of the university, however, desire to do research that may be difficult or impossible without restrictions or without access to classified or proprietary materials.

There exists, therefore, a tension between the university’s goal of disseminating knowledge freely and the desire on the part of some of its members to conduct restricted research on important problems. The university intends to guarantee the academic freedom of all faculty members to do research in their own manner on topics of their own choosing, provided that such research is consistent with the overall purposes of the university.

This policy seeks to resolve the tension between the desire to participate in restricted research and the desire to maintain the open atmosphere of the university by confining restricted research to semi-autonomous units, which are not associated with any academic departments. It thereby establishes the principle that restricted research is inappropriate at Carnegie Mellon University except in the semi-autonomous units.

This policy does not attempt to anticipate all possible concerns about restricted research. In some cases, decisions will need to be made about particular research projects to which the application of particular policy guidelines are not clear. In choosing to accept or decline such projects, the university will weigh the potential of a project for generating and disseminating new knowledge for the benefit of society, against the project’s potential for adversely affecting the climate for research conducted in a free and open environment. While this policy sets no explicit limits on the extent of classified research permitted in the semi-autonomous units, it is not the intent of the policy to encourage any unit of the university to engage in classified research as a primary ongoing activity. Indeed, it is expected that classified projects will never represent more than a small fraction of the total research effort in any unit.

Definitions

Research: all projects and investigations involving the creation of new knowledge of a theoretical or practical nature. The term "research" as used here encompasses both "research" and "development" as they are commonly defined.

Classified research: research, the free dissemination of the results of which is deemed to jeopardize national security. The federal government controls access to the environment in which such research is performed, restricts discussions about the work in progress to individuals with clearance and a "need to know," and limits publication of research, results or access to data needed to verify results, for a specified period of time.

Proprietary research: research that results in intellectual property that is owned by entities other than Carnegie Mellon University. Such entities may wish to market products derived from inventions or ideas that are developed at the university. They might, therefore, desire to fund projects which restrict access to data and to discussions about work in progress to individuals with a "need to know," and to seek, for a specified period of time, a delay in publication of research results data needed to verify results. Such entities may also provide access to proprietary material, which researchers must agree not to include in publications.

Publication: oral or written dissemination.

Restricted research: includes all classified research, and any proprietary or other research that requires more than a six month delay in publication of the research results.

Semi-autonomous units: units of the university specifically so designated by the president, after consultation with the URC and the Faculty Senate, currently the Mellon Institute and the Software Engineering Institute.

Non-autonomous units: all university entities other than semi-autonomous units.

Restricted Research in Non-Autonomous Units

It is the policy of Carnegie Mellon that restricted research is inappropriate and, therefore, not permitted within its non-autonomous units.

It is also the policy of Carnegie Mellon not to permit involvement of students in projects which carry restrictions that may impede their progress toward a degree. Therefore, students should not be involved in contracts that require the delay of a student’s publication of research results when such results are needed for use in obtaining academic credit, except that a sponsor may require a delay of thirty days for review of publications for removal of proprietary information that was provided by the sponsor for the conduct of the research.

Proprietary research is allowed within non-autonomous units provided it is subject to limitations (excluding students’ publications as noted above) no more stringent than the following:

- A sponsor may require a delay of up to six months in publication so that steps may be taken to secure intellectual property rights to inventions or ideas developed under the contract.
- A sponsor may require a delay of thirty days for review of publications for removal of proprietary information which was provided for the conduct of the research.

Considerations for faculty/researchers:

The university recognizes that problems arise in both restricted research and research that is not itself restricted but that involves access to classified or proprietary information or materials (hereinafter, restricted materials). Researchers may also have access to restricted materials when serving as consultants. Access to restricted materials gives rise to concerns about limitations on researchers' freedom to communicate. In such instances, researchers must exercise consider-able judgment to conduct their research in an open environment while protecting the restricted materials to which they have access. Researchers must also be aware that the university will judge their performance as researchers through their publications or through other scholarly works that arise from their research. Research that is restricted in dissemination, or not available for public review, cannot be considered in promotion or reappointment decisions or in evaluations of academic performance of any kind.
Considerations for faculty/researchers:
There are important concerns about the involvement of students in restricted research. It is necessary for students to publish their work in order to obtain degrees, course credit and professional recognition. Students rely on a large degree on their faculty advisor's judgment for guidance and advice. Research that is restricted in dissemination, or not available for public review, cannot be used for academic credit. Thus, before working on such research, a student must be notified in writing that work on this research may not be used for academic credit.

Restricted Research in Semi-Autonomous Units
The semi-autonomous units associated with Carnegie Mellon may conduct restricted research.
Faculty members may conduct restricted research in or in cooperation with semi-autonomous units only on a consulting basis or by means of a formal, internal leave of absence from their non-autonomous units.
Work that is restricted in any way may not be used for academic evaluations until it is released for publication, and then only with respect to future academic actions.
Students may occasionally be employed by the semi-autonomous units, provided that such employment does not interfere substantially with progress toward a degree. However, they must be made aware that work that is restricted cannot be used for academic credit. Work that was restricted and is later released for dissemination and review can be applied toward future academic credit. Students should be discouraged from working on restricted research in which dissemination may be delayed indefinitely.

Guidelines for all Units
Work by students on restricted research projects shall not be made a condition for admission or financial aid.
The principal investigator is responsible for informing all members of a project (faculty, staff and students) of any restrictions imposed on the dissemination of information related to the research. This must be done prior to the start of the project or prior to an individual joining an existing project.
Restrictions on access to university facilities due to the conduct of restricted research must be kept to a minimum. Access to and movement through the facilities in which restricted research is conducted must be consistent with standard university procedures.
The Provost's Office is responsible for obtaining signed documents from principal investigators on restricted research projects attesting that they are aware of all restrictions imposed on the research and that they have informed all participants of these restrictions.
The Office of Sponsored Research shall review all proposals and contracts prior to approval for conformity with these guidelines. Any that do not meet these guidelines will be referred to the University Research Council (URC) for review and recommendation of appropriate action to the provost.
To maintain a balance with the university's goals of broad dissemination of knowledge, the URC will conduct an annual review of all restricted research being conducted at the university. This review will be made based on a listing of all contracts that involve restricted research. This listing shall include the title and sponsor(s) of the research, name(s) of principal investigator(s), and the amount of funding of each contract.
The university community will be informed annually, through the URC's written report to the Faculty Senate and Student Senate, of the nature and overall impact of restricted research at Carnegie Mellon.
Existing sponsored research projects shall be allowed to continue under the terms of their present contract. However, renewal contracts must conform with this policy.

Student Activities Fee
By action of the Board of Trustees, a required Student Activities Fee in addition to tuition is charged to all undergraduate students and graduate students who enroll for 19 units or more. Student Government is responsible for administering the fee and for using it only for the support of projects under the following guidelines:

1. Activities and facilities which can be described as meeting the reasonably predictable social, cultural, recreational, or welfare needs of college students.
2. Publications which can reasonably be presumed to serve the needs of the student community for communication, expressions of opinion, and the conduct of their business.

3. Such enterprises of an entrepreneurial nature undertaken by the student body as can reasonably be expected to serve as an instrument for meeting the needs described above.

All functions and services provided by the fees described above must be in accordance with Carnegie Mellon's policy of non-discrimination. In addition, no use of such fees may be intended to violate or circumvent the policies of the university or the laws of the land.

Final responsibility for establishing the amount of any required fee rests with the Board of Trustees, which will consider changes only upon requests of the Student Government and the officers of the university.

Note: Historically, the Student Government has dedicated a specific portion of graduate students' activities fees to the Graduate Student Assembly to be used at their discretion.

Policy on Temporary Emergency Closing of the University
Policy Statement
Carnegie Mellon University has an important commitment to students, parents, sponsors, benefactors and the community. Accordingly, the university will make every attempt to operate normally during severe weather or other emergencies. This includes holding classes, conducting research programs, and operating facilities and services. The university will attempt to operate normally unless such operation represents a clear danger to students, staff or faculty.

There may be occasions when the university community is served best by suspending normal operations. In that event, only the president (or the president's designated representative) has the authority to close the university and to specify those persons or group of persons who are free to leave or refrain from coming to campus. Staff members who provide primary services, including certain members of Physical Plant, Dining Services and Security, may be asked to work.

Standard Operations
Unless the president announces that the university is closed, everyone is expected to be at work as usual. When the university is in session, faculty members are expected to meet their scheduled classes and other obligations. If a faculty member is unable to meet a scheduled class, he or she should notify the department office and arrange either for a qualified substitute or for a future make-up session.

If the university is open but a staff member is unable to come to work because of severe weather or other emergency, he or she should notify the supervisor as soon as possible. Staff members will be expected to make up lost time or use Paid Time Off (PTO), consistent with regular operating protocols.

Announcement of Closing
As soon as the president or his/her designee determines that the university must be closed, University Relations will alert local radio and television stations. Also, announcements of closings will be posted on the Carnegie Mellon electronic bboard official.cmu-news.

Contact
Questions concerning this policy or its intent should be directed to the Office of the President, (412) 268-2200.

Student Leave Policy
www.cmu.edu/policies/documents/StLeave.html
Students must sometimes interrupt their studies for a variety of reasons (financial, academic or personal). Students choosing to take a leave of absence should first contact their department advisor to discuss their plans while on leave and to work out any conditions that may be necessary for a smooth return to Carnegie Mellon.

A student may leave Carnegie Mellon by either withdrawing from the university (leaving the university with no intention of returning) or by taking a leave of absence (leaving the university temporarily, with the firm and stated intention of returning).

A Leave of Absence Form must be completed by all students requesting a leave. A Withdrawal Form must be filled out by all students who are withdrawing. Notifying instructors and no longer attending classes does not complete the process. Forms are available in the academic departments, deans' offices and on The HUB website. Not completing the form results in tuition being charged to the midpoint of the semester or the last date the
Contact
Questions concerning this policy or its intent should be directed to: The HUB, (412) 268-8186.

Tuition Adjustment Policy
www.cmu.edu/policies/documents/TuitionRefund.html

Application
This policy applies to withdrawals and leaves of absence by all students (graduate, undergraduate, non-degree) for all semesters (Fall, Spring, Summer 1, Summer 2, Summer All).

Official Date of Withdrawal/Leave of Absence
For students who notify the university of their intent to withdraw or take a leave of absence, the official date of withdrawal or leave of absence is the earliest of:
• the date the student began the withdrawal or leave of absence process;
• the date the student notified his or her home department;
• the date the student notified the associate dean of his or her college; or
• the date the student notified the dean of students.

For students who do not notify the university of their intent to withdraw or take a leave of absence, the official date of withdrawal or leave of absence is:
• the midpoint of the semester;
• the last date the student attended an academically-related activity such as an exam, tutorial or study group, or the last day a student turned in a class assignment.

Tuition Adjustment
Students who withdraw or take a leave of absence before completing 60% of the semester will be charged tuition based on the number of days completed within the semester. This includes calendar days, class and non-class days, from the first day of classes to the last day of final exams. Breaks which last five days or longer, including the preceding and subsequent weekends, are not counted. Thanksgiving and Spring Break are not counted. There is no tuition adjustment after 60% of the semester is completed. No tuition is charged to a student who is administratively withdrawn. See The HUB website for the complete tuition assessment schedule for the current semester.

Housing, Dining Plan & Fee Adjustments
Housing charges are adjusted daily, beginning on check-in day and ending on the last day of final exams for the semester. Holiday breaks are included. The Winter Break period is not included. Dining plan charges are adjusted per the bi-weekly period. DineXtra and PlaidCa$h are assessed based upon actual use. There is no adjustment of the Port Authority Fee, the Technology Fee or Student Activity fee.

Financial Aid Adjustment
Federal and institutional financial aid is adjusted on the same basis as tuition. A student earns 100% of his or her federal or institutional financial aid when 60% of the semester is completed.

State grants and non-federal outside scholarships are adjusted based upon the withdrawal policy of the agency awarding the funds.

Contact
Questions concerning this policy or its intent should be directed to: The HUB, (412) 268-8186.

Student Accounts Receivable Collection Policy and Procedures
The Student Accounts Receivable Collection Policy and Procedures is currently under review, with the expectation that the policy will be vacated. In the interim, the current Student Financial Obligation Statement is the appropriate reference point. That statement is provided to all students through Student Information Online (SIO), and may be accessed at http://

Student Return Policy
http://www.cmu.edu/policies/documents/StReturns.html

Policy Statement
Students on leave wishing to return to Carnegie Mellon to resume their degree studies may do so under several conditions. In order to be considered for return from leave, a student must first obtain a Return from a Leave of Absence form from The HUB or their academic department. This application requires information from the student regarding the intended semester of return, current address information and information about their leave. This application must be submitted to their home department at least one month prior to the beginning of the semester.

Undergraduates may return within their same academic department within two years. After two years, students returning in the same academic department are subject to space constraints and academic performance review. Graduate students must negotiate their return with their home department and must follow their department policy.

The Return from Leave of Absence form requires approval of the student’s academic department and Dean. If a student’s department chooses to deny the student’s Return from Leave of Absence form, the student may appeal to their Dean. Any constraints governing the student’s eligibility to return will be specified directly on the application by the academic department and/or Dean’s office or the Office of Student Affairs.

Students who have taken courses elsewhere must submit an official transcript and course descriptions with their Return from Leave of Absence form. Transfer credit approval is determined by the academic department based on course level, performance and appropriateness to the student’s curriculum requirements. Credit transfer is subject to college-specific policy. Failure to submit the necessary documents at the time of return will result in denial of transfer credit.

The process of returning is not completed until all necessary signatures on the Return form are obtained by the student and until all outstanding bills are paid. Enrollment Services will then notify the appropriate university offices of the student’s return.

Student Return Policy

Questions concerning this policy or its intent should be directed to: The HUB, (412) 268-8186.
www.cmu.edu/hub/billing/sfo/. Questions about this statement may be directed to Brian Hill, Director of Student Accounts.

Financial Aid Policy Statement

University Academic Scholarship Renewals

Carnegie Mellon University awards academic scholarships as part of the freshman financial aid process. Each of these scholarships is renewable for four academic years of study (five for architecture) based upon the maintenance of a specific cumulative quality point average. The academic scholarship renewal criteria are included in the scholarship notification letter which is mailed to the student prior to the May 1 matriculation deadline.

Each scholarship recipient’s cumulative quality point average is reviewed at the end of each academic year. If the student achieves the scholarship renewal criteria, then the scholarship is automatically renewed for the next academic year.

If the student does not meet the cumulative quality point average requirement for renewal, then s/he is given the opportunity to appeal. A merit scholarship appeal form and instructions are automatically sent to the student at the end of each academic year.

The student’s completed appeal form is reviewed by members of the Enrollment Services staff. Input from the Associate Dean of the student’s college is also considered. The student is notified, in writing, of the decision. The decision may be to renew the scholarship for the entire academic year, renew the scholarship for one academic term, or to reject the appeal. If the appeal is rejected, a written explanation is provided to the student.

Undergraduate Tuition Exchange Programs

Carnegie Mellon University assesses the standard tuition charge for the undergraduate tuition exchange programs.

Since Carnegie Mellon assesses the tuition charge, the student can be considered for all forms of institutional, state, and federal aid for which the student may have eligibility with the exception of any student employment program.

Undergraduate Study Abroad Programs

Carnegie Mellon University does not assess the tuition charge for any of the Study Abroad Programs.

Since Carnegie Mellon does not assess the tuition charge, the student is not considered for any institutional grants and scholarships. However, Carnegie Mellon will consider any student participating in an approved Study Abroad Program for all state and federal student aid programs for which the student may have eligibility with the exception of any student employment program.

The U.S. Department of Education and Carnegie Mellon University define an approved Study Abroad Program as one which is part of a contractual agreement between Carnegie Mellon and the host institution. Additionally, courses taken in the Study Abroad Program must be accepted for transfer to Carnegie Mellon by the Dean of the student’s college.

Undergraduate Sponsored Study Abroad Programs

Carnegie Mellon assesses full tuition charges and all applicable fees to students participating in an undergraduate sponsored study abroad program.

Undergraduate International Students

Documentation Eligibility (U.S. Citizenship or Eligible Noncitizen)

You must be a U.S. Citizen or permanent resident alien to receive federal student aid. If you are a U.S. Citizen, but were not born in the United States, valid documentation includes a copy of your passport or naturalization certificate.

If you are a U.S. permanent resident alien or refugee, acceptable forms of verification include a photocopy of both sides of your I-551 or I-551C card.

Undergraduate international students are ineligible to receive any federal or state student financial aid. Additionally, Carnegie Mellon does not award any institutional financial aid funds to undergraduate international students.

Undergraduate Course Meeting Procedure

This policy is not intended to reduce the rigor or vigor of the academic or artistic programs, but to ensure that students have a period in which they are free to carry on co-curricular activities and athletics. Scheduling classes, exams, or other academic and artistic activities makes it very difficult for the students to meet these commitments. Since we are all concerned about the quality of life at the university, this time must be held for the students.

In planning the academic course schedule, Enrollment Services will review all courses to ensure that no academic or artistic courses be scheduled in this period. In addition, any requests to schedule additional or makeup course meetings, review and/or study sessions, teaching assistant office hours, or other course-related meetings, must take place either before 4:30 p.m. or after 6:30 p.m. This includes meetings in all university spaces, not just within Enrollment Services controlled classrooms.

As with any policy, there must be a means of making exceptions. Any academic or artistic activities which you feel must be scheduled between 4:30 p.m. and 6:30 p.m. must be cleared with the Vice President for Enrollment. These requests must be in writing either as a memo or through e-mail (we16@andrew.cmu.edu). All requests must include the course relationship, intent for the requested meeting, and the reason why the meeting cannot be held either before 4:30 p.m. or after 6:30 p.m.

Any further clarification of this policy can be addressed to the Vice President for Campus Affairs.

Statement of Assurance

Carnegie Mellon University does not discriminate in admission, employment, or administration of its programs or activities on the basis of race, color, national origin, sex, handicap or disability, age, sexual orientation, gender identity, religion, creed, ancestry, belief, veteran status, or genetic information. Furthermore, Carnegie Mellon University does not discriminate and is required not to discriminate in violation of federal, state, or local laws or executive orders.

Inquiries concerning the application of and compliance with this statement should be directed to the Vice President for Campus Affairs, Carnegie Mellon University, 5000 Forbes Avenue, Pittsburgh, PA 15213, telephone 412-268-2056.

Undergraduate Academic Regulations

Courses and Registration

Availability of Required Courses
In order to insure that students do not have to compete for access to their required courses, registration priority is given to students who are registering for courses in their primary major. Although the University encourages the exploration of other disciplines, access to courses outside a student’s primary major (including those courses that fulfill requirements for an additional major, minor, etc.) is on a space-available basis and is not guaranteed.

Change in Schedule (Add/Drop)
Scheduling changes must be made within the period in the semester as established in the Official University Calendar. A student cannot drop a course by simply notifying the instructor(s) or by ceasing to attend class(es). A student dropping all of his/her courses (with the intent of leaving the university) must file an Application for Withdrawal or an Application for Leave of Absence (see the “Student Leave Policy” for more information).

Undergraduate students at Carnegie Mellon may drop a course by following the instructions for dropping a course in Student Information Online (SIO) on or before the appropriate deadline as published in the Official University Calendar. This applies to all courses with the exception of half-semester mini courses. When a course is dropped by these deadlines, the course is removed and does not appear on the academic record.

After the Add/Drop deadlines, or to drop below 36 units, students must see their advisor and submit a Course Withdrawal form.

The Late Add Form is used for adding a course or switching sections after the established add period and during the semester in which the course is offered. Students can check Student Information On-Line to see if the appropriate schedule changes have been made. Undergraduate students who add a course or switch a section after the established add period are required to obtain the permission of their home Dean’s Office or the Head of their School. If adding a course would result in a schedule overload, the permission of the student’s advisor is also required. Graduate students must have the permission of their department.

• If adding a course would result in a schedule overload, the signature of the student’s advisor is also required if requested by Associate Dean/Department Head.
• Graduate students must have the permission of their department.
• International students who wish to drop below full-time must consult the Office of International Education.

The deadline to add a mini course is the end of the first week of classes for that course. The deadline to drop a mini course is one week after the midpoint for that course.

Free Electives
A free elective is any Carnegie Mellon Course. However, a maximum of nine units of physical education, military science (ROTC), and/or student-taught (StuCo), courses may be used toward fulfilling graduation requirements.

Overloads
The University is committed to insuring that each degree candidate has access to a normal course load before it permits other students to register for a greater than normal number of units. A normal course load has been established by each academic department. Students should check with their academic advisor, department head, or dean’s office for the definition of a normal course load. Individual colleges may have overload policies that are more restrictive, therefore students should consult with their advisor when considering an overload. Students may register for an overload up to 12 units with the approval of their academic advisor if they have demonstrated their ability to successfully complete a normal course load. Successful completion of a normal course load is defined as having earned at least a 3.00 (3.50 for students in ECE) cumulative GPA in the preceding semester or at least a 3.00 (3.50 for students in ECE) semester GPA in the current semester (in which case all final grades must be recorded before the student can register for the overloaded class). Overloads greater than 12 units or other exceptions must have the approval of the student’s Associate Dean. Freshmen and transfer students are limited to a normal course load in their first semester of attendance.

Summer Classes
Per the Associate Deans’ Council, undergraduate students are now limited to registering for 24 units in summer sessions without advisor approval. If the advisor wishes to approve additional units, AFTER consulting with the student, advisors can increase the max units in S3 on the registration page.

Conduct of Classes
Students are expected to attend all scheduled classes unless the instructor explicitly informs the class that other ways of doing the work are acceptable. The action to be taken in regard to tardiness, absence from class or making up late work is the responsibility of the individual instructor; the instructor should consult with the department head and the student’s dean if major action, such as dropping the student from the course, is being considered.

All classes will be held at their scheduled hour on days immediately before and after all holidays and recesses. Both faculty and students are expected to be present.

Members of athletic teams and other student organizations are permitted to be absent from classes to participate in authorized contests and presentations, either at home or out of town, provided the following conditions are met:

• All work missed must be made up to the satisfaction of the instructor(s) concerned;
• No trip shall involve an absence of more than two days, excluding days when classes are not scheduled;
• The total number of days of absence shall not exceed six per sport or per organization annually;
• Each student will obtain an absence authorization signed by the director or sponsor of the organization involved and by the Dean of Student Affairs. The student will present this authorization to the instructor. This is not an excuse for work missed.

Technology affords many students access to portable devices including cell phones, PDAs, and laptops. It is expected that students will respect the wishes of faculty with regard to the use of electronic devices within the academic environment. Students who, because of religious beliefs, cannot attend class may arrange as individuals to be absent, provided the work missed is made up in a manner satisfactory to the instructor(s) of the class(es) missed.

No student shall leave a scheduled exercise because of the absence of the instructor until a reasonable time has passed. By tradition and as a matter of courtesy a student should wait 10 minutes before leaving.

Course Attendance and Enrollment
A student is responsible for the payment of charges incurred at the university by the stated payment deadline. The purpose of this policy statement is to detail the specific process and action steps to be used to resolve any outstanding student account balance.

Students will be held financially and academically accountable for course(s) which they attend or for which they are enrolled. Enrollment in a course which is not actively taken, or contrarily, the taking of a course for which enrollment has not been completed, will result in the assignment of a grade and responsibility for applicable tuition charges.

Students who fail to resolve their enrollment and balances will be prohibited from using university academic and administrative services. The services include, but are not limited to, computing facilities, library services, housing, dining, career center services, degree verification and the release of academic transcripts for the upcoming semester.

Undergraduate Course Meetings
Usually, no undergraduate classes, exams, academic, or artistic activities (including extra help sessions, rehearsals, ROTC drill, make-up exams, etc.) are scheduled on weekdays between 4:30 p.m. and 6:30 p.m. On occasion, some courses may be scheduled during these hours by Enrollment Services
Grades

Grading Policies

Policy Statement
This policy offers details concerning university grading principles for students taking courses, whether those students are undergraduates, non-degree students or graduate students. This policy covers the specifics of Assigning and Changing Grades (including Final and Mid-Semester grades, In-completes and Conditional Failures), Grading Options (Audit and Pass/Fail), Drop/Withdrawals, Course Repeats, and defines the undergraduate and graduate Grading Standards.

Questions about grading for a specific course should be addressed to the instructor of the course in question. Graduate students with questions about Pass/Fail and Drop/Withdrawal should contact their individual programs.

Appeals for an exception to any grading policy may be made by the dean’s office of the student’s home college.

1. Definitions

Certain terms are used in this document with specific meanings, as defined in this section.

Student means any full-time or part-time degree-seeking undergraduate or graduate student, or full-time or part-time non-degree student.

Non-degree student means a student who is not in a university degree program.

Faculty means members of the university’s Faculty Organization as defined in the Faculty Handbook, plus instructors and special faculty appointments (even in the first year), and part-time faculty.

Instructor means a faculty member, teaching assistant, and/or lecturer who is the instructor of record, as recorded in the Student Information System (SIS).

Assigning Grades
Final grades are awarded to each student, in each course scheduled, at the end of the semester, mini-semester or summer session. All students taking a course at Carnegie Mellon must be assigned grades.

The University Registrar’s Office will query instructors who do not assign a grade to a student. Copies of the query regarding the lack of grade will be sent to the student, to the dean and to the department head. If the instructor does not assign a letter grade or an incomplete grade within one month of Enrollment Services query, the department head will be responsible for insuring that a grade is assigned.

Changing a Grade
A student who believes that an assigned grade is incorrect, may request that a final grade be changed. Final grades will be changed only in exceptional circumstances and only with the approval of the instructor and, for undergraduates, with the approval of the dean’s office of the college/school offering the course; for graduate students, department approval is required. The intention of this policy is to insure that, under normal circumstances, all students in a class are treated equally and no student is unduly advantaged.

Mid-Semester Grades
Mid-semester grades provide valuable feedback to students as they assess their performance in courses. Furthermore, mid-semester grades and the QPA’s they generate are used by Deans and advisors in identifying and dealing in a timely way with students in academic trouble. Therefore it is imperative that mid-semester grades accurately reflect student performance and are turned in on time.

Mid-semester grades are not permanent and are kept only until final grades are recorded. Because mid-semester grades are not permanent, changes of mid-semester grades as a rule will not be accepted.

Incomplete Grades
Carnegie Mellon students are expected to complete a course during the academic semester in which the course was taken. However, if the instructor agrees, a grade of I (incomplete) may be given when a student, for reasons beyond his or her control, has been unable to complete the work of a course, but the work completed to date is of passing quality and the grade of incomplete provides no undue advantage to that student over other students.

In awarding an I grade, an instructor must specify the requirements for completing the work and designate a default letter grade where no further work is submitted. Students must complete the required course work no later than the end of the following academic semester, or sooner if required by prior agreement. The instructor must record the permanent grade by the last day of the examination period of that following semester, or Enrollment Services will administratively assign the default grade.

Conditional Failures
X grades are conditional failures. They are factored in the student grade point average as a failure in the semester they are awarded and can be replaced by nothing higher than a D. When awarding an X grade, the instructor specifies to the student the requirements necessary to achieve a grade of D. Requirements may be the completion of a prescribed course with a performance of C or better or may be specified work related to the course in which the student received the X. Students must complete the required course work no later than the end of the following academic semester, or sooner if required by prior agreement.

The instructor must record the permanent grade of D by the last day of the examination period of that following semester, or Enrollment Services will administratively assign the default grade of R.

Pass/No Pass Grades
Undergraduate students may elect to take a free-elective course pass/no-pass unless precluded by the course, the course’s department or the student’s home department/college. Policies for graduate students vary and students should be advised to check with their individual colleges/departments/programs for details.

A student must submit a Pass/No-Pass Form to the University Registrar’s Office indicating the course they are electing as pass/no-pass before the end of the university’s drop period. This decision is irreversible thereafter. No information regarding the student’s decision will be passed on to the instructor. Instructors will submit letter grades, which will automatically be converted to pass/no-pass.

A through D work will receive credit for units passed and be recorded as P on the student’s academic record; below D work will receive no credit and will be recorded as N on the student’s academic record. No quality points will be assigned to P or N units; P or N units will not be factored into the student’s GPA.

In exceptional circumstances, departments may ask to designate a course pass/no-pass or request that the course be evaluated only with letter grades. The College Council must approve designating a course as pass/no-pass only or as graded only. If such a decision will have an adverse effect on the requirements of any other college, Academic Council must review the decision. The decision to designate a course as graded or pass/no-psdd must be made before the add period for the course and is irreversible thereafter.

Audit Grades
Auditing is presence in the classroom without receiving academic credit, a pass/fail or a letter grade. The extent of a student’s participation must be arranged and approved by the course instructor. A student wishing to audit a course is required to register for the course, complete the Course Audit Approval Form, obtain permission of the course instructor and their advisor, and return the form to The HUB prior to the last day to add a course.

Any student enrolled full-time (36 units) may audit a course without additional charges. Part-time or non-degree students who choose to audit a course will be assessed tuition at the regular per-unit tuition rate.

Drop/Withdrawal Grades
Students at Carnegie Mellon may drop a course by accessing on-line registration on or before the drop deadline as published in the official university calendar. This applies to all courses with the exception of mini-semester courses. Policies for graduate students vary and students should be advised to check with their individual colleges/departments/programs for details. The deadline to drop a mini-semester course is the last day of the fourth week of the mini-semester course. When a course is dropped by these deadlines, the course is removed and does not appear on the academic record.

Undergraduate students who wish to withdraw from a course after the drop deadline must complete a Course Withdrawal form and must obtain their academic advisor’s signature. The advisor will indicate whether they recommend or “not recommend” withdrawal from the course on the form, sign the petition, and assign the “W” (withdrawal) grade in S3. The “W” grade will appear on the academic record. Withdrawal grades do not apply to graduate students, except in CIT, HC, MCS, and TSB.

Undergraduates who are registered as full-time students as of the 10th day of classes are expected to remain full-time for the duration of the semester.
Full-time is defined as registered for a minimum of 36 units. Permission to drop below the 36-unit minimum can only be granted in extraordinary circumstances by the student’s home Associate Dean. Undergraduates who are registered as part-time are also subject to the above deadlines to drop or withdraw from a course.

Course Repeats
When a course is repeated, all grades will be recorded on the official academic transcript and will be calculated in the student’s QPA. This is the case regardless if the first grade for the course is a passing or failing grade, including Pass/Fail.

Undergraduate students who wish to repeat a course already passed must obtain approval from the student’s Dean or Department Head. When a student takes a course s/he has already passed, only one set of units will count towards graduation requirements.

3. University Grading Standards
The undergraduate student Grading Standard is as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
<td>Excellent</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
<td>Good</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
<td>Passing</td>
</tr>
<tr>
<td>R</td>
<td>0.0</td>
<td>Failure</td>
</tr>
<tr>
<td>X</td>
<td>0.0</td>
<td>Conditional Failure</td>
</tr>
<tr>
<td>P</td>
<td>1.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>N</td>
<td>0.0</td>
<td>Not Passing</td>
</tr>
<tr>
<td>O</td>
<td>0.0</td>
<td>Audit</td>
</tr>
<tr>
<td>W</td>
<td>0.0</td>
<td>Withdrawal</td>
</tr>
<tr>
<td>I</td>
<td>0.0</td>
<td>Incomplete</td>
</tr>
<tr>
<td>AD</td>
<td>0.0</td>
<td>Credit granted for work completed at another institution or examination credit</td>
</tr>
</tbody>
</table>

This grading standard is for all students classified as seeking an undergraduate degree and special students taking undergraduate courses.

Any +/- grades received by undergraduate students when taking graduate-level courses will automatically convert to the corresponding letter grade as listed in the scale above.

The graduate student Grading Standard is as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.33</td>
<td>(Not applicable to CIT or Dietrich College)</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
<td>Excellent</td>
</tr>
<tr>
<td>A-</td>
<td>3.67</td>
<td>Good</td>
</tr>
<tr>
<td>B+</td>
<td>3.33</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
<td>Passing</td>
</tr>
<tr>
<td>B-</td>
<td>2.67</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>C+</td>
<td>2.33</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>C-</td>
<td>1.67</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>D+</td>
<td>1.33</td>
<td>Credit granted for work completed at another institution or examination credit</td>
</tr>
<tr>
<td>D</td>
<td>1.00</td>
<td>(Not applicable to Tepper School, Heinz College, or Dietrich College)</td>
</tr>
<tr>
<td>R</td>
<td>0.0</td>
<td>Failure</td>
</tr>
<tr>
<td>X</td>
<td>0.0</td>
<td>Conditional Failure</td>
</tr>
<tr>
<td>S</td>
<td>0.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>P</td>
<td>0.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>N</td>
<td>0.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>O</td>
<td>0.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>W</td>
<td>0.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>I</td>
<td>0.0</td>
<td>Non-Factorable</td>
</tr>
<tr>
<td>AD</td>
<td>0.0</td>
<td>Credit granted for work completed at another institution or examination credit</td>
</tr>
</tbody>
</table>

Grading standards are based upon a student's home academic program and is defined by their home college. The college's standards determine if certain grades are applicable and if undergraduate course are factored into their mid-semester and final semester quality point averages (QPA). Otherwise, the university policy is that only graduate courses (700 level and higher, unless a department specifies 600 level as graduate) are factored into the semester QPA.

Pass/Fail policies for graduate students vary and students should be advised to check with their individual college/department/program for details.

Minimum passing grades in graduate courses are determined by the department and college policy. Any course that a graduate student completes will be graded using this scale.* This includes undergraduate courses taken by graduate students, and non-degree students taking graduate courses.

Contact
Questions concerning this policy or its intent should be directed to the University Registrar's Office, (412) 268-7404.

Units and Quality Points
Carnegie Mellon has adopted the method of assigning a number of “units” for each course to represent the quantity of work required of students. For the average student, one unit represents one work-hour of time per week throughout the semester. The number of units in each course is fixed by the faculty member in consultation with the college offering the course. Three units are the equivalent of one traditional semester credit hour.

Hence, a 9 unit semester-long course should require 9 hours of student engagement, on average, including class time; if the instructor requires 3 hours of lecture and 1 hour of recitation, they can expect students to spend 5 hours outside of class engaging in class work. For mini courses that run for only seven weeks, the conversion from units to number of hours per week during the mini involves multiplying by 2. For example, a 6 unit mini course should on average involve 12 hours of student engagement; if the instructor requires 3 hours of lecture and 3 hours of lab, they can expect the students to spend 6 hours outside of class.

Final grades are given “Quality Point Values” as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Meaning</th>
<th>Quality Point Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent</td>
<td>4</td>
</tr>
<tr>
<td>B</td>
<td>Good</td>
<td>3</td>
</tr>
<tr>
<td>C</td>
<td>(satisfactory)</td>
<td>2</td>
</tr>
<tr>
<td>D</td>
<td>Passing</td>
<td>1</td>
</tr>
<tr>
<td>R</td>
<td>Failure</td>
<td>0</td>
</tr>
</tbody>
</table>

Units earned for a course multiplied by the Quality Point Value of the grade given for that course equals the Quality Points for that course. For example, a 9-unit course assigned a “C” grade is awarded 18 quality points (9 units x 2 quality points = 18 quality points). Total Quality Points divided by Total Units Factorable equals the Quality Point Average.

For example, a student’s record in one semester might be:

11 units x 4 quality points = 44 quality points
10 units in Physics "R" = 0 quality points
10 units x 0 quality points = 0 quality points
9 units in Chemistry "B" = 27 quality points
9 units in History "C" = 18 quality points
9 units in English "D" = 9 quality points
9 units x 1 quality point = 9 quality points
Total Units = 48
Total Quality Points = 98

Quality Point Average (98 divided by 48) = 2.04

*I* (incomplete), *P* (pass), and *W* (withdrawal) grades are not awarded quality points and are not considered as “factorable” units when calculating the QPA.

The same procedure is applied to all grades earned at the university to establish the Cumulative Quality Point Average.
**Dean's List**

Undergraduate students who meet specific academic requirements are added to their home college's Dean's List each semester. This is noted on the student's transcript for applicable semesters. Each college may have its own requirements for Dean's List qualification; these are described in the individual college sections of the Catalog. **Note:** Only undergraduate degree-seeking students may earn a place on the Dean's List. Non-degree students are not eligible.

**Transfer Credit Evaluation and Assignment Policy**

The Policy on Grades for Transfer Courses, originally dated January 13, 1993, and approved by the Committee on Educational Programs and Student and Faculty Affairs states:

“Carnegie Mellon University offers students the opportunity to take courses for credit through a cross-registration program and through the receipt of transfer credit from other accredited institutions. The Carnegie Mellon University transcript will include information on such courses as follows:

- Carnegie Mellon courses and courses taken through the university's cross-registration program will have grades recorded on the transcript and be factored into the QPA. All other courses will be recorded on this transcript indicating where the course was taken, but without grade. Such courses will not be taken into account for academic actions, honors or QPA calculations. (Note: Suspended students may take courses elsewhere; however, they may receive transfer credit only if their college's and department's policies allow this).

Definitions

A Carnegie Mellon course is one conducted under Carnegie Mellon University regulations regarding course content and grading and taught by faculty under the supervision of a Carnegie Mellon academic unit. Courses taught by Carnegie Mellon faculty on the Carnegie Mellon campus qualify. Courses that are part of the regular offerings of other universities do not qualify, unless faculty at the other universities receive appointments at Carnegie Mellon and handle Carnegie Mellon students under Carnegie Mellon academic regulations.

Courses offered for cross-registration are those taken under the PCHE (Pittsburgh Council on Higher Education) agreement during the regular academic year.

Only official and final college or university transcripts will be accepted for the awarding of transfer credit. Grade reports, letters and the like are not acceptable. It is the responsibility of the Office of Undergraduate Admission and the University Registrar's Office to verify official transcripts. Official transcripts for the awarding of transfer credit will reside in the student's permanent university academic folder in the University Registrar's Office.

It is the responsibility of each academic department to review and establish transfer course credit for their degree-seeking students.

**Transfer Credit Evaluation Procedure**

**External Transfer Students**

External applicants applying for transfer to Carnegie Mellon will arrange for submission of:

- official transcripts to the Office of Undergraduate Admission as part of the admission process.
- official, final transcripts to the Office of Undergraduate Admission once they are admitted and prior to their beginning coursework at Carnegie Mellon.

As part of the admission process, Admission will verify the official final transcripts, and then send them to the appropriate academic unit responsible for college/department acceptance decisions. Each unit will be responsible for student's review of transfer credit and the establishment of transfer course credit for each individual student.

**Current Students**

Current Carnegie Mellon students taking courses at other accredited institutions (colleges and universities), during either summer semesters or as part of exchange programs or other departmentally approved programs, or while on leave from Carnegie Mellon, must arrange for the submission of official final transcripts to the University Registrar's Office.

Upon receipt, Enrollment Services will verify these official transcripts and send a copy of the transcript to the appropriate academic unit responsible for that student's college/department transfer credit decisions. The official transcript will reside in the student's university academic folder in Enrollment Services. Each unit will be responsible for its students' transfer credit review and the establishment of transfer course credit for each individual student. Should a unit receive the official transcript, it must be sent immediately to the University Registrar's Office.

**Standard Course Equivalents for Advanced Placement/International Baccalaureate Units Policy**

The university has standard units assigned to Advanced Placement (AP) and International Baccalaureate (IB) credits for all majors. Standard course equivalencies for each exam will be determined by "expert departments" in each college for each acceptable AP/IB score.

Under this procedure, students' AP or IB credit for a particular course will only go toward their degree requirements if allowed by the home department or college policies. Should a student decide to transfer to another major and/or academic unit within the university, AP/IB credits applicability to new degree requirements will depend upon the requirements of the new home department (or college). Students may only be granted credit for the Higher Level IB exams. This policy assumes no significant AP and/or IB exam changes. In the event of significant exam changes, students will be notified of any resulting policy changes no later than July 30 prior to their enrollment to take effect the fall of that year.

**Rank in Class**

Undergraduates at Carnegie Mellon pursue degrees in one or more of our ten schools or colleges. They may choose to pursue coursework, minors and majors within and between schools/colleges. In an institution where students’ educational experiences are so varied, class rank is not a meaningful way to measure achievement.

Carnegie Mellon and Enrollment Services does not report nor record students' rank in class, rank in college and rank in department. For those graduate school and/or employment requests that request a student's rank, they will be completed with the statement “Carnegie Mellon does not report rank in class.”

**Official Transcripts and Verifications**

**Transcripts**

The student's official transcript is to be considered the official record for all degree(s), major(s), minor(s), and honors. The official Carnegie Mellon transcript includes both the undergraduate and graduate record. All transcripts come in individually sealed envelopes, unless otherwise specified. Transcript requests are not processed if the student has an outstanding obligation, financial or otherwise. We cannot accept phone or e-mail requests. We will not fax a transcript under any circumstances.

Visit The HUB website, www.cmu.edu/hub, for complete information, including information on ordering official transcripts.

**Verifications**

Enrollment verifications are available only for currently enrolled Carnegie Mellon students and Carnegie Mellon Alumni.

An enrollment verification officially confirms information about you. Please note that we cannot fax your QPA or verifications that contain anything besides the following:

- Name
- Local address
- Local phone number
- E-mail address
- Class
- College
- Department
- Dates of attendance
- Date(s) of graduation
- Degree(s) awarded

The most common reasons for requesting a verification are:

- Student loan agencies and insurance companies wanting to know if a student is enrolled.
• Scholarship committees wanting to know if a student maintained a certain QPA.
• Potential employers wanting to know if a student graduated with a certain degree.

On-Line Verification Ordering
Currently enrolled Carnegie Mellon students may order enrollment verifications via Student Information On-Line (https://s3.as.cmu.edu/sio).
For additional information, visit The HUB website (http://www.cmu.edu/hub).

Full-Time Status
Undergraduates who are registered as full-time students as of the 10th day of classes are expected to remain full-time for the duration of the semester. Full-time is defined by a minimum of 36 units. Permission to drop below the 36 unit minimum must be granted by the student’s Associate Dean. Undergraduates who are registered as part-time are also subject to the above deadlines to drop or withdraw from a course.

Students carrying a full-time course load as of the 10th regularly scheduled class day are not ordinarily permitted to drop below 36 units after that time. Exceptions must be authorized by the student’s Associate Dean.

Status, Class Standing
Students should refer to the sections of the catalog pertaining to their college and/or department to determine the number of units required each academic year by their specific curriculum. Students must achieve passing grades in order to earn units; students do not earn units for incomplete or failed courses.

A freshman student becomes a sophomore after earning passing grades in three-fourths of the units required by his/her freshman curriculum.

A sophomore student becomes a junior after earning the number of units required by his/her curriculum for the freshman year plus three-fourths of the number of units for the sophomore year.

A junior student becomes a senior after earning the number of units required by his/her curriculum for the freshman and sophomore years plus three-fourths of the number of units for the junior year.

Classification of students is made only at the time of their first registration in any academic year and remains unchanged throughout the rest of that academic year.

Course Description Requests (for prior years)
Please note that University Archives does not have access to transcript and verification information. They maintain only the course description archives. If you call or e-mail this office, your request will not be processed. Please contact:

Graduation & Diplomas

Degree Requirements
Students are responsible for checking to ensure that the degree requirements (as listed in the appropriate catalog at the time of their matriculation) have been met. They may also refer to the university’s online academic audit website: https://enr-apps.as.cmu.edu/audit/audit. If the degree requirements have been modified by College Council action, the student is responsible for checking to ensure that the modified requirements have been met.

To be eligible to graduate, undergraduate students must complete all residence and course requirements for their program with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative QPA to fall below 2.0, this requirement is modified to be a cumulative QPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student’s final transcript will be calculated based on all grades in all courses taken, including freshman year. Some programs may have additional QPA requirements in order to graduate. Students are encouraged to confirm all graduation requirements with their academic advisor.

No student may receive a diploma until all financial obligations to the university have been met.

Residency Requirement
A candidate for the bachelor’s degree must complete at the university a minimum of four semesters of full-time study, or the equivalent of part-time study, comprising at least 180 units of coursework. Note that these are minimum residency requirements applicable to all university undergraduates. Some of the university’s colleges and departments have developed more restrictive requirements in this area. Students should consult that section of the catalog in which their college or department’s academic regulations are presented for the residency requirements applicable to them. Deviation from these policies requires action by the Dean of the student’s home college.

Implications of Residency Requirements for transfer students seeking second undergraduate degree: Students who received degrees from other universities could have up to 2 years of credits earned elsewhere applied to their Carnegie Mellon degree requirements and would need to meet Carnegie Mellon’s Residency Requirement and complete at the university a minimum of four semesters of full-time study, or the equivalent of part-time study, comprising at least 180 units of coursework. Deviation from these policies will require action by the Dean of the student’s home college.

Diplomas
A Carnegie Mellon diploma is a student’s certificate of accomplishment. The diploma is printed with the name the student approved within Graduation On-Line, along with the student’s primary degree (i.e., Bachelor of Arts in Creative Writing). Minors are not listed on a diploma, although they do appear on an official transcript.

Diplomas are distributed to graduates during or immediately following the commencement ceremony. Certain circumstances will result in students receiving their diplomas at a later date, and such students will be informed of this well before the ceremony. If a student is unable to attend the ceremony, diplomas will be available for pick-up or mail-out in the weeks following commencement. Diplomas are not available prior to the stated date of graduation.

The diploma is 14x17 inches and is marked with a multi-colored and gold seal.

Graduation with University Honors
In recognition of exemplary academic achievement as undergraduates, some candidates for undergraduate degrees will be named to the University Honors List. Each of the undergraduate colleges will select students for honors on the basis of a cumulative grade point average (typically when cumulative QPA is greater than 3.5) and/or recommendation of the faculty.

Standard Degree Terminology
Carnegie Mellon University offers a wide variety of programs; the opportunities vary greatly between and among the colleges. For the purposes of clarification, this section defines:

• standard degree terminology;
• changes to the existing degree declaration process;
• the existing procedure for creating new degrees, majors and minors.

Degree
Examples: B.S. (Bachelor of Science); M.F.A. (Master of Fine Arts); Ph.D. (Doctor of Philosophy)

Major
Field studied in greatest depth by fulfilling a department-determined set of course requirements. The primary major is the field in which the degree is granted.

Example: Creative Writing; Physics; Marketing

Students may pursue an additional major(s) in a single degree program.

Minor
Field(s) studied for educational enrichment by fulfilling a department-determined set of course requirements. Graduate students may not pursue minors. Minors are not listed on the diploma but appear, instead, on the
student's transcript. The type of degree sought is determined by the major (that of the home department), not the minor(s). Examples: Film Studies; History of Ideas

Option
(Now referred to variously as track, option, etc.)
A specific area of study associated with the major or additional major(s), which transforms the title of the major or additional major. Examples: Civil Engineering (Biomedical Engineering Option); Physics (Computer Science Option)

Concentration
(Now referred to variously as track, option, etc.)
A specific area of study generally associated with a major or an additional major, which appears only on the transcript.

Home College
The college into which the student was originally admitted or into which the student formally transferred.

Home Department
The department into which the student was originally admitted or the department offering the major which the student has declared.

Concurrent College/Department
College/department other than the home college/department, granting the second of multiple degrees, or offering the additional major(s) of double or triple major, or minor.

Single Degree/Major
One diploma, stating the degree and the major field of study. Currently, the Statute of Limitations on earning an undergraduate degree is eight years. Examples: B.A. in Psychology; M.S. in Industrial Administration

Requirements: Fulfillment of all requirements of the home college.
Declaration: At least by registration time (early November), first semester junior year.
Certification: Home college, home department

Major-Declaration Process
For undergraduates, depending on the student's college, the major is usually declared at the end of the freshman or sophomore year. Departments enter the appropriate majors upon declaration.
For graduates, the major is usually indicative of the department and is supplied by the department.

Joint Degree
Degree program offered between two or more colleges/department(s) in conjunction with an outside University.
Examples: M.S. in Colloids, Polymers, and Surfaces (Chemistry and Chemical Engineering); B.H.A from College of Fine Arts and Humanities and Social Sciences.

Multiple Degrees
More than one degree granted by the university (whether simultaneous or sequential). One diploma for each degree. When awarded simultaneously, two degrees are referred to as dual degrees, three degrees as triple degrees. Multiple graduate degrees may be given in conjunction with (an) outside University(ies).
Examples of how such degrees appear on the respective diplomas:
- Bachelor of Fine Arts in the field of Art; Bachelor of Science in the field of History
- Bachelor of Science in the field of Physics; Bachelor of Science in the field of Computer Science

Requirements: Multiple bachelor's degrees
Declaration: Undergraduates: at least by registration time (early November), semester junior year
To receive multiple bachelor's degrees the student must:
- satisfy all requirements for each degree.
- complete an aggregate number of units that exceeds, by at least 90, the minimum unit requirement for the degree with the smallest such requirement (e.g., if the one of the degrees requires a minimum of 360 units and the other requires 380 units, a total of at least 450 units (90 plus 360, the smallest of the two) is required to obtain both degrees).
- comply, for each degree, with the statute of limitations regarding the time at which units are earned.
- while working towards more than one degree simultaneously, designate one of the departments (and if necessary colleges) as the home college/department.

Additional Major
One degree, stating the major in the home department first and the additional major second. The type of degree given (B.A., B.S.) is determined by the major of the home department.
For example, a student whose home department is Physics:
- This degree is valid: B.S. in Physics with an additional major in History
- This degree is not valid: B.S. in History with an additional major in Physics

Requirements: If the double majors involve two different colleges OR the same college, the student must fulfill:
- all requirements (including core) for the first major degree as defined by the home college;
- all major requirements (including core prerequisites) for the additional major;
- any specific requirements for double majors imposed by the department(s)/college(s) involved.

Declaration: At least by registration time (early November), first semester junior year.
Certification: Home college, home department; concurrent college (if any), concurrent department (if any).

Additional Majors
One degree, stating the major of the home departments first, the second and the third major afterwards. The type of degree sought (B.A., B.S.) is determined by the major in the home department.
For example, a History student, this degree is valid: B.A. in History with additional majors in Professional Writing and in Hispanic Studies. This degree is not valid: B.A. in Professional Writing with additional majors in History and in Spanish.

Requirements: If the triple major involves two or three different colleges OR the same college, the student must fulfill all requirements listed for each additional major.

Declaration: At least by registration time (early November), first semester junior year.
Certification: department
Concurrent college (if any), concurrent department (if any)

Second concurrent college (if any), second concurrent department (if any)

Minor
One degree, stating the major first and the minor second (or third, if there is also (an) additional major(s) involved). The type of degree sought (B.A., B.S.) is determined by the major (that of the home department). Minors are not listed on the diploma, but appear on the transcript.
Examples: B.F.A. in Music Performance (Voice) with a minor in Theatre Arts; B.S. in Applied History with an additional major in Information Systems and a minor in Mathematics.

Requirements: The student would generally take 45 units pertaining to the minor, in addition to fulfilling all requirements for the major degree (as defined by the home college). The "minor" courses are negotiated between the student and the department certifying the minor.

Declaration: At least by registration time (early November), first semester junior year.
Certification: department

Options (Tracks, Specializations, Area Cores, etc.)
These concentrations will not be considered part of the student's degree title unless included are part of the major or (an) additional major(s) field title.
Additional Majors/Minors Declaration Process
For undergraduates, all variations on a student's sought degree and major field must be declared by the end of the first semester of the student’s junior year. Having already declared a major, students should be well prepared by this time to choose additional majors and/or minors.

It is assumed that by these proposed deadlines, the student will have taken a majority of degree requirements and electives. The student can then, in conjunction with an advisor, review his/her course history and decide which options may or may not apply towards the desired degree and field(s).

A student who wishes to pursue additional majors and/or minors should consult with his/her advisor and receive a detailed curriculum for attaining the additional desired degree, major or minor. The student should then notify the college/department offering the additional program. Upon receipt of this notification, the college/department will update the Student Information System which will reflect this information to the Commencement System for graduation. This procedure ensures that when a student is expected to graduate, all degree/major information is immediately accessible, and certification of the degree is simplified.

Multiple Degrees Involving Graduate Degrees
Policies involving multiple graduate degrees or a graduate/undergraduate degree program or sequence are dictated by each college involved.

Examples: M.S. in Public Management and Policy and the degree of Juris Doctor (Heinz College/University of Pittsburgh School of Law).

Declaration: Undergraduates: at least by registration time (early November), first semester junior year.

Declaration: Graduates: upon admittance OR by the end of the semester preceding the expected graduation date.

Certification: Home college, home department and concurrent college (if any), concurrent department (if any).

Academic Actions
Each college may have its own regulations and procedures regarding academic actions, but in general, the following apply to all undergraduate students:

Student Suspension/Required Withdrawal Policy
Policy Statement
University Suspension is a forced, temporary leave from the university. There are three types of suspension for students that apply to both graduate and undergraduate students:

Academic Suspension is the result of poor academic performance or violation of academic regulations and is imposed by the student’s college or academic department (see university and college academic policies).

Disciplinary Suspension is the result of serious personal misconduct and is imposed by the Office of Student Affairs (see The Word/Student Handbook).

Administrative Suspension is the result of failure to meet university financial obligations or failure to comply with federal, state or local health regulations and is imposed by Enrollment Services. (See Student Accounts Receivable Collection Policy and Procedures for financial obligations. Contact Student Health Services for information about health regulations.)

Suspended students may not:
• register for courses
• attend classes
• live in residence halls or Greek housing
• use campus facilities, including athletic facilities, library and computer clusters
• participate in student activities
• be members of student organizations
• have student jobs

(Note: students on academic suspension may have a summer campus job if they accepted the job before they were suspended.)

Employment
Although suspended students may not hold student jobs, students on academic suspension may, under certain circumstances, have a non-student job with the university; students on disciplinary or administrative suspension may not.

To have a non-student job, students on academic suspension must receive approval from their associate dean (undergraduate students) or department head (graduate students) to ensure that the job will not violate their suspension terms. Students in violation of this will lose their degree student status, meaning they would have to reapply for admission to Carnegie Mellon through either Undergraduate Admission or the appropriate graduate department.

Transfer Credit
Suspended students may take courses elsewhere; however, they may receive transfer credit only if their college's and department's policies allow this.

Appeals
To appeal any action of this policy, the student may write to the following people:

Academic Suspension - associate dean (undergraduate students) or department head (graduate students);

Disciplinary Suspension - dean of student affairs;

Administrative Suspension - vice president for campus affairs, vice president for business and planning, and the dean of student affairs, in consultation with the student's associate dean.

Returning from Suspension
In order to return from a suspension, a student must have the following approval:

Academic Suspension - associate dean (undergraduate students) or department head (graduate students);

Disciplinary Suspension - dean of student affairs;

Administrative Suspension - vice president for campus affairs or his designate.

Contact
Questions concerning this policy or its intent should be directed to The HUB, x88186.

Procedure for the Appeal of Grades & Academic Actions
In the event a student believes an assigned grade or an imposed academic action is incorrect or not appropriate, the student may follow the processes outlined below to seek prompt and equitable resolution of the matter.

If a student believes a grade has been incorrectly assigned, the student should:
1. Present the case to the faculty member responsible for the course, providing all supporting data concerning the nature of the discrepancy.
2. If, after a decision is rendered, the student believes that his or her concerns have not been adequately resolved, the student may pursue a formal appeal with the department responsible for the course. To appeal to the department, a student must present a written statement detailing the grounds for the appeal with appropriate documentation to the head of the department responsible for the course. This appeal must be submitted within seven (7) days of receipt of the faculty member's decision. The department head will provide a written decision, including the basis for it, within thirty (30) days, or as soon thereafter as practical.
3. If the student is not satisfied with the department head's resolution, the student may pursue the appeal at the college level. To appeal at the college level, the student must present copies of all documents originally sent to the faculty member and department head, along with a formal letter of appeal, to the dean of the college responsible for the course. This appeal must be submitted within seven (7) days of receipt of the department head's decision. The dean, or the dean's designate, will review the appeal and will render a written decision, including the basis for it, within thirty (30) days, or as soon thereafter as practical.

If a student believes an academic action is inconsistent with the policies of the college or merits additional review, a student should:
1. Submit a formal written appeal, as specified in the initial academic action, to the associate dean of the college responsible for the decision, with a copy to the dean, requesting review of the action including...
Retention of Student Work

The university reserves the right in all colleges to retain indefinitely any student work the faculty may select. All work not retained by the university must be claimed at the time specified on the bulletin boards (or other forms of communication) of the department concerned; otherwise, the work will be destroyed.

Statute of Limitations

All units required for an undergraduate degree, whether earned in residence, transferred from another institution or granted via advanced placement, must have been earned within eight years of the date on which the degree is granted. This statutory period can be extended by the Dean of the student's college under the following conditions:

- the courses taken prior to the statutory period still represent a reasonable part of the student's total academic program;
- the prior courses provide adequate preparation for courses which must still be taken to fulfill the degree requirements;
- there is a legitimate reason(s) for the student not completing the academic program within the statutory period.

A request for a waiver of the statute of limitations must be submitted to the Dean of the student's college. The request for a waiver should address all of the above conditions for an extension. For cases in which a waiver is granted, the waiver covers specific courses and is intended for a specific period during which the program must be completed.

Transitional Students

Transitional student status has been instituted by the university to assist students who have changed their minds about their original field of study or who have been judged unlikely to make satisfactory progress in their chosen field. Becoming a Transitional Student gives a student an opportunity to maintain a relationship with the home college while re-orienting academic plans and goals. It also gives a student time to explore his/her options and/or enhance admittance to another college in the university, or to another institution. Ordinarily, a student will be permitted to register as a Transitional student for no more than one semester. Although, in exceptional circumstances, a student may be allowed to extend the status beyond one semester. A student must obtain the permission of his/her home college Associate Dean to initiate this option.

Transitional student status may be available to students upon the advice of their advisor, or upon their own request. Interested students must make an appointment with the Associate Dean of their home college to discuss this option.

Note: Students at Carnegie Mellon in good academic standing may transfer from one program to another as long as they meet curricular or artistic requirements and as long as there is space in the program into which they wish to transfer.

Process for Creation of New Degrees, Majors, or Minors

Departments proposing new degrees, majors, additional majors, and/or minors must complete a New Degree/Major/Minor Request Form. This form should include any and all notations to the university diploma and/or transcript (new degrees, majors, minors, options). Departments proposing to offer a new degree, major, additional major and/or minor must follow university policies for approval as follows:

- Document the Program by completing the New Degree/Major/Minor Request Form. Departments proposing new degrees and majors must complete this form and attach course descriptions, curriculum proposal, list of present faculty who will support the Program, and verify the availability of other units' courses. This documentation must indicate the starting semester for the Program, and in the case of new majors, also indicate if it is available only as a major/additional major/minor, or in combination.
- Receive Department approval.
- Receive Dean and College Council approval.
- Submit all Program documentation complete with College Council approval to the Vice Provost for Education. New majors or degrees will not be processed without the approval of the Provost's Office.
• Submit all Program documentation complete with College Council approval to the Vice Provost for Education. New majors or degrees will not be processed without the approval of the Provost’s Office.

• The Provost’s Office will approve or deny, and inform the sponsoring Department and Enrollment Services.

• The Department may then publicize and offer the program for student enrollment.
University Services

Academic Advising

Carnegie Mellon recognizes the vital role of academic advising in undergraduate education. The university assigns an academic advisor to each student, and makes certain that all advisors have clear, timely, and accurate information concerning programs, policies, procedures, and resources. In addition to having assigned academic advisors, students often develop relationships with faculty and staff members who serve as academic mentors.

Institutional Statement on Advising

Academic advising is integral to the educational mission of Carnegie Mellon. Advising is an intentional process, grounded in teaching and learning, and provides each student with guidance for developing and achieving meaningful educational, professional, and personal goals. Successful advising at Carnegie Mellon depends upon a shared understanding of, and commitment to, the advising process, by students, advisors, and the university. Academic advisors engage students in learning, promote students' academic success, and foster students' personal, ethical, and intellectual growth, all of which will carry into their roles as citizens and lifelong learners.

The Student's Role in Academic Advising

Seeking advice is an important part of how students begin to make decisions about their academic and professional futures. Each major and department has an advising system which may be different from one another. It is important that students find out early from their first year advisor how the advising system for all their four years at Carnegie Mellon works.

Students are responsible for: understanding the importance of their relationships with advisors; seeking out advisors, contacts, and information on a regular basis; knowing the requirements of their individual degree programs; and taking final responsibility for making their own decisions based on the best information and advice available. The Carnegie Mellon Advising Resource Center (CMARC) is an additional place for students to obtain information and general advice.

The Advisor's Role

To achieve the goals of academic advising at Carnegie Mellon, advisors, along with their advising programs, are responsible for: being knowledgeable of, and communicating, the requirements of the academic programs in which they advise; monitoring students' progress towards degree completion; being available to meet with students on a regular basis; assisting students in finding the appropriate institutional and community resources; involving students in the academic and career planning process and the exploration of options and resources; and engaging in developmental activities to stay informed of issues that impact student success.

Assistance for Individuals with Disabilities

Equal Opportunity Services
Whitefield Hall, 143 N. Craig Street, Pittsburgh PA 15213
http://www.cmu.edu/hr/eos/index.html

Larry Powell, EOS Manager 412-268-2013, lpowell@andrew.cmu.edu
Courtney Bryant, EOS Administrative Coordinator 412-268-2012, cbryant@andrew.cmu.edu

Qualified individuals with disabilities are entitled to reasonable accommodations under the Americans with Disabilities Act (ADA regulations). Accommodations are determined on a case-by-case basis. Equal Opportunity Services provide links between individuals with disabilities and the campus community. Information released will provide documentation of a disability for faculty, staff, students and prospective students of Carnegie Mellon University. All information will be considered confidential and only released to appropriate personnel on a need to know basis. To access services, individuals must initiate a request in writing for specific services/accommodations (books on tape, enlargements, interpreters, etc.). Accommodations prescribed only apply to Carnegie Mellon University and may not be valid elsewhere. The individual takes full responsibility for ongoing assistance.

In order to receive services/accommodations verification of a disability according to Carnegie Mellon guidelines is required.

To establish that an individual is covered under the ADA, the documentation must indicate that the disability substantially limits some major life activity, including learning. The documentation requirements are provided in the interest of assuring that a disability demonstrates an impact on a major life activity, is appropriate to verify eligibility, assures the implementation of appropriate accommodations, and supports the request for accommodations, academic adjustments, and/or auxiliary aids.

For more information on disability resources and documentation guidelines please contact Larry Powell, EOS Manager (412) 268-2013 or lpowell@andrew.cmu.edu or visit our website (http://hr.web.cmu.edu/eos.html).

Carnegie Mellon Resource Advising Center (CMARC)

Ty Walton, Director
Cyert Hall A64, 412-268-2150

The Carnegie Mellon Advising Resource Center (CMARC) is an advising and information center that assists students and connects them to appropriate communities, services and opportunities by providing academic planning and one-on-one counsel. Founded as the Carnegie Mellon Action Project (CMAP), CMARC has an additional commitment to support underrepresented minority students in a setting where students' differences and talents are guided, appreciated, and reinforced.

Academic Advising

CMARC, working in cooperation with faculty and departmental advisors, strives to promote academic success. The professional program advisors serve as an additional resource when it is necessary to consult with more than one person or to obtain another perspective. Their primary objective is to assist students in developing and achieving meaningful educational plans that are compatible with their life goals. CMARC advisors can help students:

- Establish short and long term academic goals.
- Investigate alternative majors in other colleges.
- Obtain referrals to organizations such as Career Services, Academic Development, etc.
- Explore career and graduate school options.

Computing Services

Steve Huth, Vice Provost Computing Services
Cyert Hall 281, 412-268-1075
http://www.cmu.edu/computing/

Computing on Campus

Computing Services maintains and supports computing resources for the campus community, including the campus wired and wireless networks, public printing, computer labs (clusters), email and software licensing.

To get started with computing at Carnegie Mellon, visit our Services for Students (http://www.cmu.edu/computing/students) page. Here you will find steps for connecting your computer or mobile/gaming devices to the network; accessing software; managing your Andrew account, password or email; using public printing and computer facilities.

If you need help with computing on campus, please contact the Computing Services Help Center at 412-268-HELP (4357) or advisor@andrew.cmu.edu.

Division of Student Affairs

Gina Casalegno, Dean of Student Affairs
Warner Hall 301

As much of undergraduate education focuses on preparation for professional careers, the university is strongly convinced that the total development of the student is critical to preparation for professional practice. A great deal of time and effort by the Division of Student Affairs, faculty and the university staff focuses on providing students with the opportunities to expand experiences outside the classroom, to encounter new intellectual
and social experiences, to undertake projects for personal growth, and to prepare for life.

Our vision and mission for the student experience is founded upon the intellectual, occupational, emotional, spiritual, physical, and cultural growth and nurturing of students. The Division of Student Affairs, and our partners throughout the university, are here to support you in reaching your highest potential in the areas of artistic and intellectual curiosity, personal well-being, professional competency, leadership development, and engagement in and contribution to the larger community.

Staff members throughout the division are here to support and foster your intellectual and personal growth and help you explore and experience the different aspects of college life. We care about you, your studies, your social growth, your well-being and your future and want to help you enjoy a great Carnegie Mellon experience. Offices within the Division of Student Affairs include:

- Office of the Dean of Student Affairs
- Career Center
- Counseling and Psychological Services
- Health Services
- Office of International Education
- Office of Orientation and First Year Programs
- Office of Student Activities
- Student Development Office
- Student Life Office

**Office of the Dean of Student Affairs**
Gina Casalegno, Dean of Student Affairs
Warner Hall 301, 412-268-2075,
http://www.studentaffairs.cmu.edu/dean.cfm

The Office of the Dean provides central guidance and direction of student services at Carnegie Mellon. The dean is responsible for leading the Division of Student Affairs in providing students with quality services, programs, and experiences that support and complement the academic mission of the university.

While students are encouraged to seek out any member of the division for assistance, you may also meet with the dean of student affairs directly by calling 412-268-2075 and scheduling an appointment at your convenience.

**Career and Professional Development Center**
Kevin Monahan, Associate Dean for Career and Professional Development
University Center Lower Level, 412-268-2064
http://www.cmu.edu/career

Career exploration and planning
Whether you are interested in exploring post graduation options, or are clear on the direction you plan to pursue, the Career and Professional Development Center offers a complete range of resources. Students wishing to explore how majors and minors relate to career choice, as well as gain information about particular fields, will work with a career consultant to examine their skills, interests, and values and how they relate to various career fields. Career consultants also coach students in writing resumes and cover letters, networking, locating internship and job opportunities, preparing for interviews, and pursuing graduate school opportunities. Career consultants are assigned to each college and provide individualized support, general career programming, and college-specific workshops. In addition to the workshops presented by the Career and Professional Development Center staff, consultants coordinate an annual professional development series presented by prominent alumni and recruiters in various industries and fields. Finally, the Center’s library and web page provide extensive resources on job search strategies, internships, summer opportunities and other career-related interests.

Job search
Several thousand summer internships and professional full-time job opportunities are made available to Carnegie Mellon students through TartanTRAK, our on-line job listing resource. Students can access TartanTRAK through the Center’s homepage. TartanTRAK also provides information on the hundreds of employers that visit our campus each year. These organizations interview students for internships and professional employment as well as hold informational sessions in the evenings that are open to the entire campus. Average starting salaries offered to Carnegie Mellon graduates, in most fields, consistently rank above the national norms.

Student employment/Campus jobs
The Student Employment program promotes experiential learning and professional development. All campus job postings include learning objectives that help employers and students recognize and understand the professional and personal opportunities for growth presented by each position. The Student Employment website includes an on-line training and orientation program on topics ranging from business etiquette to the essentials of getting paid on time.

Student employment opportunities are posted on-line through TartanTRAK and include federal, state, and community service work-study jobs as well as non-work-study jobs. While having a work-study award does not guarantee a job, searching for and applying to opportunities are easily navigated through TartanTRAK.

**Counseling and Psychological Services**
Morewood Gardens E-Tower, 412-268-2922,
http://www.studentaffairs.cmu.edu/counseling

Counseling and Psychological Services (CAPS) at Carnegie Mellon offers students the opportunity to talk about personal or academic concerns in a safe, confidential setting. Students come to CAPS for many reasons, including but not limited to problems with family, friends, or school; concerns about the future; and feelings of stress, low self-esteem, anxiety, depression, or loneliness.

We’re here to talk with students about issues that are significant for them. We also offer consultation to staff, faculty, and parents who have concerns about a student’s well-being. Any discussion regarding a client of the center necessitates a written consent by the student permitting us to release information, including whether the student has been seen at CAPS.

Counseling Center services are provided at no cost. There are, however, limits on the number of sessions that we are able to provide. Follow-up psychiatric services and off-campus referrals for longer term therapy are at the client’s expense. The Counseling and Psychological Services office is open weekdays, and there is a professional on call for emergencies during evenings and on weekends.

**Health Services**
Anita Barkin, Director
Morewood Gardens E-Tower, 412-268-2157
http://www.studentaffairs.cmu.edu/healthservices

Student Health Services is staffed by physicians, advanced practice clinicians and registered nurses who provide general medical care, allergy injections, first aid, gynecological care and contraception as well as on-site pharmaceuticals. Examinations by Health Services staff for illness/injury are free of charge; however, fees for prescription medications, laboratory tests, diagnostic procedures and referral to the emergency room or specialists are the student’s responsibility. Health Services also has a registered dietician and health educator on staff to assist students in addressing nutrition, drug and alcohol and other healthy lifestyle issues.

Patients are seen by appointment. Walk-in urgent care is provided. Appointments can be made by calling the office. If you have a medical problem or accident that requires immediate attention at night or on the weekend, you should contact University Police at 412-268-2323 for transportation to the emergency room. If you have an urgent problem and would like to speak with the physician on-call, you can do so by calling the Health Services number.

**Health Insurance**
In addition to providing direct health care, Health Services administers the Student Health Insurance Program. The Student Health insurance plan offers a high level of coverage in a wide network of health care providers and hospitals. It also covers most of the fees for care at Student Health Services.
All full-time students are required to carry health insurance and will be assessed a charge for the individual basic mandatory plan offered through the university student health insurance program. The charge will appear on the invoice of the first semester of attendance in the academic cycle.

The student is required to take one of the following three actions: (1) enroll in the basic plan as charged; (2) upgrade the benefit plan by enrolling in the enhanced student health insurance options during the open enrollment period; (3) apply for a waiver from the mandatory plan. Questions can be addressed to shinsure@andrew.cmu.edu.

**Office of International Education**
Linda Gentile, Director
Warner Hall, Third Floor, 412-268-5231
The Office of International Education (OIE) is committed to supporting, promoting, and celebrating individuals in an intercultural environment. We advocate for and facilitate international and cross cultural experiences, perspectives, and initiatives. OIE is the primary contact for study abroad programs and non-immigrant matters for all students and scholars (foreign professors and researchers) who are not United States citizens or permanent residents. OIE encourages both U.S. and international students to participate in international programs and events on campus, and we also welcome volunteers to participate and assist with programs sponsored by the office.

Foreign Students and Scholars
Carnegie Mellon hosts 2800 international students and 600 international scholars who come from more than 90 countries. International students make up 47% of the full-time graduate student body and 11% of our full-time undergraduates. OIE is the liaison to the university for all non-immigrant students and scholars. The foreign student and scholar advisors provide many services including: advising on immigration, academic, social and acculturation issues; presenting programs of interest such as international career workshops, tax workshops, and cross-cultural and immigration workshops; supporting international and cultural student groups such as the International Student Union and the International Spouses and Partners Organization; maintaining a foreign student resource library that includes information on cultural adjustment, international education and statistics on foreign students in the United States; posting pertinent information to students through email and our website, and conducting orientation programs.

Study Abroad
Carnegie Mellon students in every major can spend a summer, semester, or year abroad. Over 400 students go to all corners of the globe each year and receive credit for pre-approved study abroad. There is a wide range of funding options. The study abroad office assists students in all stages of the process of going abroad. The advisors promote study abroad, advise students, work with the academic departments and conduct information sessions, pre-departure orientations and welcome back workshops. For more detailed information about Carnegie Mellon’s study abroad program, see the Undergraduate Options section of this catalog.

Office of Orientation and First Year Programs
Anne R. Witchner, Assistant Dean of Student Affairs
Morewood Gardens 188, 412-268-4887
http://www.studentaffairs.cmu.edu/first-year

The Office of Orientation and First Year Programs is responsible for providing vision and leadership for a comprehensive approach to new student orientation and transition programs. The office provides programs, opportunities and services to help students and family members successfully transition to the Carnegie Mellon community.

The office is responsible for program development, marketing and implementation of orientation and transition programs. Areas of concentration include: new student orientation, Family Weekend and special event planning.

Office of Student Activities
Elizabeth Vaughan, Director
University Center 103, 412-268-8704
http://www.studentaffairs.cmu.edu/StudentActivities/

The Office of Student Activities complements students’ academic experiences by providing services and resources that engage students in creating campus culture through social, cultural, intellectual, spiritual, athletic, recreational, artistic, political, and service opportunities. Our staff is committed to delivering quality advising, resource materials, leadership development opportunities, and administrative support services to impact students’ growth and development and enhance the success of each student organization.

Our office partners with students to create a vibrant culture of student life on the Carnegie Mellon campus. Our community is home to nearly 250 recognized student organizations that are supported by the Student Activities staff team. In addition to serving as individual advisors to many organizations and providing resources, support, and ad hoc advising to all student organizations, our office also coordinates a slate of opportunities to help Carnegie Mellon students get involved in campus life.

To learn more about getting involved on campus, please visit our website where you can find information about recognized student organizations and about upcoming events on campus. If you are interested in forming a new organization, visit our office to learn more about how to get started. We look forward to helping you make your mark on the campus experience at Carnegie Mellon.

Student Life Office
John Hannon, Associate Dean of Student Affairs
Morewood Gardens A-Tower, 412-268-2142
http://www.studentaffairs.cmu.edu/student-life/

The Student Life Office provides opportunities that emphasize community engagement, leadership and social responsibility while actively supporting the personal and professional development of students. To this end, we coordinate residence life for first-year, upperclass and Greek students through our house model. Our professional staff, called Housefellows, advance a broad-based vision for student development by utilizing the residential house community as a focal point for the student experience on campus. The Housefellow’s role involves serving as students’ primary metacurricular advocate at the university while enhancing their social, academic, intellectual, artistic and personal development. Students lead the development and implementation of a vibrant, engaging experience in these houses through their work as Resident Assistants, Community Advisors or house council members, all of whom are advised by the Housefellow.

Additionally, the Student Life Office coordinates a number of developmental programs, initiatives and services for the broader campus community. We coordinate educational initiatives and accountability processes related to community standards; provide resources and facilitate programs related to gender and gay/lesbian/bisexual identity including GenderTalk and OUTSpoken, the MOSAIC conference, SafeZone training and Pride Month events; advise student safety initiatives such as Sexual Assault Advisors, 1 in 4, and Safewalk; advise and support the twenty-four social, Greek-letter organizations and associated governing bodies that comprise the fraternity and sorority community; offer leadership programs such as the First-Year Leader Retreat and Emerging Leaders; coordinate spirituality and meaning-making programs such as the Big Questions series; and advise the Student Dormitory Council.

Housing and Dining Services
Morewood E-Tower, 412-268-2139
www.cmu.edu/Housing-Dining/

Housing and Dining Services provides a variety of accommodations for Carnegie Mellon students. Living arrangements include traditional single-gender residence halls, coeducational residence halls, suites, apartments, houses and Greek living areas. All first year students, 17 years of age or older, are required to reside in University housing. The Dean of Student Affairs must approve first-year students who wish to be exempt from this requirement and would like to commute from home. Students who will not be 17 before the start of their first semester are asked to contact the Dean of Student Affairs. Transfer student housing is subject to availability and therefore, transfer students are also asked to contact Housing and Dining Services.

University housing is available on campus and in our Oakland Community Apartments. All on-campus residential areas are located in close proximity to academic buildings. The Oakland Community Apartments are located very near the campus and are an approximate 5-10 minute walk to campus. The university’s shuttle bus services these areas on a regularly scheduled basis.

Furnishings and Amenities
Housing and Dining Services provides each resident with a bed, a desk and chair, a bookshelf, a dresser and a closet or wardrobe. Each room is also equipped with window coverings and cable TV, and all of our buildings have Ethernet or broadband service for fast data connectivity. Items such as pillows, linens, area rugs, cellular telephones (if desired), etc., are the student’s responsibility. Oakland Community apartments have a broadband service modem with one outlet per apartment. Residents are responsible for any routers or switches needed to connect multiple computers to the modem.

Room Rates
Room rates include utilities, maintenance, a cable TV jack and Ethernet/ broadband connection in each room, apartment, or house. Students pay separately for room and public area damages. Long distance phone access can be obtained by use of personal cell phones or calling cards purchased by the student and used at the courtesy phones.
Room Types
Residence hall rooms, apartments and houses are available through Housing and Dining Services and are priced according to these broad categories:

Residence hall rooms
- Grouped and priced by occupancy (# of students per room by design) and a classification (standard, prime, suite)
- Singles, doubles, triples, and quads are available
- No in-room cooking facilities
- Classification is primarily based on bathroom privacy, although other criteria may also be involved
- Standard rooms share a large, central bathroom facility
- Prime rooms generally share a private or semi-private bathroom with no more than five students
- Suite-style rooms share a semi-private bathroom, as well as a common living area

Apartments
- Efficiency, one-bedroom and two-bedroom apartments are available
- Grouped and priced by occupancy, location, and number of bedrooms
- In-room cooking facilities

Houses
- Grouped and priced by occupancy and location
- Includes bedrooms, a kitchen, a dining room, a living room, private bath and laundry facilities

Housing Reservations
Returning Student Room Selection
Each spring returning resident students will have an opportunity to reserve spaces in university housing through the Room Selection process that takes place in February and March. Returning students most often select apartments and residence hall rooms that offer more flexibility and privacy, features typically created by a kitchen and/or semi-private bathroom facilities.

First-Year Student Room Assignments
Most first-year students are assigned to traditional residence hall rooms where each floor shares a community bathroom. Because these traditional residence hall rooms (standard rooms) support the development of strong community, they provide excellent opportunities for first-year students to develop many friendships on their floor and throughout the building. While every effort is made for first-year students to share a room with another first-year student, a small number of first-year students will sometimes share a room with a returning student. If two first-year students request each other as roommates, their request will usually be honored as long as both applications are received before the May 31 deadline.

Room assignments for first-year students are made in the order in which their original university deposits were processed by the Office of Admission. The Office of Admission provides Housing and Dining Services with the information concerning the date on which each incoming student deposit was processed.

Building and Room Preferences
We give our best effort in fulfilling each student’s individual housing preferences, but it is often difficult to accommodate everyone’s top choice due to the high demand for housing at Carnegie Mellon. The cost of attendance used in the calculation of a student’s eligibility for financial aid includes a housing allowance that is based on a standard double room rate. Students are still responsible for the full cost of their room rate even if it is higher than the standard double rate.

Roommate Matching Procedures
A number of factors are taken into account when we make roommate assignments: a preference for a special residential program, specific hall or room type, smoking status, and college and major. Also factored into the equation is personal information about how you intend to utilize your room (social or study purposes), how clean you intend to maintain your room and whether you consider yourself to be a “night” person or a “morning” person. Housing and Dining Services does not, and will not, discriminate in any way in regards to roommate matching. It is important for students to be honest when filling out the housing application as it will eliminate the potential for roommate conflicts.

Housing License Agreement
The Housing License Agreement is a binding document that states the terms and conditions of occupancy by which the student and the university intend to be legally bound including the dates of residence. The agreement is for two full terms, beginning with the fall semester. Housing and Dining Services advises students, parents and guardians to read the agreement thoroughly (a copy is available on our website, www.cmu.edu/housing/). The submission of the Housing License Agreement is an on-line process for both first year and upperclass students. The Housing License Agreement is signed by electronic signature and authenticated by Andrew ID through the WebIS process.

Important Information About Temporary Housing
Because housing is in high demand at Carnegie Mellon, occupancy pressures may dictate that a limited number of first-year students spend anywhere from a few days to a few weeks in temporary housing. Once it is time to relocate to a permanent assignment, Housing and Dining Services will orchestrate and assist in the move.

Housing Charges
The housing room charge is billed in three separate amounts. After charging and crediting the housing reservation fee, the University bills students for the balance of their academic year housing charges in two separate amounts, one each semester.

Cancellations
Only under very limited circumstances can Housing License Agreements be cancelled. These reasons include marriage, verified departure from the university, study abroad, or moves to Greek housing as defined by Greek leases and approved by Housing and Dining Services staff. The only contract cancellation requests that will be considered, other than those mentioned, are those based on verifiable medical or psychological hardship. Students interested in pursuing a contract cancellation based on one of these hardships may obtain the appropriate form at the Housing and Dining Services office.

Refunds
During the academic year, if a housing room payment should become refundable, the refund shall be recorded as a credit to the student’s account with the University. Refund amounts are calculated on a pro-rated basis for the days remaining in the contractual term after the student completes the entire withdrawal procedure, which includes completion of the Request for Cancellation form and returning the room key to the Office of Housing and Dining Services.

Other Living Arrangements
Students moving into a fraternity or sorority house or leaving university housing (except to participate in an academic program away from the Pittsburgh area) should be aware that their opportunities to move into Carnegie Mellon University housing in the future may be very limited. Students wishing to return to university housing join a wait list for spaces remaining after all returning residents, incoming first-year students and transfer students have been housed.

Community Housing
Housing and Dining Services provides an off-campus housing registry service. This on-line service maintains up-to-date information on available apartments, houses and rooms in private homes for rent, as well as on students who are looking for roommates. Additional information about moving to Pittsburgh, utility companies, etc. is included on the site. Since accommodations in university housing are not available to graduate students, Community Housing Services is a good resource for graduate students seeking accommodations in the local area. For more information on our services, please visit our website at http://www.cmu.edu/housing/community-housing/.

Additional housing information can be found in “The Word (http://www.studentaffairs.cmu.edu/theword), “From the Ground Floor Up, the undergraduate guide to Housing and Dining Services” or at www.cmu.edu/housing.

Dining Services
At Carnegie Mellon Dining, our priorities are to give students healthy options, a convenient dining experience and, most importantly, good tasting, quality food. We currently feature over twenty eating locations in the University Center and in residential and academic buildings. Our cuisine ranges from Asian to Indian to American, from an All-you-care-to-eat location to breakfast served all day to a quick sandwich and drink on
the go. We have established hours to meet the needs and requirements of the campus community, from early morning coffee to late night snacks. We are able to accommodate special dining needs and have a registered dietician and other food service professionals on campus that can work with individual students on nutrition and diet choices.

Dining Plans
We have designed our dining plans so that you can chose when, where and what you want to eat to best fit your needs. Your dining plan is encoded on your Carnegie Mellon ID card so that you have easy access to your account wherever you go.

There are several different ways to use your dining plan on campus. Our traditional dining plans and community dining plans consist of value meals combined with a declining balance account called flexible dollars. Students are also able to select a DineXtra only plan, which acts as a declining balance account for the entire semester.

Student who have purchased a traditional or community dining plan are able to use meal passes at any dining location. There are four meal periods per day - breakfast, lunch, dinner and late night. You can use one pass during each of these meal periods. The traditional plans also include two guest meals per semester which allow your guests to enjoy campus food with you, or you can use these meals if you would like to purchase two meals during one pass period. These guest meals can be redeemed at any time during the semester.

Flexible dollars and DineXtra are dollars that can be used at any point during the semester. They can be used to upgrade your meal passes with special options like Premium Entrees or to purchase items a la carte at any of our Dining locations. Flexible dollars and DineXtra can also be used at Entropy+, the campus convenience store, to purchase grocery items to supplement your daily meals. In addition to dining locations on campus, they are also accepted at Eat n’ Park (Murray Ave), Vocolli’s Pizza (Baum Blvd) and Subway (S. Craig St) off campus. Unused flexible dollars do not roll over to the next semester. DineXtra balances do roll over from the fall to the spring semester, but your account expires at the end of the spring semester.

Vending Services
Vending machines are located in a number of locations throughout campus. From this 24-hours service, students may chose entreées, “Healthy choice” lunch meals, soup, coffee, assorted beverages, and snacks. Many of the machines in the residence halls are enabled to accept DineXtra transactions, and most vending machines around campus also accept Plaid Ca$h. Purchases are made by swiping your Carnegie Mellon ID Card through the card reader on each machine, which will access and deduct the cost of the purchase from your DineXtra or Plaid Ca$h accounts.

Academic Support Services

Academic Development
Cyert Hall, Suite B5
412-268-6878
www.cmu.edu/academic-development

Academic Development provides a variety of support services geared towards helping students develop the skills, strategies, and behaviors needed to perform as confident, independent, and active learners. These services range from study skills instruction in areas such as textbook reading and lecture note taking to tutoring and review sessions in selected courses. These services are free of charge and available to all Carnegie Mellon students - those who are having difficulties and those who just want to improve their skills.

Following are the services that Academic Development offers:

Peer Tutoring
Peer Tutoring is geared primarily, but not exclusively, toward large introductory courses. It is available from 8:30-11:00pm. Sunday-Thursday in various residence halls and on selected weekday afternoons in Cyert B5. This is a walk-in service, and no appointment is necessary. Standing Tutoring appointments are also available upon request.

Study Skills Instruction
Group workshops are held several times each semester, covering topics such as time management, stress management, test taking, and procrastination. Register for workshops or make individual appointments by contacting Academic Development.

Supplemental Instruction (SI)
Supplemental Instruction (SI) is an academic enrichment program that is offered in traditionally difficult courses. SI discussion and review sessions are facilitated by trained student SI Leaders who have already completed the course and received an A in it.

Designed to supplement - not replace - class lectures and recitations, SI sessions are interactive and collaborative. Students who attend sessions learn to integrate how to learn with what to learn. SI sessions are usually held twice weekly for one hour; additional sessions are held prior to exams. Attendance at sessions is voluntary.

Study Groups
Organized Study Groups are available in selected courses each term. The Study Groups are limited to six students and are facilitated by a student leader. Come in to the Academic Development office in Cyert Hall, Suite B5 and fill out a Request Form to join a Study Group.

Fast Facts
These pamphlets, which offer tips on a variety of academic success issues, can be picked up from the Academic Development office or can be viewed on the website under “Publications”.

Freshmen Fast Facts
This set of five brochures is geared primarily toward freshmen. They cover topics such as working with faculty, optimizing your time, managing coursework and readings, understanding grades, academic integrity, and getting help when you need it.

Teacher Certification
Carnegie Mellon students interested in earning teacher certification can participate in a 5-year program that will allow them to earn their undergraduate degree at Carnegie Mellon and spend one year in an intensive Master of Arts in Teaching (MAT) program at Chatham University to earn the MAT and Pennsylvania Teacher Certification. To make this program possible, interested undergraduate students should plan to cross register at Chatham for 63 units of required courses, using elective spaces in their schedule. Students who will graduate after December 2012 will have slightly different requirements because of changes being made to more adequately meet the requirements of the No Child Left Behind law (mainly related to preparation to work with special education populations and students who speak English as a second language).

Criteria for admission or the MAT program includes: An overall GPA of 3.0, and completion of three pre-professional Praxis exams in Reading, Writing and Mathematics. All candidates for initial certification in Pennsylvania must have earned at least a baccalaureate degree, completed an approved program of teacher education, and passed the Praxis content tests for their certification area. NOTE: Pennsylvania has signed interstate agreements with more than 42 other states, so you are not restricted to teaching in Pennsylvania. Check with the Department of Education in the state where you will live to determine if PA certification will be accepted. To plan early, contact Judith Hallinen, Assistant Vice Provost for Educational Outreach, 8-1498.

Intercultural Communication Center
Peggy Allen Heidish, Director
Warner Hall 308, 412-268-4979
http://www.cmu.edu/icc
esilhelp@andrew.cmu.edu

The Intercultural Communication Center (ICC) is a support service offering both credit and non-credit classes, workshops, and individual appointments designed to equip nonnative English speakers (international students as well as students who attended high school in the U.S.) with the skills needed to succeed in academic programs at Carnegie Mellon. In addition to developing academic literacy skills such as speaking, reading and writing, students can learn more about the culture and customs of the U.S. classroom. The center offers:

- Writing Clinic: individual appointments to help students with their academic writing assignments
- Credit class for undergraduates: Building Fluency for Presentations (7 week mini, 99-451); register through ICC, interview required
- Non-credit Seminars and workshops: such as Citing Sources, Writing Academic Summaries and Revising for Clarity
• Tutoring: individual appointments address specific areas such as speaking, listening, grammar, and academic fluency
• Placement interviews: evaluate spoken language so that we can suggest appropriate ICC work and give students useful feedback on the strengths and weaknesses of their communication skills.
• The ITA Test: a mandatory screening test for any non-native speaker of English (graduate or undergraduate) who plans to work as a teaching assistant.

Level of English fluency needed for non-Native English speakers - Please see Academic Regulations. (p. 52)

Fellowships
Fellowships and Scholarships Office (FSO)
Stephanie Wallach, Director
412-268-9987
http://www.cmu.edu/fsq

Students at Carnegie Mellon are encouraged to apply for a wide variety of national and international fellowships available throughout their undergraduate years and post graduation. These opportunities — some competitive, some open to any student, and exposing students to new scholarly communities, to different kinds of research, and/or to service in the public sector. Participation in fellowships, and other award opportunities is often an important springboard to future career directions. Many people have heard about the Rhodes Scholarships, the Fulbright Grant and The Harry S. Truman Scholarship, yet there are hundreds of opportunities that may be less well-known but are excellent funding sources.

The Fellowships and Scholarships Office plays an important role in helping students learn about scholarships that are a good match for their interests. The FSO staff also work closely with students on their applications to make sure that they are as competitive as possible.

Please visit the FSO website to learn about the many scholarships and fellowships open to Carnegie Mellon students. The website also contains useful links to other resources for additional information on external educational opportunities.

Honor Societies
Phi Beta Kappa Society
Carnegie Mellon shelters a chapter of the Phi Beta Kappa Society, sponsored by the three colleges (Dietrich College of Humanities and Social Sciences, Mellon College of Science, and the School of Computer Science) that comprise the University’s “arts and sciences” equivalent. The chapter's name is "Upsilon of Pennsylvania," and was formally installed in April of 1995.

Founded in 1776 at the College of William and Mary in Williamsburg, Va., Phi Beta Kappa is the nation's oldest honorary society, with chapters at 276 of the foremost institutions of higher education across the country. Almost all members are elected by the chapters from among candidates for degrees in liberal arts and sciences, usually from the top 10% of the graduating class.

Many notable figures in American History have earned the coveted Phi Beta Kappa key including leaders of the American Revolution, delegates to the Constitutional Convention of 1788, and members of the Continental Congress and the U.S. Congress. Six United States presidents earned the honor as undergraduates and another 10 presidents were elected as alumni or honorary members.

Membership in Phi Beta Kappa key has become a universally recognized mark of academic achievement in the liberal arts and sciences. The key’s venerable pointy shape claims for all to see the wearer’s commitment to Phi Beta Kappa’s ancient principles (represented in the three stars) — friendship, morality and learning.

The society’s name is formed by the first letters of the phrase Philosophy Biou Kybernetes, Philosophy (wisdom) is the Guide of Life. In line with the conviction that the test of education lies not in what people know but in what they are, the objectives of humane learning encouraged by Phi Beta Kappa include not merely knowledge but also intellectual honesty and tolerance, a broad range of intellectual interests and understanding.

The Carnegie Mellon chapter is active in sponsoring visiting speakers, on-campus roundtables that focus on current issues, community service activities, scholarship opportunities, student research involvement, and the like.

The Honor Society of Phi Kappa Phi
The Honor Society of Phi Kappa Phi has been an important presence on campus since 1933. Phi Kappa Phi, a national honor society that began in 1897 at the University of Maine, takes its name from the initial letters of its adopted motto, Philosophy Krateito Photon, "Let the love of wisdom rule humanity." Phi Kappa Phi recognizes and honors persons of good character who have excelled in scholarship, in all fields of study. Members are nominated by their department or their school or college and then invited to join the society. To be eligible, seniors must be in the top ten (10) percent of their class and juniors in the upper seven and one-half (7.5) percent of their class at the time of invitation. Graduate students, alumni, faculty and staff are also eligible for nomination. The chapter indicts new members once a year, each spring, and provides information to its members on all sorts of opportunities, including study abroad, internships, and graduate fellowships, recognition and awards.

Undergraduate Research Office
Stephanie Wallach, Assistant Vice Provost for Education
www.cmu.edu/uro

What is the Undergraduate Research Office (URO) at Carnegie Mellon?
Conducting research as an undergraduate is a terrific way to get to know faculty members, explore an area of interest in depth, turn classroom theory into practical hands-on experience, get a feel for graduate school, and have some fun at the same time! The Undergraduate Research Office supports students conducting independent research and creative projects in every field at the university.

All undergraduates at Carnegie Mellon are eligible to participate in Undergraduate Research Office programs. The term “research” is defined broadly as “research, scholarly, or artistic activities that lead to the production of new knowledge; to increased problem solving capabilities, including design and analysis; to original critical or historical theory and interpretation; or to the production of art or artistic performance.” Students from all fields and at all levels are encouraged to participate in the research process at least once, and hopefully many times, in their undergraduate careers. Our website, www.cmu.edu/uro contains detailed information on all of our programs and on the application processes.

Advising and Information Services
The Director and Assistant Director of the Undergraduate Research Office are available to discuss project ideas; suggest possible faculty mentors (required); read and comment on proposal drafts; and generally facilitate the research process. In addition, the URO typically runs two proposal writing workshops each semester to assist students in preparing their proposals. Support from the URO is a competitive process and requires the students to submit strong proposals.

Small Undergraduate Research Grants (SURG)
Undergraduates in good academic standing are eligible to apply for a Small Undergraduate Research Grant (SURG). Awards are made twice each year based on submitted project proposals. A panel of faculty and administrators from each of the colleges serves on the selection committee and will generally consider requests up to $500 for individual student projects or $1000 for a group project. Grants may be used to purchase supplies and materials, rent time on laboratory equipment, pay subjects in an experiment, or even travel to another city to collect data. Budgets are required as part of the SURG proposals. Deadlines are October for the Spring grant period and in March for the Summer and Fall grant periods.

Summer Undergraduate Research Fellowship (SURF)
These fellowships are designed to allow students a 8–10 week summer of supported research at Carnegie Mellon in close collaboration with a faculty advisor. Students receive a fellowship of $3,500 as a stipend to cover any of their expenses. The deadline for submission of proposals coincides with the regular SURG deadline in March.

Undergraduate Research Symposium: Meeting of the Minds
The undergraduate research symposium, known as “Meeting of the Minds,” is an annual event that brings our campus together to celebrate the diverse, creative, and ground-breaking research that takes place among undergraduates. Students share their research findings through poster, oral, and artistic presentations. Many participate in award competitions sponsored by various corporations, individuals, and organizations. All students funded through the URO are required to attend, but it is also open to other students, including senior thesis presenters. Approximately 450
students participate each year. Meeting of the Minds takes place during early May at the University Center.

Presentation Awards
Students whose work has been accepted for presentation at an academic conference are eligible to apply for a Presentation Award. These awards, up to $250, help defray costs of conference registration, transportation, and accommodation.

SRC-URO Program
Second-year students in semiconductor research and information technology fields are eligible to join faculty labs — depending on the needs of the faculty and qualifications of the student — to get an early taste of the excitement and benefits of undergraduate research. The Semiconductor Research Corporation funds this program. Students can earn up to $2,000 per semester for the second semester of their sophomore year and for both semesters of their junior year; they are strongly encouraged to apply for SURF ($3500) for the summer between their sophomore and junior years. SRC-URO is open to students in the following fields: Electrical and Computer Engineering; Chemical Engineering; Mechanical Engineering; Materials Science and Engineering; Computer Science; and Physics. This is a competitive opportunity and the number of participants is very limited. A special application process is required and is available on the URO website.

University Center
Carnegie Mellon’s University Center is the first building of its kind on our campus. A central gathering place for all members of the university community, the University Center is the hub of Carnegie Mellon’s social, athletic, recreational and religious life.

• Play basketball, volleyball and badminton
• Play racquetball or squash on one of five courts
• Swim in the eight-lane lap pool or dive into the diving well
• Work out on new weight machines, rowers, stair climbers, ellipticals, and treadmills
• Take a group exercise class including yoga, indoor cycling, Pilates, and Zumba. Check the website www.cmu.edu/athletics/facilities/university-center.html for further information.

The locker rooms include showers, whirlpools, and steam rooms.

Eating at the University Center
We’ve brought in several outside vendors to offer a variety of dining options:

• City Grill
• Creperie
• Downtown Deli
• El Gallo de Oro
• entropy+
• Evgefstos
• Pasta Villagio
• Quik Piks
• Schatz Dining Room
• Skibo Coffeehouse
• Spinning Salads
• Take Comfort Too
• The Pomegranate

Shopping at the University Center
Carnegie Mellon’s retail stores are in the University Center. These include the Art Supply Store and the University Shoppe, a multi-level retail facility for art/engineering supplies and tools, books, textbooks, clothing, memorabilia and the computer store.

The building houses student organization offices, activity space and the Scotland Yard Game Room. The game room includes pool tables, foosball, ping pong and shuffle board. The building also includes the Student Activities staff offices, webstations and printer, a multi-denominational chapel, a prayer room, the University Post Office, a recycling room, FedEx Office, ATMs, PNC bank branch, the Career and Professional Development Center and an alumni lounge, which is open to all members of the university community.

University Police
Thomas Ogden, Chief
300 South Craig Street, Room 199
Public entrance on Filmore Place
www.cmu.edu/police

The University Police Department consists of 24 sworn Police Officers, 37 Security Guards, and five Communications Dispatchers. University Police provides campus buildings and grounds patrol, emergency medical transport, personal escorts, and other services to increase the safety and well being of persons and property in the university community. Officers patrol the campus continuously 24 hours a day, seven days a week on foot, on bicycle and in vehicles and remain in constant radio contact so that they can respond rapidly in the event of an emergency. Direct line emergency telephones to the University Police communications center are located both inside and outside of buildings at 53 locations around the campus.

All crimes that occur on campus should be reported immediately to University Police to ensure that appropriate action is taken. Crime occurring on campus can be reported in person, or by calling the University Police emergency number, (412) 268-2323 or x8-2323, any time of the day or night. All other non-emergency inquiries should be made by calling the non-emergency number (412) 268-6232 or x86232.

University Police operates an Operation Campus Watch program to increase the awareness of the entire community at Carnegie Mellon. The concept of Operation Campus Watch includes two simple aims:

1. The sharing of crime information by University Police.
2. The involvement of the entire community in reporting suspicious activity or actual crime.

Additional information on Operation Campus Watch is available at the University Police Office located in Room 199, 300 South Craig Street or by calling the non-emergency number, (412) 268-6232.

All emergencies on campus, including fire and medical, should be reported immediately to University Police.

Students are responsible for their personal property as well as the property of groups to which they belong. Insurance against loss, theft, or damage to such property occurring in the residence hall or elsewhere on campus must be arranged for by students or their parents through an insurance agent.

University Police makes available on the world wide web a wide range of information about the university’s security practices. Descriptions of crime prevention programs, alcohol and drug, sexual assault policies, and statistics about the number and type of crimes committed on campus during the preceding three years can be found at www.cmu.edu/police, click on “Annual Reports.”

University Libraries
Keith Webster, Dean of University Libraries
Hunt Library
412-268-2447
kwebster@andrew.cmu.edu
www.library.cmu.edu

Facilities and Services
The University Libraries’ collections support teaching and research at Carnegie Mellon University (CMU). The collections for various disciplines are housed in three libraries: the Engineering and Science Library (engineering, mathematics, physics, computer science and robotics), Hunt Library (humanities, fine arts, social sciences and business) and the Mellon Institute Library (chemistry and biology). An off-site storage facility holds low-circulating materials, which are available at your request via the library catalog. Interactive access to library resources is supported by the University Libraries’ home page at http://search.library.cmu.edu.

Reference services help you to select resources and find the information you need. If you need materials that we do not own, interlibrary loan will help you to obtain them. Circulation services help you to borrow and renew materials, and use course reserves. Most course reserves are online, but some reserves are hard copies that faculty set aside in the library for their classes to use.

The University Libraries also house several unique collections (Architecture Archives, Fine and Rare Books, and the University Archives) in addition to a number of special collections that we have digitized and make available online. Digital collections include the H. John Heinz III Archives, the Allen Newell Collection, the Clifford Shull Collection, the Herbert Simon Collection, the Joseph Traub Collection, and the Posner Family Collection of fine and rare books. Student-created exhibits of fine and rare books from the Posner
Collection are a regular feature in Posner Center, located between the College of Fine Arts and the Tepper School of Business.

Online Access
From the Libraries’ home page, search.library.cmu.edu:

- CAMEO library catalog – Use CAMEO to find out where materials are located in libraries on campus. See whether items are checked out, on reserve, or available to be borrowed.
- My Library Account – Renew books, put books on hold, see a list of what you have checked out, see fines.
- Course Reserves – Find required materials that your professors have reserved for classes to use.
- Research Help – Learn about key resources in your subject area, including the CMU librarian who is a subject specialist for your school or college.
- Ask Andy – Interactive reference service staffed by CMU librarians (chat, IM, email, phone, or in-person)
- AND MUCH MORE: Library Collections – Articles & Databases – E-Journals A-Z – Library Catalogs – Library Services ...

“Library Catalogs” links to online catalogs for the University of Pittsburgh Library System, The Carnegie Library of Pittsburgh, and other local libraries. We are partners with Pitt and The Carnegie; you can get library cards and borrow directly from these nearby libraries.

Instruction and Help – Live!
Get acquainted with the collections and services that support your school and subject area. Take advantage of library orientations and other library instruction classes that will help you become adept at using information resources. Being able to select good sources, access information efficiently, and evaluate results are skills that you will use throughout your academic and professional career.
Reference desks at the Engineering and Science Library, Hunt Library, Mellon Institute Library and in Arts and Special Collections (at Hunt Library) are staffed weekdays, evenings, and on weekends. Besides helping you in the library, reference staff also can answer your questions about remote access (using library resources such as databases and e-journals from any internet location).
If you need specialized reference help, contact the librarian for your subject area. Librarians work directly with faculty and students in each school, department and institute at CMU to help shape library collections, teach library research skills, and assist efficient research.

Undergraduate Jobs
The University Libraries hire many undergraduate students each year, primarily through state and federal work/study programs. Working part-time in the library gives you the unique opportunity to learn and practice skills that will contribute to academic success while you earn some spending money. If this sounds interesting to you, check out About Us > Employment> Student Assistants at search.library.cmu.edu and apply.
Undergraduate Options

This page describes some of the many options of study students can choose during their undergraduate career at Carnegie Mellon.

Additional Majors/Dual Degrees

Students interested in pursuing more than one area of study are encouraged to consider an additional major or dual degree. Students who complete an additional major will earn a single degree in two areas. Generally, it is possible to fulfill the requirements of both majors in four years by taking the course requirements of the second major in the elective spaces allowed by the first major. Students in Carnegie Institute of Technology may elect to double major in Engineering and Public Policy or Biomedical and Health Engineering, which are offered only as an additional major. Human Computer Interaction is also offered only as an additional major.

Dual Degree programs allow students to earn two degrees. Students who are interested in an additional major or dual degree are encouraged to review the specific possibilities with the relevant academic advisor.

Five-Year Bachelor's/Master's Programs

Qualified undergraduates may apply to one of several programs to earn their bachelor's and master's degrees in five years. For further details about these programs, please refer to the appropriate college or departmental section(s).

Carnegie Institute of Technology

The five-year Integrated Master's/Bachelor's programs offered by the Departments of Electrical and Computer Engineering and Civil and Environmental Engineering offer students superior technical preparation for careers in industry. The departments of Chemical Engineering and Mechanical Engineering also offer fifth-year/Accelerated Masters programs. The Department of Materials Science and Engineering offers a cooperative Industrial Internship Option in which students alternate coursework with practical experience in industry. Admission is highly competitive and leads to a Master of Science degree.

Dietrich College of Humanities and Social Sciences

The Department of Philosophy offers a bachelor's/master's degree option: the Bachelor's/Master's degree in Logic and Computation. The M.A. in Teaching English to Speakers of Other Languages (TOESL) is a fifth-year master's option for Modern Language students who are concentrating in English as a Second Language. Also, the department of English offers an accelerated program for undergraduates to obtain a Master of Arts in Professional Writing.

H. John Heinz III College

The Heinz College's Accelerated Masters program allows qualified undergraduate students to earn a prestigious Master of Science degree in Public Policy and Management. For students in the College of Fine Arts or the Bachelor of Humanities and Arts degree program who are interested in careers in arts management, the program leads to a Master of Arts in Professional Writing.

Mellon College of Science

The Honors Programs in the Department of Chemistry and Mathematics are demanding, accelerated programs that give highly qualified students the opportunity to earn their bachelor's and master's degrees in just four years. Admission is by invitation only.

Tepper School of Business 3-2 Program

Students who are interested in business management may wish to consider the Tepper School of Business 3-2 program. Qualified undergraduate students may earn their master's degree in Industrial Administration in addition to their bachelor's degree. For students interested in earning a Master of Science in Quantitative Economics degree, Tepper offers an accelerated B.S./M.S. program in Economics.

Health Professions Program

Director: Jason D'Antonio
Office: Doherty Hall 1319

The Health Professions Program (HPP) at Carnegie Mellon University is an advising and resource center for all university students and alumni who are interested in one or more aspects of the health professions. This program complements a student's curricular advising and is meant to help students explore their interests, prepare for graduate programs in the health professions, and facilitate their application process. Students can enroll in the program at any time during their academic career, but the importance of early planning is communicated to interested first-year students. Once enrolled, students meet regularly with the director to discuss course requirements, medical exposure opportunities, and other aspects of preparing to be a competitive candidate.

Students in the HPP span all colleges of the university and have many diverse career interests including medicine, dentistry, optometry, biomedical research, medical physics, rehabilitation engineering, medical informatics, and health policy. Although the majority pursue a primary major in the Mellon College of Science, other highly represented disciplines include engineering and the social sciences.

Regardless of a student's major, the basic course requirements outlined below must be completed prior to medical school matriculation, and most should be taken before the student takes the Medical College Admissions Test (MCAT) that is normally taken in spring of the junior year.

1. One year of general biology with lab.

   This is typically fulfilled by the following Carnegie Mellon courses:
   03-121 Modern Biology 9
   or 03-202 Intro to Mammalian Physiology 9
   or 20-202 Physiology 9
   or 03-124 Modern Biology Laboratory 9
   or 03-343 Experimental Techniques in Molecular Biology 9
   or 03-206 Biomedical Engineering Laboratory 12

2. One year of general chemistry with lab.

   This is typically fulfilled by the following Carnegie Mellon courses:
   09-105 Introduction to Modern Chemistry I 10
   09-106 Modern Chemistry II 10
   09-221 Laboratory I: Introduction to Chemical Analysis 12

3. One year of organic chemistry with lab.

   This is typically fulfilled by the following Carnegie Mellon courses:
   09-217 Organic Chemistry I 9
   09-218 Organic Chemistry II 9
   09-222 Laboratory II: Organic Synthesis and Analysis 12

4. One year of physics with lab.

   This is typically fulfilled by the following Carnegie Mellon courses:
   33-106/111 Physics I for Engineering Students 12
   (for science or engineering students)
   33-112 Physics II for Science Students 12
   33-100 Basic Experimental Physics 6

5. One year of English.

   This is typically fulfilled by the following Carnegie Mellon courses:
   76-101 Interpretation and Argument 9
   76-xxx English course of the student's choice, typically 200-level or higher

In addition to these general course requirements, recommended coursework includes calculus, biochemistry, statistics, behavioral sciences, ethics, and languages. Interdisciplinary studies are also strongly encouraged, and many students design an undergraduate curriculum that incorporates
majors and/or minors in both the natural and social sciences. One interesting interdisciplinary minor offered is the Minor in Health Care Policy and Management, which broadens awareness of the health care field from social, economic, historical, and policy perspectives. See http://coursecatalog.web.cmu.edu/melloncollegeofscience/melloncollegeofscience/minors/ for the details of this minor.

Undergraduate research is a hallmark of the educational experience at Carnegie Mellon in many disciplines. Whether in the psychology lab studying the impact of breast cancer diagnosis on family social dynamics, in the NMR lab imaging metabolic function in the heart or brain, or in the surgery suite testing robotic devices, our students have made significant achievements in research, well beyond the more traditional guided experiments.

Our university policy is to train students to be first class scientists, engineers, artists, writers, managers, or whatever their passion may be. We do not train students to be “pre-med,” but if they choose to use their talents in a health profession, we offer many services to help them obtain their life goals. Regular advising, application workshops, health issue seminars and symposium, community outreach activities, and preceptorship/internship experiences are all part of our programming. The student pre-health organizations on campus, the Doctors of Carnegie (DOCs) and the Minority Association of Premedical Students (MAPS), together with the Health Professions Program, provide students with many opportunities to learn, explore, and prepare for their chosen area of professional interest.

The Health Professions Program has been successful in helping students to define, prepare for, and obtain their professional goals. Our students are regularly accepted at top-level medical and graduate programs, and our alumni continue to serve as outstanding ambassadors of Carnegie Mellon and the training and experience they received here.

Minors

In addition to a student’s primary degree, he or she can choose a minor, a secondary focus to the student’s area of study, which can enhance a student’s breadth of study and overall experience while not requiring the same amount of coursework as a second major or degree. The following list shows available minors. Unless otherwise indicated, minors are generally open to all university undergraduate students.

Intercollege:
- Arts in Society (sponsored by the Center for Arts in Society)
- Health Care Policy and Management (sponsored by the College of Humanities and Social Sciences, the H. John Heinz III College, and Mellon College of Science)
- Music Technology
- Neural Computation

Carnegie Institute of Technology:

The following CIT minors are open to all Carnegie Mellon students:
- Biomedical Engineering
- Engineering Studies
- Technology and Policy
- Robotics

Designated Minors (open only to CIT students):
- Audio Engineering
- Automation and Controls
- Colloids, Polymers and Surfaces
- Data Storage Systems and Technology
- Electronic Materials
- Environmental Engineering and Sustainability
- Global Engineering
- Materials Science and Engineering
- Mechanical Behavior of Materials

College of Fine Arts:
- Accompanying (available only to Piano majors in the School of Music)
- Architectural Representation and Visualization (available also to B. Arch candidates)
- Architectural Technology
- Architecture
- Architecture History (available also to B. Arch candidates)
- Art
- Building Science (available only to B. Arch candidates)
- Communication Design

- Conducting (available only to students in the School of Music)
- Drama
- History of the Arts
- Industrial Design
- Music
- Music (Composition) (available only to students in the School of Music)
- Music Education (available only to students in the School of Music)
- Music Performance (available only to students in the School of Music)
- Music Technology
- Music Theory
- Photography

Dietrich College of Humanities and Social Sciences:
- African and African American Studies
- Anthropology
- Chinese Studies
- Cognitive Neuroscience
- Creative Writing
- Economics
- English
- Environmental Studies
- Ethics
- Film and Media Studies
- French and Francophone Studies
- Gender Studies
- German Studies
- Global Systems and Management
- Health Care Policy and Management
- Hispanic Studies
- History
- Innovation, Economics, and Entrepreneurship
- Japanese Studies
- Linguistics
- Logic and Computation
- Philosophy
- Policy and Management
- Professional Writing
- Psychology
- Religious Studies
- Russian Studies
- Science, Technology and Society
- Sociology
- Statistics
- Technical Writing

Mellon College of Science:
- Biological Sciences
- Chemistry
- Computational Finance
- Discrete Mathematics and Logic
- Environmental Science
- Mathematical Sciences
- Neuroscience
- Physics
- Scientific Computing

School of Computer Science:
- Computational Biology
- Computer Science
- Human-Computer Interaction
- Language Technologies
- Machine Learning
- Robotics
- Software Engineering

Tepper School of Business:
- Business Administration
- Business Administration (for CIT students)
The Integrative Design, Arts and Technology (IDEATe) network offers students the opportunity to become immersed in a collaborative community of faculty and peers who share expertise, experience, and passions at the intersection of arts and technology. Students will engage in active "learning by doing" in state-of-the-art maker spaces. The program addresses current and emerging real-world challenges that require disciplinary expertise coupled with multidisciplinary perspectives and collaborative integrative approaches.

The IDEATe undergraduate curriculum consists of eight interrelated concentration areas, all of which can also be taken as minors. The themes of these areas integrate knowledge in technology and arts:

- **Game Design**: Enhance your knowledge of key component areas of games such as dramatic narrative and character development, programming and engine development, game assessment and redesign. Create games for varied platforms from mobile devices to home entertainment systems and theme parks.
- **Animation & Special Effects**: Explore the technical and artistic aspects of 3D and 2D animation in an integrated manner and within different application contexts (from film animation and special effects to interactive displays).
- **Media Design**: Learn to design digitally mediated experiences across different platforms, from mobile apps to large-scale installations, and for varied applications (from media for daily living to mediated performance).
- **Learning Media**: Design effective new media systems for learning using new technologies, learning science principles and media arts knowledge. Produce engaging and effective experiences from games to tangible learning tools and remote systems.
- **Sound Design**: Create experimental musical or explore new, technology-enabled applications and markets for sound design, music creation, and performance.
- **Entrepreneurship for Creative Industries**: Lead and innovate in creative industries through coursework that emphasizes the conceptualization of innovative products and the structuring of innovation processes.
- **Intelligent Environments**: Develop spaces and devices that support efficiency and high quality of experience, in contexts like daily activity, built environment, making process (from laying plaster to robot development), and arts performance.
- **Physical Computing**: Build interfaces and circuitry to embed in physical contexts, such as mobile environments and new creative practice instruments.

Individuals who make significant contributions, academically and professionally, in these areas are solidly prepared in a related discipline. Their preparation is combined with the ability to work in multidisciplinary teams that span technology and the arts. IDEATe serves as a multidisciplinary collaborative learning addition to the education (and learning outcomes) that students receive through their disciplinary major rather than a standalone learning experience.

Innovation and advancement in the eight IDEATe concentration themes, as in many complex areas of inquiry, is the result of collective inquiry and requires deep expertise in all contributing areas of knowledge (i.e., expert technologists and artists). Carnegie Mellon University is the only University in the United States with top ten ranked units in all key technological and arts domains involved in the eight IDEATe concentrations. With these resources, CMU is uniquely positioned to create faculty and student teams that contain all necessary, high-level expertise in tech-arts areas of inquiry.

Students who participate in IDEATe will be able to combine the unique experience of a "deep dive" in their chosen discipline while connecting to the diverse areas of knowledge and skill across the university. To help facilitate this experience, the educational objectives of the IDEATe concentrations and minors are:

- **Students from any undergraduate major can integrate a tech-arts area of study into their curricular plan and professional exploration through the IDEATe concentrations/minors, which enhance and synthesize the tech-arts ecosystem at CMU.**
- **Students in IDEATe have the opportunity to:**
  - Immerses themselves in a collaborative community of faculty and peers who share expertise, experience, and passions at the intersection of arts and technology
  - Engage in active “learning by doing” in state-of-the-art maker spaces
  - Address current and emerging real-world challenges that require disciplinary expertise coupled with multidisciplinary perspectives and integrative approaches.

A student can choose to enroll in an IDEATe concentration (or minor) either in their sophomore or in their junior year. To complete a concentration the student will take 4 courses (five for a minor); one core training course, two courses in their chosen concentration theme (three for a minor), one course from a different concentration theme. To complete a minor, at least three of these courses taken cannot be double counted for the major degree (all courses of a concentration can count towards the major degree).

Across the eight concentration themes there are over 50 multi-disciplinary technology-arts courses that a student can choose from to customize their paths. Students are assisted in their choice of theme area and in the structuring of their path by a dedicated IDEATe advisor who works in tandem with the advisor in their home unit.

The cross-training courses (portal courses) introduce students to the concepts and practices of knowledge areas beyond their discipline that contribute to the subject of each minor/concentration. After completing the portal courses, students should be able to (1) interpret cross-disciplinary communication from their collaborators (and use that interpretation productively in the collaborative work), (2) translate their own disciplinary expertise to describe ideas and outcomes in a way their cross-disciplinary collaborators can understand, and (3) develop interdisciplinary tech-arts approaches that include disciplinary diversity and enable further interdisciplinary communication and collaboration.

The remaining courses of IDEATe are Collaborative studios. Each studio is focused on a key aspect of the minor/concentration that it’s categorized under. By taking three studios in the minor/concentration the student can become familiar with many of the technical and creative issues in the area of the minor and the collaborative processes they entail. The student can also explore the interrelations of these studios. These courses are branded as collaborative studios because a) they promote hands on learning through making, critique and iterative design, b) they promote learning from both the instructor and the interdisciplinary peer cohort. At the conclusion of each studio a student should be in a position to a) collaboratively plan and implement an established outcome in the area of the studio within a limited amount of time and b) apply skills from both technology and arts disciplines to prototype ideas and leverage the diversity of perspectives to produce innovation in the field.

A completion of a concentration should provide multidisciplinary training in the area of the concentration and further enhance collaborative learning experience and skills of students: diversify the cohorts of the student, enhance collaboration skills, promote cognitive versatility, facilitate skill transfer across technology and the arts, and produce graduates that can innovate in 21st century creative industries. Students completing an undergraduate degree with an IDEATe concentration have the opportunity to apply for enrollment in the cross-University Emerging Media Masters degree and complete the degree in one year (4+1 Media Master’s option).

For more information, please visit the IDEATe website (http://www.cmu.edu/ideate).

**Pre-Law Advising Program**

Director: Joseph Devine, Associate Dean for Undergraduate Studies, Dietrich College of Arts and Sciences

Office: Dietrich College Dean's Office, Baker Hall 154

www.cmu.edu/pre-law

“Law School” is an objective that students frequently mention when asked about post-baccalaureate plans. It seems in its brevity to be a simple enough answer, but in reality it masks a host of complex and momentous personal decisions and strategic tasks.

First and foremost, seeking entry into law school implies an informed decision about the rigors of law school and the realities of professional life as an attorney, as well as a strong and mature commitment to achieving these objectives at significant cost and investment (financial, personal, and intellectual). Second, it implies an understanding of this as one of many options that should be carefully considered before a choice is made that will so significantly influence the course of one’s personal and professional life.

To address these needs, the university offers a pre-law advising program for students and alumni/ae who are contemplating or actively seeking to enter law school. The program consists of a range of support services, coordinated centrally, designed to assist these groups in appreciating the complex questions associated with decisions about law school, and in successfully negotiating the sequence of tasks associated with selecting, applying and gaining admission to the best law schools possible.
Department of Athletics & Physical Education

Please see Department of Athletics & Physical Education (p. 67).

Reserve Officers’ Training Corps (ROTC)

Please see Reserve Officers’ Training Corps (ROTC) (p. 69).

Study Abroad

Carnegie Mellon students from every major may be able to study in any part of the world for a semester, year or summer. Short-term programs during spring and winter break are also possible. A well planned study abroad program, in coordination with one’s academic advisor, will allow a student to receive credit for study abroad and graduate on time. Most students study abroad during their junior year; however, a growing number of students are studying abroad during their sophomore and senior years.

The study abroad advising staff offers general information sessions as well as individual advising appointments to assist students in all stages of the study abroad process. The Office of International Education (OIE) has a large in-house library as well as useful web links to help students find the most appropriate study abroad program. In addition, OIE offers orientations to help with personal, academic and acculturation issues, before and after a study abroad experience.

Carnegie Mellon offers students a variety of payment options for study abroad. The Office of International Education (OIE) provides financial aid information and can help with personal, academic and acculturation issues, before and after a study abroad experience. The Office of International Education (OIE) offers orientations to help with personal, academic and acculturation issues, before and after a study abroad experience.

Exchange Programs

Students who participate in exchange programs pay Carnegie Mellon tuition and receive their regular financial aid package. Students are responsible for room, board, travel and miscellaneous expenses.

University Exchanges

Carnegie Mellon University has university-wide exchange programs with institutions located in Australia, Chile, Hong Kong, Israel, Japan, Mexico, Qatar, Singapore, and Switzerland.

Departmental Exchanges

Architecture, Art, Chemical Engineering, Design, Drama, Electrical and Computer Engineering, English, Heinz College, Information Systems, Materials Science and Engineering, Modern Languages, Computer Science

and Business offer departmental exchange programs. Students should contact their department or the study abroad website for additional information.

Sponsored Programs

The university has designated a few study abroad programs administered by other organizations or universities as sponsored programs. To participate in these programs students pay a university fee equivalent to current tuition, board, travel, and other expenses. Carnegie Mellon in turn pays the program costs to the study abroad sponsor. Where applicable, funds are distributed to the student for room, board, and personal expenses.

Currently Carnegie Mellon has 38 sponsored programs available around the world. A full list can be found at www.cmu.edu/studyabroad or in consultation with a study abroad advisor.

External Programs

Students may also participate in a program sponsored by another university or study abroad organization if the student's home department approves the program and its course offerings. Students will pay the other organization or institution directly. Students who receive institutional aid from Carnegie Mellon will not be eligible for this aid while they are abroad. However, students with state and federal aid will still qualify. Students can learn more about external program options during study abroad advising appointments and by exploring the study abroad website and library.

University Student-Defined Major

Carnegie Mellon offers the opportunity for undergraduate students to pursue a University Student-Defined Major. (There are also opportunities to pursue a Student-Defined Major in some of the colleges [see relevant college section of the catalog].) For information and advice, interested students are encouraged to speak to the Associate Dean (sic) of their current home college or the college most relevant to the proposed course of study.

The requirements for successful completion of a University Student-Defined Major include a student proposal approved by an advisor, relevant college(s), and the Provost, and successful completion of the approved course of study. In brief:

• A student interested in pursuing a university student-defined major must develop a proposal which outlines an intellectually coherent area of study (with degree title) and a plan of study (courses to be taken, pedagogical rationale, proposed schedule). The proposal should include an explanation of why it is not appropriate or possible to pursue such a program through the curriculum of any one of the colleges. It should outline a program of study for both general education (for example, the core requirements of one of the most relevant colleges or equivalent general education plan) and major requirements. The proposal should designate one of the participating colleges as defacto "home college" for tracking and verification purposes.

• The student's proposal must be approved by a faculty advisor within a college who takes pedagogical responsibility for the program, by the defacto "home college" and by any other colleges involved in granting the degree. The signed proposal will be submitted to the Provost's office for a final review and approval.

• Once approved by the faculty advisor, colleges, and the Provost's office, the student's major will be administered by the advisor and his/her progress tracked by the Dean's office of the "home college." The "home college" will be responsible for monitoring the student's progress and reminding any collateral colleges of the approval of the student-defined major so that these colleges may inssure the student's ability to enroll in the necessary courses. Upon successful completion of the course of study, the "home college" will be responsible for contacting all the relevant colleges and verifying the completion of the degree. Unless there are sufficient numbers of university student-defined majors in any graduation year, upon consultation with the "home college," students may choose to receive the diploma in the most relevant department's ceremony.
Department of Athletics and Physical Education

Susan Bassett, Director of Athletics
Office: 204 Gymnasium
http://www.cmu.edu/athletics/physed/

Intercollegiate Athletics
Carnegie Mellon emphasizes excellence in its intercollegiate athletic programs as well as in its classrooms. The University strongly believes that academic and athletic excellence can successfully coexist. It also believes that intercollegiate athletics are important in student life and can become a key part of the educational experience. Professional and social endeavors after graduation also benefit from university experiences as a student-athlete.

Carnegie Mellon sports teams have competed intercollegiately since the early 1900s. In the past 15 years, the program has experienced extensive success. The Tartans have won 81 conference championships and competed in over 108 national championships since 1976. This success has been achieved while meeting all of the academic requirements of demanding programs and without athletic scholarships.

In 1986, Carnegie Mellon became a charter member of the University Athletic Association (UAA), a nine-team league of similar institutions with regard to academic and athletic programs. The UAA, a national association which geographically reaches as far north as Massachusetts, as far south as Atlanta and as far west as St. Louis and Chicago, sponsors intercollegiate competition in 24 sports including 12 for men and 12 for women. UAA members include Brandeis University, Case Western Reserve University, Carnegie Mellon University, Emory University, New York University, the University of Chicago, the University of Rochester and Washington University in St. Louis.

Carnegie Mellon, like the other seven UAA members, is a member of the National Collegiate Athletic Association (NCAA). Its intercollegiate teams compete on the Division III level, which prohibits athletic scholarships and operates under the true meaning of amateurism. Student-athletes who play at the varsity level are students first and athletes second. All students, both athletes and non-athletes, are treated equally with regard to admission and financial aid policies. Carnegie Mellon fully supports a policy of equity in resources and opportunities for women and men.

The university fields competitive teams in 17 sports. The Tartans compete in football, men’s and women’s soccer, men’s and women’s cross-country, men’s and women’s tennis, women’s volleyball, men’s and women’s basketball, men’s and women’s swimming, men’s and women’s indoor and outdoor track and field, and golf.

Carnegie Mellon’s intercollegiate program has consistently produced winners. The Tartans’ football team has won 15 conference championships, has a string of 33 consecutive winning seasons, and has appeared in the NCAA Division III Championship playoffs six times. In 1979, Carnegie Mellon was awarded the Lambert Trophy as the best small college team in the northeast. The men’s cross country won the conference championship in 2005 going on and placing 8th at nationals that same season. The team also has had a 12th and 9th place finish at nationals. The women’s cross country won the 1998 conference and went on to place 4th nationally.

A freshman computer science major on the men’s tennis team won the NCAA National singles title in 2000 and Carnegie Mellon’s top doubles team also was selected to play in the nationals. The men’s program garnered their highest team ranking ever in 2006 at 11th nationally. The women’s tennis team has recently produced national ranked players in the NCAA competition and in 2005 had a sophomore claim the ITA National Small College Championship while earning the James O’Hara Sargent Sportsmanship Award. Both men’s and women’s swimming and track and field teams annually qualify a number of athletes for the national championships. Swimming recently has produced a national champion.

To provide excellence in the athletic program, the department employs full-time coaches in all varsity sports. Intercollegiate competition begins with the first football and soccer games in early September and ends with the UAA track and field, golf and tennis championships in late April. Students with athletic skills in any of the above mentioned sports are welcome to become members of the team. Participation is open to all students. Inquiries may be directed to the appropriate coach at:

Recreation
In addition to providing for its more formal programs and teams, Carnegie Mellon’s athletic facilities are available for use by individual students on an extensive seven-day per week schedule.

The Skibo Gymnasium, has facilities for basketball, volleyball, badminton, weight lifting, and cardio equipment. Located within the University Center are facilities for squash, basketball, racquetball, volleyball, badminton, a diving pool and a large swimming pool for lap swim, cardio machines like treadmills, Expresso Bike EFX, steppers, Cybex machines, dumbbells, a sauna and a whirlpool. Gesling Stadium provides soccer, football and track facilities. All of Tennis courts, located between the University Center and Margaret Morrison, are lighted for night play. During the school year they are open for use by students, faculty and staff.

These facilities are available to any student, faculty or staff person with a valid Carnegie Mellon ID. For hours, please contact the Athletic Office at (412) 268-1236, or visit our website.

Physical Education
The Department of Physical Education provides an elective program with an emphasis on personal fitness and lifetime recreation, thus preparing students for physical activity after the college years. Most classes are offered on a mini-course system with each class running seven weeks in length.

This program of more than 30 courses is designed for all students, from the beginner to those students who have already developed some skill. Courses include personal fitness, racquetball, tennis, golf, weight training, karate, aerobic fitness, and yoga. Instruction is also provided in several team sports. Carnegie Mellon also provides courses for American Red Cross certification in the four levels of swimming (beginners, intermediate, swimmers, and life guarding), and First Aid and Cardiopulmonary Resuscitation (CPR).

Intramural Sports
For those who seek another level of competition or just like to participate and have fun, the Intramural Program provides recreation and relaxation for all students, faculty and staff, regardless of the degree of their natural athletic skills. The university prides itself on an intramural program which annually involves 6,000 students. Men and women, both graduate and undergraduate, compete in more than 20 different activities. Major sports include flag football, soccer, volleyball, floor hockey, basketball, and softball. A few of our popular tournaments are ultimate frisbee, dodgeball, tennis, and badminton.

Through participation in this program, students are able to keep physically fit, put to good use various learned skills, and develop leadership, team play and sportsmanship. Intramural activities, like all sports endeavors, contribute to physical development, good health, and a sound state of mind, while providing keen competition and team spirit. In addition, intramurals possess an inherent flexibility that allows for a limited commitment of time in light of academic priorities. The intramural program permits students from all departments to meet and socialize on an informal basis.

Fitness and Wellness
The university is well aware that fitness is a vital contributor to an individual’s well-being and productivity. For this reason the department is committed to providing the entire campus community with the opportunity and resources to keep fit for the new century.

The Fitness and Wellness program provides educational services, programs, workshops and seminars. Programs include cardio-respiratory fitness, muscular strength, blood pressure and stress reduction. Workshops include the topics of nutrition, weight control, stress management and lower back care and prevention. The Group X program provides over 30 exercise classes per week ranging from yoga and pilates to zumba and spinning.
Faculty

SHANNON AGNEW, Assistant Women's Soccer Coach – Bachelor of Arts, University of Tampa; Carnegie Mellon, 2012–.

SUSAN BASSETT, Director of Athletics – M.S., Indiana University; Carnegie Mellon, 2005–.

GARY ALDRICH, Associate Head Track & Field Coach/Instructor – M.S., Slippery Rock University; Carnegie Mellon, 2006–.

MICHAEL BELMONTE, Assistant Men/Women Tennis – History, Duquesne; Carnegie Mellon, 2010–.

TERRY BODNAR, Assistant Football Coach/Instructor – M.S., Indiana University of PA; Carnegie Mellon, 1984–.

JOSH CENTOR, Assistant Director of Athletics – B.A., Brandeis University; Carnegie Mellon, 2008–.

ALAN DEGENNARO, Strength and Conditioning Coach; Carnegie Mellon, 2011–.

DARIO DONATELLI, Head Men's Cross-Country & Track Coach – M.S., Indiana University of PA; Carnegie Mellon, 1984–.

RICHARD ERDELYI, Assistant Football Coach and Head Golf Coach/Instructor – B.A., University of Pittsburgh; Carnegie Mellon, 1987–.

ANDREW GARCIA, Assistant Men's Basketball Coach – History, Tulane University; Carnegie Mellon, 2011–.

SARA GAUNTNER, Assistant Director of Athletics for Instructional Programs & Recreation & Aquatics Director/Instructor – M.S., Duquesne University; Carnegie Mellon, 2005–.

ANDREW GIRARD, Head Men's and Women's Tennis Coach/Instructor – B.S., Michigan Tech University; Carnegie Mellon, 2003–.

JACQUE HULLAH, Head Women's Basketball Coach; Carnegie Mellon, 2011–.

KIM KELLY, Assistant Women's Volleyball Coach/Instructor – MBA, Mt. St. Mary’s University; Carnegie Mellon, 2005–.

MATTHEW KINNEY, Head Swimming and Diving Coach/Instructor – M.S., Western Illinois; Carnegie Mellon, 2007–.

ARRON LUJAN, Head Men's Soccer Coach – M.S., Virginia Commonwealth University; Carnegie Mellon, 2008–.

DONNA MOROSKY, Director of Fitness and Health/Instructor – Post-Graduate Education, University of Pittsburgh; Carnegie Mellon, 1975–.

MICHAEL PIRANIAN, Assistant Men’s Soccer Coach/Instructor – B.S., Virginia Polytechnic Institute & State University; Carnegie Mellon, 2008–.

JEFF SIMMONS, Assistant Football Coach/Instructor – B.A., Geneva College; Carnegie Mellon, 2010–.

PATTYE STRAGAR, Operations Manager for Fitness and Aquatics/Instructor – B.S., Northwestern University; Carnegie Mellon, 2003–.

YON STRUBLE, Head Men's Soccer Coach/Instructor – M.S., Georgia State; Carnegie Mellon, 2010–.

TONY WINGEN, Head Men's Basketball Coach/Associate Athletic Director/Instructor – M.Ed., Springfield College; Carnegie Mellon, 1990–.
Reserve Officers' Training Corps (ROTC)

Department of Aerospace Studies (Air Force ROTC)

Steven Hernandez, Lt. Colonel, U.S. Air Force
Office: 2917 Cathedral of Learning, University of Pittsburgh

The traditional Four-Year program is divided into two parts. The Basic Course is taken in the freshman and sophomore years. There is no commitment for non-scholarship students at this level. Upon successful completion of the Basic Course, students are eligible for the Advanced Course, taken in the junior and senior years. At the beginning of the Advanced Course, students will decide whether or not they wish to become officers in the Army and enter into a formal contract. During the summer between the junior and senior years, students are required to attend the Leader Development and Assessment Course (LDAC). Upon successful completion of a University degree and the Army ROTC program, students are commissioned into the United States Army as a Second Lieutenant.

The Two-Year Program

If the first two years of ROTC are not taken, students can attend the Leader’s Training Course (LTC) during the summer between the sophomore and junior year. This camp will qualify students to begin the Advanced Course in their junior year or in the first year of a two-year graduate program. Or, if students have served in the active duty military, attended a military academy for one year, participated in JROTC for three years or belong to a Army National Guard or Army Reserve unit, they already qualify for entrance into the Advanced Course.

The Alternative Entry Program

The Alternative Entry Program is designed for academic junior students with no prior qualifying military training but are otherwise qualified. This option allows students to contract into the Advanced Course without receiving placement credit for the basic course. Students accepted into this program must complete the Leader’s Training Course and the Leader Development and Assessment Course during the summer months.

Army ROTC Scholarships

Army ROTC offers four, three and two year full scholarships with additional annual allowances of $900 for books and a monthly stipend. High school, undergraduate and incoming two-year graduate students are eligible to apply. For application and information call ROTC at the University of Pittsburgh at (412) 624-6254/6197.

The Simultaneous Membership Program (SMP)

This program allows students to become members of the Army National Guard or the Army Reserve while enrolled in Army ROTC. Students in the Advanced Course who are SMP are paid for their Guard/Reserve training. The benefit of this program is that students in the Advanced Course are able to act as Army officers in their National Guard or Reserve unit, receiving valuable leadership experience.

Summer Programs

Leadership Development & Assessment Course

This 35-day camp is a requirement for all contracted students. Students attend the summer between their junior and senior year. Students are placed in various leadership positions throughout Camp and their skills and abilities will be tested and evaluated in preparation of a commission in the United States Army. All expenses are paid by the Army. Students are paid while attending.
Leader’s Training Course
This 35-day camp is taken as a prerequisite for entry into the Advanced Course if the Basic Course cannot be fulfilled. It is taken the summer before the junior year. All expenses are paid by the Army. Students are paid while attending.

Army Adventure Training
ROTC students may participate in Airborne School, Air Assault School, Northern Warfare School and Mountain Warfare School the summer before the sophomore and junior year. These courses range from two to four weeks and students must arrive in top physical condition. All expenses are paid by the Army.

Extracurricular Activities

Rangers
Army ROTC students are eligible to participate in the Cadet Ranger Club. The Club conducts physically and mentally challenging extracurricular training to promote fitness, teamwork, self-confidence and fellowship. Training includes physical fitness, rappelling, rope bridging, tactics, hiking, climbing, weapons training and orienteering.

Scabbard & Blade
National Honor Society consisting of cadets/midshipmen from Army, Air Force and Naval ROTC.

Rho Tau Chi
Military fraternity established for the members of the various branches of ROTC. Purpose is to draw together cadets to increase communication and feelings of goodwill between the Cadet Corps and the community. Cadets participate in a variety of community service projects.

Color Guard
Dedicated group of Army ROTC cadets who train and perform to present the American flag and Army colors at football and basketball games and various community events.

Department of Naval Science (Naval ROTC)

Thomas M. Calabrese, Captain, U.S. Navy
Office: 4615 Forbes Avenue

The Department of Naval Science was established 16 December 1987. Its mission is to prepare young men and women mentally, morally, and physically, and to instill in them the highest qualities of duty, honor, and loyalty, in preparation for leadership positions in the naval service.

Carnegie Mellon’s Naval Reserve Officers Training Corps (NROTC) is designed for young men and women who are seeking a challenging academic experience and who desire to serve their country as officers in the Navy or Marine Corps after graduation.

NROTC midshipmen lead the same campus life as other Carnegie Mellon students. They make their own arrangements for room and board, choose a preferred area of study and participate in extracurricular activities. Midshipmen wear civilian clothes to classes but wear uniforms one day of the week. NROTC students are active in all facets of university life; many are in positions of leadership in student government, on varsity and intramural sports teams, in campus clubs, and other student organizations. The NROTC program seeks students who are bright, ambitious, enthusiastic leaders, whose lives are enriched by their education at Carnegie Mellon and by their involvement in NROTC.

Four-Year Scholarship Program
The four-year scholarship program provides full tuition and university fees, $750 for textbooks per year, uniforms, and a $250 per month tax-free subsistence allowance to students during their freshman year. This stipend then increases to $300 during their sophomore year, $470 for their junior year and $400 for their senior year. Midshipmen must complete the university-approved curriculum of their choice, including courses in calculus and calculus-based physics (Navy Option Only), and specified courses in naval science subjects. Paid summer training periods are also provided. Scholarships are awarded on the basis of a nationwide competition before the start of the freshman year. Midshipmen commissioned through the scholarship programs become officers in the Navy or Marine Corps and incur a four-year active duty obligation in a selected area of the naval service.

Tweedale Scholarship Program
This scholarship program provides the same benefits as the four-year program, but is targeted toward currently enrolled students who have completed at least one, but not more than four semesters, and who are pursuing technical majors. This program allows a highly-qualified engineer, physics, chemistry, or mathematics student who has never applied for a NROTC scholarship in the past to be considered for this scholarship. Solid academic standing within his or her field of study is required, including a ranking within the top half of students pursuing his or her chosen course of study. If nominated by the Professor of Naval Science for this scholarship, the student will generally receive a scholarship decision within 5 working days from submission. Midshipmen commissioned through the scholarship programs become officers and incur a four-year active duty obligation in a selected area of the naval service.

College (Non-Scholarship) Programs in NROTC
Qualified students may participate in NROTC as college program (non-scholarship) midshipmen and earn commissions in the Navy or Marine Corps Reserve upon graduation. The active duty obligation for this program is three years. Students receive all naval science textbooks and uniforms. Additionally, if awarded advanced standing during their junior and senior years, they receive a tax-free subsistence monthly allowance of $350 and $400 respectively. A paid summer training period is provided between the junior and senior year. College program students may compete for three- and two-year scholarships described in the following paragraph.

College Program Three- and Two-Year Scholarships
Three-year scholarships are available on a competitive basis to those qualifying college program (non-scholarship) NROTC students who have demonstrated leadership and academic excellence during their freshman or sophomore year and are nominated for the scholarship by the Professor of Naval Science. Scholarship benefits are identical to those provided by the four-year scholarship program. Active duty obligation is four years upon commissioning in a selected area of the naval service.

Two-Year National Scholarship Program
Sophomores who have not participated in the NROTC program may apply for a nationally competitive two-year NROTC scholarship. The two-year scholarship program provides the same benefits as the four-year program for a period of 20 months. Students must apply for this program no later than February of their sophomore year. Students selected for this program attend the Naval Science Institute during the summer before their junior year to complete required naval science course material. A paid summer training period is provided between the junior and senior years. Commissionees incur a four-year active duty obligation upon graduation in a selected area of the naval service.

Curriculum
The sequence of naval science courses is the same for all officer candidates for the first three semesters. Midshipmen accepted into the Marine Corps option program will have curriculum variations starting with their third year. Additionally, some candidates may be required to complete courses in American military affairs, national security policy, English, mathematics, and/or the physical sciences. Descriptions of the course requirements for each candidate classification (scholarship/college program) may be obtained from the Department of Naval Science office.

All scholarship and college program students are required to attend a weekly 1.5 hour Naval Laboratory (32-100) where professional orientation, military drill, physical fitness, and leadership are emphasized. Guest speakers from the Fleet are frequent participants in these laboratories. Naval Science courses are open to all students. Since these are required courses for NROTC students, they will be given priority in enrollment. Remaining spaces will be filled through the normal university registration process.

** Required of students in the Marine Option
All other courses are required of all students in the program.

Naval ROTC Faculty

THOMAS M. CALABRESE, Captain, US Navy; Professor of Naval Science –
B.S., U.S. Naval Academy; Carnegie Mellon, 2012–.
Intercollegiate Programs

Carnegie Mellon University offers several degree programs and courses of study which are coordinated by multiple colleges, reflecting the interdisciplinary nature of the university. These are detailed below.

**BXA Intercollege Degree Programs**

The BXA Intercollege Degree Programs enable students the freedom to individualize their educational experience by promoting integration, balance and innovation. There are three degree programs from which to choose:

- Bachelor of Humanities and Arts
- Bachelor of Science and Arts
- Bachelor of Computer Science and Arts

For detailed information on the BXA Intercollege Degree Programs, go to BXA Intercollege Degree Programs (p. 84).

**Bachelor of Science in Computational Biology**

Computational Biology is concerned with solving biological and biomedical problems using mathematical and computational methods. It is recognized as an essential element in modern biological and biomedical research. There have been fundamental changes in biology and medicine over the past decade due to spectacular advances in biomedical imaging, genomics, and proteomics. The nature of these changes demands the application of novel theories and advanced computational tools to decipher the implications of these data, and to devise methods of controlling or modifying biological function. Consequently, Computational Biologists must be well trained and grounded in biology, mathematics, and computer science.

The School of Computer Science and Mellon College of Science have joined forces to establish an exciting interdisciplinary program leading to a B.S. in Computational Biology. The goal of this degree program is to provide an intensive interdisciplinary education to enable outstanding students to become leaders in identifying and solving tomorrow’s biological problems using computational methods. The program’s curriculum is truly interdisciplinary and is designed for students interested in the intersection of Biology and Computer Science.

Applications to the program are invited from current sophomores. Applicants must have completed, or be currently enrolled in 03-231/232 and 15-210 or 15-251. Applicants must submit an essay describing their interest in the program. Completed applications should be submitted to Dr. Maggie Braun at mabraun@andrew.cmu.edu in Doherty Hall 1320, Dr. Karen Thickman at krtickman@cmu.edu in Gates-Hillman Center 7403, or Dr. Tom Cortina at tcortina@cs.cmu.edu in Gates-Hillman Center 4117 no later than one week after midsemester grades are released in a given semester.

**Degree Requirements**

**47 units Math/Stats Core**

- 21-120 Differential and Integral Calculus
- 21-122 Integration and Approximation
- 21-127 Concepts of Mathematics
- 21-xxx Math Elective (21-241, 21-260, 21-341)
- 36-xxx Statistics Elective (36-217, 36-225, 36-247, 36-625)

**41 units General Science Core**

- 09-105 Introduction to Modern Chemistry I
- 09-106 Modern Chemistry II
- 09-217 Organic Chemistry I
- 33-111 Physics I for Science Students

**51 units Biological Sciences Core**

- 03-121 Modern Biology
- 03-231 Biochemistry I
- or 03-232 Biochemistry I
- 03-240 Cell Biology
- 03-330 Genetics

**360 units Free Electives**

**56 units Computer Science Core**

- 03-342 Introduction to Biological Laboratory Practices * 1
- 03-343 Experimental Techniques in Molecular Biology * 12
- 03-201 Undergraduate Colloquium for Sophomores 1
- or 15-128 Freshman Immigration Course
- 03-411 Topics in Research 1

* these two courses are co-requisites and must be taken together.

**56 units Computer Science Core**

- 03-211 Principles of Imperative Computation 10
- 03-150 Principles of Functional Programming 10
- 15-210 Parallel and Sequential Data Structures and Algorithms
- 15-251 Great Theoretical Ideas in Computer Science 12
- 15-451 Algorithm Design and Analysis 12

**45-54 units Major Electives**

- 03-511 Computational Molecular Biology and Genomics 9
- 03-xxx, 05-xxx, or 02-xxx Computational Biology Electives 18-24
- 03-xxx Advanced Biology Elective 9
- 15-xxx Advanced Computer Science Elective (15-211 or higher) 9

**75 units General Education**

- 09-10x Computing @ Carnegie Mellon 3
- 76-10x Interpretation and Argument 9
- 99-10x Elective Cognition, Choice and Behavior 9
- 99-10x Elective Economics, Political and Social Institutions 9
- 99-10x Elective Cultural Analysis 9
- 99-10x Non-Technical Elective 9
- 99-10x Non-Technical Elective 9
- 99-10x Non-Technical Elective 9

**360 Minimum number of units required for degree:**

**Bachelor of Science in Computational Finance**

The Mellon College of Science, the Heinz College of Public Policy and Management and the Tepper School of Business jointly offer a degree uniquely designed to meet the quantitative needs of the finance industry. Modeled after the highly successful Carnegie Mellon Master of Science in Computational Finance, this degree allows students to develop a deep knowledge of mathematics, probability, statistics, and the applications of these disciplines to finance. Students who complete this degree may directly enter the finance industry, enter other industries where an applied mathematics training is appropriate, or pursue advanced degrees in economics, finance or the mathematical sciences.

Students entering the work force upon completion of this degree may wish to later complement their undergraduate degree with a Master's degree in Business Administration or other professional degree. Students who might eventually pursue doctoral degrees in economics, finance, statistics or mathematics should seek advising on how to use their electives in order to prepare for graduate work in their chosen disciplines. Students apply for admission to the B.S. program in Computational Finance in the second semester of the sophomore year. Later application is also possible.

The Bachelor of Science in Computational Finance is an Intercollegiate Program. Students who pursue Computational Finance as their primary major may elect to have either the Mellon College of Science (MCS) or the Tepper School of Business (Tepper) as their home college. The coursework required for the major is the same in either case, with one minor exception outlined below. The general education requirements for the degree depend on the student’s home college. MCS students must complete the same Humanities, Social Sciences, and Fine Arts requirements as other MCS students. In addition, MCS students are required to take two science courses, one fewer than other MCS majors. Tepper students must complete the Breadth Requirements of the Undergraduate Business Administration.
Additionally, they must take several courses from the Functional Business Core of that program.

Majors in Computational Finance can tailor their degree program by selecting Depth Electives aligned with their interests and ambitions. MCS students are required to take three depth electives. Tepper students must take two depth electives and 70-391 Finance (MCS students may select 70-391 as one of their three depth electives).

**MCS Science Requirements**

Students intending to apply to the B.S. program in Computational Finance should take two semesters of calculus, 21-120 Differential and Integral Calculus and 21-122 Integration and Approximation, and 15-110 Principles of Computing.

In addition, in the freshman year students should complete two of the following three courses:

- 03-121 Modern Biology 9
- 09-105 Introduction to Modern Chemistry I 10
- 33-111 Physics I for Science Students 12

**MCS Humanities, Social Sciences & Fine Arts Requirements**

Candidates for the B.S. in Computational Finance must complete 72 units offered by Dietrich College of Humanities and Social Science and/or the College of Fine Arts. Of these 72 units, 36 are specified by the detailed curriculum in below. These are:

- 76-101 Interpretation and Argument 9
- 73-100 Principles of Economics 9
- 73-230 Intermediate Microeconomics 9
- 73-240 Intermediate Macroeconomics 9

Two more nine unit courses must be in specific categories as listed in the section on general requirements for a Bachelor’s degree in the Mellon College of Science. One in Category 1: Cognition, Choice and Behavior, and one in Category 3: Cultural Analysis. The remaining 18 units may be filled by courses from any of the departments in DC, CFA or Tepper, subject to the list of exclusions and additions maintained by MCS.

**Tepper Functional Business Core**

The Functional Business Core of the Undergraduate Business Administration Program includes 70-122 Introduction to Accounting, which is required by all Computational Finance majors. It also includes 70-391, which Tepper students majoring in Computational Finance must select as of one their Depth Electives. In addition, Tepper students pursuing the B.S. in Computational Finance must complete six other courses from the Functional Business Core.

These courses are:

- 70-100 Global Business 9
- 70-311 Organizational Behavior 9
- 70-332 Business, Society and Ethics 9
- 70-371 Operations Management 9
- 70-381 Marketing I 9
- 70-401 Management Game 12

**Tepper Breadth Requirements**

Candidates for the B.S. in Computational Finance must complete the breadth requirements outlined in the section describing the Undergraduate Business Administration Program.

**Depth Electives**

The detailed curricula below include three or four depth electives. These may be chosen from among the following:

- 21-355 Principles of Real Analysis I 9
- 21-365 Projects in Applied Mathematics 9
- 21-372 Partial Differential Equations and Fourier Analysis 9
- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9
- 36-461 Special Topics 9
- 70-391 Finance 9
- 70-398 International Finance 9
- 70-492 Investment Analysis 9
- 70-495 Corporate Finance 9
- 70-497 Derivative Securities 9
- 73-372 International Money and Finance 9
- 73-392 Financial Economics 9

**MCS Detailed Curriculum**

What follows is the detailed curriculum for the degree Bachelor of Science in Computational Finance in the Mellon College of Science. The courses listed are required. The semesters in which the courses are to be taken are suggested.

### Minor in Computational Finance

Students do not need to apply for the minor in Computational Finance, however in order to declare the minor in Computational Finance, a student must satisfy one of the following two requirements:

1. Completion of 21-270 Introduction to Mathematical Finance with a grade of A and an overall QPA of at least 3.2.
2. Completion of 21-270 Introduction to Mathematical Finance and 21-370 Discrete Time Finance with an average grade of B and an overall QPA of at least 3.0.

When a student has met the necessary requirements, he or she may declare the minor by contacting the Associate Director of the Undergraduate Computational Finance program.

1. Completion of 21-270 Introduction to Mathematical Finance with a grade of A and an overall QPA of at least 3.2.
2. Completion of 21-270 Introduction to Mathematical Finance and 21-370 Discrete Time Finance with an average grade of B and an overall QPA of at least 3.0.

To avoid excessive double counting, Mathematical Sciences majors may not count 21-270 Introduction to Mathematical Finance, 21-370 Discrete Time Finance or 21-420 Continuous-Time Finance toward any other requirement.

---

*The prerequisites for 21-370 are 21-260, 21-325, 36-225 or 36-217. Note that 70-207 is not accepted as a prerequisite for 21-420.

** The prerequisites for 21-420 are 21-260, 21-370 and one of the following three calculus based probability courses: 21-325, 36-225 or 36-217. Note that 70-207 is not a sufficient preparation in probability. Also note that 21-122 is a prerequisite for 21-260 and that 21-127 is a prerequisite for 21-341 and is recommended for 21-241.

Students minoring in Computational Finance are strongly encouraged to take one or two economics course, e.g., 73-100, 73-230, or 73-240.

### Minor in Health Care Policy and Management

Sponsored by:
The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

60 units minimum
Curriculum

Seven courses (a minimum of 60 units) are required to complete this minor. Entry into the minor requires completion of 73-100 Principles of Economics or 88-220 Policy Analysis I or the equivalent by approval.

39 units Required Courses

Students are required to take the following courses.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>

</table>

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

Additional Major in Human-Computer Interaction

Robert Kraut, Undergraduate Advisor
Office: Newell Simon Hall (NSH) 3515
For up to date information, see: http://www.hcii.cmu.edu/applying-undergraduate-major

Overview

Human-Computer Interaction (HCI) is a fast growing field devoted to the design, implementation, and evaluation of interactive computer-based technology. Examples of HCI products include intelligent computer tutors, wearable computers, social networking sites, and internet connected personal digital assistants (PDAs). Constructing an HCI product is a cyclic, iterative process that has at least three stages: Design, Implementation, and Evaluation.

The Design stage involves principles of design and human behavior, the Implementation stage principles of computer science, and the Evaluation stage empirical research methods common to several disciplines. There are thus four topical areas to cover in this major: Human Behavior, Design, Implementation, and Evaluation. In slightly more detail, the major involves the following sorts of knowledge and skill:

Design
• Eliciting from the client, formulating, and articulating functional specifications
• Knowing how human factors and cognitive models should inform design
• Knowing the principles of, and having experience with, communication design
• Understanding how implementation constraints should inform design
• Incorporating evaluation results into iterated designs

Implementation Programming Skills
• Standard programming languages - e.g., C++, Java
• Rapid prototyping skill (e.g., Visual Basic, Flash)
• Computational literacy, i.e., knowledge sufficient for effective communication and decision making about:
  • interface construction tools and languages
  • multimedia authoring tools
  • data structures and algorithms
  • Operating systems, platforms, etc.

Evaluation
• Experimental design
• Focus Groups
• Surveys
• Usability Testing (Cognitive walkthroughs, user models, heuristic evaluation, GOMS)
• Statistical Analysis

There are over 45 courses relevant to these areas that are now offered by eight different departments in four different colleges at Carnegie Mellon (the School of Computer Science, the College of Humanities and Social Sciences, and the College of Fine Arts, and the Tepper School of Business).

<td>Software Structures for User Interfaces</td>
<td>6</td>
</tr>
</tbody>
</table>

Notes

a The evaluation and statistics courses are required so that majors will be able to understand and conduct empirical research in HCI. Therefore a mathematically-oriented probability course, such as 36-217 Probability Theory and Random Processes does not fulfill either requirement.

b Design majors do not need to take 51-261 Communication Design Fundamentals as a prerequisite, since they learn similar material in other courses for their major. HCI undergraduates taking Communication Design Fundamentals must go to the School of Design office, MM 110, to register for the course on their assigned day. ID will be required.

c HCI double majors are guaranteed a place in 51-422 Interaction Design Studio, offered every spring by the School of Design for HCI double majors. Students intending to take 51-422 must visit the School of Design office in MM 110 during registration week to fill out an instructor-permission request form. The content of this course is comparable to 51-421 (Fall).

Electives (18 Units)

Electives are intended to provide HCI double majors advanced concepts and skills relevant to HCI or breadth of experience not available from their primary major. Given these goals, most electives will be 300-level courses or higher. Courses at the 100-level and 200-level in one's primary major will not count as electives, although the same course taken by a non-major may count (approval is still required).

Students can take electives in the HCIII or courses relevant to HCI from many other departments on campus. All electives are approved on a case-by-case basis. Undergraduate majors request approval of an elective using The HCI Institute’s EASY requirements management system (http://mhcserver1.hci.cs.cmu.edu/EASY). The director of the undergraduate program will approve the request, ask for more information or reject it. The EASY system then deeps a record of the electives approved for a particular student.

The following courses have been approved as electives in the past, organized by the offering department:

<table>

B.S. in Mathematical and Statistical Sciences

This degree program is administered under the joint Science & Humanities Scholars Program between the Mellon College of Science and the College of Humanities & Social Sciences. To qualify, a student must be acceptable for admission to both colleges.

85 Units Mathematical Sciences:

- 21-120 Differential and Integral Calculus 10
- 21-122 Integration and Approximation 10
- 21-127 Concepts of Mathematics 10
- 21-241 Matrices and Linear Transformations 10
- 21-259 Calculus in Three Dimensions 9
- 21-201 Undergraduate Colloquium 1
- 21-292 Operations Research I 9
- 21-355 Principles of Real Analysis I 9
  or
- 21-369 Numerical Methods 9
- 21-xxx Mathematical Science Elective
- 21-xxx Mathematical Science Elective

36 Units Probability and Statistics:

- 21-325 Probability 9
- 36-225 Introduction to Probability Theory 9

Note: 21-325 Probability is preferred.

36 Units Data Analysis:

- 36-247 Statistics for Lab Sciences 9
- 36-309 Experimental Design for Behavioral and Social Sciences 9
  or
- 36-303 Sampling, Survey and Society 9
- 36-401 Modern Regression 9

18 Units Statistics and Data Analysis Electives:

Complete two courses from the following:

- 21-393 Operations Research II 9
- 36-402 Advanced Methods for Data Analysis 9
- 36-462 Special Topics: Data Mining 9

In consultation with his/her advisor, the student may also arrange to take Statistics graduate courses (36-7xx) to satisfy part of this requirement.

Joint MCS/H&SS Core other than Mathematical Science

103-107 Unitson Statistics courses:

Free Electives:

Enough to reach 360 Units

**Sample Course Sequence: Math & Statistical Sciences**

**Freshman Year**

**Fall**

- 21-120 Differential and Integral Calculus 10
- 21-127 Concepts of Mathematics 10
- 76-101 Interpretation and Argument 9
- 33-111 Physics I for Science Students 12
- 99-10x Computing @ Carnegie Mellon

**Spring**

- 21-122 Integration and Approximation 10
- 36-247 Statistics for Lab Sciences 9
- 79-104 Global Histories 9

**Sophomore Year**

**Fall**

- 21-201 Undergraduate Colloquium 1
- 21-241 Matrices and Linear Transformations 10
- 36-309 Experimental Design for Behavioral and Social Sciences 9
- xx-xxx Economic, Political and Social Institutions
- xx-xxx Science
- xx-xxx Elective

**Spring**

- 21-201 Undergraduate Colloquium 1
- 21-259 Calculus in Three Dimensions 9
- 21-292 Operations Research I 9
- xx-xxx Cultural Analysis
- xx-xxx Electives

**Junior Year**

**Fall**

- 21-355 Principles of Real Analysis I 9
- 21-325 Probability 9
- xx-xxx Cognition, Choice and Behavior
- xx-xxx Electives

**Spring**

- 21-xxx Mathematical Science Elective
- 36-226 Introduction to Statistical Inference 9
- 36-410 Introduction to Probability Modeling 9
- xx-xxx Creative Production & Reflection
- xx-xxx Electives

**Senior Year**

**Fall**

- 21-393 Operations Research II 9
- 36-401 Modern Regression 9
- 36-461 Special Topics 9
- xx-xxx Electives

**Spring**

- 21-xxx Mathematical Science Elective
- 36-402 Advanced Methods for Data Analysis 9
- 36-xxx Senior Research Elective
- xx-xxx Electives

**Bachelor of Science in Music and Technology**

The Bachelor of Science in Music and Technology is offered jointly by the School of Music, the School of Computer Science (SCS), and the Carnegie Institute of Technology (CIT).

This program consists of a set of courses that span both music and technology, as well as a capstone composition/design/performance project. Courses in all three areas of study are stipulated in the music and technology undergraduate curriculum and provide for students coming from any of the three areas. In other words, regardless of a student’s entry point — an interest in computer science, electrical engineering, or music — the coursework prescribed will allow the student to gain the requisite knowledge and experience in all three areas. Students will work closely with advisors and will be guided in both course selection and capstone projects.

85 units **General Requirements**

**Seminar**

- 57-570 Music and Technology Seminar 8 (8 semesters for a total of 8 units)
Music Concentration

Students complete either the Music Concentration or the Technical Concentration.

57 or 55 units Technical Concentration

21-127 Concepts of Mathematics 10
15/18-213 Introduction to Computer Systems 12

AND EITHER:

18-220 Electronic Devices and Analog Circuits 12
18-240 Structure and Design of Digital Systems 12
15-2xx/18-3xx Electives in ECE or CS 12

or above

OR:

15-128 Freshman Immigration Course 1
15-210 Parallel and Sequential Data Structures and Algorithms 12
15-323 Computer Music Systems and Information Processing 9
15-2xx/18-3xx Electives in ECE or CS 12

or above

Total number of units required for major 380

Bachelor of Science in Neuroscience

John. L. Woolford, Interim Department Head, Biological Sciences

Michael Tarr, Department Head, Psychology

www.cmu.edu/neuro

Neuroscience is an interdisciplinary field in which scientists from many backgrounds apply the tools of biology, cognitive science, psychology, chemistry, mathematics, statistics, computer science, and engineering to develop a comprehensive understanding of brain function at the level of molecules, neurons, brain circuits, cognitive brain modules, and behavior. Research in neuroscience across these disciples has grown substantially in the past two decades, and a solid understanding of the physiological basis of many aspects of brain function both in health and disease has come along with this growth in research. Along with this comes an increasing need for students to begin careers in neuroscience and to be prepared to work on the problems in neuroscience and to bring new answers to the public and to patients. In order to be successful in developing new treatments and answering outstanding questions in the field, neuroscientists need to be conversant in many different levels of inquiry from neurobiology to cognitive neuroscience to computational neuroscience.

The Dietrich College of Humanities & Social Sciences and the Mellon College of Science have joined forces to establish an exciting interdisciplinary program leading to a Bachelor of Science in Neuroscience. The goal of this degree program is to provide an intensive interdisciplinary education to enable outstanding students to become leaders in identifying and solving tomorrow's Neuroscience problems using a variety of methods. The program's interdisciplinary curriculum is designed for students to gain a fundamental understanding of brain function on many different levels and to begin to specialize within the broad field of Neuroscience. Students in Mellon College of Science, Dietrich College, or Science and Humanities Scholars Program may have a primary major in Neuroscience in any of the three concentrations. Students from other colleges may have a second major in Neuroscience in any of the three concentrations, subject to double-counting restrictions.

A degree in neuroscience provides excellent preparation for medical school or other graduate programs in the health professions. These students are aided by the Carnegie Mellon Health Professions Program (HPP), an advisory and resource service for all Carnegie Mellon students who are considering careers in the health care field. (See the HPP (http://coursecatalog.web.cmu.edu/servicesandoptions/undergraduateoptions/#healthprofessionsprogram) section in this catalog or www.cmu.edu/hpp for more information.)

Students wishing to pursue the Neuroscience major through Dietrich College should contact Dr. Lori Holt (loriholt@cmu.edu). Students wishing to pursue the Neuroscience major through the Mellon College of Science should contact Dr. Maggie Braun (mabraun@andrew.cmu.edu). Students wishing to pursue an additional major in either the Neurobiology or Computational Neuroscience concentrations should contact Dr. Maggie Braun (mabraun@andrew.cmu.edu). Students wishing to pursue an additional major in the Cognitive Neuroscience concentration should contact Dr. Lori Holt (loriholt@cmu.edu).

Students who pursue this major will:
• Gain a broad understanding of Neuroscience at many different levels of analysis, including: cellular biology of the brain, brain systems, cognitive brain function, and computational brain modeling
• Gain an understanding of the sciences underlying Neuroscience, including: Biology, Chemistry, Computer Science, Cognition and Psychology, and other emerging areas
• Develop a comprehensive understanding of brain function in health and disease
• Be familiar with neuroanatomy & neurophysiology and their implications for nervous system function
• Be prepared for advanced study in neurobiology, cognitive neuroscience, and/or neural computation
• Be able to collaborate with Neuroscientists across a wide range of systems and levels of analysis
• Prepare for careers in Neuroscience related companies, Neuroscience research, and/or medicine
• Be prepared for specialization within subfields of Neuroscience given their concentration selection

Requirements for a B.S. in Neuroscience
All students must complete the following:
1. General Science Requirements (see section A)
2. Core Neuroscience Courses (see section B)
3. Requirements for one concentration (see sections C, D, or E)*
4. 18 additional relevant course hours in their home concentration or
5. Their home college’s General Education requirements

C. Neurobiology concentration

Didactic Core: Students must complete all of the following*  Units
03-231 | Biochemistry I | 9 |
03-240 | Cell Biology | 9 |
03-260 | Neurobiology of Disease | 9 |
or 03-365 | Neural Correlates of Learning and Memory | 27 |

* Computational Neuroscience concentration students are required to complete 15-386.

D. Cognitive Neuroscience concentration

Didactic Core: Students must complete all of the following*  Units
03-231 | Biochemistry I | 9 |
03-240 | Cell Biology | 9 |
03-260 | Neurobiology of Disease | 9 |
03-350 | Developmental Biology | 9 |
03-365 | Neural Correlates of Learning and Memory | 9 |
03-439 | Introduction to Biophysics | 9 |
09-195 | Organic Chemistry II | 9 |
09-222 | Laboratory II: Organic Synthesis and Analysis | 12 |
42-202 | Physiology | 9 |
42-203 | Biomedical Engineering Laboratory | 9 |

Electives in Neurobiology (minimum of 9 additional hours)  Units
03-250 | Introduction to Computational Biology | 12 |
03-251 | Introduction to Computational Molecular Biology | 6 |
03-252 | Introduction to Computational Cell Biology | 6 |
03-260 | Neurobiology of Disease | 9 |
03-350 | Developmental Biology | 9 |
03-364 | Developmental Neuroscience | 9 |
03-365 | Neural Correlates of Learning and Memory | 9 |
03-439 | Introduction to Biophysics | 9 |
09-195 | Organic Chemistry II | 9 |
09-222 | Laboratory II: Organic Synthesis and Analysis | 12 |
42-202 | Physiology | 9 |
42-203 | Biomedical Engineering Laboratory | 9 |

Note: VERY Limited Seating Available for 42-203

Electives in Cognitive Neuroscience (minimum of 27 additional hours)**  Units
85-221 | Principles of Child Development | 9 |
85-241 | Social Psychology | 9 |
85-261 | Abnormal Psychology | 9 |
85-356 | Music and Mind: The Cognitive Neuroscience of Sound | 9 |
85-370 | Perception | 9 |
85-390 | Human Memory | 9 |
85-406 | Autism: Psychological and Neuroscience Perspectives | 9 |
85-408 | Visual Cognition | 9 |
85-412 | Cognitive Modeling | 9 |
85-414 | Cognitive Neuropsychology | 9 |
85-419 | Introduction to Parallel Distributed Processing | 9 |
85-424 | Hemispheric Specialization: Why, How and What? | 9 |
85-426 | Learning in Humans and Machines | 9 |
85-429 | Cognitive Brain Imaging | 9 |

Electives in Cognitive Neuroscience (minimum of 27 additional hours)**  Units
85-408 | Visual Cognition | 9 |
85-412 | Cognitive Modeling | 9 |
85-414 | Cognitive Neuropsychology | 9 |
85-419 | Introduction to Parallel Distributed Processing | 9 |
85-424 | Hemispheric Specialization: Why, How and What? | 9 |
85-426 | Learning in Humans and Machines | 9 |
85-429 | Cognitive Brain Imaging | 9 |

Electives in Cognitive Neuroscience (minimum of 45 additional hours)**  Units
85-408 | Visual Cognition | 9 |
85-412 | Cognitive Modeling | 9 |
85-414 | Cognitive Neuropsychology | 9 |
85-419 | Introduction to Parallel Distributed Processing | 9 |
85-424 | Hemispheric Specialization: Why, How and What? | 9 |
85-426 | Learning in Humans and Machines | 9 |
85-429 | Cognitive Brain Imaging | 9 |

** Students may NOT do two concentrations, but may minor in a related area subject to double-counting restrictions

Units

54

9
85-442 Health Psychology 9
85-501 Stress, Coping and Well-Being 9

* If not used as a core course
** At least 18 of these hours must be 300 level or above

NOTE: this list is not restrictive. Concentration advisors can approve additional elective courses that contribute to the student’s neuroscience education, subject to additional approval by the major steering committee.

* NOTE: Up to 9 units of applicable undergraduate research course work (e.g. 03-445 or 85-507/85-508) can count as a neuroscience elective (not towards a concentration). A maximum of 27 additional units can be counted as a free electives.

Depending on a student’s home college (H&SS or MCS), General Education (GenEd) requirements will be different. GenEd requirements for H&SS (p. 196), MCS (p. 293), and SHS (http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/#scienceandhumanitieesscholarsprogram) are found on their respective Catalog pages.

Free Electives (depending on concentration & college) 51-61
TOTAL hours to degree 360

Double-counting restrictions and additional majors & minors

Students may not major in two concentrations.

Students using Neuroscience as an additional major or who have an additional major or minor to Neuroscience may only double-count at most 3 courses between this an their other major or minor (this restriction does not apply to prerequisites, General Education Requirements, or the General Science Requirements – section A).

No student may have an additional minor in Neuroscience. Neurobiology concentration students may not have an additional major or minor in Biology. Cognitive Neuroscience concentration students may not have an additional minor in Cognitive Neuroscience. Computational Neuroscience concentration students may not have an additional minor in Neural Computation.

Neuroscience research

Neuroscience majors are encouraged to become extensively involved in research. Students may discuss with the major coordinator and concentration advisors to arrange a supervised research project and to prepare a formal thesis that is written and defended in the senior year, according to the guidelines of their college. This does not preclude a student from completing any of the options within the major nor is it the only way in which students can participate in undergraduate research, although it is excellent preparation for graduate studies. Depending on their college, this research program may require a minimum GPA and may contribute to College Honors or Departmental Honors.

* NOTE: Up to 9 units of applicable undergraduate research course work (e.g. 03-445 or 85-507/85-508) can count as a neuroscience elective (not towards a concentration). A maximum of 27 additional units can be counted as a free electives.

Major in Psychology & Biological Sciences

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

Note: Students entering from the College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology. Students in the joint Science and Humanities Scholars (SHS) program can complete the SHS educational core and choose either departmental order for their diploma.

Depending on a student’s home college (H&SS or MCS), General Education (GenEd) requirements will be different. GenEd requirements for H&SS (p. 196) and MCS (p. 293) are found on their respective Catalog pages.

Science and Humanities Scholars Program
Sponsored by the Dietrich College of Humanities & Social Sciences and the Mellon College of Science
Dr. William Alba, Director
Office: Doherty Hall, Room 2201
www.cmu.edu/shs

The Science and Humanities Scholars (SHS) program is for students who wish to build upon a solid academic foundation in the humanities, social sciences, natural sciences, and mathematics. Students in this program enroll in either the Mellon College of Science (MCS) or the Dietrich College of Humanities & Social Sciences (DC). While every student at the university may elect to pursue multi- and interdisciplinary studies, the SHS General Education curriculum assures that students in the program can develop the background for any field of study or combination of studies across both MCS and DC.

SHS students in their first year may elect to live in a Stever House residential cluster that promotes the integration of academic and social interests. The program additionally supports students through the creation of interdisciplinary and multidisciplinary courses.

Before a student declares a major, the program director serves as the student's primary academic advisor, complementing the range of other advising available around the university. After a student declares a major, the director continues to provide supplementary advising for the student, especially on matters of General Education.

Entering first-year students with outstanding credentials who applied or H&SS or MCS may receive an invitation to the SHS Program. Those invited should carefully consider whether this academic program matches their own scholarly interests. Students enrolled in either college may also request to transfer into the Science and Humanities Scholars Program after completing at least one semester at the university.

Science and Humanities Scholars General Education Program
There are 14 requirements in the SHS General Education Program. The curriculum is designed to expose students to a variety of subjects and methodologies, in order to enable them to become better citizens of the world and more complete scholars with a comprehensive range of possible major choices. The SHS curriculum allows for flexibility and independence in selecting courses to fulfill these General Education requirements, and in many cases students in the Program can petition the Director to take alternate courses in addition to the ones listed here.

Mathematical Sciences (20 units)

Units
21-120 Differential and Integral Calculus 10
21-122 Integration and Approximation 10
or 21-124 Calculus II for Biologists and Chemists

Statistical Reasoning (9 units)
Students should take one of the following courses or any Statistics course at the 200- level or higher.
36-247 Statistics for Lab Sciences 9
21-325 Probability 9
36-201 Statistical Reasoning and Practice 9
36-217 Probability Theory and Random Processes 9
36-225 Introduction to Probability Theory 9

Writing/Expression (9 units)
Language is a tool used to communicate, as well as a way to organize thinking. This university-wide requirement, to be completed in the first year, focuses on the social nature of language and the ways in which writing constitutes thinking.
76-101 Interpretation and Argument 9

World Cultures (9 units)
This requirement seeks to enable students to recognize how cultures have shaped and continue to shape the human experience, as well as analyze material that provide clues as to how these cultures operate.
79-104 Global Histories 9

Freshman Seminar (6-9 units)
Students may select an SHS seminar, a full-semester seminar from DC, or two half-semester freshman seminars from MCS and/or DC from a list of courses provided every semester. Past and present SHS seminars include:
99-241 Revolutions of Circularity 9
99-242 Meaning Across the Millennia 9
99-243 Light from the Enlightenment 9
99-245 Energy: Science, Society, and Communication

Computational Reasoning (9-10 units)
Students may select one of the following courses offered in Computer Science, Mathematical Sciences, Philosophy, or related fields.
15-110 Principles of Computing 10
15-112 Fundamentals of Programming and Computer Science 12
Courses in this category examine the ways in which institutions organize the major department.

Choose three of the following courses. Science majors with primary majors in the Mellon College of Science must complete at least two that are outside of their major department.

- Modern Biology
- Intro to Mammalian Physiology
- Honors Chemistry: Fundamentals Concepts and Applications
- Modern Chemistry II
- Physics I for Science Students
- Physics II for Science Students
- Matter and Interactions I
- Matter and Interactions II

Choose a minimum of four courses, at 9 units per category, totaling at least 36 units. Below are examples of courses satisfying these categories. You are encouraged to identify other courses that could fulfill these requirements; see the SHS Director for prior approval.

Courses in this category use model-based analysis to broaden an understanding of human thinking, choices, and behavior on an individual basis across a variety of settings. The following list includes examples from Philosophy, Psychology, and Social and Decision Sciences.

- Introduction to Ethics
- Nature of Reason
- Nature of Language
- Philosophy of Social Science
- Ethical Theory
- Ethical Judgments in Professional Life
- Philosophy of Mind
- Introduction to Psychology
- Cognitive Psychology
- Principles of Child Development
- Social Psychology
- Personality
- Abnormal Psychology
- Reason, Passion and Cognition

Courses in this category explore definitions of culture and the role culture plays in producing different actions and institutions, as well as the roles of institutions, systems, and human actions in shaping cultural contexts.

- Survey of Western Music History
- Managing Across Cultures
- Comedy
- African American Literature
- Introduction to Gender Studies
- Introduction to Anthropology
- The Development of American Culture
- Development of European Culture
- The Roots of Rock and Roll, 1870-1970
- African American History: Africa to the Civil War
- African American History: Reconstruction to the Present
- Mayan America
- Chinese Culture and Society
- Poverty, Charity, and Welfare
- Medicine and Society
- Introduction to Philosophy
- Ancient Philosophy
- Modern Philosophy
- Continental Philosophy
- Analytic Philosophy
- Pragmatism
- Empiricism and Rationalism
- Introduction to Japanese Language and Culture
- Topics in Russian Language and Culture
- French Culture
- The Francophone World
- Introduction to Chinese Language and Culture
- Spain: Language and Culture
- Latin America: Language and Culture
- U.S. Latinos: Language and Culture
- Introduction to Hispanic Literary and Cultural Studies
- The Faust Legend at Home and Abroad
- Topics in French and Francophone Studies
- Topics in German Literature and Culture
- Studies in Latin American Literature and Culture
- Literature, Politics and Film in Russia & East Europe Today
BXA Intercollege Degree Programs

http://www.cmu.edu/interdisciplinary

Mission Statement

The BXA Intercollege Degree Programs are designed for students who want to turn talent and passion into viable professions for the future through a challenging academic regimen. BXA students pursue their goals with the help of multifaceted advising, innovative pedagogical strategies, and a focus on the impact arts have on technology and vice versa.

The goal of the Bachelor of Humanities and Arts (BHA), the Bachelor of Science and Arts (BSA), and the Bachelor of Computer Science and Arts (BCSA) BXA Intercollege Degree Programs is to allow a select group of students who demonstrate interest and accomplishment in the fine arts and the humanities, social sciences, natural sciences, computer science, and emerging media to explore beyond the traditional academic major, or integrate more than one field of study across disciplines. These programs foster the creativity of students who explore innovative approaches to the academic environments of two colleges. By merging the components in the arts and humanities, natural sciences, or computer science into an interdisciplinary/masterdisciplinary study, a unique, complex product is born. BXA students produce new information, challenging questions, and innovative theory. BXA students are models of independence, motivation, and well-rounded scholarship as humanists, scientists, and artists at the same time.

In the context of the Carnegie Mellon University environment, the BXA Intercollege Degree Programs hold a special role. BXA provides access to four strong colleges that offer specialized training with expert faculty and researchers. The BXA Programs challenge students to utilize those resources as they explore and develop their own approach to interdisciplinary studies in the fine arts and the humanities and social sciences, the natural and mathematical sciences, or computer science.

BXA students balance courses in their CFA concentration with courses in their academic concentration, as well as BXA-specific courses. These BXA-specific courses give students the opportunity to integrate their areas of concentration by focusing on interdisciplinary approaches and arts-based research techniques. The curricula in the concentration areas provide students with a solid disciplinary foundation upon which they can draw for interdisciplinary projects.

A BXA Intercollege degree prepares students for graduate study and careers in an enormous variety of fields, including traditional graduate training in the arts as well as academic areas, positions in arts and education non-profits such as museums and foundations, and technical positions with media and technology companies.

Program Objectives

The skills developed by BXA students span the creative, the technical, the academic, and the practical. The objective of the BXA Intercollege Program is to prepare graduates for careers in which they will draw on their creative and academic skills to create, educate, communicate, and innovate across disciplines.

Students who complete the BXA curriculum will graduate with the following skills:

- Foundational knowledge and technical expertise in the CFA concentration area and the DC/MCS/SCS concentration area
- Ability to describe the connections between these concentrations and how the student integrates them
- Ability to communicate ideas textually, visually, and orally
- Knowledge of how the concentration disciplines intersect with history, society, and culture from local and global perspectives
- Ability to use cognitive, behavioral, and ethical dimensions within the concentration disciplines to make decisions on individual and social levels
- Experience in engaging in art research to produce new knowledge both within the CFA concentration and the DC/MCS/SCS concentration
- Experience in designing, researching, and completing a large-scale, object-based project that integrates both areas of concentration

Bachelor of Humanities and Arts Degree Program

Carnegie Mellon University offers an intercollege degree that combines the strengths of the College of Fine Arts (CFA) and the College of Dietrich College of Humanities and Social Sciences (DC). The intercollege degree, called the Bachelor of Humanities and Arts (BHA), offers depth of study in both the fine arts and the humanities, social and behavioral sciences. The BHA Degree Program enables a student to receive broader exposure to the humanities and liberal arts than is generally possible through a Bachelor of Fine Arts degree in CFA, while obtaining deeper and more substantial training in the fine arts than is generally possible through a Bachelor of Arts or Bachelor of Science degree in DC. Students receive extensive training in one or more of the fine arts disciplines as well as related advanced training in areas such as writing, social sciences, behavioral sciences, or cultural studies. The program also provides enough flexibility to allow students to explore other areas of interest. The most important aspect of the BHA Program is for students to blend their interests, and to explore the connections between their chosen disciplines.

The BHA curriculum is divided into three parts: 1) BHA General Education coursework, 2) CFA concentration coursework, and 3) DC concentration coursework.

Students choose their fine arts concentration from among the five schools in CFA: Architecture, Art, Design, Drama, or Music. A student must meet the entry requirements for the particular CFA school of their choice. While in the BHA Program, a student may change their CFA concentration only if they pass all admission requirements for that particular school.

Students choose their humanities or social/behavioral sciences concentration from the list of majors and minors offered by DC.

The BHA Degree Program is governed by faculty and administrators from both colleges and led by the director of the BXA Intercollege Degree Programs. The director and academic advisor of the BXA Intercollege Degree Programs are the primary advisors and liaisons between CFA and DC. Students receive extensive advising support. Each student has two additional academic advisors: an advisor in the admitting school of CFA for their fine arts concentration, and an advisor in DC for their humanities/social sciences concentration. This network of advisors guides each student through their curriculum.

Masters of Arts Management (MAM) Option

BHA students who have an interest in arts management and wish to go on for an advanced degree may select courses in their sophomore and junior years to prepare them for this area. A student in the junior year may apply to the Accelerated Master’s Program with the School of Public Policy & Management at Heinz College. In this program students take both graduate and undergraduate courses in the senior year, earn the BHA degree, and continue on for an additional year to complete the work for the Masters of Arts Management (MAM) degree.

I. BHA General Education (GenEd)

(14 courses, 111 units minimum)

- Communicating: Language and Interpretations (3 courses, 27 units minimum, 76-101 required, two approved modern language courses required)
- Reflecting: Societies and Cultures (1 course, 9 units minimum, 79-104 required)
• Modeling: Mathematics and Experiments (1 course, 9 units minimum)
• Deciding: Social Sciences and Values (3 courses, 27 units minimum, 36-201 required)
• BXA Freshman Interdisciplinary Seminar (1 course, 9 units, 52-190 or 52-399 required)
• BXA Junior Seminar (1 course, 9 units, 52-410 required)
• BXA Portfolio Review (complete 1 required review, 0 units, 52-391 required)
• BXA Capstone Project (2 courses, 18 units, 52-401 & 52-402 required)
• Computing @ Carnegie Mellon (1 mini-course, 3 units, required in first semester)

Communicating: Language and Interpretations (3 courses, complete 27 units minimum)
Courses in this category give special attention to the study of language as interpretation, expression and argument within and across multiple discourses. Students examine language for its internal logics and structures.
76-101 Interpretation and Argument -REQUIRED 9
(various topics by section) http://www.cmu.edu/hs/english/first_year/index.html
82-xxx Modern Languages -REQUIRED 18
Complete two courses taught in a language offered by the Modern Language Department. A wide selection of courses are offered in Arabic, Chinese Studies, European Studies, French and Francophone Studies, German Studies, Hispanic Studies, Italian, Japanese Studies, Russian Studies, and Spanish. Students must complete two courses in the same language.
Languages taught at other institutions are also acceptable (with advisor approval).

Reflecting: Societies and Cultures (1 course, complete 9 units minimum)
This category emphasizes the study of history, society, and culture from local and global perspectives.
79-104 Global Histories -REQUIRED 9
(various topics by section) http://www.history.cmu.edu/undergraduate/fall.html

Modeling: Mathematics and Experiments (1 course, complete 9 units minimum)
Courses in this category stress the interplay of mathematical (formal) theories and experimental work. Some courses investigate the internal structure of theories, whereas others use them as models for producing real-world knowledge. Such models may be drawn from a variety of disciplines including the natural sciences, but also, for example, psychology and computer science. The interactions between theorizing and experimenting (observing) can be understood within an intellectual framework that invites comparative assessment. Select one course from the following course options:

Mathematics
21-110 Problem Solving in Recreational Mathematics 9
21-111 Calculus I 10
21-112 Calculus II * 10
21-120 Differential and Integral Calculus 10
21-122 Integration and Approximation * 10
21-127 Concepts of Mathematics 10
21-241 Matrices and Linear Transformations 10
21-256 Multivariate Analysis * 9
21-259 Calculus in Three Dimensions * 9
80-110 Nature of Mathematical Reasoning 9
80-210 Logic and Proofs 9
80-211 Logic and Mathematical Inquiry 9
80-212 Arguments and Logical Analysis 9

Natural Science
02-250 Introduction to Computational Biology * 12
02-261 Quantitative Cell and Molecular Biology Laboratory 9
03-121 Modern Biology 9
03-125 Evolution * 9
03-132 Basic Science to Modern Medicine 9
03-161 Molecules to Mind 9
03-231 Biochemistry I * 9
03-232 Biochemistry II * 9
03-250 Introduction to Computational Biology * 12
09-101 Introduction to Experimental Chemistry 3
09-103 Atoms, Molecules and Chemical Change 9
09-105 Introduction to Modern Chemistry I 10
09-106 Modern Chemistry II * 10
09-217 Organic Chemistry I * 9
09-218 Organic Chemistry II * 9
09-221 Laboratory I: Introduction to Chemical Analysis * 12
09-222 Laboratory II: Organic Synthesis and Analysis * 12
12-201 Geology 9
33-100 Basic Experimental Physics 6
33-104 Experimental Physics 9
33-106 Physics I for Engineering Students * 12
33-107 Physics II for Engineering Students * 12
33-111 Physics I for Science Students * 12
33-112 Physics II for Science Students * 12
33-114 Physics of Musical Sound 9
33-115 Physics for Future Presidents 9
33-124 Introduction to Astronomy 9
33-131 Matter and Interaction I * 12
33-132 Matter and Interactions II * 12
33-211 Physics III: Modern Essentials * 10
33-213 Mini-Course in Special Relativity * 4
33-224 Stars, Galaxies and the Universe * 9
33-355 Nanoscience and Nanotechnology * 9

Other Courses
02-223 Personalized Medicine: Understanding Your Own Genome 9
05-291 HCI for Computer Scientists * 12
05-413 Human Factors 9
06-100 Introduction to Chemical Engineering * 12
09-109 Kitchen Chemistry Sessions 3
09-209 Kitchen Chemistry Sessions * 3
12-100 Introduction to Civil and Environmental Engineering * 12
15-104 Introduction to Computing for Creative Practice 10
15-110 Principles of Computing 10
15-112 Fundamentals of Programming and Computer Science 12
15-121 Introduction to Data Structures * 10
18-100 Introduction to Electrical and Computer Engineering *
19-101 Introduction to Engineering and Public Policy * 12
24-101 Fundamentals of Mechanical Engineering * 12
27-100 Engineering the Materials of the Future * 12
33-120 Science and Science Fiction 9
36-202 Statistical Methods * 9
42-101 Introduction to Biomedical Engineering * 12
80-220 Philosophy of Science 9
80-222 Measurement and Methodology 9
80-226 Revolutions in Science 9
80-312 Philosophy of Mathematics * 9
80-313 Philosophical Logic * 9
80-322 Philosophy of Physics 9
Deciding: Social Sciences and Values (3 courses, complete 27 units minimum)

The theme of this category is the exploration of cognitive, behavioral and ethical dimensions of decision-making on both the individual and social level. Making decisions requires a broad understanding of human rationality and social interaction. Some courses examine the critical collection and analysis of data for achieving such an understanding, whereas others emphasize the historical development of policies and values, which form the matrix for decision-making.

36-201 Statistical Reasoning and Practice -REQUIRED 9
08-200/19-211 Ethics and Policy Issues in Computing 9
36-207 Probability and Statistics for Business 9
Applications * 9
36-220 Engineering Statistics and Quality Control * 9
36-247 Statistics for Lab Sciences * 9
36-303 Sampling, Survey and Society * 9
73-100 Principles of Economics 9
73-230 Intermediate Microeconomics * 9
79-313 Objects of Value 9
79-342 Introduction to Science and Technology Studies 9
80-130 Introduction to Ethics 9
80-136 Social Structure, Public Policy & Ethics 9
80-208 Critical Thinking 9
80-221 Philosophy of Social Science 9
80-230 Ethical Theory 9
80-235 Political Philosophy 9
80-244 Environmental Ethics 9
80-245 Medical Ethics 9
80-247 Ethics and Global Economics 9
80-270 Philosophy of Mind 9
80-271 Philosophy and Psychology 9
80-305 Rational Choice 9
80-321 Causation, Law, and Social Policy * 9
80-324 Philosophy of Economics 9
80-335 Deliberative Democracy: Theory and Practice 9
80-337 Philosophy, Politics & Economics 9
80-348 Health Development and Human Rights 9
80-405 Game Theory 9
80-430 Ethics and Medical Research 9
80-447 Global Justice 9
85-102 Introduction to Psychology 9
85-211 Cognitive Psychology 9
85-213 Human Information Processing and Artificial Intelligence * 9
85-219 Biological Foundations of Behavior 9
85-221 Principles of Child Development 9
85-243 Social Psychology 9
85-251 Personality 9
85-261 Abnormal Psychology 9
85-395 Applications of Cognitive Science 9
88-104 Decision Processes in American Political Institutions 9
88-120 Reason, Passion and Cognition 9
88-363 Behavioral Economics Theory * 9
88-365 Behavioral Economics and Public Policy * 9
88-388 Psychological Models of Decision Making * 9

* Indicates co-requisites and/or prerequisites required.

BXA Freshman Interdisciplinary Seminar (1 course, 9 units)

The BXA Freshman Research Seminar introduces first-year students to the field of interdisciplinary work and arts-based research. Students engage with theoretical and practical readings from across the various concentrations, with particular emphasis on aesthetic theory. Guest lectures complement the weekly readings by giving insight into practical implementations of these ideas. Students will conceive, research, and create a final project to be presented at the end of the semester. BXA internal transfer students should register for 52-399 BXA Interdisciplinary Seminar to fulfill the interdisciplinary requirement.

52-190 BXA Freshman Interdisciplinary Seminar - REQUIRED 9
or 52-399 BXA Interdisciplinary Seminar

BXA Junior Seminar:

Subcultures: Style, Structure, Representation (1 course, 9 units)

This seminar will examine contemporary and historical subcultures, particularly youth subcultures, through interdisciplinary modes of analysis, using theory and methodologies from several fields (particularly anthropology, communication studies, cultural studies, feminist theory, history, Marxism, modernism/post-modernism, performance studies, queer theory, sociology, and structuralism/post-structuralism). We will analyze the roots, performances, identities, and representations of subcultures, especially those with rituals and presentations centered on artistic mediums (music, fashion, graphic arts, street art, etc.). Though this course will focus primarily on the American experience, at times we will incorporate transnational perspectives to study the Beats, greasers, Mods, punks, skinheads, b-boys and girls, Goths, and “geek cultures” (comics, cosplay, gaming), among others. This course will pay careful attention to nuances of gender, race, class, and age in understanding the meaning of subcultures—symbolically, politically, and personally. Course requirements may include individual student research and leadership of class discussions.

52-410 BXA Junior Seminar - REQUIRED 9

BXA Junior Portfolio Review (complete 1 required review, 0 units)

To better assess the progress and accomplishments of BXA students as they enter their final year, students submit a portfolio for review during the spring semester junior year. Students should work with their BXA advisor and their concentration faculty advisors to assemble a portfolio that represents their academic and creative accomplishments over the course of their college career. This portfolio should also include a reflective essay in which students evaluate how they integrated their two areas of interest, and how they will extend that integration into the BXA Capstone Project in the senior year.

Students should identify their own specific goals for their academic career and how they are fulfilling them in this reflective essay, as well as how they evaluate their performance in light of the programs’ broader pedagogical goals. Students in the BXA program should be working toward being able to:

- describe the connections between their chosen concentration disciplines and to integrate them into their work
- communicate ideas in writing, visual expression, and oral expression
- discuss the intersection of history, society, and culture from local and global perspectives
- synthesize mathematical theories and experimental work to produce real-world knowledge
- use cognitive, behavioral, and ethical dimensions to make decisions on individual and social levels

52-391 BXA Junior Portfolio Review -Spring -REQUIRED (pass/no pass) 0

BXA Capstone Project (2 courses, 18 units)

The BXA Capstone Project gives BXA students the opportunity to demonstrate the extent of their interdisciplinary work over the course of
their academic career. The Capstone Project should include elements that span the student’s CFA and DC concentrations (for BHA students), CFA and MCS concentrations (for BSA students), or CFA and SCS concentrations (for BCSA students). The project can be either a scholarly or creative endeavor, and may take one of many possible forms (e.g., a written thesis, a compilation of creative work or works, an experiment and report, a computer program or animation, etc.).

The BXA Capstone sequence covers both semesters of a student’s senior year. In the fall, students are enrolled in 52-401 BXA Capstone Project I (9 units), which meets weekly to discuss strategies for managing research, planning the project, and larger theoretical issues related to interdisciplinary work. At the end of the fall course, students will have produced a Capstone Project proposal, an annotated bibliography, and multiple versions of their project pitch. In the spring, students enroll in 52-402 BXA Capstone Project II (9 units), which has no required classroom time. Instead, students spend the semester doing the research and foundational work necessary for the project, as well as meeting with their faculty and BXA advisors as they create their Capstone Project and prepare to present it at the annual Meeting of the Minds Undergraduate Research Symposium held each May.

52-401  BXA Capstone Project I -Fall -REQUIRED (course attendance required) 9
52-402  BXA Capstone Project II -Spring -REQUIRED (DNM, independent study) 9

Computing @ Carnegie Mellon (1 mini-course, 3 units)
This is a mini-course, pass/no pass, to be completed in the first semester.
99-101 Computing @ Carnegie Mellon -REQUIRED 3
or 99-102 Computing @ Carnegie Mellon
or 99-103 Computing @ Carnegie Mellon

II. Dietrich College of Humanities and Social Sciences Concentration
(9 courses, 81 units minimum)
Each student meets individually with a BHA DC Academic Advisor to design an 81 unit DC concentration based on existing DC majors/minors. Please refer to the DC section of this catalog to review the individual majors and minors offered. Curriculum for several BHA DC concentration options are outlined below and others will be made available in the BXA office throughout the academic year.

A completed DC Concentration Sheet must be approved by the concentration faculty advisor and submitted to the BXA office by the end of the student’s sophomore year.

Anthropology (81 units minimum)
The BHA concentration in Anthropology offers students training in ethnographic methods and in theoretical understandings of culture. Students examine the evolution, depth, and complexities of ethnography, and explore notions of “culture” in diverse settings, over time and across space. In today’s world, students are increasingly aware of the importance of developing a sophisticated approach to culture and its articulation with changes in the domains of the arts, technology, economics, and politics. The BHA concentration in Anthropology provides students with the tools to link artistic practices to various aspects of globalization.

Students in the Anthropology concentration are required to take an introductory course and a methods/theory course (18 units), two regional courses and two topical courses (36 units), two advanced language courses (18 units), and complete a culminating capstone/independent study (9 units).

Introductory and Methods Courses (2 courses, 18 units)
Students must complete 18 units (typically two courses) selecting from the list below.

79-297  Dilemmas and Controversies in Anthropology 9
79-311  Introduction to Anthropology 9
79-379  Extreme Ethnography 9
79-380  Ethnographic Methods 9

Anthropological Perspectives (4 courses, 36 units)
Students gain knowledge of specialized theoretical and regional topics by choosing 36 units (typically four courses) selecting from the list below.

79-203  Social and Political Change in 20th Century Central and Eastern Europe 9
79-220  Caribbean: Cultures and Histories 9
79-221  Development and Democracy in Latin America 9
79-222  Between Revolutions: The Development of Modern Latin America 9
79-224  Mayan America 9
79-235  Caribbean Cultures 9
79-261  Chinese Culture and Society 9
79-262  Modern China 9
79-278  Rights to Representation: Indigenous People and their Media 9
79-295  Race Relations in the Atlantic World 9
79-296  Perspectives on Social Protest 9
79-299  Trafficking Persons: Children in a Global Context 9
79-312  International Human Rights Institutions in Theory and Practice 9
79-313  Objects of Value 9
79-314  The Politics and Culture of Memory 9
79-315  Hawai‘i: America’s Pacific Island State 9
79-317  Art, Anthropology, and Empire 9
79-332  Medical Anthropology 9
79-355  World Citizenship 9
79-358  The Pacific Encounters the West: An Anthropology of Globalization 9
79-375  China’s Environmental Crisis 9
79-384  Garbage Gone Global: Managing Surplus, Waste, and Desire 9

Note: Courses that count toward this category may be taken at another university, and the units transferred to the BHA concentration under the guidance of the BHA Anthropology faculty advisor.

Language Courses (2 courses, 18 units)
Every student is expected to take two upper level (intermediate or above) language courses (18 units). These courses deepen the immersion in a culture or society that the Anthropology concentration provides a student, and should coordinate with the regional courses selected for the concentration.

Capstone/Independent Study (1 course, 9 units)
Every student is required to do a culminating research project; this may be part of an advanced course (9 units). Students should work with the BHA Anthropology faculty advisor to determine the best method for completing the capstone research project. This project may be complementary to the BHA Capstone Project sequence (52-401 and 52-402) that is completed in the senior year.

Cognitive Neuroscience (81 units minimum)
Cognitive neuroscience is a science concerned with discovering biological bases of psychological functions. It addresses questions of how behavior is produced by neural circuits of the brain and also how those neural circuits are in turn influenced by behavioral experiences. Students with a concentration in Cognitive Neuroscience are expected to learn about existing findings within the field and also to become proficient in how to conduct and analyze scientific investigations directed toward understanding the biological basis of behavior. This includes observing behavior, formulating hypotheses, designing experiments to test these hypotheses, running experiments, performing statistical analyses, and writing reports.

Introductory and Survey Courses (36 units)
03-121  Modern Biology 9
03-363  Systems Neuroscience 9
85-219  Biological Foundations of Behavior 9
85-211  Cognitive Psychology 9
or 85-213  Human Information Processing and Artificial Intelligence

Research Methods Training (18 units)
36-309  Experimental Design for Behavioral and Social Sciences 9
85-314  Cognitive Neuroscience Research Methods * 9

* 85-310 Research Methods in Cognitive Psychology may be substituted if necessary.

Distribution Requirements (27 units)
Complete three courses with at least one from each category below.
Approaches to Cognitive Neuroscience:

- 15-386: Neural Computation (9 units)
- 15-883: Computational Models of Neural Systems (12 units)
- 36-746: Statistical Methods for Neuroscience and Psychology (12 units)
- 85-412: Cognitive Modeling (9 units)
- 85-414: Cognitive Neuropsychology (9 units)
- 85-419: Introduction to Parallel Distributed Processing (9 units)
- 85-429: Cognitive Brain Imaging (9 units)

Cognitive Neuroscience Electives:

- 03-260: Neurobiology of Disease (9 units)
- 03-362: Cellular Neuroscience (9 units)
- 03-364: Developmental Neuroscience (9 units)
- 03-761: Neural Plasticity (9 units)
- 15-486: Artificial Neural Networks (12 units)
- 85-356: Music and Mind: The Cognitive Neuroscience of Sound (9 units)
- 85-370: Perception (9 units)
- 85-385: Auditory Perception: Sense of Sound (9 units)
- 85-390: Human Memory (9 units)
- 85-406: Autism: Psychological and Neuroscience Perspectives (9 units)

Creative Writing (81 units minimum)

In the Creative Writing concentration, BHA students develop their talents in writing fiction, poetry, and other imaginative forms. While studying with faculty members who are practicing poets and prose writers, students read widely in literature, explore the resources of their imaginations, sharpen their critical and verbal skills, and develop a professional attitude toward their writing. The Creative Writing program is based on a conservatory model, made up of faculty and students who have an intense commitment to their work.

Students in the Creative Writing concentration are required to take two of the introductory Survey of Forms courses, ideally in their sophomore year. Choices include Poetry (76-265), Fiction (76-260), Screenwriting (76-269), and Nonfiction (76-261). In order to proceed into the upper level courses in the major (and in each of the genres), students must do well in these introductory courses (receive a grade of A or B). After completing the Survey of Forms courses, students take four workshops in fiction, poetry, screenwriting, or nonfiction. At least two of the workshops must be taken in a single genre. In the writing workshops, students develop their critical and verbal abilities through close writing and analysis of poems, stories, and other literary forms. Their work is critiqued and evaluated by peers and the faculty.

Survey of Forms Courses (2 courses, 18 units)

- 76-260: Survey of Forms: Fiction (9 units)
- 76-261: Survey of Forms: Creative Nonfiction (9 units)
- 76-265: Survey of Forms: Poetry (9 units)
- 76-269: Survey of Forms: Screenwriting (9 units)

Note: A student must receive a grade of A or B in the Survey of Forms class in a specific genre in order to be eligible to enroll in a workshop of that genre. A student who receives a grade of C in a Survey of Forms course may enroll in a related workshop only with the permission of the workshop professor. A student who receives a D or F in Survey of Forms may not take a workshop in that genre.

Creative Writing Workshops (4 courses, 36 units)

- 76-365: Beginning Poetry Workshop (9 units)
- 76-460: Beginning Fiction Workshop (9 units)
- 76-462: Advanced Fiction Workshop (9 units)
- 76-464: Creative Nonfiction Workshop (9 units)
- 76-465: Advanced Poetry Workshop (9 units)
- 76-469: Advanced Screenwriting Workshop (9 units)
- 76-4xx: Elective Workshops (various forms) (9 units)

English Electives (3 courses, 27 units)

- Complete three courses from the English Department’s offerings.

Reading in Forms classes are recommended, as is 76-306 Editing and Publishing. Please consult the list of courses published each semester by the Department for current offerings. Students should discuss curriculum choices with the Creative Writing advisor to determine the best electives for their focus in Creative Writing.

Decision Science (81 units minimum)

In the Decision Science concentration, students study the three aspects of decision science: (a) normative analysis, creating formal models of rational choice; (b) descriptive research, studying how cognitive, emotional, social, and institutional factors affect judgment and choice, and (c) prescriptive interventions, seeking to improve judgment and decision making. In addition to gaining a broad education in the principles of judgment and decision making, students with a concentration in Decision Science gain broadly applicable skills in research design and analysis. They also have the chance to think about and discuss decision making in many different areas.

Disciplinary Perspectives (5 courses, 45 units)

- 85-211: Cognitive Psychology (9 units)
- 88-120: Reason, Passion and Cognition (9 units)
- 88-220: Policy Analysis I (9 units)
- 88-223: Decision Analysis and Decision Support Systems (9 units)
- 88-302: Behavioral Decision Making (9 units)

Research Methods (2 courses, 18 units)

- 36-202: Statistical Methods (9 units)
- 88-251: Empirical Research Methods (9 units)

Electives (2 courses, 18 units)

Complete at least 18 units from the following categories of courses. The selected courses may be from one category or from any combination of categories. Note that not all elective courses are offered every year. At least one of these courses (9 units) must be a Department of Social and Decision Sciences course (88-xxx).

Biological and Behavioral Aspects of Decision Making:

- 85-352: Evolutionary Psychology (9 units)
- 85-377: Attitudes and Persuasion (9 units)
- 85-442: Health Psychology (9 units)
- 88-360: Behavioral Economics (9 units)
- 88-365: Behavioral Economics and Public Policy (9 units)
- 88-388: Psychological Models of Decision Making (9 units)
- 88-421: Emotion: Physiology, Neurobiology, Expression, and Decision Making (9 units)
- 88-442: Decision Science in Intergroup Conflict (9 units)

Managerial and Organizational Aspects of Decision Making:

- 70-311: Organizational Behavior (9 units)
- 70-381: Marketing I (9 units)
- 70-460: Mathematical Models for Consulting (9 units)
- 88-221: Policy Analysis II (9 units)
- 88-419: Negotiation (9 units)
- 88-444: Public Policy and Regulation (9 units)
- 88-451: Policy Analysis Senior Project (9 units)
- 88-452: Policy Analysis Senior Project (9 units)

Philosophical and Ethical Perspectives on Decision Making:

- 19-426: Environmental Decision Making (9 units)
- 80-208: Critical Thinking (9 units)
- 80-221: Philosophy of Social Science (9 units)
- 80-243: Ethical Judgments in Professional Life (9 units)
- 80-245: Medical Ethics (9 units)
- 80-305: Rational Choice (9 units)
- 80-321: Causation, Law, and Social Policy (9 units)

Economic and Statistical Methods for Decision Science:

- 70-460: Mathematical Models for Consulting (9 units)
- 73-347: Game Theory for Economists (9 units)
- 80-337: Philosophy, Politics & Economics (9 units)
- 80-405: Game Theory (9 units)
contexts. Rhetoric courses focus on language as a tool to explore and depict experience. Rhetoric focuses on language as a tool to explore and depict experience. Rhetoric focuses on the principles through which writers construct texts and audiences respond to them. Drawing from all of these perspectives, students with a Concentration in English learn the research skills and writing strategies to enable them to analyze the language and texts of other writers and to report their research in effective texts of their own. Such training can prepare students for graduate work in literature, cultural studies, or rhetoric, and also for careers in law, business, or government, which require similar skills in interpretation, research, and writing.

Introductory Courses (2 courses, 18 units)
The 200-level core courses are designed to introduce students to writing in a variety of genres, to a knowledge of literary and other media forms, and to a basic theoretical knowledge of how texts are produced and interpreted. In the Interpretive Practices course, students are introduced to basic concepts, methods, and practices of literary and rhetorical approaches to texts. In the Survey of Forms course, students learn how to use language to express experience through poetic and narrative forms.

Research Course (1 course, 9 units)
Research in English offers training in gathering information systematically and in building arguments based on that information. Students will hone their skills in reading texts, using critical commentary, assessing print and electronic materials, and conducting interviews and surveys. They will learn how to test their hypotheses against alternatives and present their research to audiences within the discipline of English. The historical or thematic content of this course will vary from one semester to another. While 76-394 is not a prerequisite for 400-level courses, it is strongly recommended that students with a BHA concentration in English take this course in their junior year.

Rhetoric Course (1 course, 9 units)
Complete one course from a set of varied offerings in Rhetoric as designated each term by the English Department. Rhetoric courses focus explicitly on language and discourse as objects of study and emphasize the relationships of language, text structure, and meaning within specific contexts.

300-Level Courses (2 courses, 18 units)
Complete two 300-level courses that investigate the production and interpretation of texts and other media forms, and offer a variety of periods and theoretical and methodological perspectives. Course offerings that meet these requirements are advertised on a semester-by-semester basis. For students with a BHA Concentration in English, 76-294 Interpretive Practices is a prerequisite for these courses. Course options include but are not limited to the following:

Research Methods for Decision Science:
- 36-303 Sampling, Survey and Society
- 70-460 Mathematical Models for Consulting
- 88-388 Psychological Models of Decision Making
- 88-402 Modeling Complex Social Systems
- 88-435 Analysis of Uncertain Social Systems

English (81 units minimum)
The BHA concentration in English is distinctive in drawing from the artistic and research strengths of the Department’s faculty in Literary and Cultural Studies, Rhetoric, and Creative Writing. Literary and Cultural Studies focuses on the way texts are formally constructed and how they function in historical and contemporary contexts. Creative Writing helps students focus on language as a tool to explore and depict experience. Rhetoric focuses on the principles through which writers construct texts and audiences respond to them. Drawing from all of these perspectives, students with a Concentration in English learn the research skills and writing strategies to enable them to analyze the language and texts of other writers and to report their research in effective texts of their own. Such training can prepare students for graduate work in literature, cultural studies, or rhetoric, and also for careers in law, business, or government, which require similar skills in interpretation, research, and writing.

Research Course (1 course, 9 units)
Research in English offers training in gathering information systematically and in building arguments based on that information. Students will hone their skills in reading texts, using critical commentary, assessing print and electronic materials, and conducting interviews and surveys. They will learn how to test their hypotheses against alternatives and present their research to audiences within the discipline of English. The historical or thematic content of this course will vary from one semester to another. While 76-394 is not a prerequisite for 400-level courses, it is strongly recommended that students with a BHA concentration in English take this course in their junior year.

300-Level Courses (2 courses, 18 units)
Complete two 300-level courses that investigate the production and interpretation of texts and other media forms, and offer a variety of periods and theoretical and methodological perspectives. Course offerings that meet these requirements are advertised on a semester-by-semester basis. For students with a BHA Concentration in English, 76-294 Interpretive Practices is a prerequisite for these courses. Course options include but are not limited to the following:

Economics (81 units minimum)
The BHA concentration in Economics provides a solid understanding of economic theory and quantitative economic analysis. The introductory core disciplinary sequences in economic theory and quantitative analysis rely on a knowledge base of calculus and statistics. The advanced data analysis component pays additional attention to ordinal data and the study of surveys. Students also study political, historical, cultural, and social institutions within an economic context.

Mathematics Pre-requisites
These courses are not counted as part of your DC Concentration. They may be used to satisfy general education or free elective requirements.

Economic Theory Requirements (27 units)
- 73-100 Principles of Economics
- 73-230 Intermediate Microeconomics
- 73-270 Writing for Economists

Quantitative Analysis Requirements (27 units)
These courses require 36-201 Statistical Reasoning and Practice as a prerequisite; 36-201 fulfills a general education Decision requirements, as well. 

36-202 Statistical Methods 9
36-303 Sampling, Survey and Society 9
73-407 Fundamentals of Statistical Modeling 9

Advanced Economics Electives (18 units) 
Students must take two advanced elective courses numbered between 73-300 and 73-495. Please consult with the Economics faculty advisor to select these courses.

Senior Project (9 units) 
Students will take the Senior Project course in conjunction with the 52-401 BXA Capstone Project I course in the fall of their senior year.

Environmental Studies (81 units minimum) 
The concentration in Environmental Studies focuses on human-environment interactions from a multitude of disciplinary perspectives. The curriculum draws on the expertise of faculty across several Carnegie Mellon colleges in order to provide students with the interdisciplinary background and skills necessary to understand environmental problems and the means to mitigate them. It emphasizes three general areas: (1) natural science and technology; (2) social sciences; and (3) the humanities. The flexible curriculum features training in research methods; a set of core courses on fundamental environmental issues including energy, pollution, and biological diversity; and a project course experience geared toward policy formulation. It is recommended that students take 21-111 Calculus I and 36-202 Statistical Methods as prerequisites for higher-level coursework.

Note that some courses carry prerequisites and/or reserve seats for primary majors. Students interested in pursuing the concentration must meet beforehand with the faculty director and their BHA academic advisor in order to map out a course of study. Students are encouraged to be alert to new course offerings; every effort will be made to find equivalent courses that meet student interest when done in consultation with the faculty director.

Foundation of Environmental Sciences (18 units minimum) 
Complete one required science course:

03-121 Modern Biology 9
Choose one of the following courses:

03-124 Modern Biology Laboratory (co-requisite: 03-121) 9
03-125 Evolution 9
09-103 Atoms, Molecules and Chemical Change 9
09-105 Introduction to Modern Chemistry I 10
09-106 Modern Chemistry II 10

Disciplinary Perspectives (18 units)
Choose two of the following courses:

09-510 Introduction to Green Chemistry 9
73-148 Environmental Economics 9
76-319 Environmental Rhetoric 9
79-374 American Environmental History: Critical Issues 9

Thematic Electives (15 units minimum) 
Choose two of the following courses:

12-100 Introduction to Civil and Environmental Engineering 12
19-101 Introduction to Engineering and Public Policy 12
19-424 Energy and the Environment 9
60-203 Concept Studio: EcoArt 10
76-395 Science Writing 9
79-372 Perspectives on the Urban Environment 9
79-375 China's Environmental Crisis 9
79-384 Garbage Gone Global: Managing Surplus, Waste, and Desire 9
80-348 Health Development and Human Rights 9
88-223 Decision Analysis and Decision Support Systems 9
88-302 Behavioral Decision Making 9
88-412 Energy, Climate Change, and Economic Growth in the 21st Century 9

90-765 Cities, Technology and the Environment 9
90-798 Environmental Policy & Planning 12
90-808 Energy Policy 6
90-xxx Heinz College courses (open to seniors)

Research and Analytical Methods (18 units)
Choose two of the following courses:

36-309 Experimental Design for Behavioral and Social Sciences 9
79-380 Ethnographic Methods 9
79-381 Petrocultures: How Oil Changed the World 9
88-220 Policy Analysis I 9
88-251 Empirical Research Methods 9
88-432 International Policy Decision Modeling Workshop 9

Project Course (12 units)
Complete one of the following courses:

19-451 EPP Projects (pre-approved sections) 12
19-452 EPP Projects 12

Ethics, History, & Public Policy (81 units minimum) 
The BHA concentration in Ethics, History, & Public Policy (EHPP) provides students with a rigorous, interdisciplinary humanistic and social-scientific education. The concentration in EHPP encourages the development of a broad technical skill set that will benefit students in whatever career they ultimately choose to pursue. Students with a concentration in EHPP learn how to analyze and construct arguments; to evaluate evidentiary statements; to persuade people to agree with their particular claims; to conduct research under time and resource constraints; and to craft policies that address real world problems in a way that is sensitive both to history and competing sets of values. Comprised of courses in the departments of History, Philosophy, Economics, and Decision Science, the BHA concentration in EHPP encourages specialization, internship experiences, and research in a wide range of policy areas.

Economics Requirement (1 course, 9 units)
Choose one of the following courses:

73-100 Principles of Economics 9
88-220 Policy Analysis I 9

History Core (3 courses, 30 units)
Required History Core Courses:

79-200 Introduction to Historical Research 12
79-300 History of American Public Policy 9

Choose one Survey Course:

US Survey
79-240 The Development of American Culture 9

Non-US Survey
79-202 Flesh and Spirit: Early Modern Europe, 1400-1750 9
79-205 20th Century Europe 9
79-206 The European Union at the Crossroads 9
79-207 Development of European Culture 9
79-208 Europe's Two Revolutions: Dynamics of Change in the 19th Century 9
79-212 China and Its Neighbors: Minorities, Conquerors, and Tribute Bearers 9
79-213 Nationalities and the New States of the Former USSR 9
79-220 Caribbean: Cultures and Histories 9
79-221 Development and Democracy in Latin America 9
79-222 Between Revolutions: The Development of Modern Latin America 9
79-223 Mayan America 9
79-225 West African History in Film 9
79-226 Introduction to African History: Earliest Times to 1780 9
Engineering and Public Policy:

Choose any two courses from any of the following categories.

Elective Courses

**Foundations of Social Science (9 units):**
- 79-227 Introduction to African History: 1780-1994
- 79-229 Origins of the Arab-Israeli Conflict, 1880-1948
- 79-230 Arab-Israeli Conflict and Peace Process since 1948
- 79-233 The United States and the Middle East since 1945
- 79-235 Caribbean Cultures
- 79-236 Introduction to African Studies
- 79-237 Comparative Slavery
- 79-251 India/America: Democracy, Diversity, Development
- 79-255 Irish History
- 79-256 20th Century Germany
- 79-257 Germany and the Second World War
- 79-258 French History: From the Revolution to De Gaulle
- 79-259 France During World War II
- 79-261 Chinese Culture and Society
- 79-262 Modern China
- 79-263 China’s Cultural Revolution
- 79-264 China in the Age of Reform, 1978-Present
- 79-265 Russian History: From the First to the Last Tsar
- 79-266 Russian History: From Communism to Capitalism
- 79-267 The Soviet Union in World War II: Military, Political, and Social History
- 79-272 Iberian Encounters: Muslims, Christians, and Jews in Spain

**Philosophy Core (3 courses, 27 units):**

Choose one course from three of the four categories below. No more than 18 units at the 100-level may be counted toward this requirement.

**Ethics (9 units):**
- 80-130 Introduction to Ethics
- 80-230 Ethical Theory

**Political Philosophy (9 units):**
- 80-135 Introduction to Political Philosophy
- 80-235 Political Philosophy

**Foundations of Social Science (9 units):**
- 80-221 Philosophy of Social Science
- 80-321 Causation, Law, and Social Policy
- 80-337 Philosophy, Politics & Economics

Applied Philosophy (9 units):
- 80-136 Social Structure, Public Policy & Ethics
- 80-241 Ethical Judgments in Professional Life
- 80-244 Environmental Ethics
- 80-245 Medical Ethics
- 80-247 Ethics and Global Economics
- 80-341 Computers, Society and Ethics
- 80-344 Management, Environment, and Ethics
- 80-348 Health Development and Human Rights
- 80-447 Global Justice

**Selective Courses (2 courses, 18 units):**

Choose any two courses from any of the following categories.

Engineering and Public Policy:
- 19-424 Energy and the Environment
- 19-426 Environmental Decision Making
- 19-448 Science, Technology & Ethics

Business:
- 70-311 Organizational Behavior
- 70-321 Negotiation and Conflict Resolution
- 70-322 Business, Society and Ethics
- 70-364 Business Law
- 70-365 International Trade and International Law
- 70-430 International Management

**Economics:**
- 73-148 Environmental Economics
- 73-310 Evolution of Economic Ideas and Analysis
- 73-357 Regulation: Theory and Policy
- 73-358 Economics of the Environment and Natural Resources
- 73-359 Benefit-Cost Analysis
- 73-365 Firms, Market Structures, and Strategy
- 73-372 International Money and Finance
- 73-375 History of Money and Monetary Policy
- 73-408 Law and Economics
- 73-476 American Economic History

**English:**
- 76-492 Rhetoric of Public Policy

**History:**
- 79-221 Development and Democracy in Latin America
- 79-231 American Foreign Policy: 1945-Present
- 79-233 The United States and the Middle East since 1945
- 79-242 African American History: Reconstruction to the Present
- 79-267 The Soviet Union in World War II: Military, Political, and Social History
- 79-288 Bananas, Baseball, and Borders: Latin America and the United States
- 79-303 Pittsburgh and the Transformation of Modern Urban America
- 79-320 Women, Politics, and Protest
- 79-331 Body Politics: Women and Health in America
- 79-333 Biology and Society: Evolution, Animal Experimentation, and Eugenics
- 79-334 Law, Ethics, and the Life Sciences
- 79-335 Drug Use and Drug Policy
- 79-339 Juvenile Delinquency and Film (1920-1950)
- 79-342 Introduction to Science and Technology Studies
- 79-359 Terrorism and U.S. National Security
- 79-368 Poverty, Charity, and Welfare
- 79-371 African American Urban History
- 79-374 American Environmental History: Critical Issues
- 79-383 Epidemic, Disease, and Public Health
- 79-389 Stalin and Stalinism

**Philosophy:**
- 80-241 Ethical Judgments in Professional Life
- 80-256 Modern Moral Philosophy
- 80-305 Rational Choice
- 80-341 Computers, Society and Ethics
- 80-344 Management, Environment, and Ethics
- 80-405 Game Theory

**Social and Decision Sciences:**
- 88-104 Decision Processes in American Political Institutions
- 88-223 Decision Analysis and Decision Support Systems
- 88-343 Economics of Technological Change
- 88-345 Perspectives on Industrial Research and Development
- 88-347 Complex Technological Systems: Past, Present, and Future
- 88-371 Entrepreneurship, Regulation and Technological Change
- 88-387 Social Norms and Economics
- 88-423 Institutions, Entrepreneurship, and Innovation
- 88-444 Public Policy and Regulation

Note: Other elective courses may be approved at the discretion of the EHPP faculty advisor and should be noted on a student’s DC Concentration Sheet.
Film & Media Studies (81 units minimum)

Film and the electronic media have become a crucial part of contemporary culture and society; they constitute an important tool for understanding social arrangements, historical changes, and play an increasingly important role in the development of aesthetic and cultural theory. The BHA concentration in Film & Media Studies takes an interdisciplinary approach to the study of film and other electronic media. Courses provide techniques for analyzing and criticizing film and other media, for assessing their value as historical, anthropological and social scientific data, and for understanding the aesthetic and philosophical premises of various media texts. In addition, students may take courses in the processes of film-making, offered through special arrangement with the Pittsburgh Filmmakers (a non-profit media arts center, operating since 1971, that provides workshops, seminars, screenings, exhibitions, and training programs in the media and photographic arts).

The courses listed below are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. The minor faculty advisor will be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

**Introductory Course** (9 units)
76-239 Introduction to Film Studies 9

**Required Intermediate Course** (9 units)
76-339 Advanced Studies in Film and Media 9
(May be taken up to three times and counted for additional credit toward Intermediate Courses if topics differ.)

**Intermediate Courses** (27 units)
Complete a minimum of 27 units of course work, chosen in any combination from the following three categories.

**Film and the Study of Society:**
76-238 Media and Film Studies 9
82-296 A Century of Russian Film 9

**Film and Anthropology:**
79-278 Rights to Representation: Indigenous People and their Media 9

**Filmmaking:**
76-269 Survey of Forms: Screenwriting 9
FM 200 Documentary Production (please go to CFA 100 to register for this course) 9

Other 200 or 300 level courses in English, History, and Modern Languages can be counted in this category when their primary topic is film and media. Please consult the Film & Media Studies faculty advisor.

**Advanced Courses** (36 units)
Complete four advanced courses that concentrate on film directly or that use it as a tool of social or cultural analysis.

FM 301 Advanced Filmmaking (please go to CFA 100 to register for this course) 9
76-438 Film and Media Studies: Television 9
76-439 Advanced Seminar in Film and Media Studies: Hollywood Film Genres 9
76-469 Advanced Screenwriting Workshop 9
82-491 Literature, Politics and Film in Russia & East Europe Today 9

**Global Studies (81 units minimum)**

The BHA concentration in Global Studies is designed for students interested in humanistic approaches to understanding past and present processes of globalization. Participating faculty in the departments of History, Modern Languages, English, and Philosophy conduct research in Africa, Asia, Europe, Latin America, the Middle East, and the Pacific. The rigorous yet flexible Global Studies curriculum combines anthropology, history, literary and cultural studies, and advanced language training in order to help students make sense of complex interactions among global processes, regional and local cultures, and societal structures. BHA concentration students in Global Studies develop a broad understanding of their prospects and responsibilities as citizens of the world confronting challenging contemporary problems.

There are two courses for the concentration: Introduction to Global Studies (79-275) and Advanced Seminar in Global Studies (79-400). Students also choose among several courses focused on theory, research methods, transnational histories, and regional/national histories and cultures. Demonstrating intermediate to advanced level proficiency in a language other than English is a crucial component of the major in Global Studies.

In addition to coursework at Carnegie Mellon, BHA students with a concentration in Global Studies are encouraged to incorporate a semester of study abroad into their course of study in order to immerse themselves in society different from their own with unfamiliar cultural practices, language, and history.

Students should consult frequently with the BHA advisor, the Global Studies advisor, and with participating faculty who will help students to craft a coherent course of study on specific topics and/or regions that may lead to the capstone research project (79-400 Advanced Seminar in Global Studies), the BXA capstone project (52-401 and 52-402) or a Dietrich College senior honors thesis (http://hss.cmu.edu/seniorhonorsprogram.html). Program faculty and the academic advisor will also work with students to connect their academic interests and their participation in student organizations and/or organizations based in Pittsburgh with transnational reach.

**Global Studies Introductory and Capstone Courses** (2 courses, 21 units)
Students must earn a final grade of “C” or better for these courses to count toward the major.
79-275 Introduction to Global Studies 9
79-400 Advanced Seminar in Global Studies 12

**Language Requirement**

Demonstrating intermediate to advanced level proficiency in a language other than English is a crucial component of the concentration in Global Studies. Normally this requirement can be satisfied by successfully completing a course conducted in the second language at the 300-level or above for French, German, Italian, or Spanish, or the fourth semester (Intermediate III) level or above for Arabic, Chinese, Japanese, or Russian. Comparable proficiency for other languages can be considered. Additional advanced cultural, historical, and literary study in the second language is strongly recommended. Courses in a language other than English may also be counted as Global Studies transnational, global, regional courses or Global Studies electives as appropriate.

**Theoretical and Topical Core Courses** (2 courses, 18 units)
To gain a solid foundation in the theories, methods, and analytical topics underpinning the concentration in Global Studies, students select 18 units (typically two courses) from the core courses listed below. Students must earn a final grade of “C” or better in these courses to fulfill the theoretical and topical core course requirement.
76-453 Postcolonial Studies 9
76-497 Culture: Interdisciplinary Approaches 9
79-200 Introduction to Historical Research 12
79-278 Rights to Representation: Indigenous People and their Media 9
79-292 China Inside Out: Going Global, 19th to 21st Centuries 9
79-297 Dilemmas and Controversies in Anthropology 9
79-313 Objects of Value 9
79-314 The Politics and Culture of Memory 9
79-317 Art, Anthropology, and Empire 9
79-318 Sustainable Social Change: History and Practice 9
79-376 Topics in Transnational History 9
79-377 Food, Culture, and Power: A History of Eating 9
79-380 Ethnographic Methods 9
79-381 Petrocultures: How Oil Changed the World 9

**Transnational, Global, and Regional Courses** (3 courses, 27 units)
To gain insight into how complex transnational and global processes shape and are affected by local, national, and regional dynamics, students will select 27 units (typically three courses) from any subcategories below.

**Transnational and Global Courses:**
76-322 Global Masala: South Asians in the Diaspora 9
76-337 Intro to Ethnic American Studies 9
76-353 Global Studies 9
76-440 Postcolonial Theory: Diaspora and Transnationalism 9
Regional Courses:

82-441 Regional Courses: Minorities, Conquerors, and Tribute Bearers 9
79-224 Mayan America 9
79-233 The United States and the Middle East since 1945 9
79-237 Comparative Slavery 9
79-251 India/America: Democracy, Diversity, Development 9
79-254 The Jewish Diaspora in Latin America 9
79-282 Europe and the World since 1800 6
79-288 Bananas, Baseball, and Borders: Latin America and the United States 9
79-289 Animal Planet: An Environmental History of People and Animals 9
79-295 Race Relations in the Atlantic World 9
79-299 Trafficking Persons: Children in a Global Context 9
79-312 International Human Rights Institutions in Theory and Practice 6
79-355 World Citizenship 9
79-358 The Pacific Encounters the West: An Anthropology of Globalization 9
79-383 Epidemic, Disease, and Public Health 9
79-384 Garbage Gone Global: Managing Surplus, Waste, and Desire 9
79-385 The Making of the African Diaspora 9
80-348 Health Development and Human Rights 9
80-447 Global Justice 9
82-304 The Francophone World 9
82-345 Introduction to Francophone Literary and Cultural Studies 9
82-366 Introduction to International Relations 9

Regional Courses:

Africa
79-225 West African History in Film 9
79-226 Introduction to African History: Earliest Times to 1780 9
79-227 Introduction to African History: 1780-1994 9
79-236 Introduction to African Studies 9
79-290 States/Stateless Societies and Nationalism in West Africa 6
79-291 Globalization in East African History 6
79-286 Entrepreneurs in Africa, Past, Present and Future 9
82-404 Francophone Realities: Africa 9

Eastern and Southern Asia and the Pacific
76-354 South Asian Literature 9
82-411 China and the West 9
88-411 The Rise of the Asian Economies 9

Europe
79-202 Flesh and Spirit: Early Modern Europe, 1400-1750 9
79-203 Social and Political Change in 20th Century Central and Eastern Europe 9
79-205 20th Century Europe 9
79-206 The European Union at the Crossroads 9
79-207 Development of European Culture 9
79-213 Nationalities and the New States of the Former USSR 9
79-268 World War I: The Twentieth Century's First Catastrophe 9
79-321 The Rise of the Modern Nation State 9
79-323 Family, Gender, and Sexuality in European History, 500-1800 9
82-320 Contemporary Society in German, Austria and Switzerland 9
82-323 Germany, Austria and Switzerland in the 20th Century 9
82-415/416 Topics in French and Francophone Studies 9
82-441 Studies in Peninsular Literature and Culture 9
82-491 Literature, Politics and Film in Russia & Eastern Europe Today Var.

The Middle East
79-229 Origins of the Arab-Israeli Conflict, 1880-1948 9
79-230 Arab-Israeli Conflict and Peace Process since 1948 9
79-307 Religion and Politics in the Middle East 9
79-398 Documenting the 1967 Arab-Israeli War 9
82-300 Topics in Cross-Cultural Studies 9

The Americas
79-220 Caribbean: Cultures and Histories 9
79-221 Development and Democracy in Latin America 9
79-222 Between Revolutions: The Development of Modern Latin America 9
79-235 Caribbean Cultures 9
82-343 Latin America: Language and Culture 9
82-445 U.S. Latino Literature 9
82-451 Studies in Latin American Literature and Culture 9
82-454 The Hispanic Caribbean: Rhythm, Reason and Song 9
82-455/456 Topics in Hispanic Studies 9

Electives (2 courses, 15 units minimum)

Students are required to take an additional 15 units (typically two courses) of electives, selected from one or both of the subcategories below. *Theoretical and Topical Core Courses* and *Transnational, Global, and Regional Courses* listed above that are not used to fulfill those requirements may be counted as electives in addition to the courses listed below.

Those students who wish to pursue an optional Global Studies Senior Thesis (9 units) as one of their electives may do so by arrangement with Global Studies faculty; the thesis will often involve work in a language other than English. This option is not to be confused with the two-semester Dietrich College Senior Honors Thesis, for graduating with college-level honors.

Thematic Courses:

70-365 International Trade and International Law 9
76-241 Introduction to Gender Studies 9
76-318 Communicating in the Global Marketplace 9
76-386 Language & Culture 9
76-450 History of Critical Ideas: Problems of Reading, Interpretation & Spectatorship 9
79-281 Introduction to Religion 9
79-296 Perspectives on Social Protest 9
79-311 Introduction to Anthropology 9
79-330 Medicine and Society 9
79-332 Medical Anthropology 9
79-333 Biology and Society: Evolution, Animal Experimentation, and Eugenics 9
79-334 Law, Ethics, and the Life Sciences 9
79-342 Introduction to Science and Technology Studies 9
79-349 The Holocaust in Historical Perspective 9
79-368 Poverty, Charity, and Welfare 9
79-382 History of Biomedical Research 9
79-506 Global Studies Internship 9
80-247 Ethics and Global Economics 9
80-335 Deliberative Democracy: Theory and Practice 9
80-344 Management, Environment, and Ethics 9
82-215 Introduction to Modern Arabic Literature and Culture Var.
82-311 Arabic Language and Culture I 9
82-312 Arabic Language and Culture II 9
82-358 Literacies Across Language and Culture 9
82-384 Language and Culture: Language in its Social Context 9
82-541 Special Topics: Hispanic Studies Var.
88-205 Comparative Politics 9
88-362 Diplomacy and Statecraft 9
88-408 Attitudes the Media and Conflict in International Relations 9
Nation-based Courses:

79-231 American Foreign Policy: 1945-Present 9
79-235 Hawai‘i: America’s Pacific Island State 9
79-320 Women, Politics, and Protest 9
79-329 Health and the Environment in U.S. History 9
79-331 Body Politics: Women and Health in America 9
79-335 Drug Use and Drug Policy 9
82-344 U.S. Latinos: Language and Culture 9
79-261 Chinese Culture and Society 9
79-262 Modern China 9
79-263 China’s Cultural Revolution 6
79-264 China in the Age of Reform, 1978-Present 9
79-309 20th Century China Through Film 9
79-310 Religions of China 9
79-375 China’s Environmental Crisis 9
82-333 Introduction to Chinese Language and Culture Var.
82-433 Topics in Contemporary Culture of China 9
82-435 Studies in Chinese Traditions 9
82-440 Studies in Chinese Literature & Culture 9
79-258 French History: From the Revolution to De Gaulle 9
79-259 France During World War II 9
82-303 French Culture 9
82-305 French in its Social Contexts 9
79-256 20th Century Germany 9
79-257 Germany and the Second World War 9
79-326 History of Modern Germany through its Cinema 9
82-327 The Emergence of the German Speaking World 9
82-425 Topics in German Literature and Culture 9
82-426 Topics in German Literature and Culture 9
82-427 Nazi and Resistance Culture 9
82-428 History of German Film Var.
79-319 India through Film 6
79-255 Irish History 9
82-361 Introduction to Italian Culture 9
82-362 Italian Language and Culture II 9
82-273 Introduction to Japanese Language and Culture 9
82-278 Japanese Literature in Translation 9
82-473/474 Topics in Japanese Studies 9
82-474 Topics of Japanese Studies 9
82-253 Korean Culture Through Film 9
82-254 World of Korea, Then and Now 9
79-265 Russian History: From the First to the Last Tsar 9
79-266 Russian History: From Communism to Capitalism 9
79-267 The Soviet Union in World War II: Military, Political, and Social History 9
79-269 The Soviet Union in World War II: Military, Political, and Social History 9
79-270 Stalin and Stalinism 9
82-293 Introduction to Russian Culture 9
82-294 Topics in Russian Language and Culture 9
82-296 A Century of Russian Film 9
82-492 The Historical Imagination in Nineteenth-Century Russian Literature Var.
79-272 Iberian Encounters: Muslims, Christians, and Jews in Spain 9
82-342 Spain: Language and Culture 9

History (81 units minimum)

The BHA concentration in History emphasizes broad-based, cumulative knowledge and interpretive skills in the study of the past. Offerings at the 200- and 300-level are designed to allow maximum flexibility in meeting requirements and maximum choice in focusing on particular themes, places, or eras. Upper-level courses aim to give students majoring in History more time together in smaller classes and more experience working with primary and secondary sources. The senior capstone seminar, Advanced Studies in History, provides training and experience in conducting original research and in interpretive, analytical writing—skills that prepare graduates for professional careers as well as for graduate or law school.

Options available in the following areas: 1) General History, 2) US History 3) Regional or Non-US History

Required Courses for All Concentration Options (2 courses, 24 units)

79-200 Introduction to Historical Research -Sophomore or Junior year 12
79-420 Historical Research Seminar -Fall, Senior year 12

Work with History Advisor to Approve Concentration Option (57 units minimum):

General History Required Courses (1 course, 9 units)

Required US Survey Course:

79-240 The Development of American Culture 9

Choose one (9 units) Non-US Survey Course:

79-202 Flesh and Spirit: Early Modern Europe, 1400-1750 9
79-205 20th Century Europe 9
79-206 The European Union at the Crossroads 9
79-207 Development of European Culture 9
79-208 Europe’s Two Revolutions: Dynamics of Change in the 19th Century 9
79-212 China and Its Neighbors: Minorities, Conquerors, and Tribute Bearers 9
79-213 Nationalities and the New States of the Former USSR 9
79-220 Caribbean: Cultures and Histories 9
79-221 Development and Democracy in Latin America 9
79-222 Between Revolutions: The Development of Modern Latin America 9
79-224 Mayan America 9
79-225 West African History in Film 9
79-226 Introduction to African History: Earliest Times to 1780 9
79-227 Introduction to African History: 1780-1994 9
79-229 Origins of the Arab-Israeli Conflict, 1880-1948 9
79-230 Arab-Israeli Conflict and Peace Process since 1948 9
79-233 The United States and the Middle East since 1945 9
79-235 Caribbean Cultures 9
79-236 Introduction to African Studies 9
79-237 Comparative Slavery 9
79-251 India/America: Democracy, Diversity, Development 9
79-255 Irish History 9
79-256 20th Century Germany 9
79-257 Germany and the Second World War 9
79-258 French History: From the Revolution to De Gaulle 9
79-259 France During World War II 9
79-261 Chinese Culture and Society 9
79-262 Modern China 9
79-263 China’s Cultural Revolution 6
79-264 China in the Age of Reform, 1978-Present 9
79-265 Russian History: From the First to the Last Tsar 9
79-266 Russian History: From Communism to Capitalism 9
79-267 The Soviet Union in World War II: Military, Political, and Social History 9
79-272 Iberian Encounters: Muslims, Christians, and Jews in Spain 9

The BHA concentration in History focuses on new ways to understand the past and new ways to use what we know, as well as on connections between past and present and on how historical knowledge facilitates understanding of social, cultural, and policy change. The History concentration emphasizes empirical methods and conceptual analysis, as well as specific research skills relevant to many types of jobs and further professional training. The History concentration combines a structured sequence of courses, training in research methods, theoretical concepts, and analytical writing skills, plus a considerable array of electives.
A minimum of 39 additional History units must be approved with the History advisor. Any History courses not fulfilling another major requirement may be chosen as an elective.

US History Required Courses (1 course, 9 units)

Required US Survey Course:
79-240  The Development of American Culture 9

Choose one (9 units) Non-US Survey Course:
79-202  Flesh and Spirit: Early Modern Europe, 1400-1750 9
79-205  20th Century Europe 9
79-206  The European Union at the Crossroads 9
79-207  Development of European Culture 9
79-208  Europe's Two Revolutions: Dynamics of Change in the 19th Century 9
79-212  China and Its Neighbors: Minorities, Conquerors, and Tribute Bearers 9
79-213  Nationalities and the New States of the Former USSR 9
79-220  Caribbean: Cultures and Histories 9
79-221  Development and Democracy in Latin America 9
79-222  Between Revolutions: The Development of Modern Latin America 9
79-224  Mayan America 9
79-225  West African History in Film 9
79-226  Introduction to African History: Earliest Times to 1780 9
79-227  Introduction to African History: 1780-1944 9
79-229  Origins of the Arab-Israeli Conflict, 1880-1948 9
79-230  Arab-Israeli Conflict and Peace Process since 1948 9
79-233  The United States and the Middle East since 1945 9
79-235  Caribbean Cultures 9
79-236  Introduction to African Studies 9
79-237  Comparative Slavery 9
79-251  India/America: Democracy, Diversity, Development 9
79-255  Irish History 9
79-256  20th Century Germany 9
79-257  Germany and the Second World War 9
79-258  French History: From the Revolution to De Gaulle 9
79-259  France During World War II 9
79-261  Chinese Culture and Society 9
79-262  Modern China 9
79-263  China's Cultural Revolution 6
79-264  China in the Age of Reform, 1978-Present 6
79-265  Russian History: From the First to the Last Tsar 9
79-266  Russian History: From Communism to Capitalism 9
79-267  The Soviet Union in World War II: Military, Political, and Social History 9
79-272  Iberian Encounters: Muslims, Christians, and Jews in Spain 9

Choose three (27 units) US History Courses:
79-231  American Foreign Policy: 1945-Present 9
79-233  The United States and the Middle East since 1945 9
79-241  African American History: Africa to the Civil War 9
79-242  African American History: Reconstruction to the Present 9
79-243  African American Women's History 9
79-244  Women in American History 9
79-245  Capitalism and Individualism in American Culture 9
79-246  Industrial America 9
79-247  The Civil War Era: 1848-1877 9
79-249  20th Century U.S. History 9
79-251  India/America: Democracy, Diversity, Development 9
79-252  Recent U.S. History, 1945-Present 9
79-288  Bananas, Baseball, and Borders: Latin America and the United States 9
79-300  History of American Public Policy 9
79-303  Pittsburgh and the Transformation of Modern Urban America 6
79-304  African Americans in Pittsburgh 6
79-315  Hawai'i: America's Pacific Island State 9
79-318  Sustainable Social Change: History and Practice 9
79-320  Women, Politics, and Protest 9
79-327  History of the American Working Class 9
79-328  Photographers and Photography Since World War II 9
79-330  Medicine and Society 9
79-331  Body Politics: Women and Health in America 9
79-335  Drug Use and Drug Policy 9
79-339  Juvenile Delinquency and Film (1920-1950) 6
79-340  Juvenile Delinquency and Film: From "Blackboard Jungle" to "The Wire" 6
79-342  Introduction to Science and Technology Studies 9
79-343  History of American Urban Life 9
79-345  The Roots of Rock and Roll, 1870-1970 9
79-346  American Political Humor from Mark Twain to the Daily Show 9
79-348  Abraham Lincoln at 200: From 1809-2009 9
79-357  History of Black American Music 6
79-371  African American Urban History 9
79-372  Perspectives on the Urban Environment 9
79-374  American Environmental History: Critical Issues 9
79-382  History of Biomedical Research 9
79-383  Epidemic, Disease, and Public Health 9
79-394  Urban Revitalization 9
79-395  The Arts in Pittsburgh 9

A minimum of 12 additional History units must be approved with the History advisor. Any History courses not fulfilling another major requirement may be chosen as an elective.

Regional or Non-US History Required Courses (2 courses, 18 units)

Two Foreign-Language Courses 300-level or higher:
Students must complete 18 units (typically two courses) of language acquisition, or thematic instruction in the foreign language, relevant to the region of concentration. Must be at the 300-level or above and may not be the same courses used to fulfill BHA general education requirement in the Communicating category.

Choose three (27 units) Regional History Courses:

African Diaspora
79-220  Caribbean: Cultures and Histories 9
79-222  Between Revolutions: The Development of Modern Latin America 9
79-225  West African History in Film 9
79-226  Introduction to African History: Earliest Times to 1780 9
79-227  Introduction to African History: 1780-1994 9
79-235  Caribbean Cultures 9
79-236  Introduction to African Studies 9
79-237  Comparative Slavery 9
79-241  African American History: Africa to the Civil War 9
79-242  African American History: Reconstruction to the Present 9
79-243  African American Women's History 9
79-290  States/Stateless Societies and Nationalism in West Africa 6
79-291  Globalization in East African History 6
79-295  Race Relations in the Atlantic World 9
79-304  African Americans in Pittsburgh 6
79-357  History of Black American Music 6
79-371  African American Urban History 9
79-385  The Making of the African Diaspora 9
79-386  Entrepreneurs in Africa, Past, Present and Future 9
Japanese Studies (81 units minimum)

A BHA concentration in Japanese Studies promotes not just language proficiency but also an understanding of Japanese culture. Students who arrive at Carnegie Mellon with previous language study and/or who have high Advanced Placement, an International Baccalaureate, or exemption based on internal placement test scores will be able to begin taking courses in the concentration earlier in their undergraduate program. In all cases, progress in the concentration will be accelerated by study abroad, which is recommended for all students.

Prerequisites

Low-intermediate level proficiency in Japanese. This is equivalent to the completion of three courses (two at the 100-level and one at the 200-level) or exemption based on internal placement test scores.

Core Courses in Japanese (27-39 units)

<table>
<thead>
<tr>
<th>Course</th>

</tr>
</tbody>
</table>

* Students are strongly encouraged to complete at least one more History course focusing on Japanese history in fulfillment of the major requirements. This list will evolve according to the current offerings of the Departments of History and Modern Languages.

Japanese Studies and Interdisciplinary Electives

Complete three courses from Japanese Electives or a minimum of two courses from Japanese Electives and one course from Interdisciplinary Electives in consultation with the Japanese advisor.

Japanese Electives:

- 79-307 Religion and Politics in the Middle East
- 79-398 Documenting the 1967 Arab-Israeli War
- Russia and the Former Soviet States
- 79-213 Nationalities and the New States of the Former USSR
- 79-265 Russian History: From the First to the Last Tsar
- 79-266 Russian History: From Communism to Capitalism
- 79-267 The Soviet Union in World War II: Military, Political, and Social History
- 79-322 Family and Gender in Russian History
- 79-341 The Cold War in Documents and Film
- 79-389 Stalin and Stalinism

A minimum of 12 additional History units must be approved with the History advisor. Any History courses not fulfilling another major requirement may be chosen as an elective.
The BHA concentration in Linguistics combines courses from the departments of English, Modern Languages, Philosophy and Psychology and the Language Technologies Institute. Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.

**Introductory Course** (1 course, 9 units)
80-180 Nature of Language 9

**Fundamental Skills Courses** (2 courses, 18 units)
Take one course each in two of the following three areas:

**Sounds:**
80-282 Phonetics and Phonology I 9

**Structure:**
76-389 Rhetorical Grammar 9
80-280 Linguistic Analysis 9
80-283 Syntax and Discourse 9

**Meaning:**
76-385 Introduction to Discourse Analysis 9
80-381 Meaning in Language 9
80-383 Language in Use 9

**Interdisciplinary Electives:**

**English**
76-239 Introduction to Film Studies 9
76-386 Language & Culture 9
76-387 Narrative & Argument 9

**History**
79-261 Chinese Culture and Society 9
79-275 Introduction to Global Studies 9
79-310 Religions of China 9

**Modern Languages**
80-278 Japanese Literature in Translation 9
80-280 Learning About Language Learning 9
80-281 Tutoring for Community Outreach Var.
80-282 Literacies Across Language and Culture 9
80-283 Second Language Acquisition: Theories and Research 9
80-288 Understanding Second Language Fluency 9
80-480 Social and Cognitive Aspects of Bilingualism 9

**Music**
57-306 World Music 9

**Philosophy**
80-180 Nature of Language 9
80-280 Linguistic Analysis 9
80-380 Philosophy of Language 9

**Psychology**
85-375 Crosscultural Psychology 9
85-421 Language and Thought 9

**Linguistics (81 units minimum)**

The BHA concentration in Linguistics combines courses from the departments of English, Modern Languages, Philosophy and Psychology and the Language Technologies Institute. Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.

**Introductory Course** (1 course, 9 units)
80-180 Nature of Language 9

**Fundamental Skills Courses** (2 courses, 18 units)
Take one course each in two of the following three areas:

**Sounds:**
80-282 Phonetics and Phonology I 9

**Structure:**
76-389 Rhetorical Grammar 9
80-280 Linguistic Analysis 9
80-283 Syntax and Discourse 9

**Meaning:**
76-385 Introduction to Discourse Analysis 9
80-381 Meaning in Language 9
80-383 Language in Use 9

**Elective Courses** (4 courses, 36 units)
Take four additional electives. These can be additional courses from the Fundamental Skills courses or Breadth courses listed above, or any other course which must be approved by the Director as a linguistics elective. Listed below are the additional electives taught on a regular basis. Additional appropriate courses are offered irregularly or on a one-off basis. The Director will provide students with a list of possible electives each semester, and will assist students in selecting electives which are consistent with their goals and interests. A list of these courses must be filed in the BXA office.

11-411 Natural Language Processing 12
11-716 Graduate Seminar on Dialog Processing 6
11-721 Grammars and Lexicons 12
11-722 Grammar Formalisms 12
11-761 Language and Statistics 12
11-762 Language and Statistics II 12
15-492 Special Topic: Speech Processing 12
76-373 Topics in Rhetoric: Argument 9
76-378 Literacy: Educational Theory and Community Practice 9
76-451 Topics in Language Study 9
76-476 Rhetoric of Science 9
80-281 Language and Thought 9
80-380 Philosophy of Language 9
80-382 Phonetics and Phonology II 9
82-345 Introduction to Hispanic Literary and Cultural Studies 9
82-373 Structure of the Japanese Language 9
82-378 Japanese Conversation Analysis 9
82-388 Understanding Second Language Fluency 9
82-442 Analysis of Spoken Spanish 9
82-444 The Structure of Spanish 9
82-476 Japanese Discourse Analysis 9
82-480 Social and Cognitive Aspects of Bilingualism 9
82-488 Language Learning in a Study Abroad Context 9

**Language Requirement**
Students must successfully complete two semesters of consecutive language courses. Students may not test out of this requirement. However, language courses taken at other institutions or as part of a study abroad program will typically substitute for a semester of language study.

**Professional Writing (81 units minimum)**

Professional Writing combines liberal and professional education with a strong foundation in rhetorical studies. The concentration in Professional Writing has a strong career orientation and is specifically designed to prepare students for successful careers as writers and communications specialists in a range of fields: publishing, government, journalism, the non-profit sector, education, public and media relations, corporate communications, advocacy writing, and the arts. The concentration is designed to develop articulate and reflective communications professionals.
with both the skills needed to enter and negotiate current work contexts (including writing for the web and other digital media) and the analytic and problem-solving skills needed to understand and keep pace with cultural and technological change.

**Foundation Courses** (4 courses, 36 units)

- 76-26x Survey of Forms (Nonfiction, Fiction, Poetry, or Screenwriting) 9
- 76-271 Introduction to Professional and Technical Writing 9
- 76-373 Topics in Rhetoric: Argument 9
- 76-390 Style 9

**Rhetoric/Language Studies Course** (1 course, 9 units)

Students with a concentration in Professional Writing complete one course from designated Rhetoric courses offered and advertised each semester by the English Department. Rhetoric courses focus on understanding the role of language in thought, reasoning, and action. These courses emphasize the relationships between texts and their contexts and pay particular attention to textual features, meaning, processes of reading and writing, and the ways in which language practices vary over time and across cultures. The courses also equip students with explicit techniques for analyzing, understanding, and exploring language practices. The Rhetoric/Language Studies courses may also be taken as part of the concentration requirements for three additional, Advanced Writing/Rhetoric courses and include but are not limited to the following list:

- 76-318 Communicating in the Global Marketplace 9
- 76-319 Environmental Rhetoric 9
- 76-355 Leadership, Dialogue, and Change 9
- 76-378 Literacy: Educational Theory and Community Practice 9
- 76-385 Introduction to Discourse Analysis 9
- 76-386 Language & Culture 9
- 76-387 Narrative & Argument 9
- 76-389 Rhetorical Grammar 9
- 76-419 Media in a Digital Age 9
- 76-420 Process of Reading and Writing 9
- 76-451 Topics in Language Study 9
- 76-457 Topics in Rhetoric 9
- 76-476 Rhetoric of Science 9
- 76-491 Rhetorical Analysis 9
- 76-492 Rhetoric of Public Policy 9

**Advanced Writing/Rhetoric Courses** (3 courses, 27 units minimum)

Students with a concentration in Professional Writing complete three Advanced Writing/Rhetoric courses at the 300- or 400-level. Options for these courses include all of the Rhetoric/Language Studies courses listed above plus the writing-focused courses listed below. Additional courses that fulfill these requirements are advertised on a semester-by-semester basis. For help in choosing which of the possible options are most appropriate for various professional goals – journalism, writing for new media, editing and publishing, public relations, corporate communications, or science and technical writing – consult your English Department advisor and the “Selected Core Courses & Electives for PW Majors” advising sheet available through the English Department. All students with a concentration in PW, regardless of their career focus, are encouraged to take 76-391 Document Design and 76-487 Web Design (in conjunction with the 3-unit 76-488 Web Design Lab) to extend their skills in writing for print to include information design for digital media. Both courses focus on the role of the writer in these specializations and provide lab instruction in the relevant software and related computer skills.

- 39-605 Engineering Design Projects 12
- 76-301 Internship Var.
- 76-359 Planning and Testing Documents 9
- 76-360 Literary Journalism Workshop 9
- 76-372 Topics in Journalism 9
- 76-375 Magazine Writing 9
- 76-389 Rhetorical Grammar 9
- 76-391 Document Design 12
- 76-395 Science Writing 9
- 76-396 Non-Profit Advocacy 9
- 76-397 Instructional Text Design 9
- 76-472 Advanced Journalism 9
- 76-474 Software Documentation 9
- 76-479 Public Relations & Marketing for Writers 9
- 76-481 Writing for Multimedia 12
- 76-487 Web Design 9 (take with 76-488 Web Design Lab, 3 units)
- 76-491 Rhetorical Analysis 9
- 76-494 Healthcare Communications 9

**English Elective** (1 course, 9 units)

Students with a concentration in Professional Writing complete one additional course from the English Department’s offerings. This course should be one that focuses on the relationships between texts and their cultural and historical contexts. Courses in literature, cultural studies, rhetoric, and media studies that meet this requirement are advertised on a semester-by-semester basis. The English Elective may be any course offered by the Department with the exception of 76-270 Writing for the Professions and 76-272 Language in Design, both of which are designed for non-majors and overlap with 76-271 Introduction to Professional and Technical Writing. Students with a concentration in PW are additionally encouraged to supplement their PW coursework with 76-300 Professional Seminar (3 units) to learn more about internship and career options in professional writing. 76-300 meets once per week and is offered every fall semester.

**Psychology (81 units minimum)**

Psychology is a science that embraces both biological and social sciences. It is a science concerned with establishing principles and laws regarding the ways in which people think, feel, and behave through the scientific study of human behavior. Students with a concentration in Psychology are expected not only to learn about findings already established by psychologists, but also to become proficient in the investigation and analysis of behavior. This includes observing behavior, formulating hypotheses, designing experiments to test these hypotheses, running experiments, performing statistical analyses, and writing reports.

**Breadth Courses** (4 courses, 36 units)

To gain familiarity with the breadth of the field of Psychology, students take 85-102 Introduction to Psychology and three survey courses.

**Required Intro Course:**

- 85-102 Introduction to Psychology 9

**Survey Courses:**

- 85-211 Cognitive Psychology 9
- or 85-213 Human Information Processing and Artificial Intelligence 9
- 85-219 Biological Foundations of Behavior 9
- 85-221 Principles of Child Development 9
- 85-241 Social Psychology 9
- 85-251 Personality 9

**Research Methods and Statistics** (2 courses, 18 units)

Students complete one course in Research Methods (9 units). The corresponding survey course is a prerequisite for this course.

- 85-310 Research Methods in Cognitive Psychology 9
- 85-320 Research Methods in Developmental Psychology 9

The following Statistics course is a prerequisite or co-requisite for all the Research Methods courses. This Statistics course counts toward the Psychology concentration.

- 36-309 Experimental Design for Behavioral and Social Sciences -Fall 9

**Advanced Courses** (3 courses, 27 units)

**III. College of Fine Arts Concentration**

(number of courses vary, 108 units minimum)

BHA students choose one of the following concentrations:

- Architecture (108 units)
- Art (108 units)
- Design (108 units)
Architecture Concentration (108 units minimum)

Architecture Required Courses (52 units minimum)

Review Requirement: (complete 2 required reviews, 0 units)

A review is required at the end of the sophomore and senior years. Pass/no pass only.
A minimum of 30 additional Dramaturgy units must be approved by the Dramaturgy faculty option coordinator. A list of these selected courses must be filed in the BXA office.

**Choose 30 units from:**

- **Dramaturgy:**
  - 54-109 Dramaturgy 1: Approaches to Text
  - 54-200 Dramaturgy Forum - Fall
  - 54-121 Directing I: Sources
  - 54-187 Introduction to Playwriting
  - 54-330 Introduction to Stage Management
  - 54-162 Introduction to Costume Design
  - 54-166 Introduction to Sound Design for Theatre
  - 54-250 Introduction to Scenic Design
  - 54-252 Introduction to Lighting Design
  - 54-254 New Play Collaboration
  - 54-299 Dramaturgy Production: Practical Observation
  - 54-387 Dramaturgy: Production I
  - 54-487 Dramaturgy: Production II
  - 54-488 Dramaturgy: Production II
  - 54-xxx Dramaturgy Research Hours

  * Take a minimum of two; students are expected to take one Dramaturgy Forum course per year while enrolled.

**Production Technology and Management Required Courses** (26 units)

- 54-151-54-152 Stagecraft-Stagecraft

  (15 units + 11 units)

A minimum of 62 additional PTM units must be approved by the PTM faculty option coordinator. A list of these selected courses must be filed in the BXA office.

**Music Concentration (108 units minimum)**

**AUDITION REQUIRED FOR PERFORMANCE CONCENTRATION OPTION. PORTFOLIO REVIEW/INTERVIEW REQUIRED FOR COMPOSITION, MUSICOLOGY, OR MUSIC TECHNOLOGY CONCENTRATION OPTION.**

Options available in the following areas: 1) Performance (instrumental, piano, organ, voice), 2) Composition 3) Musicology, 4) Music Technology

**Required Course for All Concentration Options (9 units)**

- 57-152 Harmony I - Fall
- 57-149 Basic Harmony I

**Work with Music Advisor to Approve Concentration Option (99 units minimum):**

**Performance and Composition Required Courses** (76 units)

- 57-161 Eurhythmics I - Fall (recommended co-requisite: 57-181)
- 57-181 Solfege I
- 57-180 Basic Solfege I
- 57-185 Advanced Solfege I
- 57-173 Survey of Western Music History - Fall (co-requisite: 57-188)
- 57-188 Repertoire and Listening for Musicians
- 57-69x BXA Studio (4 semesters)
- 57-xxx Major Ensemble (4 semesters)

A minimum of 23 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

**Musicology Required Courses** (45 units)

- 57-283 Music History I
  - (co-requisite: 57-190)
- 57-284 Music History II
  - (co-requisite: 57-289)
- 57-285 Music History III
  - (co-requisite: 57-290)
- 57-189 Introduction to Repertoire and Listening for Musicians
- 57-190 Repertoire and Listening for Musicians I
- 57-289 Repertoire and Listening for Musicians II
- 57-290 Repertoire and Listening for Musicians III
- 57-611 Independent Study in History

**Choose 36 units from:**

- 57-209 The Beatles
- 57-306 World Music
- 57-412 Opera Since Wagner
- 57-414 Music and Nature
- 57-415 Mozart Operas
- 57-477 Music of the Spirit
- 57-478 Survey of Historical Recording
- 57-480 History of Black American Music

**Graduate Musicology courses may be taken with instructor permission.**

A minimum of 18 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

**Music Technology Required Courses** (40 units)

- 57-101 Introduction to Music Technology
- 57-181 Solfege I - Fall
- 57-180 Basic Solfege I
- 57-185 Advanced Solfege I
- 57-173 Survey of Western Music History - Fall
  - (co-requisite: 57-188)
- 57-188 Repertoire and Listening for Musicians
- 57-337 Sound Recording
- 57-347 Electronic and Computer Music
- 57-xxx Independent Study in Music Technology or Sound Recording

**Choose 36 units from:**

- 57-153 Harmony II - Spring
- 57-182 Solfege II - Spring
- 57-186 Advanced Solfege II
- 57-283 Music History I
  - (co-requisite: 57-190)
- 57-284 Music History II
  - (co-requisite: 57-289)
- 57-285 Music History III
  - (co-requisite: 57-290)
- 57-190 Repertoire and Listening for Musicians I
- 57-289 Repertoire and Listening for Musicians II
- 57-290 Repertoire and Listening for Musicians III
- 57-338 Sound Editing and Mastering
- 57-437 Multitrack Recording

A minimum of 23 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

**IV. Free Electives**

(approximately 9 courses, 78 units)

Take any Carnegie Mellon course. Many BHA students use their electives to broaden or deepen their concentrations. A maximum of 9 units of physical education and/or military science may be counted toward this requirement. Physical education and military science courses will not be calculated in a student’s GPA.
Bachelor of Science and Arts Degree Program

Carnegie Mellon University recognizes that there are students who are naturally gifted in both the fine arts and the natural sciences or mathematics. In order to accommodate students who want to pursue an education simultaneously in these areas, we offer a degree that combines the strengths of the College of Fine Arts (CFA) and the Mellon College of Science (MCS). The intercollege degree, called the Bachelor of Science and Arts (BSA), is a rigorous program that offers a unique group of qualified students the opportunity to develop their talents and interests in an area of the fine arts and an area of the natural sciences or mathematics.

The BSA curriculum is divided into three parts: 1) BSA General Education coursework, 2) CFA concentration coursework, and 3) MCS concentration coursework.

I. BSA General Education

(16 courses, 135 units minimum)

- Writing/Expression (1 course, 9 units, 76-101 required)
- Cultural Analysis (1 course, 9 units minimum)
- Economic, Political, & Social Institutions OR Cognition, Choice & Behavior (1 course, 9 units minimum)
- Two additional courses from one of the following departments: English, History, Modern Languages, Philosophy, or Psychology (2 courses, 18 units minimum)
- Mathematics (2 courses, 20 units, 21-120 and 21-122 required)
- Science (3 courses, 31 units, 03-121, 09-105, and 33-111 required)
- BXA Freshman Interdisciplinary Seminar (1 course, 9 units, 52-190 or 52-399 required)
- BXA Junior Seminar (1 course, 9 units, 52-410 required)
- BXA Junior Portfolio Review (complete 1 required review, 0 units, 52-391 required)
- BXA Capstone Project (2 courses, 18 units, 52-401 & 52-402 required)
- Computing @ Carnegie Mellon (1 mini-course, 3 units, required in first semester)

Writing/Expression (1 course, 9 units)

Broadly considered, language is a tool used to communicate, as well as a way to organize non-visual and non-mathematical thinking. This requirement focuses on the social nature of language and the ways in which writing constitutes thinking.

76-101 Interpretation and Argument -REQUIRED 
(various topics by section) www.cmu.edu/hss/english/first_year/index.html

Cultural Analysis (1 course, level 9 units minimum)

This category explores definitions of culture and the role culture plays in producing different actions and institutions as well as the roles of institutions, systems and human actions in shaping cultural contexts. Listed below are examples of courses that meet the requirement for this category.

Complete TWO additional courses from one of the following departments (2 courses, complete 18 units minimum):

- English
- History
- Modern Languages
- Philosophy
- Psychology

Mathematics (2 courses, 20 units)

- 21-120 Differential and Integral Calculus 10
- 21-122 Integration and Approximation 10

Science (3 courses, 31 units)

- 03-121 Modern Biology 9
- 09-105 Introduction to Modern Chemistry I 10
- 33-111 Physics I for Science Students 12

BXA Freshman Interdisciplinary Seminar (1 course, 9 units)

The BXA Freshman Research Seminar introduces first-year students to the field of interdisciplinary work and arts-based research. Students engage with theoretical and practical readings from across the various concentrations, with particular emphasis on aesthetic theory. Guest lectures complement the weekly readings by giving insight into practical implementations of these ideas. Students will conceive, research, and create a final project to be presented at the end of the semester. BXA internal transfer students should register for 52-399 BXA Interdisciplinary Seminar to fulfill the interdisciplinary requirement.

52-190 BXA Freshman Interdisciplinary Seminar - REQUIRED
52-399 BXA Interdisciplinary Seminar

BXA Junior Seminar:
Subcultures: Style, Structure, Representation (1 course, 9 units)

This seminar will examine contemporary and historical subcultures, particularly youth subcultures, through interdisciplinary modes of analysis, using theory and methodologies from several fields (particularly anthropology, communication studies, cultural studies, feminist theory, history, Marxism, modernism/post-modernism, performance studies, queer theory, sociology, and structuralism/post-structuralism). We will analyze the roots, performances, and forms of representations of subcultures, especially those with rituals and presentations centered on artistic mediums (music, fashion, graphic arts, street art, etc.). Though this course will focus primarily on the American experience, at times we will incorporate transnational perspectives to study the Beats, greasers, mods, punks, skinheads, b-boys and girls, Goths, and “geek cultures” (comics, cosplay, gaming), among others. This course will pay careful attention to nuances of gender, race, class, and age in understanding the meaning of subcultures—symbolically, politically, and personally. Course requirements may include individual student research and leadership of class discussions.

52-410 BXA Junior Seminar - REQUIRED

BXA Junior Portfolio Review (complete 1 required review, 0 units)

To better assess the progress and accomplishments of BXA students as they enter their final year, students submit a portfolio for review during the spring semester junior year. Students should work with their BXA advisor and their concentration faculty advisors to assemble a portfolio that represents their academic and creative accomplishments over the course of their college career. This portfolio should also include a reflective essay in which students evaluate how they integrated their two areas of interest, and how they will extend that integration into the BXA Capstone Project in the senior year.

Students should identify their own specific goals for their academic career and how they are fulfilling them in this reflective essay, as well as how they evaluate their performance in light of the programs’ broader pedagogical goals. Students in the BXA program should be working toward being able to:

- describe the connections between their chosen concentration disciplines and to integrate them into their work
- communicate ideas in writing, visual expression, and oral expression
- discuss the intersection of history, society, and culture from local and global perspectives
- synthesize mathematical theories and experimental work to produce real-world knowledge

* Indicates co-requisites and/or prerequisites required.
** Indicates credit is based on the AP Credit Policy.
The BXA Capstone Project gives BXA students the opportunity to

demonstrate the extent of their interdisciplinary work over the course of

eye academic career. The Capstone Project should include elements that

span the student’s CFA and DC concentrations (for BHA students), CFA and

MCS concentrations (for BSA students), or CFA and SCS concentrations

for BCSA students). The project can be either a scholarly or creative

effort, and may take one of many possible forms (e.g., a written thesis,
a compilation of creative work or works, an experiment and report, a
computer program or animation, etc.).

The BXA Capstone sequence covers both semesters of a student’s senior
year. In the fall, students are enrolled in 52-401 BXA Capstone Project I (9
units), which meets weekly to discuss strategies for managing research,
planning the project, and larger theoretical issues related to interdiscipli-

nary work. At the end of the fall course, students will have produced a Capstone
Project proposal, an annotated bibliography, and multiple versions of
their project pitch. In the spring, students enroll in 52-402 BXA Capstone
Project II (9 units), which has no required classroom time. Instead, students

spend the semester doing the research and foundational work necessary
for the project, as well as meeting with their faculty and BXA advisors as
they create their Capstone Project and prepare to present it at the annual
Meeting of the Minds Undergraduate Research Symposium held each May.

Computing @ Carnegie Mellon (1 mini-course, 3 units)
This is a mini-course, pass/no pass, to be completed in the first semester.
99-101 Computing @ Carnegie Mellon -REQUIRED
or 99-102 Computing @ Carnegie Mellon
or 99-103 Computing @ Carnegie Mellon

II. MCS Concentration
(number of courses vary, 120-134 units)
BSA students choose one of the following concentrations:
• Biological Sciences (120 units)
• Chemistry (124 units)
• Mathematical Sciences (122 units)
• Physics (134 units)

Biological Sciences Concentration (120 units minimum)

Biological Sciences Required Courses (102 units minimum)

03-231 Biochemistry I 9
or 03-232 Biochemistry I
03-240 Cell Biology 9
03-330 Genetics 9
03-124 Modern Biology Laboratory 9
or 03-343 Experimental Techniques in Molecular Biology
03-202-201 Undergraduate Colloquium for Sophomores 2
09-106 Modern Chemistry II 10
09-217 Organic Chemistry I 9
09-218 Organic Chemistry II 9
09-221 Laboratory I: Introduction to Chemical Analysis 12
09-222 Laboratory II: Organic Synthesis and Analysis 12
33-112 Physics II for Science Students 12

Biological Sciences Electives (2 courses, 18 units)

One course must be an advanced elective selected from 03-3xx or higher,
excluding 03-445.

Chemistry Concentration (124 units minimum)

Chemistry Required Courses (106 units)

09-106 Modern Chemistry II 10
09-219 Modern Organic Chemistry 10
09-220 Modern Organic Chemistry II 10
09-214 Physical Chemistry 9
or 09-344 Physical Chemistry (Quantum): Microscopic Principles of
Physical Chemistry 9
or 09-345 Physical Chemistry (Thermo): Macroscopic Principles of
Physical Chemistry 9
09-348 Inorganic Chemistry 10
09-221 Laboratory I: Introduction to Chemical Analysis 12
09-222 Laboratory II: Organic Synthesis and Analysis 12
09-321 Laboratory III: Molecular Design and Synthesis 12
09-204 Professional Communication Skills in Chemistry 3
09-201-09-202 Undergraduate Seminar I - Undergraduate Seminar II: Safety and Environmental Issues for Chemists - Undergraduate Seminar III 3
09-402 Undergraduate Seminar VI 3
33-112 Physics II for Science Students 12

Advanced Chemistry Electives (2 courses, 18 units)

May be any upper level chemistry course, 09-3xx or higher, or Biochemistry

I, 03-231 or 03-232, with the exception of 09-435 Independent Study, which

can be used only by permission of the Director of Undergraduate Studies.

Mathematical Sciences Concentration (122 units minimum)

Mathematical Sciences Required Courses (86 units minimum)

(Rational substitutions within the core program will be allowed.)
15-110 Principles of Computing 10
21-127 Concepts of Mathematics (prerequisite for 15-211) 10
21-228 Discrete Mathematics 9
21-241 Matrices and Linear Transformations 10
or 21-341 Linear Algebra 10
21-259 Calculus in Three Dimensions 9
21-260 Differential Equations 9
or 33-231 Physical Analysis 9
21-355 Principles of Real Analysis I 9
21-373 Algebraic Structures 9
33-112 Physics II for Science Students 12

Mathematical Sciences Electives (2 courses, 18 units)

Students with a music focus should take 21-372 Partial Differential
Equations and Fourier Analysis.

Mathematical Sciences, Statistics, or Computer Science Electives (2 courses,
18 units)

May be computer science course above the 100-level, mathematical science
courses beyond the calculus sequence, and statistics courses at the level of
36-225 or higher.

Physics Concentration (134 units minimum)

Physics Required Courses (116 units)

21-259 Calculus in Three Dimensions 9
33-104 Experimental Physics 9
33-112 Physics II for Science Students 12
33-201 Physics Sophomore Colloquium I -Fall 2
33-202 Physics Sophomore Colloquium II -Spring 2
33-211 Physics III: Modern Essentials 10
33-228 Electronics I 10
33-231 Physical Analysis 10
33-232 Mathematical Methods of Physics 10
33-234 Quantum Physics 10
33-301 Physics Upperclass Colloquium I -Fall 1
33-302 Physics Upperclass Colloquium II -Spring 1
33-331 Physical Mechanics I 10
33-338 Intermediate Electricity and Magnetism I 10
33-340 Modern Physics Laboratory 10
33-341 Thermal Physics I 10

Physics Electives (2 courses, 18 units)
Two courses to be pre-approved by the Physics Department.

33-xxx  Two Physics Electives  18

NOTE: 33-114 Physics of Musical Sound (9 units) is highly recommended for students with a Music concentration.

III. College of Fine Arts Concentration

(number of courses vary, 108 units minimum)

BSA students choose one of the following concentrations:

- Architecture (108 units)
- Art (108 units)
- Design (108 units)
- Drama (108 units)
- Music (108 units)

Architecture Concentration (108 units minimum)

Architecture Required Courses (52 units minimum)

A minimum of 36 additional Directing units must be approved by the Directing faculty option coordinator. A list of these selected courses must be filed in the BXA office.

Dramaturgy Required Courses (53 units)

54-109 Dramaturgy 1: Approaches to Text 9
54-184 Dramaturgy 2: History and Practice 9
54-160 Production Symposium I -Spring 6
54-200 Dramaturgy Forum 1
54-387 Dramaturgy : Production I 9
54-xxx Dramaturgy 3, 4, 5 or 6 (take a minimum of two in any order during the sophomore, junior, and senior years; students are expected to take one Dramaturgy course per semester while enrolled) 18

A minimum of 35 additional Dramaturgy units must be approved by the Dramaturgy faculty option coordinator. A list of these selected courses must be filed in the BXA office.

Production Technology and Management Required Courses (26 units)

54-151-54-152 Stagecraft-Stagecraft (15 units + 11 units) 26

A minimum of 62 additional PTM units must be approved by the PTM faculty option coordinator. A list of these selected courses must be filed in the BXA office.

Music Concentration (108 units minimum)

AUDITION REQUIRED FOR PERFORMANCE CONCENTRATION OPTION. PORTFOLIO REVIEW/INTERVIEW REQUIRED FOR COMPOSITION, MUSICOLOGY, OR MUSIC TECHNOLOGY CONCENTRATION OPTION.

Options available in the following areas: 1) Performance (instrumental, piano, organ, voice), 2) Composition 3) Musicology, 4) Music Technology

Required Course for All Concentration Options (9 units)

57-152 Harmony I -Fall 9
57-149 Basic Harmony I

Work with Music Advisor to Approve Concentration Option (99 units minimum):

Performance and Composition Required Courses (76 units)

57-161 Eurhythmics I -Fall (recommended co-requisite: 57-181) 3
57-181 or 57-180 Basic Solfege I
57-185 or 57-181 Advanced Solfege I
57-173 Survey of Western Music History -Fall (co-requisite: 57-188) 9
57-188 Repertoire and Listening for Musicians 1
57-69x BXA Studio (4 semesters) 26
57-xxx Major Ensemble (4 semesters) 24

A minimum of 23 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

Musicology Required Courses (45 units)

57-283 Music History I (co-requisite: 57-190) 9
57-284 Music History II (co-requisite: 57-289) 9
57-285 Music History III (co-requisite: 57-290) 9
57-189 Introduction to Repertoire and Listening for Musicians 3
57-190 Repertoire and Listening for Musicians I 3
57-289 Repertoire and Listening for Musicians II 3
57-290 Repertoire and Listening for Musicians III 3
57-611 Independent Study in History 6

Choose 36 units from:

57-209 The Beatles 9
57-306 World Music 6
57-412 Opera Since Wagner 9
57-414 Music and Nature 9
57-415 Mozart Operas 6
57-477 Music of the Spirit 6
57-478 Survey of Historical Recording 6
57-480 History of Black American Music 6

Graduate Musicology courses may be taken with instructor permission.

A minimum of 18 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

Music Technology Required Courses (40 units)

57-101 Introduction to Music Technology 6
57-181 Solfege I -Fall 3
57-180 Basic Solfege I
57-185 Advanced Solfege I
57-173 Survey of Western Music History -Fall (co-requisite: 57-188) 9
57-188 Repertoire and Listening for Musicians 1
57-337 Sound Recording 6
57-347 Electronic and Computer Music 6
57-xxx Independent Study in Music Technology or Sound Recording 9

Choose 36 units from:

57-153 Harmony II -Spring 9
57-182 Solfege II -Spring 3
57-186 Advanced Solfege II
57-283 Music History I (co-requisite: 57-190) 9
57-284 Music History II (co-requisite: 57-289) 9
57-285 Music History III (co-requisite: 57-290) 9
57-190 Repertoire and Listening for Musicians I 3
57-289 Repertoire and Listening for Musicians II 3
57-290 Repertoire and Listening for Musicians III 3
57-338 Sound Editing and Mastering 6
57-438 Multitrack Recording 9

A minimum of 23 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

IV. Free Electives

(approximately 1-2 courses, 3-17 units)

Take any Carnegie Mellon course. A maximum of 9 units of physical education and/or military science may be counted toward this requirement. Physical education and military science courses will not be calculated in a student's QPA.

Bachelor of Computer Science and Arts Degree Program

Carnegie Mellon University recognizes that there are students who are naturally gifted in both the fine arts and computer science. In order to accommodate students who want to pursue an education simultaneously in these areas, we offer a degree that combines the strengths of the College of
Fine Arts (CFA) and the School of Computer Science (SCS). The intercollege degree, called the Bachelor of Computer Science and Arts (BCSA), is a rigorous program that offers a unique group of qualified students the opportunity to develop their talents and interests in an area of the fine arts and computer science.

The BCSA curriculum is divided into three parts: 1) BCSA General Education coursework, 2) CFA concentration coursework, and 3) SCS concentration coursework.

Students choose their fine arts concentration from among the five schools in CFA: Architecture, Art, Design, Drama or Music. A student must meet the entry requirements for the particular CFA school of their choice. While in the BCSA Program, a student may change their CFA concentration only if they pass all admission requirements for that particular school.

The BCSA Degree Program is governed by faculty and administrators from both colleges and led by the director of the BXA Intercollege Degree Programs. The director and academic advisor of the BXA Intercollege Degree Programs are the primary advisors and liaisons between CFA and SCS. Students receive extensive advising support. Each student has two additional academic advisors: an advisor in the admitting school of CFA for their fine arts concentration, and an advisor in SCS for their computer science concentration. This network of advisors guides each student through their curriculum.

**BCSA Curriculum**

**I. BCSA General Education**

(15 courses, 121 units minimum)

- Writing/Expression (1 course, 9 units, 76-101 required)
- Cultural Analysis (1 course, 9 units minimum)
- Mathematics (2 courses, 19 units minimum, 21-120 and either 21-122 or 21-241 required), Probability (1 course, 9 units minimum required)
- Science (2 courses, 18 units minimum)
- Engineering (In consultation with your academic advisor, an engineering course could substitute for one of the two Science requirements.)
- Economic, Political, & Social Institutions OR Cognition, Choice & Behavior (1 course, 9 units minimum)
- One additional course from one of the following departments: English, History, Modern Languages, Philosophy, or Psychology (1 course, 9 units minimum)
- BXA Freshman Interdisciplinary Seminar (1 course, 9 units, 52-190 or 52-399 required)
- BXA Junior Seminar (1 course, 9 units, 52-410 required)
- BXA Junior Portfolio Review (complete 1 required review, 0 units, 52-391 required)
- BXA Capstone Project (2 courses, 18 units, 52-401 & 52-402 required)
- Computing @ Carnegie Mellon (1 mini-course, 3 units, required in first semester)

**Writing/Expression (1 course, 9 units)**

Broadly considered, language is a tool used to communicate, as well as a way to organize non-visual and non-mathematical thinking. This requirement focuses on the social nature of language and the ways in which writing constitutes thinking.

76-101 Interpretation and Argument -REQUIRED

(various topics by section) www.cmu.edu/hss/english/first_year/index.html

**Cultural Analysis (1 course, complete 9 units minimum)**

This category explores definitions of culture and the role culture plays in producing different actions and institutions as well as the roles of institutions, systems and human actions in shaping cultural contexts. Listed below are examples of courses that meet the requirement for this category.

57-173 Survey of Western Music History * 9
70-342 Managing Across Cultures * 9
76-227 Comedy 9
76-232 African American Literature * 9
76-239 Introduction to Film Studies * 9
76-241 Introduction to Gender Studies * 9
79-104 Global Histories 9
79-207 Development of European Culture 9
79-240 The Development of American Culture 9
79-241 African American History: Africa to the Civil War 9
79-242 African American History: Reconstruction to the Present 9
79-261 Chinese Culture and Society 9
79-281 Introduction to Religion 9
79-311 Introduction to Anthropology 9
79-330 Medicine and Society 9
79-345 The Roots of Rock and Roll, 1870-1970 9
79-350 Early Christianity 9
79-368 Poverty, Charity, and Welfare 9
80-100 Introduction to Philosophy 9
80-250 Ancient Philosophy 9
80-251 Modern Philosophy 9
80-253 Continental Philosophy 9
80-254 Analytic Philosophy 9
80-255 Pragmatism 9
80-276 Philosophy of Religion 9
82-3xx Any 300 level or greater course from Modern Languages

* Indicates co-requisites and/or prerequisites required.

**Mathematics & Probability (3 courses, 29 units minimum)**

Choose two mathematics courses (20 units minimum):

21-120 Differential and Integral Calculus 10
21-122 Integration and Approximation 10
or 21-241 Matrices and Linear Transformations

Choose one probability course (9 units minimum):

15-359 Probability and Computing 12
21-325 Probability 9
36-217 Probability Theory and Random Processes 9
36-225 Introduction to Probability Theory 9

**Science (2 courses, 18 units minimum)**

Choose two courses from the following list:

03-121 Modern Biology 9
09-105 Introduction to Modern Chemistry I 10
21-259 Calculus in Three Dimensions 9
33-111 Physics I for Science Students 12

**Engineering**

In consultation with your academic advisor, an engineering course could substitute for one of the two Science requirements.

**Economic, Political & Social Institutions OR Cognition, Choice & Behavior (1 course from either category, complete 9 units minimum)**

**Economic, Political & Social Institutions**

This category examines the ways in which institutions organize individual preferences and actions into collective outcomes using model-based reasoning.

36-303 Sampling, Survey and Society * 9
70-332 Business, Society and Ethics * 9
73-100 Principles of Economics 9
79-335 Drug Use and Drug Policy 9
79-374 American Environmental History: Critical Issues 9
80-135 Introduction to Political Philosophy 9
80-136 Social Structure, Public Policy & Ethics 9
80-235 Political Philosophy 9
80-341 Computers, Society and Ethics 9
88-104 Decision Processes in American Political Institutions 9
88-110 Experiments with Economic Principles 9
88-205 Comparative Politics 9
88-220 Policy Analysis I 9

* Indicates co-requisites and/or prerequisites required.

Cognition, Choice, and Behavior

This category uses model-based analysis to broaden an understanding of human thinking, choices, and behavior on an individual basis across a variety of settings.

70-311 Organizational Behavior * 9
80-130 Introduction to Ethics 9
80-150 Nature of Reason 9
80-180 Nature of Language 9
80-221 Philosophy of Social Science 9
80-230 Ethical Theory 9
80-241 Ethical Judgments in Professional Life 9
80-270 Philosophy of Mind 9
80-271 Philosophy and Psychology 9
80-275 Metaphysics 9
80-281 Language and Thought 9
85-102 Introduction to Psychology 9
85-211 Cognitive Psychology 9
85-221 Principles of Child Development 9
85-241 Social Psychology 9
85-251 Personality 9
85-261 Abnormal Psychology 9
88-120 Reason, Passion and Cognition 9
88-260 Organizations 9

* Indicates co-requisites and/or prerequisites required.

Complete ONE additional course from one of the following departments (1 course, complete 9 units minimum)

- English
- History
- Modern Languages
- Philosophy
- Psychology

BXA Freshman Interdisciplinary Seminar (1 course, 9 units)

The BXA Freshman Research Seminar introduces first-year students to the field of interdisciplinary work and arts-based research. Students engage with theoretical and practical readings from across the various concentrations, with particular emphasis on aesthetic theory. Guest lectures complement the weekly readings by giving insight into practical implementations of these ideas. Students will conceive, research, and create a final project to be presented at the end of the semester. BXA internal transfer students should register for 52-399 BXA Interdisciplinary Seminar to fulfill the interdisciplinary requirement.

52-190 BXA Freshman Interdisciplinary Seminar - REQUIRED 9
or 52-399 BXA Interdisciplinary Seminar 9

BXA Junior Seminar:

Subcultures: Style, Structure, Representation (1 course, 9 units)

This seminar will examine contemporary and historical subcultures, particularly youth subcultures, through interdisciplinary modes of analysis, using theory and methodologies from several fields (particularly anthropology, communication studies, cultural studies, feminist theory, history, Marxism, modernism/post-modernism, performance studies, queer theory, sociology, and structuralism/post-structuralism). We will analyze the roots, performances, identities, and representations of subcultures, especially those with rituals and presentations centered on artistic mediums (music, fashion, graphic arts, street art, etc.). Though this course will focus primarily on the American experience, at times we will incorporate transnational perspectives to study the Beats, greasers, Mods, punks, skinheads, b-boys and girls, Goths, and "geek cultures" (comics, cosplay, gaming), among others. This course will pay careful attention to nuances of gender, race, class, and age in understanding the meaning of subcultures—symbolically, politically, and personally. Course requirements may include individual student research and leadership of class discussions.

52-410 BXA Junior Seminar -REQUIRED 9

BXA Junior Portfolio Review (complete 1 required review, 0 units)

To better assess the progress and accomplishments of BXA students as they enter their final year, students submit a portfolio for review during the spring semester junior year. Students should work with their BXA advisor and their concentration faculty advisors to assemble a portfolio that represents their academic and creative accomplishments over the course of their college career. This portfolio should also include a reflective essay in which students evaluate how they integrated their two areas of interest, and how they will extend that integration into the BXA Capstone Project in the senior year.

Students should identify their own specific goals for their academic career and how they are fulfilling them in this reflective essay, as well as how they evaluate their performance in light of the programs’ broader pedagogical goals. Students in the BXA program should be working toward being able to:

- describe the connections between their chosen concentration disciplines and to integrate them into their work
- communicate ideas in writing, visual expression, and oral expression
- discuss the intersection of history, society, and culture from local and global perspectives
- synthesize mathematical theories and experimental work to produce real-world knowledge
- use cognitive, behavioral, and ethical dimensions to make decisions on individual and social levels

52-391 BXA Junior Portfolio Review -Spring -REQUIRED (pass/no pass) 0

BXA Capstone Project (2 courses, 18 units)

The BXA Capstone Project gives BXA students the opportunity to demonstrate the extent of their interdisciplinary work over the course of their academic career. The Capstone Project should include elements that span the student’s CFA and DC concentrations (for BHA students), CFA and MCS concentrations (for BSA students), or CFA and SCS concentrations (for BCSA students). The project can be either a scholarly or creative endeavor, and may take one of many possible forms (e.g., a written thesis, a compilation of creative work or works, an experiment and report, a computer program or animation, etc.).

The BXA Capstone sequence covers both semesters of a student’s senior year. In the fall, students are enrolled in 52-401 BXA Capstone Project I (9 units), which meets weekly to discuss strategies for managing research, planning the project, and larger theoretical issues related to interdisciplinary work. At the end of the fall course, students will have produced a Capstone Project proposal, an annotated bibliography, and multiple versions of their project pitch. In the spring, students enroll in 52-402 BXA Capstone Project II (9 units), which has no required classroom time. Instead, students spend the semester doing the research and foundational work necessary for the project, as well as meeting with their faculty and BXA advisors as they create their Capstone Project and prepare to present it at the annual Meeting of the Minds Undergraduate Research Symposium held each May.

52-401 BXA Capstone Project I -Fall -REQUIRED (course attendance required) 9
52-402 BXA Capstone Project II -Spring -REQUIRED (DNM, independent study) 9

Computing @ Carnegie Mellon (1 mini-course, 3 units)

This is a mini-course, pass/no pass, to be completed in the first semester.

99-101 Computing @ Carnegie Mellon -REQUIRED 3
or 99-102 Computing @ Carnegie Mellon 3
or 103 Computing @ Carnegie Mellon 3

II. SCS Concentration

School of Computer Science Concentration (111 units minimum)

Prerequisite
III. College of Fine Arts Concentration

(number of courses vary, 108-118 units minimum)

BCSA students choose one of the following concentrations:

- Architecture (108 units)
- Art (118 units)
- Design (108 units)
- Drama (108 units)
- Music (108 units)

Architecture Concentration (108 units minimum)

Architecture Required Courses (52 units minimum)

- 48-100 Architecture Design Studio: Foundation I - Fall, Freshman year 10-12
- 48-095 Spatial Concepts for Non-Architects I 6
- 48-120 Digital Media I - Fall, Freshman year 6
- 48-121 Analog Media I - Fall, Freshman year 6
- 48-125 Digital Media II - Spring, Freshman year 6
- 48-126 Analog Media II - Spring, Freshman year 6
- 48-240 Historical Survey of World Architecture and Urbanism I - Spring, Freshman year 9
- 48-241 Modern Architecture - Fall, Sophomore year 9

Architecture Electives (56 units minimum)

- A minimum of 56 additional Architecture units must be approved by the Architecture advisor. A list of these selected courses must be filed in the BXA office.

Art Concentration (118 units minimum)

PORTFOLIO REVIEW REQUIRED FOR ADMISSION

Concept Studios (2 courses, 20 units)

- 60-101 Concept Studio: The Self and the Human Being 10
- 60-201 Concept Studio: Space and Time 10
- 60-202 Concept Studio: Systems and Processes 10
- 60-203 Concept Studio: EcoArt 10
- 60-204 Concept Studio: Networked Narrative 10

Media Studios (2 courses, 20 units)

- 60-150 2D Media Studio: Drawing 10
- 60-160 2D Media Studio: Imaging 10
- 60-250 2D Media Studio: Painting 10
- 60-251 2D Media Studio: Print Media 10
- 60-130-60-130 3-D Media Studio I - (complete two minis, 5 units each) 10
- 60-131-60-131 3-D Media Studio II - (complete two minis, 5 units each) 10
- 60-110 Electronic Media Studio: Introduction to the Moving Image 10
- 60-210 Electronic Media Studio: Introduction to Interactivity 10

Advanced Studios (6 courses, 60 units)

- Complete six courses. Courses may be offered in the fall and/or spring. Students may take courses in any media area (ETB, SIS, CP or DP3). They may take all courses in one media area if a focus is desired.

- 60-401/402 Senior Studio 10
- 60-403 Extended Studio 10
- 60-410 - 60-429 Advanced Electronic and Time-Based Work (ETB) 10
- 60-430 - 60-447 Advanced Sculpture, Installation and Site-Work (SIS) 10
- 60-448 - 60-449 Advanced Contextual Practice (CP) 10
- 60-450 - 60-498 Advanced Drawing, Painting, Print Media and Photography (PDP) 10
- 60-499 Studio Independent Study (one only) 10

Art History/Theory (2 courses, 18 units)

- 60-205 Modern Visual Culture 1789-1960 - Fall 9
- 60-206 Contemporary Visual Culture 1960 - Present - Spring 9

Review Requirement (Complete 2 required reviews, 0 units)

A review is required at the end of the sophomore and senior years. Pass/no pass only.

- 60-200 Sophomore Review - Spring 0
- 60-400 Senior Review - Fall 0

Design Concentration (108 units minimum)

PORTFOLIO REVIEW REQUIRED FOR ADMISSION

Design Required Courses (96 units)

- 51-101 Studio: Survey of Design - Fall, Freshman year 9
- 51-103 Design Workshop I - Fall, Freshman year 3
- 51-121 Visualizing - Fall, Freshman year 9
- 51-171 Placing - Fall, Freshman year 9
- 51-102 Design Lab - Spring, Freshman year 9
- 51-104 Design Workshop II - Spring, Freshman year 3
- 51-122 Collaborative Visualizing - Spring, Freshman year 9
- 51-172 Systems - Spring, Freshman year 9
51-225 Communications Lab: Understanding Form & Context -Fall, Sophomore year (choose two courses) 4.5, 4.5
or 51-245 Products Lab: Understanding Form & Context
or 51-265 Environments Lab: Understanding Form & Context
51-227 Prototyping Lab I: Communications -Fall, Sophomore year (choose two courses) 4.5, 4.5
or 51-247 Prototyping Lab I: Products
or 51-267 Prototyping Lab I: Environments
51-205 How People Work -Fall, Sophomore year 9
51-371 Futures -Fall, Sophomore year or later 9

Design Electives (12 units minimum)
A minimum of 12 additional Design units must be approved by the Design advisor. A list of these selected courses must be filed in the BXA office.

Drama Concentration (108 units minimum)

AUDITION/INTERVIEW REQUIRED FOR DIRECTING OR DRAMATURGY CONCENTRATION OPTION. PORTFOLIO REVIEW/INTERVIEW REQUIRED FOR DESIGN OR PRODUCTION TECHNOLOGY AND MANAGEMENT CONCENTRATION OPTION.

Options available in the following areas: 1) Design, 2) Directing, 3) Dramaturgy, 4) Production Technology and Management

There is no BHA Acting or Musical Theatre option.

Required Courses for All Concentration Options (20 units)

54-175-54-176 Conservatory Hour-Conservatory Hour (1 unit each) 2

54-177 Foundations of Drama I 6
or 54-178 Foundations of Drama I

54-281 Foundations of Drama II (prerequisite: 54-177 or 54-178) 6
or 54-282 Foundations of Drama II

54-381 Special Topics in Drama: History, Literature and Criticism 6

Work with Drama Faculty Option Coordinator to Approve Concentration Option (88 units minimum):

Design Required Courses (26 units)

54-151-54-152 Stagecraft-Stagecraft (15 units + 11 units) 26

A minimum of 62 additional Design units must be approved by the Design faculty coordinator. A list of these selected courses must be filed in the BXA office.

Directing Required Courses (52 units)

54-121-54-122 Directing I: Sources-Directing I: Sources 18
54-221-54-222 Directing II: Fundamentals-Directing II: Fundamentals 18
54-159-54-160 Production Symposium I-I 12
54-517-54-518 Director's Colloquium-Director's Colloquium (four times, 4 units total) 2

A minimum of 36 additional Directing units must be approved by the Directing faculty coordinator. A list of these selected courses must be filed in the BXA office.

Dramaturgy Required Courses (53 units)

54-109 Dramaturgy 1: Approaches to Text 9
54-184 Dramaturgy 2: History and Practice 9
54-160 Production Symposium I-Spring 6
54-200 Dramaturgy Forum (two times, 2 units total) -Fall 1
54-387 Dramaturgy : Production I 9
54-xxx Dramaturgy 3, 4, 5 or 6 (take a minimum of two in any order during the sophomore, junior, and senior years; students are expected to take one Dramaturgy course per semester while enrolled) 18

A minimum of 35 additional Dramaturgy units must be approved by the Dramaturgy faculty option coordinator. A list of these selected courses must be filed in the BXA office.

Production Technology and Management Required Courses (26 units)

54-151-54-152 Stagecraft-Stagecraft (15 units + 11 units) 26

A minimum of 62 additional PTM units must be approved by the PTM faculty option coordinator. A list of these selected courses must be filed in the BXA office.

Music Concentration (108 units minimum)

AUDITION REQUIRED FOR PERFORMANCE CONCENTRATION OPTION. PORTFOLIO REVIEW/INTERVIEW REQUIRED FOR COMPOSITION, MUSICOLOGY, OR MUSIC TECHNOLOGY CONCENTRATION OPTION.

Options available in the following areas: 1) Performance (instrumental, piano, organ, voice), 2) Composition 3) Musicology, 4) Music Technology

Required Course for All Concentration Options (9 units)

57-152 Harmony I -Fall
or 57-149 Basic Harmony I

Work with Music Advisor to Approve Concentration Option (99 units minimum):

Performance and Composition Required Courses (76 units)

57-161 Eurythmics I -Fall (recommended co-requisite: 57-181) 3

57-181 Solfege I
or 57-180 Basic Solfege I
or 57-185 Advanced Solfege I

57-173 Survey of Western Music History -Fall (co-requisite: 57-188) 9

57-188 Repertoire and Listening for Musicians 1
57-69x BXA Studio (4 semesters) 36
57-xxx Major Ensemble (4 semesters) 24

A minimum of 23 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

Musicology Required Courses (45 units)

57-283 Music History I (co-requisite: 57-190) 9
57-284 Music History II (co-requisite: 57-289) 9
57-285 Music History III (co-requisite: 57-290) 9

57-189 Introduction to Repertoire and Listening for Musicians 3
57-190 Repertoire and Listening for Musicians I 3
57-289 Repertoire and Listening for Musicians II 3
57-290 Repertoire and Listening for Musicians III 3
57-611 Independent Study in History 6

Choose 36 units from:

57-209 The Beatles 9
57-306 World Music 6
57-412 Opera Since Wagner 9
57-414 Music and Nature 9
57-415 Mozart Operas 6
57-477 Music of the Spirit 6
57-478 Survey of Historical Recording 6
57-480 History of Black American Music 6

Graduate Musicology courses may be taken with instructor permission.

A minimum of 18 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

Music Technology Required Courses (40 units)

57-101 Introduction to Music Technology 6
57-181 Solfege I-Fall
or 57-180 Basic Solfege I
or 57-185 Advanced Solfege I

57-173 Survey of Western Music History -Fall (co-requisite: 57-188) 9

57-188 Repertoire and Listening for Musicians 1
57-337 Sound Recording 6
57-347 Electronic and Computer Music 6
Choose 36 units from:

A minimum of 23 additional Music units must be approved by the Music advisor. A list of these selected courses must be filed in the BXA office.

### IV. Free Electives

(approximately 3-4 courses, 30–40 units minimum)

Take any Carnegie Mellon course. A maximum of 9 units of physical education and/or military science may be counted toward this requirement. Physical education and military science courses will not be calculated in a student's QPA.
College of Engineering

James H. Garrett, Jr., Dean and Thomas Lord Professor of Civil and Environmental Engineering
Annette M. Jacobson, Associate Dean for Undergraduate Studies
Kurt Larsen, Assistant Dean for Undergraduate Studies
Office: Scaife Hall 110
http://www.cit.cmu.edu/

Carnegie Institute of Technology, the engineering college of the university, has three main activities - undergraduate education, graduate education, and research. Its continuing goal has been to maintain excellence in all these activities. The degree to which this goal has been achieved is attested to by the demand for its graduates, the success of its alumni, the quality of its students and faculty, the adoption elsewhere of its innovations, and the national and international recognition it receives in educational and research activities.

The college offers the degree of bachelor of science in chemical engineering, civil engineering, electrical and computer engineering, mechanical engineering, and materials science and engineering. All of these programs are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

An engineering student may also choose to pursue a minor in one of the CIT designated minor programs, or a double major in engineering and public policy or biomedical engineering, or to design a minor, additional major or dual-degree programs with other non-engineering departments.

Educational Objectives

The overarching objective of our engineering curriculum is to provide our students an education that enables them to be productive and fulfilled professionals throughout their careers. Our more specific, measurable objectives for graduates of our engineering curriculum are the following:

- Graduates recognize that they acquired a high quality, rigorous technical education from the College of Engineering at Carnegie Mellon.
- Graduates, in addition to their technical knowledge, recognize that they have acquired a broader body of knowledge that allows them to understand the larger context of the problems that they must address during their career.
- Graduates use their technical foundation and their broader base of knowledge to be successful in a diverse collection of individual careers inside and outside of the engineering profession.

From its earliest days, Carnegie Institute of Technology (CIT) has considered undergraduate education to be the key element in the development of future leaders. In this regard, CIT has adopted a plan for education that is designed to equip students with the capacity to learn and to continue the process of self-education throughout their lives. The present curriculum incorporates this philosophy by providing the opportunity for both breadth in a number of engineering, science, humanities and fine arts areas as well as depth in a major area of concentration. To achieve these goals, our flexible curriculum has been designed to allow students to customize their program to suit their needs and to help each student acquire:

- A thorough and integrated understanding of fundamental knowledge in fields of a students’ major interest and the ability to use this knowledge;
- Competence in the orderly way of thinking, which professionals and scientists have always used in reaching sound, creative conclusions, with the goal that after graduation the student can, by such thinking, reach decisions both as a professional and as a citizen;
- An ability to learn independently with scholarly orderliness, so that after graduation the student will be able to grow in wisdom and keep abreast of the changing knowledge and problems of the profession and the society in which he or she participates;
- The philosophical outlook, breadth of knowledge, and sense of values which will increase the student’s understanding and enjoyment of life and enable each student to recognize and deal effectively with the human, economic, ethical and social aspects of professional problems; and
- The ability to communicate ideas to others in a comprehensive and understandable manner.

The curriculum encourages students to confront professional problems, accomplished through team and problem-oriented courses, as well as courses which emphasize design or individual projects. These classes stress creativity and independent thought and require the student to define the problem, propose a solution or a design in the presence of technical and socioeconomic constraints, to make judgments among alternative solutions, and to explore innovative alternatives to more conventional solutions.

First Year for Engineering Students

The Carnegie Mellon engineering education is based on engineering and science fundamentals that give students the skills to face new and challenging situations. The first year in engineering provides a broad foundation upon which students build a curriculum in their eventual major. Since students in CIT do not select a major until the end of the first year, all first year students share a common experience consisting of introductory courses in the engineering majors (one each semester), calculus, physics, other science courses which complement specific introductory engineering courses, and courses in the College of Humanities and Social Sciences (General Education). This curriculum helps make an informed decision about a final major. Below is an example of a standard schedule for a first-year engineering student.

Introductory Engineering Elective
12
Restricted Technical Elective
9-12
Differential and Integral Calculus
10
General Education
5
Computing @ Carnegie Mellon
3
Introductory Engineering Elective
12
Restricted Technical Elective
10
Integration, Differential Equations, Approximation
10
General Education Course
5
9

Notes:
1. Each semester every CIT department offers its Introductory Engineering Elective. * Every first year CIT student must select one such course each semester.
* Except 19-101, offered only in spring.
2. Each Introductory Engineering Elective requires a specific Restricted Technical Elective (as a pre- or co-requisite) as given below:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introductory Engineering</td>
<td></td>
</tr>
<tr>
<td>Restricted Technical Elective</td>
<td></td>
</tr>
</tbody>
</table>

| Biomedical Engineering        | 03-121 |
| Chemical Engineering          | 09-105 |
| Civil & Environmental Engineering | 33-106 |
| Electrical & Computer Engineering | 15-110 or 15-112 |
| Engineering & Public Policy   | 33-106 |
| Mechanical Engineering        | 33-106 |
| Materials Science & Engineering | 33-106 |

3. Restricted Technical Electives include the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Modern Biology</td>
<td>9</td>
</tr>
<tr>
<td>Introduction to Modern Chemistry</td>
<td>10</td>
</tr>
<tr>
<td>Principles of Computing</td>
<td>10</td>
</tr>
<tr>
<td>Fundamentals of Programming and Computer Science</td>
<td>33-106</td>
</tr>
<tr>
<td>Physics I for Engineering Students</td>
<td>12</td>
</tr>
</tbody>
</table>

4. All students must complete 33-106 Physics I for Engineering Students by the end of the first year. Therefore, if a student chooses to take Introduction to Chemical Engineering (with 09-105 as a co-requisite) during one semester and Introduction to Electrical and Computer Engineering (with 15-110 as a co-requisite), the student must take 33-106 in place of the General Education requirement in the Spring semester of the first year and take the General Education course in a subsequent semester. Alternatively, a student entering the university with AP credit in a required first year course may substitute 33-106 in its place.

2. Interpretation and Argument, 76-101, should be completed in the first year. Some students for whom English is not a native language, may have to take 76-100 first.
Program in General Education for CIT Students for the Class of 2015 and earlier

27 Units Breadth Requirement

<table>
<thead>
<tr>
<th>Humanistic Studies</th>
<th>Cognitions and Institutions</th>
<th>Writing/Expression *</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>9 units</td>
<td>9 units</td>
<td>9 units</td>
<td>27</td>
</tr>
</tbody>
</table>

* A list of acceptable courses for Humanistic Studies and Cognitions and Institutions is available at www.cit.cmu.edu in the General Education section.

** The Writing/Expression requirement consists of the following course: 76-101 Interpretation and Argument (9 units)

27 units Depth Sequence in Humanities, Social Science, or Fine Arts

A sequence of humanities, social science, or fine arts courses which provides depth in a specific area. Usually, 27 units from a single department meet this requirement. However, related courses from different departments may also satisfy this requirement. A depth sequence in language must include at least three nine-unit courses in the same language. Statistics Department courses may NOT be used to satisfy this requirement. Courses from Business Administration (70-xxx) and Heinz College that are on the above “Acceptable Non-DC/CFA courses for Non-Technical Electives” list can be used as part of a Depth Sequence. Although this requirement is typically satisfied by completing 3 courses of at least 9 units each, some acceptable courses are greater or less than 9 units (e.g. 6-unit Art courses). While mini courses of fewer than 9 units may be combined to equal 9 unit courses, the excess units from courses greater 9 units may NOT be used to satisfy this requirement. For example, a 12 unit, 6 unit, 9 unit combination is not acceptable. A 6 unit, 3 unit, 9 unit, 9 unit combination is acceptable.

18 units Non-Technical Electives

Two unrestricted humanities, social science or fine arts courses. Non-technical courses from Business Administration, or the Heinz College may also satisfy this requirement. Accounting, finance, management, marketing, production, and statistics courses are regarded as technical courses and may NOT be used to satisfy this requirement. Although this requirement is typically satisfied by completing 2 courses of at least 9 units each, some acceptable courses are greater or less than 9 units (e.g. 6-unit Art courses). While mini courses of fewer than 9 units may be combined to equal 9 unit courses, the excess units from courses greater 9 units may NOT be used to satisfy this requirement. For example, a 12 unit, 6 unit, 9 unit combination is not acceptable. A 6 unit, 3 unit, 9 unit, 9 unit combination is acceptable.

Free Elective Courses

A free elective is any graded Carnegie Mellon course. However, a maximum of nine units in the form of pass/fail or non-factorable courses (excluding physical education, StuCo and military science) may be taken as free electives in most CIT degree programs.

Program in General Education for CIT students for the Class of 2016 and later

The environment in which today’s engineering graduates will find themselves working is evolving rapidly. Technical innovation is becoming ever more critical to retaining a competitive edge. This is true for individuals, for firms and for nations. Start-ups, as well as established companies, have significant international opportunities but also face more competition in a global economy. Seizing these opportunities and dealing with the associated challenges requires an understanding of the global context in which engineers work, as well as understanding multi-disciplinary approaches to technological innovation across cultures.

The College of Engineering has developed General Education Requirements designed to ensure that our students are ready to work effectively in the global economy, and become the innovators and leaders of tomorrow.

Complete the following requirements to graduate (72 units):

1. 76-101 Interpretation and Argument (some students may need to take 76-100 first)
2. One course from the following list:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>73-100</td>
<td>Principles of Economics</td>
<td>9</td>
</tr>
<tr>
<td>73-202</td>
<td>Intermediate Microeconomics</td>
<td>9</td>
</tr>
<tr>
<td>85-102</td>
<td>Introduction to Psychology</td>
<td>9</td>
</tr>
<tr>
<td>88-104</td>
<td>Decision Processes in American Political Institutions</td>
<td>9</td>
</tr>
<tr>
<td>79-104</td>
<td>Global Histories</td>
<td>9</td>
</tr>
</tbody>
</table>

or one other PPC or SDM course (defined below)

AFTER FRESHMAN YEAR

Students must complete each of the categories (descriptions of categories follow below):

1. Innovation & Internationalization (I&I)
   - 9 units from the I&I list of courses (which could be two 4.5 unit courses);
2. Peoples, Places, and Cultures (PPC) 1
   - 9 units from the PPC list; or a 9-12 unit course in a modern language at the 200+ level
3. Social Analysis and Decision Making (SDM)
   - 9 units from the SDM list of courses (which could be two 4.5 unit courses)
4. Writing and Expressions (W&E)
   - 9 units from the W&E list of courses (in addition to 76-101)
5. General Education Electives
   - At least 18 units (any combination) from the four categories: I&I, PPC, SDM, or W&E; non-technical academic courses from the Dietrich College or the College of Fine Arts excluding those listed on the CIT website under General Education Exclusions (http://engineering.cmu.edu/current_students/services/general_education_requirements/general_education_exclusions.html).

1 Students can receive exemption through an approved study abroad program (these students would then have three General Education Electives to complete instead of two).

Experiential Learning (EL)

- 6 EL points by participating in a variety of approved activities in the following timeframe:
  - 2 points for more than one semester (39-510)
  - 2 points for more than one semester (39-220)
  - 2 points for more than one semester (39-310)
- A list of acceptable courses to complete these requirements is available at the CIT website under General Education Requirements (http://engineering.cmu.edu/current_students/services/general_education_requirements).

General Education Categories

People, Places and Cultures (PPC)

PPC courses are designed to help you gain better understanding of the diversity of the world in which we live, and the way in which social, political, economic and technical factors interact to shape that world.

Social Analysis and Decision Making (SDM)

SDM courses are focused on helping you to gain an understanding of different ways in which individuals and societies approach and make decisions.

Innovation and Internationalization (I&I)

I&I courses are intended to expose you to the opportunities and potential that engineering provides with regard to developing cutting-edge technologies and leveraging the fundamental skills you gain in your education to make innovative ideas come to fruition in a global context.

Experiential Learning (EL)

Being curious and constantly looking for inspiration are critical parts of lifelong learning. To be successful as an engineer and as a citizen, your education must not stop when you graduate from Carnegie Mellon. The EL requirement aims to encourage a habit of lifelong learning about innovation and the growing internationalization in engineering and, indeed of many other aspects of the modern world. The goal of this requirement is to help
inspire the habits of being open to new ideas as successful, innovative engineers.

To do that, during both semesters of your sophomore year, and the first semester of your junior year, we require you to choose a few related activities that are not part of your formal course work. Examples could include:

- Attending approved seminars and then submitting a one page write up of your thoughts on what you heard;
- Participating in one of the “country courses” or other weekend courses that the University runs (for details see Weekend Today (http://www.cmu.edu/weekend-today)); or
- Holding an official leadership position (e.g., President, Vice President, Secretary, Treasurer) in an organization from this list (http://engineering.cmu.edu/current_students/services/organizations.html).

Additional Majors and Dual Degrees in CIT

A major is defined as a program that must be completed for the granting of a degree. Additional majors comprise a single degree with majors in two separate areas; for example, the degree of Bachelor of Science in Chemical Engineering and an additional major in English. Although the additional major requires the completion of two designated programs, they may have overlapping requirements that can be met simultaneously. The general principle used to measure eligibility for a Carnegie Institute of Technology additional major is that the major (core) requirements of both departments must be completed. Finally, although the student is formally enrolled as an undergraduate in one of the departments (the parent department, which is responsible for scheduling and other administrative actions for the student), the student should apply for the additional major through the second department and coordinate requirements with both departments.

The additional major is to be distinguished from a dual degree program, which results in two separate bachelor’s degrees; for example, Bachelor of Science in Chemical Engineering and a Bachelor of Arts in English. The dual degree, though, requires a minimum of 90 units of work in addition to the units required for the first degree. The second degree may be earned in Bachelor of Science or Bachelor of Arts degree programs.

Requirements for students wishing to complete Additional Majors in CIT

Note: This applies to all students.

The student must satisfactorily pass all requirements of the regular and complete program (with the permissible exceptions) leading to a degree in CIT. The minimum number of units required for the additional major is the number required by the parent department or major.

The student takes and satisfactorily completes the courses specified by a second department, usually using elective space available in the first program.

The second department, on the basis of the specified number of courses plus the courses comprising the parent department’s regular degree requirements, then certifies that the student has completed the requirements for a major in the second department. Equivalent technical electives may be substituted at the discretion of the departments/colleges.

Non-technical courses in the curricula can be used to meet the requirements of the second major. But if the second major is not an H&SS department, the program must include a minimum of 72 units of General Education courses to meet CIT requirements for graduation.

Designated Minors Offered by CIT

(for engineering students)

In addition to their regular majors for B.S. degrees, undergraduate students in the Carnegie Institute of Technology can elect to complete an interdisciplinary Designated Minor. These minors have been added to the Carnegie Institute of Technology curriculum to promote flexibility and diversity among the college’s engineering students. Independent of major, a student is free, but not required, to pursue a selected design minor from the following list:

- Audio Engineering
- Automation and Control
- Biomedical Engineering*
- Colloids, Polymers and Surfaces
- Electronic Materials
- Environmental Engineering and Sustainability
- Global Engineering
- Manufacturing Engineering
- Material Science and Engineering
- Mechanical Behavior of Materials
- Robotics*

* Also available for non-CIT students

Complete descriptions of the designated minors can be found at Undergraduate Designated Minors in CIT (p. 117).

To declare a CIT Designated Minor, please contact the director listed for each minor.

Minors for Non-Engineering Students

Students in a non-engineering discipline can also declare certain CIT minors:

- Biomedical Engineering
- Engineering Studies
- Technology and Policy
- Robotics

A full listing of curriculum for these minors when taken by non-engineering students can be found at CIT Minors for Non-Engineering Students (p. 123).

Academic Standards

Grading Practices

For undergraduate grading regulations, please see Undergraduate Academic Regulations (p. 45).

CIT Dean’s Honor List

Each semester, Carnegie Institute of Technology recognizes students who have earned outstanding academic records by naming them on the dean’s honor list. The criterion for such recognition is a semester quality point average of at least 3.75 while completing at least 36 factorable units and earning no incomplete grades.

Transfer into CIT Departments

Undergraduate students admitted to colleges other than CIT who wish to transfer into a CIT department during their first year should consult with an advisor in the Office of Undergraduate Studies in the CIT Dean’s Office. Students admitted to CIT but excluded from certain departments must also consult with the CIT Dean’s Office if they wish to transfer into a restricted CIT department.

First-year students can apply for transfer after mid-semesters grades for the spring semester have been posted. At that time, a decision will be based on availability of space and the student’s academic performance.

CIT undergraduate students beyond the first year wishing to transfer into another CIT department may apply if they are in good academic standing and if there is room in the department of their choice. If the demand for any department exceeds the space available, then the department will admit students based on a comparative evaluation of all applicants at the end of each semester, up to the limit of available space.

Undergraduate students not in CIT who wish to transfer into a CIT department beyond the first year will be considered for transfer on a rolling space available/academic performance basis.

Criteria for all applicants include space in the department, good academic standing, and successful completion of or being currently enrolled in at least one introductory to engineering course (minimally one of the target major), the appropriate science corequisite, math (21:120, 21:122) and Physics 1 (33:106, 33:111, or 33:131).

Procedure for transfer of students from another university into CIT departments: A student first applies through the Office of Admission. If the Office of Admission believes the applicant is acceptable, the student’s record is sent to the appropriate department for evaluation and a decision on acceptance. The CIT department head has the right to refuse to accept the student if there are space restrictions and/or if the student’s chance for success in the CIT department is determined to be questionable based on past academic performance.
Academic Actions

In the first year, a student’s quality point average below 1.75 in either semester invokes an academic action. For all subsequent semesters, a student’s semester QPA or the cumulative QPA (excluding the first year) below 2.0 invokes an academic action.

Probation

The action of probation occurs in the following cases:

- One semester QPA of the first year falls below 1.75.
- The semester QPA of a student in good standing beyond the first year falls below 2.00.

The term of probation is one semester as a full-time student. First year students are no longer on probation at the end of the semester if their semester QPA AND their cumulative QPA are 1.75 or above. Students in the third or subsequent semester of study are no longer on probation at the end of one semester if the semester QPA AND cumulative QPA (excluding the first year) are 2.00 or above.

Probation Continued

A student who is currently on one semester of probation but whose record indicates that the standards are likely to be met by the end of the next semester may be continued on probation at the discretion of the associate dean.

Suspension

A student who does not meet minimum standards at the end of one semester of probation will be suspended.

A first year student will be suspended if the QPA from each semester is below 1.75.

A student in the third or subsequent semester of study will be suspended if the semester QPA or the cumulative QPA (excluding the first year) is below 2.00 for two consecutive semesters.

The normal period of suspension is one academic year (two semesters). At the end of that period a student may petition to return to school (on probation) by completing the following steps:

1. Writing a formal petition requesting to return and receiving permission in writing from the assistant dean for undergraduate studies.
2. Completing a Return from Leave of Absence form from Enrollment Services; and
3. Providing transcripts and clearance forms if the student has been in a degree program at another college or university even though academic credit earned will not transfer back to Carnegie Mellon unless prior approval from the Assistant Dean is given.

Students who are suspended, take a leave of absence or withdraw are required to vacate the campus (including residence halls and Greek houses) within a maximum of two days after the action and to remain off the campus for the duration of the time specified. This action includes debarment from part-time or summer courses at the university for the duration of the period of the action.

Drop

This is a permanent severance. A student is dropped when it seems clear that the student will never be able to meet minimum standards. A student who has been suspended and fails to meet minimum standards after returning to school is dropped.

If students are dropped, they are required to vacate campus (including dormitories and fraternity houses) within a maximum of two days after the action. This action includes debarment from part-time or summer courses.

The relation indicated above between probation, suspension, and drop is normal, not binding. In unusual circumstances, College Council may suspend or drop a student without prior probation.

Graduation Requirements

To be eligible to graduate, undergraduate students must complete all course requirements for their department with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshman and whose freshman grades cause the cumulative QPA to fall below 2.0, this requirement is modified to be a cumulative QPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student’s final transcript will be calculated based on all grades in all courses taken, including freshman year. Some departments may have additional QPA requirements in order to graduate. Students are encouraged to confirm all graduation requirements with their academic advisor.

Students must be recommended for a degree by the faculty of CIT. A candidate must meet the residence requirement of having completed at least 180 units at Carnegie Mellon University.

Students must meet all financial obligations to the university before being awarded a degree.

Modification of Graduation Requirements: A student may seek permission to modify graduation requirements by petition to the CIT College Council.

Other Regulations Affecting Student Status

Schedule Changes

Add/drop procedure information and grading procedures for dropped courses can be found under Undergraduate Academic Regulations (p. 45).

Course Add Deadline

The last date to ADD courses is stipulated for each semester on the university calendar - about two weeks after the beginning of a term. This applies to all courses with the following exception: the final date to add half-semester mini-courses is the last class day of the first week of the course.

Course Drop/Withdraw Deadline

CIT undergraduate students may drop a course on-line on or before the deadline published in the official university calendar. This deadline is two weeks after mid-semester grades are due in The HUB. The deadline to drop a half-semester mini course is the last day of the fourth week of the mini course. When a course is dropped by the deadlines, the course is removed entirely and disappears from a student’s academic record. After the official university deadline to drop, undergraduate students may withdraw from a course on-line on or before the last day of classes, excluding final examinations. The deadline to withdraw from a half-semester mini course is the last class day of the mini course. When a student withdraws from a course between the official university deadline to drop a course and the last day of classes, a “W” (Withdrawal) is assigned as a grade, which appears on the student’s academic record. This “W” grade does not affect a student’s QPA.

CIT undergraduates who are registered as full time students as of the tenth class day are expected to remain full time for the duration of a semester. Full time is defined by being registered for a minimum of 36 factorable units. Students may not drop or withdraw from courses that will reduce their factorable units below 36 unless there are extenuating circumstances for which they obtain approval from the CIT College Council. Undergraduates who are registered as part time (those carrying fewer than 36 factorable units) as of the 10th class day are also subject to the above deadlines to drop or withdraw from a course.

Exceptions to the regulations above will be granted only upon approval of a petition to the College Council.
Undergraduate Designated Minors in Carnegie Institute of Technology

Undergraduate students in the Carnegie Institute of Technology can elect to complete an interdisciplinary Designated Minor in addition to their regular majors for B.S. degrees. Designated minors have been added to the curriculum of the Carnegie Institute of Technology to promote flexibility and diversity among the college’s engineering students. Independent of a student’s major, he or she is able to pursue a selected designated minor from the following list:

- Audio Engineering
- Automation and Controls
- Biomedical Engineering
- Colloids, Polymers and Surfaces Technology
- Electronic Materials
- Environmental Engineering
- Global Engineering
- Materials Science and Engineering
- Mechanical Behavior of Materials
- Robotics (see “CIT Minors for Non-Engineering Students (p. 123)"

An engineering student may elect to complete a CIT designated minor. Generally, the student takes all the required courses in an engineering major but uses electives to take courses needed to fulfill the requirements of the designated minor. Upon completion of the requirements of a CIT designated minor and the engineering degree, the minor is a formally recognized on the student’s transcript.

Each of the CIT designated minors is administered by a Program Committee consisting of faculty from all major engineering departments who serve as faculty advisors. Each Program Committee certifies the completion of requirements of the designated minor. But the student’s major department is responsible for approving the degree with a designated minor after reviewing a student’s entire academic record. Any substitution or departure from the published curriculum should be avoided. For example, non-technical courses may not be substituted for required technical courses or electives. Equivalent technical electives offered by a designated minor as substitutions for required courses in a major must be approved by the Head of the student’s major department.

Although a student generally can complete a designated minor without increasing the number of required units for graduation, early planning in electing a designated minor is important. A student also may find that some minors are more compatible than others with his/her major because of different relations between various major and minor requirements. The requirements for these CIT designated minors are listed below.

Audio Engineering Designated Minor

Tom Sullivan, Director

This sequence is for candidates who are engineering majors with interest in and/or have background in music, recording, sound-editing and/or other music technology areas; or majors from any discipline in the university who have the above interests and who can meet the prerequisite requirements for the engineering courses in the minor.

Note: Students who do not have the requisite engineering/science/math background should investigate the Minor in Music Technology offered by the School of Music.

Faculty Advisor

Tom Sullivan

Course Requirements

The student must have taken the appropriate prerequisite courses for the listed courses.

Prerequisite Courses, 0-3 units

Beginning Piano is required of students who do not pass a piano proficiency test.

Music Courses, 40-43 units

Basic Harmony I is required of students who do not qualify for entrance into Harmony I, based on their scores on the theory placement test.

Units required for minor: 73-79

Automation and Controls Designated Minor

Erik Ydstie, Director
Office: DH 4210 A

The objective of the Designated Minor in Automation and Control Engineering is to expose CIT students to the breadth of knowledge required by the modern practice of control and automation. With this objective in mind, the requirements include not only two courses in control system analysis and design, but also courses on real-time computation, software engineering, hardware implementation, and applications. The minor is expected to attract primarily students from Chemical Engineering, Electrical and Computer Engineering, and Mechanical Engineering. The main interdisciplinary component of the minor is between engineering and computer science, although many opportunities exist for creating a program across several CIT departments.
Faculty Advisor
All CIT departments — Erik Ydstie

Course Requirements
The minor requires a minimum of six courses as described below:

Note: The course lists below are not necessarily current or complete. Appropriate courses not listed below may be counted toward the requirements for the minor upon approval by one of the departmental faculty advisors. Students interested in the Automation and Control Engineering Designated Minor are encouraged to look for applicable courses each semester in CIT, CS, and Robotics.

Biomedical Engineering Minor
Conrad M. Zapanta, Ph.D.
www.bme.cmu.edu
Campus Office for Student Affairs: Doherty Hall 2100

The minor program is designed for engineering students who desire exposure to biomedical engineering but may not have the time to pursue the Biomedical Engineering additional major. The program is open to students of all colleges and is popular among science majors. In conjunction with other relevant courses, the program may provide a sufficient background for jobs or graduate studies in biomedical engineering. Students interested in a medical career may also find this program helpful.

The Biomedical Engineering minor curriculum is comprised of three core courses and two or three electives. Students pursuing the minor may contact BME Associate Head (http://www.bme.cmu.edu/people/staff.html#ADH) for advice. Students interested in declaring Biomedical Engineering minor should contact either the Associate Department Head (http://www.bme.cmu.edu/people/staff.html#ADH) of Biomedical Engineering or the Biomedical Engineering Undergraduate Program Coordinator (http://www.bme.cmu.edu/people/staff.html#UPC).

</tbody>
</table>

Some Special Topics, newly offered or intermittently offered 42-xxx may be acceptable as electives. Students should consult with their advisors and petition the Biomedical Engineering Undergraduate Affairs Committee for permission to include such courses.

Notes

# Elective I cannot be a required course in the student’s major. It may be
1. Any track gateway, restricted elective, or track elective course selected from any of the four Biomedical Engineering tracks. See the online catalog (http://www.bme.cmu.edu/ugprog/catalog.html) for a listing of courses.
2. Any 42-xxx course with a 42-300 or higher number and worth at least 9 units.
3. 42-203 Biomedical Engineering Laboratory (or the cross-listed version 03-206 for students in the Health Professions Program). The course has a limited capacity and priority is given to students who have declared the Additional Major in Biomedical Engineering.
4. One semester of 42-200 Sophomore BME Research Project, 42-300 Junior BME Research Project, 42-400 Senior BME Research Project or 39-500 CIT Honors Research Project. The project must be supervised by a core or courtesy Biomedical Engineering faculty member and for 9 or more units.

+ Elective II must be a Biomedical Engineering track gateway, track elective, or restricted Elective course that is offered by one of the Engineering Departments (06-xxx, 12-xxx, 18-xxx, 19-xxx, 24-xxx, 27-xxx or 42-xxx). The only exception is that 03-232, the biotechnology-focused version of Biochemistry taught each Spring by the Department of Biological Sciences, is also acceptable. Organic Chemistry I 09-217 is a pre-requisite of 03-232.

* Selected from 06-100 Introduction to Chemical Engineering, 12-100 Introduction to Civil and Environmental Engineering, 18-100 Introduction to Electrical and Computer Engineering, 19-101 Introduction to Engineering and Public Policy, 27-100 Engineering the Materials of the Future, or 24-101 Fundamentals of Mechanical Engineering. Note that these courses may involve co-requisites.

** Priority for enrollment in 42-203 or 03-206 will be given to students who have declared the Additional Major in Biomedical Engineering. If sufficient room in the course remains after all majors have been accommodated in a given semester, students who have declared the Biomedical Engineering Designated Minor will be given the next priority for enrollment. If space still allows, other students will be enrolled.
Colloids, Polymers and Surfaces Designated Minor
Annette Jacobson, Director
Office: Doherty Hall 3102B
Website: http://www.cit.cmu.edu/current_students/services/majors_minors/engineering_minors/cps.html

The sequence of courses in the Colloids, Polymers and Surfaces (CPS) designated minor provides an opportunity to explore the science and engineering of fine particles and macromolecules as they relate to complex fluids and interfacially engineered materials. These topics are very relevant to technology and product development in industries that manufacture pharmaceuticals, coatings and paints, pulp and paper, biomaterials, surfactants and cleaning products, cosmetics and personal care products, food, textiles and fibers, nanoparticles, polymer/plastics, composite materials.

Course Requirements
This minor requires a total of five classes. The following four courses are mandatory:

- 06-609/09-509 Physical Chemistry of Macromolecules 9
- 06-607 Physical Chemistry of Colloids and Surfaces 9
- 06-426 Experimental Colloid Surface Science 9
- 06-466 Experimental Polymer Science 9

In addition, the student must take one course from the following list:

- 06-221 Thermodynamics 9
- 24-221 Thermodynamics I 10
- 27-215 Thermodynamics of Materials 12
- 33-341 Thermal Physics I 10
- 09-345 Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry 9

Electronic Materials Designated Minor
David W. Greve, Director
Office: Hamerschlag Hall B204

Lisa A. Porter, Co-Director
Office: Roberts Engineering Hall 145
Website: http://www.cit.cmu.edu/current_students/services/majors_minors/engineering_minors/electronic_materials.html

Many of the technological changes in recent decades—notably the rise of digital data processing—have been made possible by continuing advances in the performance of electronic devices. These advances include continuous improvement in microprocessor performance, optical communication bandwidth, and magnetic disk storage capacity. Other new areas of innovation include the development of micromechanical systems and the development of flat panel display technology. These advances depend on interactions between engineers from many different disciplines. In particular, there is a strong interaction between device design and materials engineering and processing.

The Electronic Materials Minor is intended to provide students with a firm basis for the application of electronic materials in advanced systems. This minor is well suited for students who intend to pursue careers in the electronics industry (included, but not limited to, semiconductor integrated circuit design and manufacturing, and magnetic storage engineering). The minor also provides an excellent preparation for students interested in pursuing graduate work in MSE, ECE, or Applied Physics.

This minor is primarily intended to offer ECE and MSE students an understanding of the important features that must be built into a material during processing so that it will function as required in an electronic or magnetic device. Other students interested in pursuing this minor should consult their advisors to determine whether it will be practical in their own curriculum. Such students are expected to take both 18-100 and 27-201 as introductory courses.

Students in the Electronic Materials program are urged to consider registering for an undergraduate project in addition to the requirements below, especially if they intend to apply to graduate school. The co-directors will make every effort to arrange a suitable project for interested students.

Course Requirements
The minor requires an introductory course together with a minimum of 48 additional units as specified below.

Required Introductory Courses:
18-100 Introduction to Electrical and Computer Engineering (MSE students) 12
27-201 Structure of Materials (ECE students) 9

Elective Courses:
48 additional units, with 24 units from Group A and 24 units from Group B. Some courses are a required part of one of the curricula and consequently cannot be counted again for the minor program.

We have determined that “courses which are a required part of a curriculum” are those which are specifically named in the curriculum requirements. Consequently technical electives and breadth and depth electives may be double-counted.

Group A

- 27-202 Defects in Materials (ECE students only) 9
- 06-619 Semiconductor Processing Technology 9
- 27-542 Processing and Properties of Thin Films 9
- 27-217 Phase Relations and Diagrams (ECE students only) 12
- 27-533 Principles of Growth and Processing of Semiconductors 6
- 27-433 Dielectric, Magnetic, Superconducting Properties of Materials & Related Devices (only if not required in your curriculum) 9
- 27-551 Properties of Ceramics and Glasses 9
- 27-216 Transport in Materials (ECE students only) 9
- 33-225 Quantum Physics and Structure of Matter (ECE students only) 9

Group B

- 18-310 Fundamentals of Semiconductor Devices 12
- 18-715 Physics of Applied Magnetism 12
- 18-716 Advanced Applied Magnetism 12
- 18-8xx — An appropriate 800-level course (for example, 18-813, 18-815, 18-819). 9

Note: Other appropriate courses may be substituted with the approval of the coordinators in the event that limited course offerings make it impossible to satisfy the requirements as described above.

Environmental Engineering and Sustainability Designated Minor
Neil M. Donahue, Director
Office: Doherty Hall 2116

Concern for the environment now influences a wide range of public, private and engineering decisions. Environmental Engineering is widely recognized as a discipline at the graduate and professional level, and undergraduate training in environmental issues and processes can provide the preparation necessary to pursue this career path, or serve as a useful complement to a career in any of the traditional areas of engineering. Sustainability issues are not considered critical across engineering disciplines. Effective preparation requires broad knowledge and skills in the areas of environmental engineering, sustainability, and environmental policy.

Pursuit of the minor program of study provides an introduction to environmental sustainability issues as well as a preparation for graduate work in Environmental Engineering and Sustainability.
Faculty Advisors

The Environmental Engineering program is a focus for faculty members from diverse engineering backgrounds. The faculty are actively engaged in teaching and conducting research in this field. Current faculty advisors are:

- Biomedical Engineering — Robert Tilton
- Chemical Engineering – Meagan Mauter
- Civil and Environmental Engineering — Peter Adams and Scott Matthews
- Electrical and Computer Engineering — Marija Ilic
- Engineering and Public Policy — Edward Rubin
- Mechanical Engineering — Ryan Sullivan
- Materials Science and Engineering — Robert Heard

Course Requirements

The requirements include two core courses, three technical electives, and two policy electives.

(12 units) A1. Core Courses in Sustainability
Select one course from:
12-712/19-717 Introduction to Sustainable Engineering 12
12-714 Environmental Life Cycle Assessment 12

(9 units) A2. Core Courses in Environmental Engineering
Select one course from:
12-351 Environmental Engineering 9
24/19-424 Energy and the Environment 9
12-651 Air Quality Engineering 9
24-425 Combustion and Air Pollution Control 9
12-702 Fundamentals of Water Quality Engineering 12

(27 units) B. Technical Electives in Environmental Engineering and Sustainability
Select three from the following list
03-121 Modern Biology 9
09-106 Modern Chemistry II 10
09-510 Introduction to Green Chemistry 9
12-201 Geology 9
12-351 Environmental Engineering 9
12-651 Air Quality Engineering 9
12-702 Fundamentals of Water Quality Engineering 12
12-657 Water Resources Engineering 9
12-658 Hydraulic Structures 9
12-718 Sustainable Engineering Project 12
24/19-424 Energy and the Environment 9
24-425 Combustion and Air Pollution Control 9
27-322 Processing of Metals or 27-323 Powder Processing of Materials, but not both 9
27-367 Selection and Performance of Materials * 6
27-421 Processing Design * 6
27-594 Electrochemical Degradation of Materials 9
48-315 Environment I: Climate & Energy 9
79-289 Animal Planet: An Environmental History of People and Animals 9

* 6 units; must be combined with 3 additional units

C. Policy Electives (18 units)
Select two from the following list of humanities/social science-oriented courses:
19-448 Science, Technology & Ethics 9
48-576 Mapping Urbanism 9
73-148 Environmental Economics 9
73-357 Regulation: Theory and Policy 9
73-358 Economics of the Environment and Natural Resources 9
73-359 Benefit-Cost Analysis 9
76-319 Environmental Rhetoric 9
79-303 Pittsburgh and the Transformation of Modern Urban America 6
79-372 Perspectives on the Urban Environment 9
80-244 Environmental Ethics 9
88-220 Policy Analysis I 9
88-221 Policy Analysis II 9
88-223 Decision Analysis and Decision Support Systems 9
90-758 Ethics & Public Policy in a Global Society 6
90-765 Cities, Technology and the Environment 6
90-789 Sustainable Community Development 12
90-798 Environmental Policy & Planning 12

NOTES:
1. Courses cannot be double-counted for lists A and B.
2. Courses used to fulfill the first year restricted technical electives for CIT cannot be double counted for list B requirements.
3. A group of three environmental policy courses, from List C, excluding Heinz courses, may be counted as fulfilling the general education breadth requirement required of all CIT students if and only if the student completes the Environmental Engineering and Sustainability Minor. Approval of the selected courses from List C for fulfillment of this CIT depth sequence is required from the student’s home department advisor.
4. Courses required within a student’s CIT major can be double counted for list A or B course requirements, with the exception that 12-351 Environmental Engineering can be counted toward completion of the minor for non-CEE students only.
5. Students may take up to two list B courses in their home department. One list B course must be from outside their home department. EPP double majors should NOT consider EPP their home department. BME double majors should NOT consider BME their home department.
6. At most ONE 48-xxx course can be used as a List B course and one as a List C course. The 48-xxx courses may not be acceptable as technical electives by some CIT engineering departments.
7. Other environmentally related technical electives with similar or related content may be substituted for List B courses only with written permission of the Director.
8. Other humanities and social science courses with similar or related content may be substituted for Type C courses only with written permission of the Director.
9. A list of available courses for the minor in each semester is provided to students who have declared the minor and to all faculty advisors for the minor.

Global Engineering Designated Minor
Treci Bonime, Director
Office: Scaife Hall 110

Many engineers work on international projects or for multinational companies. Carnegie Mellon is an international community, with a significant fraction of international students and many events featuring foreign speakers and cultural experiences. This minor is intended for engineering students interested in broadening their background in international experiences and global awareness and engagement.

Course Requirements

International Management (1 course)
Complete one course in international management or business such as:
70-342 Managing Across Cultures 9
70-365 International Trade and International Law 9
70-381 Marketing I 9
70-430 International Management 9
88-384 Conflict and Conflict Resolution in International Relations 9

Or approved equivalent.

Regional Specialization (1 course)
Complete one course in non-US History, international politics, or literature in a single region of the world. See the list at http://www.cit.cmu.edu/global/courses_degrees.html below for examples (Note: Please consult with the Global Engineering director before planning your course schedule, as some course information may have changed).
The student must select a minimum of 24 units from the following list:

Elective Courses (24 units minimum)

Core Courses (21 units)

Students wishing to take the MSE minor must have prerequisite requirements, each student must take three out-of-department courses. In satisfying these course requirements, each student must take three out-of-department courses. Each student is required to complete three core courses:

Materials Science and Engineering Designated Minor

Michael E. McHenry, Director
Office: Roberts Engineering Hall 243

The Designated Minor in Materials Science and Engineering provides the CIT student with a background in the field of Materials Science and Engineering. This minor is open to all CIT students, with the exception of MSE majors. Core Courses (21 units)

Study/Work Abroad

Study or engineering internship work abroad for a semester or a summer. The region visited should be consistent with the language and regional culture/history studied.

Materials Science and Engineering Designated Minor

Michael E. McHenry, Director
Office: Roberts Engineering Hall 243

The Designated Minor in Materials Science and Engineering provides the CIT student with a background in the field of Materials Science and Engineering. This minor is open to all CIT students, with the exception of MSE majors. All required and elective courses are taught within the MSE Department.

Course Requirements

The minor requires a minimum of 45 units, with two semester long required courses (the first being a sequence of two minis).

Prerequisites

Students wishing to take the MSE minor must have prerequisite thermodynamics and transport courses. The prerequisite MSE courses may be substituted for by a thermodynamics and transport course in another engineering discipline.

Core Courses (21 units)

The laboratories with these courses are not required as core but will be counted as elective units if desired.

Elective Courses (24 units minimum)

The student must select a minimum of 24 units from the following list:

Elects (1 course)

Any ethics course that provides some exposure to international ethics issues such as:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>70-332</td>
<td></td>
</tr>
<tr>
<td>80-136</td>
<td></td>
</tr>
<tr>
<td>80-244</td>
<td></td>
</tr>
<tr>
<td>80-247</td>
<td></td>
</tr>
</tbody>
</table>

Modern Languages

Demonstration of basic competency in a foreign language via one of the three options listed below:

- Complete one (1) Modern Languages course at the 200 level, with a minimum grade of C, or
- Achieve a score of 4 or higher in one foreign language Advanced Placement examination, or
- Demonstrate equivalent proficiency to the satisfaction of the Department of Modern Languages

Study/Work Abroad

Study or engineering internship work abroad for a semester or a summer. The region visited should be consistent with the language and regional culture/history studied.

Materials Science and Engineering Designated Minor

Michael E. McHenry, Director
Office: Roberts Engineering Hall 243

The Designated Minor in Materials Science and Engineering provides the CIT student with a background in the field of Materials Science and Engineering. This minor is open to all CIT students, with the exception of MSE majors. All required and elective courses are taught within the MSE Department.

Course Requirements

The minor requires a minimum of 45 units, with two semester long required courses (the first being a sequence of two minis).

Prerequisites

Students wishing to take the MSE minor must have prerequisite thermodynamics and transport courses. The prerequisite MSE courses may be substituted for by a thermodynamics and transport course in another engineering discipline.

Core Courses (21 units)

The laboratories with these courses are not required as core but will be counted as elective units if desired.

Elective Courses (24 units minimum)

The student must select a minimum of 24 units from the following list:

Mechanical Behavior of Materials Designated Minor

Warren M. Garrison, Jr., Director
Office: Wean Hall 3303

An understanding of mechanical behavior is important to both the development of new materials and the selection of appropriate materials for many applications. The mechanical behavior of materials is best investigated and understood by integrating solid mechanics with the microstructural basis of flow and fracture. The purpose of this minor is to allow a formal basis for students to pursue an integrated approach to the mechanical behavior of materials.

Although this minor is open to all CIT students, only students in the departments of Civil Engineering, Materials Science and Engineering, and Mechanical Engineering can take advantage of the double counting permitted for some courses in their department majors. Students in other departments may have difficulty in fulfilling the requirements in four years.

Faculty Advisors

- Chemical Engineering — Paul Sides
- Electrical and Computer Engineering — David W. Greve
- Mechanical Engineering — Paul S. Steif

Course Requirements

The minor requires six courses: three core courses, two solid mechanics courses, and one materials science course. In satisfying these course requirements, each student must take three out-of-department courses. Each student is required to complete three core courses:

Core Courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>

<td>Introduction to Solid Mechanics</td>
<td>12</td>
</tr>
</tbody>
</table>

Students should check with the director of the program or their faculty advisor for an up-to-date list of relevant courses that will count towards this minor. For more information, please consult the Undergraduate Course Catalog and the current Schedule of Classes.
CIT Minors for Non-Engineering Students

Biomedical Engineering Minor
(for non-engineering students)
Conrad M. Zapanta, Ph.D.
www.bme.cmu.edu
Campus Office for Student Affairs: Doherty Hall 2100

BME offers a minor program for those non-CIT students who desire coordinated training in BME. The Biomedical Engineering Minor is designed to train students to apply engineering techniques to problems in medicine and biology. Emphasis is placed on describing biological organisms as engineering systems and on applying engineering technology to clinical and laboratory situations.

Upon completing the Biomedical Engineering Minor, the student may elect to continue graduate studies in Biomedical engineering or basic biomedical sciences at either the master's or Ph.D. level. In addition, some of the courses in BME minor will assist students in preparing for medical school. Students who pursue jobs in biomedical engineering are involved in developing and improving medical devices, automating medical procedures using information technology, characterizing the operation of physiological systems, designing artificial organs, and altering microbes and mammalian cells for the production of useful drugs and chemicals.

Students in the minor program can choose from a wide range of electives to build skills in a number of areas of biomedical engineering. Students who wish to complete the Biomedical Engineering Designated Minor should complete the BME Minor Request Form (http://www.bme.cmu.edu/files/documents/minor_request.pdf) and return it to the Associate Head of the Department of Biomedical Engineering (http://www.bme.cmu.edu/contact.html).

Requirements for non-CIT students: six courses, minimum of 60 units

<table>
<thead>
<tr>

<td>Elective II +</td>
</tr>
<tr>
<td>xx-xxx</td>
<td>A second Introductory Engineering Course* or Any 42-xxx Course Numbered 42-3xx or Higher and Worth at Least 9 Units</td>
</tr>
</tbody>
</table>

Some Special Topics, newly offered or intermittently offered 42-xxx may be acceptable as electives. Students should consult with their advisors and petition the Biomedical Engineering Undergraduate Affairs Committee for permission to include such courses as track electives.

Notes:
1. Any Track Gateway, Track Elective, Restricted Elective, or Track Capstone course selected from any of the four Biomedical Engineering tracks. A list of track courses is provided under the BME Additional Major listing in the catalog and is periodically updated on the website.
2. Any 42-xxx course with a 42-300 or higher number and worth at least 9 units.
3. 42-203 Biomedical Engineering Laboratory (or the cross-listed version 03-206 for students in the Health Professions Program)**.
4. One semester of 42-200 Sophomore BME Research Project, 42-300 Junior BME Research Project, 42-400 Senior BME Research Project or 39-500 Honors Research Project, as long as the research project is supervised by a regular or courtesy Biomedical Engineering faculty member and the project is conducted for 9 or more units of academic credit.
5. Elective II must be a Biomedical Engineering Track Gateway, Track Elective, Restricted Elective, or Track Capstone course that is offered by one of the CIT departments (06-xxx, 12-xxx, 18-xxx, 19-xxx, 24-xxx, 27-xxx or 42-xxx). The only exception is that 03-232, the biotechnology-focused version of Biochemistry taught each Spring by the Department of Biological Sciences, is also acceptable, provided students meet the prerequisites and corequisites for that course.
6. Select either 06-100 Introduction to Chemical Engineering, 12-100 Introduction to Civil and Environmental Engineering, 18-100 Introduction to Electrical and Computer Engineering, 19-101 Introduction to Engineering and Public Policy, 27-100 Engineering the Materials of the Future, or 24-101 Fundamentals of Mechanical Engineering. Note that corequisites are required for these courses.

** Priority for enrollment in 42-203 or 03-206 will be given to students who have declared the Additional Major in Biomedical Engineering. If sufficient room in the course remains after all majors have been accommodated in a given semester, students who have declared the Biomedical Engineering Designated Minor will be given the next priority for enrollment. If space still allows, other students will be enrolled.

Engineering Studies Minor
(for non-engineering students)
Kurt Larsen, Director
Office: Scaife Hall 110

Carnegie Mellon undergraduate students enrolled in colleges other than engineering can complete a Minor in Engineering Studies in addition to their regular majors. Students pursuing this minor are required to complete courses from at least two different engineering departments in order to assure some breadth of exposure to engineering. In addition, the minor provides students the opportunity to pursue an in-depth concentration in a particular field of engineering.

For the Minor in Engineering Studies, students must complete five engineering courses as follows and must earn a cumulative GPA of 2.00 in these five courses. Students may declare the minor by contacting the Director after they have successfully completed two introductory engineering courses (from list #1 below).

Double counting of core courses in student’s primary major is not permitted.

Because of the nature of the courses offered by Engineering and Public Policy, only two EPP courses (including 19-101) can be used toward the minor requirements. Students need special permission to use an Engineering and Public Policy course (EPP-19-xxx) toward minor requirements. Students interested in EPP coursework should consider the Technology and Policy minor instead.

Requirements

1. Two of the following:
   - 12-100 Introduction to Civil and Environmental Engineering | 12
   - 18-100 Introduction to Electrical and Computer Engineering | 12
   - 19-101 Introduction to Engineering and Public Policy | 12
   - 24-101 Fundamentals of Mechanical Engineering | 12
   - 27-100 Engineering the Materials of the Future | 12
   - 42-101 Introduction to Biomedical Engineering | 12
   - 06-100 Introduction to Chemical Engineering | 12
   - 08-201 Introduction to Engineering and Public Policy | 12

2. Three courses of at least 9 units each from one or more CIT departments

3. **NOTE:** The following courses may NOT be included as part of the Minor in Engineering Studies. In addition to the courses listed, most EPP courses (19-xxx) are not permissible for the minor and students should contact the Director for prior approval of EPP courses.
   - 06-262 Mathematical Methods of Chemical Engineering | 12
   - 12-201 Geology | 9
   - 15-213 Introduction to Computer Systems | 12
   - 18-200 Emerging Trends in Electrical and Computer Engineering | 1
   - 18-213 Introduction to Computer Systems | 12
   - 24-201 Engineering Graphics | 9
   - 24-311 Numerical Methods | 12
   - 39-200 Business for Engineers | 9
   - 42-202 Physiology | 9
Technology and Policy Minor
(for non-engineering students)
Deanna H. Matthews, Director Office: Baker Hall 129

The Technology and Policy Minor is administered by the Department of Engineering and Public Policy (EPP) for students who are majoring in areas other than engineering. The Technology and Policy Minor is designed to give students a basic understanding of the interactions between technology, society and policy and some project experience in problems involving technology and policy.

Pre-requisites: Students should have prerequisite knowledge in economics (73-100 Principles of Economics or higher level economics course) and statistics (36-202 Statistical Methods or higher level statistics course) in order to pursue the Technology and Policy Minor.

Course Requirements

</tbody>
</table>

EPP Technology Electives include courses in CIT, MCS, or SCS that address problems at the society-technology interface and the means of analyzing these issues. A list of qualifying Technology-Policy electives is assembled each semester and is available from the EPP Department. Example Technology-Policy electives include:

- 16-385 Introduction to Robotics
- 19-451 EPP Projects
- 19-452 EPP Projects
- xx-xxx Two EPP Technology-Policy Electives

Students must earn a cumulative QPA of 2.0 in all courses taken for the minor. Required courses taken for a student’s primary major may not be counted toward the Technology and Policy Minor. Elective courses for a student’s primary major or courses fulfilling general education requirements may be counted, however.

Robotics Minor

Director: Dr. Howie Choset
Administrative Coordinator: Julie Goldstein
Website: http://www.ri.cmu.edu/education/ugrad_minor.html

The Minor in Robotics provides an opportunity for undergraduate students at Carnegie Mellon to learn the principles and practices of robotics through theoretical studies and hands-on experience with robots. The Minor is open to students in any major of any college at Carnegie Mellon. Students initially learn the basics of robotics in an introductory robotics overview course. Additional required courses teach control systems and robotic manipulation. Students also choose from a wide selection of electives in robotics, perception, computer vision, cognition and cognitive science, or computer graphics. Students have a unique opportunity to undertake independent research projects, working under the guidance of Robotics Institute faculty members, this provides an excellent introduction to robotics research for those considering graduate studies.

All Robotics Minors are required to take Introduction to Robotics (16-311). This course is designed to help students understand the big picture of what is going on in robotics through topics such as kinematics, mechanisms, motion planning, sensor based planning, mobile robotics, sensors, and vision. The minor also requires students to take a controls class and a manipulation, dynamics, or mechanism class. These courses provide students with the necessary intuition and technical background to move on to more advanced robotics courses.

In addition to the required courses, students must take 2 electives. Students may satisfy the elective requirement by taking an approved course or upper-level Robotics course. The student must have course selection approved by the Director of the Minor during the application submission process. In order to be awarded the Minor in Robotics, a student must earn a cumulative QPA of 2.5 in these courses. Courses that are taken Pass/Fail or audited cannot be counted for the Minor.

Admission

Admission to the Undergraduate Minor in Robotics is limited to current Carnegie Mellon students. Students interested in signing up for the minor should fill out the application form (https://www-preview.ri.cmu.edu/education/apply/ugrad_appform.html).

Prerequisite

Successful candidates for the Robotics Minor will have prerequisite knowledge of C language, basic programming skills, and familiarity with basic algorithms. Students can gain this knowledge by taking 15-122 Principles of Imperative Computation.

Graduate level Robotics courses may be used to meet elective requirement with permission from the Program Director. Graduate level Mechanical Engineering and Electrical and Computer Engineering courses that are relevant to robotics may be used to meet the elective requirement with permission from the Program Director.

Double-Counting Restriction

Courses in the Robotics Minor may not be counted towards another SCS minor. Computer Science (CS) Majors are permitted to double count a maximum of two courses (excluding General Education requirements) towards the Minor in Robotics.
Department of Biomedical Engineering

Biomedical Engineering Overview

Biomedical engineering education at Carnegie Mellon reflects the belief that a top biomedical engineer must be deeply trained in both a traditional engineering practice and biomedical sciences. The unique additional major program leverages extensive collaborations with sister departments in the College of Engineering and with major medical institutions in Pittsburgh. This collaborative approach, combined with a rigorous engineering education, confers unique depth and breadth to the education of Biomedical Engineering graduates.

Students who elect Biomedical Engineering as a major must also declare a major in one of the traditional engineering disciplines: Chemical Engineering, Civil & Environmental Engineering, Electrical & Computer Engineering, Materials Science & Engineering, or Mechanical Engineering.

The curriculum, demanding but readily feasible to complete in four years, is highly rewarding to motivated students.

Common Requirements for the Additional Major

The Biomedical Engineering additional major program takes advantage of curricular overlaps between Biomedical Engineering and traditional engineering majors, such that the dual major can be completed in four years with only a modest increase in course requirements. The requirements for Biomedical Engineering consist of the core, the tracks, and the capstone design course. The core exposes students to basic facets of biomedical engineering to lay a foundation. The tracks allow students to build depth in a specific aspect of biomedical engineering. The capstone design course (http://www.bme.cmu.edu/ugprog/design.html) engages students in team work to develop real-world applications.

While most tracks are designed to parallel a traditional engineering discipline, a General Biomedical Engineering track is available for students intending on pursuing graduate studies or medical school, and a self-designed track allows students to pursue specific areas not covered by the pre-defined tracks. The additional major in Biomedical Engineering should be declared at the same time when declaring a traditional engineering major.

Course Requirements for the Additional Major Degree

Student majoring in Biomedical Engineering must meet three sets of requirements: 1) Biomedical Engineering (BME), 2) a traditional engineering discipline, and 3) CIT General Education (http://engineering.cmu.edu/current_students/services/general_education_requirements/general_education_2016) sequence. The Quality Point Average (QPA) for courses that count toward the additional major must be 2.00 or better. No course taken on a pass/fail or audit basis may be counted toward the additional major.

The course requirements for the BME portion of the additional major are as follows:

* # Also known as 03-206 for Health Professions Program students.

Biomaterials and Tissue Engineering (BMTE) Track

Overview

The BMTE track addresses issues at the interface of materials science, biology and engineering. The topics include the interactions between materials and cells or tissues, the effects of such interactions on cells and tissues, the design of materials for biological applications, and the engineering of new tissues.

Targets

The BMTE track is ideal for students interested in combining the education of Biomedical Engineering with Materials Science & Engineering or with Chemical Engineering. Both provide the necessary foundation in chemistry and/or materials science. Students of this track may develop careers in biotechnology, tissue engineering, biopharmaceuticals, and medical devices that leverage materials properties.

In addition to the Biomedical Engineering core courses, students in the BMTE Track must take the following combination of courses:

- **One (1) BMTE Gateway course**
- **One (1) Required BMTE elective**
- **Two (2) other Electives (either one of the two options)**
  1. **One (1) BMTE Elective (either Required or Additional)** and one (1) Restricted Elective
  2. **Two (2) Additional BMTE Electives**

**BMTE Gateway Course**

<table>

<tbody>
<tr>
<td>03-231 Biochemistry I- Fall</td>
<td>9</td>
</tr>
<tr>
<td>03-232 Biochemistry I- Spring</td>
<td>9</td>
</tr>
</tbody>
</table>

* # Note that only 03-232 satisfies Chemistry Engineering course requirements. Either 03-231 or 03-232 satisfies Materials Science & Engineering requirements.

**BMTE Electives**

Required BMTE Electives (must take one of the following)
### Biomechanics (BMEC) Track

#### Overview

The BMEC track addresses the application of solid or fluid mechanics to biological and medical systems. It provides quantitative understanding of the mechanical behavior of molecules, cells, tissues, organs, and whole organisms. The field has seen a wide range of applications from the optimization of tissue regeneration to the design of surgical and rehabilitation devices.

#### Targets

The BMEC track is ideally suited to the combined education of Biomedical Engineering and Mechanical Engineering or Civil & Environmental Engineering. Both provide the necessary foundation in the underlying physical principles and their non-Biomedical Engineering applications. This track may also appeal to students of Electrical & Computer Engineering who are interested in biomedical robotics. Education in biomechanics enables students to pursue careers in medical devices or rehabilitation engineering.

In addition to the Biomedical Engineering core courses, students in the BMEC Track must take the following combination of courses:

- One (1) BMEC Gateway Course
- One (1) Required BMEC Elective
- Two (2) other Electives (either one of the two options)

### Biomedical Signal and Image Processing (BSIP) Track

#### Overview

The BSIP track addresses bio/medical phenomena based on the information embedded in sensor-detected signals, including digital images and nerve electrical pulses. Students in this track will gain understanding of the technologies involved in acquiring signals and images, the mathematical principles underlying the processing and analysis of signals, and the applications of signal/image processing methods in basic research and medicine.

Some Special Topics, newly offered or intermittently offered courses may be acceptable as track electives. Students should consult with their advisors and petition the BME Undergraduate Affairs Committee for permission to include such courses as track electives.

Sample schedules can be found on the BMEC (http://www.bme.cmu.edu/ugprog/bmec.html) page on the BME website.
Targets
This track aligns most naturally with a combined education of Biomedical Engineering and Electrical & Computer Engineering, which lays a solid foundation in signal processing principles. This track prepares students for careers in medical imaging or smart prosthetics. It also interacts with many clinical practices including radiology, neurology/neurosurgery, and pathology.

In addition to the Biomedical Engineering core courses, students in the BSIP Track must take the following combination of courses:

- One (1) BSIP Gateway course
- One (1) Required BSIP elective
- Two (2) other Electives (either one of the two options)

1. One (1) BSIP Electives (either Required or Additional) and one (1) Restricted Elective 2. Two (2) BSIP Electives (either Required or Additional)

BSIP Gateway Course
18-290 Signals and Systems – Fall/Spring

BSIP Electives

Required BSIP Electives (must take at least one of the following)

* The 42-x00 research project (42-200/300/400 Sophomore/Junior/ Senior Biomedical Engineering Research Project OR 39-500 Honors Research Project) must be on a BME topic supervised or co-supervised by a BME faculty member and conducted for 9 or more units of credit.

Some Special Topics, newly offered or intermittently offered courses may be acceptable as track electives. Students should consult with their advisors and petition the BME Undergraduate Affairs Committee for permission to include such courses as track electives.

Sample schedules can be found on the BSIP (http://www.bme.cmu.edu/ugprog/bsip.html) page on the BME website.

Cellular and Molecular Biotechnology (CMBT) Track

Overview
The CMBT track emphasizes fundamentals and applications of biochemistry, biophysics, and cell biology, and processes on the nanometer to micrometer scale. Students in this track acquire understanding of the molecular and cellular bases of life processes, and build skills in quantitative modeling of live cell-based biotechnologies and in technologies that exploit the unique properties of biomolecules in non-biological settings.

Targets
The CMBT track is ideally suited for the combined education of Biomedical Engineering and Chemical Engineering, which provides a strong core of chemistry and molecular processing principles. The track may also interest students of Mechanical Engineering, Materials Science & Engineering, or Civil & Environmental Engineering who have an interest in molecular aspects of Biomedical Engineering. The CMBT track prepares students for careers in bio/pharmaceutical, medical diagnostics, biosensors, drug delivery, and biological aspects of environmental engineering.

In addition to the Biomedical Engineering core courses, students in the CMBT Track must take the following combination of courses:

- One (1) CMBT Gateway course
- One (1) Required CMBT Elective
- Two (2) other Electives (either one of the two options)

1. One (1) CMBT Elective (either Required or Additional) and one (1) Restricted Elective 2. Two (2) CMBT Electives (either Required or Additional)

CMBT Gateway Course
03-231 Biochemistry I (9 units) – Fall
03-232 Biochemistry I (9 units) # – Spring

*Note that only 03-232 satisfies Chemistry Engineering course requirements, either 03-231 or 03-232 satisfies Materials Science & Engineering requirements.

CMBT Electives

General Biomedical Engineering (GBME) Track

The GBME track provides broader education in biomedical engineering than other tracks. It is aimed at students who intend on pursuing medical or graduate school and desire a general coverage of biomedical engineering with maximal flexibility in course selection. Students are strongly encouraged to consult the advisor(s) and tailor the electives according to their career plan.

In addition to the Biomedical Engineering core requirements, students must fulfill the following requirements.

- One (1) Gateway Course listed for BMEC, BMTE, BSIP, or CMBT track.
- Three (3) Electives from BMEC, BMTE, BSIP, or CMBT track, or from other 42-6xx courses.

Some Special Topics, newly offered or intermittently offered courses may be acceptable as track electives. Students should consult with their advisors and petition the Biomedical Engineering Undergraduate Affairs Committee for permission to include such courses as track electives.

** The 42-x00 research project (42-200/300/400 Sophomore/Junior/Senior Biomedical Engineering Research Project OR 39-500 Honors Research Project) must be on a BME topic supervised or co-supervised by a BME faculty member and conducted for 9 or more units of credit. Students may count either 42-660 Surgery for Engineers or 42-660 OR Biomedical Engineering Research project, but not both, as one track elective.

Minor in Biomedical Engineering

Conrad M. Zapanta, Ph.D.
www.bme.cmu.edu

The minor program is designed for engineering students who desire exposure to biomedical engineering but may not have the time to pursue the Biomedical Engineering additional major. The program is open to students of all colleges and is popular among science majors. In conjunction with other relevant courses, the program may provide a sufficient background for jobs or graduate studies in biomedical engineering. Students interested in a medical career may also find this program helpful.

The Biomedical Engineering minor curriculum is comprised of three core courses and two or three electives. Students pursuing the minor may contact either the Associate Department Head (http://www.bme.cmu.edu/people/staff.html#ADH) for advice. Students interested in declaring Biomedical Engineering minor should contact the Associate Department Head (http://www.bme.cmu.edu/people/staff.html#ADH) of Biomedical Engineering or the Biomedical Engineering Undergraduate Program Coordinator (http://www.bme.cmu.edu/people/staff.html#UPC).

</tr>
</tbody>
</table>

Some Special Topics, newly offered or intermittently offered 42-xxx may be acceptable as electives. Students should consult with their advisors and the Biomedical Engineering Undergraduate Affairs Committee to have approved course plan, the student may petition the Biomedical Engineering Undergraduate Affairs Committee.
petition the Biomedical Engineering Undergraduate Affairs Committee for permission to include such courses.

Notes

# Elective I cannot be a required course in the student’s major. It may be
1. Any track gateway, restricted elective, or track elective course
selected from any of the four Biomedical Engineering tracks. See the
online catalog (http://www.bme.cmu.edu/ugprog/catalog.html) for a
listing of courses.
2. Any 42-xxx course with a 42-300 or higher number and worth at
least 9 units.
3. 42-203 Biomedical Engineering Laboratory (or the cross-listed
version 03-206 for students in the Health Professions Program). The
course has a limited capacity and priority is given to students who
have declared the Additional Major in Biomedical Engineering.**
4. One semester of 42-200 Sophomore BME Research Project, 42-300
Junior BME Research Project, 42-400 Senior BME Research Project or
39-500 CIT Honors Research Project. The project must be supervised by
a core or courtesy Biomedical Engineering faculty member and
for 9 or more units.

+ Elective II must be a Biomedical Engineering track gateway, track
elective, or restricted Elective course that is offered by one of the
Engineering Departments (06-xxx, 12-xxx, 18-xxx, 19-xxx, 24-xxx, 27-xxx
or 42-xxx). The only exception is that 03-232, the biotechnology-focused
version of Biochemistry taught each Spring by the Department of Biological
Sciences, is also acceptable. Organic Chemistry I 09-217 is a pre-requisite of
03-232.

* Selected from 06-100 Introduction to Chemical Engineering, 12-100
Introduction to Civil and Environmental Engineering, 18-100 Introduction to
Electrical and Computer Engineering, 19-101 Introduction to Engineering
and Public Policy, 27-100 Engineering the Materials of the Future, or 24-101
Fundamentals of Mechanical Engineering. Note that these courses may
involve co-requisites.

** Priority for enrollment in 42-203 or 03-206 will be given to students who
have declared the Additional Major in Biomedical Engineering. If sufficient
room in the course remains after all majors have been accommodated in a
given semester, students who have declared the Biomedical Engineering
Designated Minor will be given the next priority for enrollment. If space still
allows, other students will be enrolled.

Full-Time Faculty

ANTAKI, JAMES F., Professor of Biomedical Engineering – Ph.D., University of
Pittsburgh, 1991; .

ARMITAGE, BRUCE A., Professor of Chemistry, Biological Sciences, and
Biomedical Engineering – Ph.D., University of Arizona, 1993; .

Department of Chemical Engineering

Lorenz Biegler, Head
Office: Doherty Hall 1107

Chemical engineering is a broad discipline based on chemistry, mathematics, physics and biology that applies the principles of engineering science and process systems engineering to the development and commercialization of new products and processes. Engineering science provides experimental and theoretical models for predicting the behavior of fluid flow and heat transfer in materials and biological systems, as well as chemical reactions and mass transfers that take place in multi-component mixtures. Process systems engineering provides methodologies for the systematic design and analysis of processes, including their control, safety, and environmental impact. The department emphasizes the basic principles of engineering science and process systems engineering through problem solving, and it strives to broaden the experience of students by offering a significant number of electives, undergraduate research projects, an integrated masters degree, industrial internships and study abroad programs, all of which benefit from our strong industrial ties.

A career in chemical engineering offers challenging and well-compensated positions in a wide variety of growth industries. Graduates may supervise the operation of chemical plants, redesign chemical processes for pollution prevention, or be involved in the research and development of new products or processes in high technology areas. These activities require knowledge of chemical reactions and catalysis, separation technologies and energy recovery systems, all of which are thoroughly presented in our curriculum. In the petroleum industry, for example, our national need for fuels demands well-trained chemical engineers in catalysis. A significant number of chemical engineers are also hired by industries associated with colloids (fine particles), polymers (plastics and resins), and coatings (e.g., paint, integrated circuits). Opportunities exist in biotechnology, the computer industry, environmental firms, and consulting companies. Other examples include the processing of advanced polymeric systems, thin films for the semiconductor and data storage industry, and chip fabrication. A growing number of consulting companies hire chemical engineers to develop computer software for the simulation and real-time optimization of chemical processes, for predicting how toxic chemicals are dispersed and degraded in soils and in the atmosphere, and for evaluating the economic feasibility of industrial projects. The diversity of career opportunities arises from the depth and breadth of the curriculum. For instance, the pharmaceutical industry recruits chemical engineers who possess a combined expertise in process engineering and biochemistry/molecular biology.

The program in chemical engineering within the Department of Chemical Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Curriculum

The program in chemical engineering within the Department of Chemical Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Educational Objectives and Outcomes

The objectives for the program are that graduates of the department will obtain employment or attend graduate school, will advance in their chosen careers, and will be productive and fulfilled professionals throughout their careers. The curriculum and programs are developed to prepare students to attain these educational objectives.

Students majoring in chemical engineering learn the science and engineering that govern chemical processing systems. Fundamental principles, problem solving, systems analysis and design, development of self-confidence, and communication skills are emphasized. Students are made aware of modern tools, industrial needs and societal issues. This combination of fundamental knowledge and skills provides a firm foundation for future learning and career growth. The goal of the department is to produce students who will become leaders in their careers. Students who complete the curriculum will have attained the following educational outcomes:

- an ability to apply knowledge of mathematics, science, and engineering
- an ability to design and conduct experiments, as well as to analyze and interpret data
- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- an ability to function on multidisciplinary teams
- an ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibility
- an ability to communicate effectively
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- a recognition of the need for, and an ability to engage in, life-long learning
- a knowledge of contemporary issues
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

The department offers a number of special programs for students majoring in Chemical Engineering. In addition to the double majors offered by the College of Engineering such as Biomedical Engineering and Engineering & Public Policy, students may choose from a variety of minors in technical areas offered by the College of Engineering. Undergraduate research projects are also available in the areas of bioengineering, complex fluids engineering, environmental engineering, process systems engineering, and catalysis & surface science. Students may participate in study abroad programs during their junior year. In addition to the University program with EPFL in Switzerland and ITESM Monterey in Mexico, the department provides its own exchange programs with Yonsei University in Seoul, Korea, RWTH Aachen in Germany, and Imperial College in London, Great Britain. Students may also participate in Practical Internships for Senior Chemical Engineering Students, a one-year industrial internship program offered between the junior and senior years. Finally, qualified students may enroll in our Master of Chemical Engineering program. This degree is typically completed in the fifth year. However, depending on the number of advanced placement courses and course load at Carnegie Mellon, this degree could be awarded during the B.S. graduation, or after one additional semester.

* Computer Science/Physics II: Students should complete 15-110 Principles of Computing or 15-112 Fundamentals of Programming and Computer Science as well as 33-107 Physics II for Engineering Students by the end of the Sophomore year. The recommended sequence is 33-106/33-107 for engineering students, however, 33-111/33-112 or 33-131/33-132 will also meet the CIT Physics requirement.

For those students who have not taken 06-100 as one of the two Introductory Engineering Electives, 06-100 should be taken in the Fall Semester of the Sophomore year. The General Education Course normally taken during that semester may be postponed until the Junior year. These students should consult with their faculty advisors as soon as possible.

At the end of the Sophomore year, a student should have completed the following required basic science and computer science courses:

<table>
<thead>
<tr>
<th>Course Title</th>

**Students pursuing a Chemical Engineering/Engineering and Public Policy double major are waived from taking the Biochemistry Elective. They will take 36-220.

### Notes:

1. In addition to the graduation requirement of an overall QPA of 2.0 (not counting the First Year), the Department of Chemical Engineering requires a cumulative QPA of 2.0 in all chemical engineering courses (all those numbered 06-xxx).
2. Minimum number of units required for graduation: 386.
3. Overloads are permitted only for students maintaining a QPA of 3.0 or better during the preceding semester.
4. Electives: To obtain a Bachelor of Science degree in Chemical Engineering, students must complete 06-100 and one other Introductory Engineering Elective. There are also five Unrestricted Electives. At most, 9 units of ROTC or Physical Education can be counted toward these electives. Students must discuss choice of electives with their faculty advisors.
5. Undergraduate Research: Independent research projects are available by arrangement with a faculty advisor. Many students conduct these research projects for elective credit by enrolling in 06-200, 06-300, or 06-400 (Sophomore, Junior, or Senior Research Projects) or 39-500 Honors Research Project for eligible Seniors.
6. Advanced undergraduates may also take Chemical Engineering graduate courses (600+ level).

#### Double Major in Engineering and Public Policy (EPP)

Students may pursue a double major in Chemical Engineering and EPP. This double major is very flexible, built around Electives, Social Analysis, Probability and Statistics courses, and projects. Specific course choices should be discussed with a faculty advisor and an EPP advisor.

#### Double Major in Biomedical Engineering (BME)

Students may pursue a double major in Chemical Engineering and BME. Specific course choices should be discussed with a faculty advisor and a BME advisor.

#### Minors with a B.S. in Chemical Engineering

Chemical Engineering students are eligible for any CIT Designated Minor. Those minors that are especially well suited to Chemical Engineers include Audio Engineering, Automation and Controls, Biomedical Engineering, Colloids, Polymers & Surfaces, Electronic Materials, Environmental Engineering, Global Engineering, Manufacturing Engineering, Materials Science and Engineering, Mechanical Behavior of Materials, and Robotics. The minor requirements may be fulfilled with electives. Other minors, such as the Supply Chain Management minor in association with the Tepper School of Business, are also available outside of CIT. These should be discussed with a faculty advisor.

#### Minor in Colloids, Polymers, and Surfaces (CPS)

Historically, the CPS coursework sequence has had a long-standing popularity among chemical engineering students. A detailed description of the minor can be found in the CIT Minors section of this catalog, or ask your Chemical Engineering faculty advisor, or the Director of CPS. Chemical Engineering students may use four of their electives to obtain the CPS minor. This is a sequence of closely related courses that explore the science and engineering of polymeric materials, particulates, micro-structured fluids, and interfacially engineered materials. Completion of the following five courses constitutes the CPS minor:

<table>
<thead>
<tr>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>06-221   Thermodynamics</td>
<td>9</td>
</tr>
<tr>
<td>06-426   Experimental Colloid Surface Science</td>
<td>9</td>
</tr>
<tr>
<td>06-466   Experimental Polymer Science</td>
<td>9</td>
</tr>
</tbody>
</table>
Typically, 06-607 is taken in the spring of the junior year, while 06-609 also known as 09-509, 06-426 and 06-466 are taken during the Senior year.

Practical Internships for Senior Chemical Engineering Students (PISCES)

Chemical Engineering students may apply in the fall of their Junior year for a salaried, one-year PISCES with a partner company. Admitted students begin their internships after completion of the Junior year. Following the internship, students return to complete their Senior year. There are several advantages of a one full-year internship, including the opportunity to gain a breadth of professional experience that is not generally possible in a shorter program, more opportunity to make important contributions to the partner company, and the opportunity to complete Senior year courses in their normal sequence with no need for curriculum rearrangements. Interested students should consult with their faculty advisors.

International Chemical Engineering Exchange Programs

Chemical Engineering students may apply during their Sophomore year to spend their junior year at RWTH Aachen in Germany, Yonsei University in Seoul, Korea, or at Imperial College in London, Great Britain. A summer exchange program in Dortmund, Germany is also available. These exchange programs provide a great opportunity for students to obtain international experience while taking courses very similar to those offered at Carnegie Mellon. Students considering any of these programs should consult with their faculty advisors, and students considering the Aachen program in particular are advised to take at least one introductory German course before or during their Sophomore year.

Fifth Year Master of Chemical Engineering (MChE)

This degree offers qualified undergraduate students the opportunity to obtain a Masters degree in Chemical Engineering in less than one academic year. The goal of the program is to produce skilled engineers who will have a deeper understanding of the fundamentals of chemical engineering as well as a broader set of professional skills and exposure to other technical disciplines. The MChE degree requires the completion of at least 96 units, with a cumulative QPA of 3.0. Junior and Senior undergraduates from the department may apply to the MChE program if they have an overall QPA of 3.0. Three letters of recommendation are also required. The deadline for application is February 1 for the Fall semester and October 15 for the Spring semester. All applications should be submitted to the Graduate Admissions Committee of Chemical Engineering.

Research and Teaching Faculty

SHELLEY ANNA, Professor of Chemical Engineering – Ph.D., Harvard University; Carnegie Mellon, 2003–.

LORENZ T. BIEGLER, University Professor and Bayer Professor of Chemical Engineering, Head of Department – Ph.D., University of Wisconsin; Carnegie Mellon, 1981–.

KRIS N. DAHL, Associate Professor of Chemical Engineering – Ph.D., University of Pennsylvania; Carnegie Mellon, 2006–.

MICHAEL M. DOMACH, Professor of Chemical Engineering – Ph.D., Cornell University; Carnegie Mellon, 1983–.

NEIL M. DONAHUE, Professor of Chemical Engineering and Chemistry – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2000–.

ANDREW J. GELLMAN, Lord Professor of Chemical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1992–.

CHRYSANTHOS GOUNARIS, Assistant Professor of Chemical Engineering – Ph.D., Princeton University; Carnegie Mellon, 2013–.

IGNACIO E. GROSSMANN, University Dean Professor of Chemical Engineering – Ph.D., Imperial College, University of London; Carnegie Mellon, 1979–.

ANNETTE M. JACOBSON, Teaching Professor of Chemical Engineering and Director of Colloids, Polymers, and Surfaces Program – Ph.D., Carnegie Mellon; Carnegie Mellon, 1988–.

MYUNG S. JHON, Professor of Chemical Engineering – Ph.D., University of Chicago; Carnegie Mellon, 1980–.

ADITYA KHAIR, Assistant Professor of Chemical Engineering – PhD, California Institute of Technology; Carnegie Mellon, 2010–.

JOHN KITCHIN, Professor of Chemical Engineering – Ph.D., University of Delaware; Carnegie Mellon, 2006–.

MEAGAN MAUTER, Assistant Professor of Chemical Engineering – Ph.D., Yale University; Carnegie Mellon, 2013–.

SPYROS N. PANDIS, Research Professor of Chemical Engineering and Engineering and Public Policy – Ph.D., California Institute of Technology; Carnegie Mellon, 1993–.

DENNIS C. PRIEVE, Gulf Professor Of Chemical Engineering – Ph.D., University of Delaware; Carnegie Mellon, 1974–.

TODD M. PRZYBYCIEN, Professor Of Chemical Engineering And Biomedical Engineering – Ph.D., California Institute of Technology; Carnegie Mellon, 1998–.

NIKOLAOS V. SAHINIDIS, John E. Swearingen Professor of Chemical Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2007–.

JAMES W. SCHNEIDER, Professor of Chemical Engineering – Ph.D., University of Minnesota; Carnegie Mellon, 1999–.

PAUL J. SIDES, Professor of Chemical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1981–.

JEFFREY J. SIROLA, Distinguished Service Professor – PhD, University of Wisconsin; Carnegie Mellon, 2011–.

SUSANA C. STEPPAN, Assistant Teaching Professor – PhD, University of Massachusetts; Carnegie Mellon, 2004–.

ROBERT D. TILTON, Professor of Chemical Engineering – Ph.D., Stanford University; Carnegie Mellon, 1992–.

LYNN M. WALKER, Professor of Chemical Engineering – Ph.D., University of Delaware; Carnegie Mellon, 1997–.

ARTHUR W. WESTERBERG, Emeritus, University Professor of Chemical Engineering – Ph.D., DIC, Imperial College, University of London; Carnegie Mellon, 1976–.

KATHRYN WHITEHEAD, Assistant Professor of Chemical Engineering – Ph.D., University of California; Carnegie Mellon, 2012–.

B. ERIK YDSTIE, Professor of Chemical Engineering – Ph.D., Imperial College, University of London; Carnegie Mellon, 1992–.
Department of Civil and Environmental Engineering

David A. Dzombak, Head
Office: Porter Hall 119-D
http://www.cmu.edu/cee/

The role of civil and environmental engineers, in the broadest sense, is to apply technology to meet society’s needs. Civil engineers plan, design, and manage facilities used daily by the public and industry, such as buildings, airports, water supply, and waste management systems. They work at the intersection of the built, natural, and information environments. Today’s civil and environmental engineers are also called upon by government and industry to provide leadership on complex technical and societal issues such as demands for infrastructure improvement in our cities, remediation of hazardous waste sites, provision of safe drinking water, and incorporation of environmental safeguards in new designs. Civil and Environmental Engineering requires broad technical training and strong communication skills because of the complexity of large projects and the interactions with engineers in other fields, lawyers, politicians, and the public. Carnegie Mellon’s curriculum is intended to provide this versatility for professional practice in civil and environmental engineering or as a foundation for other professional pursuits.

The Department of Civil and Environmental Engineering offers a wide spectrum of opportunities for direct entry into the engineering profession, for graduate education in engineering, or entry into various other professions. While maintaining its emphasis on the fundamental understanding of the behavior of constructed facilities through the application of the physical sciences and mathematics, the curriculum has continually evolved in directions that exploit advances in technology. The methods of engineering design are introduced in the freshman year and are emphasized throughout the curriculum in both traditional and open-ended project-oriented courses. The basic undergraduate degree program leads to a B.S. in Civil Engineering. Students with a specific interest in Environmental Engineering are advised to undertake the Minor in Environmental Engineering and Sustainability.

Central to the evolution of technology and its impact on engineering practice is the increased emphasis on computer-aided engineering. Several courses on computer methods are required in the curriculum, and virtually every course offered by the department requires the use of computers in applications of either analysis or design. Our curriculum emphasizes the development of scientific inquiry with the perspective of social, economic, and institutional developments. For graduates who wish to enter directly the engineering profession in such specialties as structural engineering, construction, or environmental engineering, this approach to teaching allows application of the most advanced technological developments.

A student may choose to concentrate in one of the specialty areas in Civil Engineering, to pursue a minor in one of the CIT designated minor programs, or to design a double major or double degree program. The specialty areas offered by the Civil and Environmental Engineering Department are described in this section. The CIT designated minor programs can be found under the Carnegie Institute of Technology section. The double-major requirements with Biomedical Engineering and with Engineering and Public Policy are described in the curriculum specified by those departments. Other double-major programs selected by recent graduates include computer science, economics, mathematics, business, architecture, history, and foreign languages. Each student should have well-defined objectives in selecting courses leading to a specialty, a minor, or a double major. Faculty advisors are available to discuss students’ educational goals.

Educational Objectives

The objectives of the Bachelor of Science in Civil Engineering curriculum are to develop graduates who embody the following definitions:

- Graduates distinguish themselves within their organizations as individuals able to complete both conventional and cutting-edge professional challenges related to one or more of the areas of the built, natural, and information environments;
- Graduates work for a wide range of engineering and non-engineering organizations located both in the U.S. and internationally, and work on a wide range of activities, such as academic research, government service and private sector activity; and
- Graduates are innovative, proactive, and adaptive professionals, highly engaged in their professional communities.

The Civil Engineering curriculum is intended to allow ample opportunity for students to pursue areas of personal interest. The opportunity for self-exploration requires careful advising to gain meaningful educational experiences. We believe that design and team working experiences should occur at regular intervals in the curriculum, and that graduates should have appropriate “hands on” experience in laboratories and projects. Students are encouraged to participate in research projects and to pursue study or work abroad.

The Civil Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

By the end of the B.S. program, students should have achieved the following student outcomes:

A. an ability to apply knowledge of mathematics, science and engineering
B. an ability to design and conduct experiments, as well as to analyze and interpret data
C. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
D. an ability to function on multidisciplinary teams
E. an ability to identify, formulate, and solve engineering problems
F. an understanding of professional and ethical responsibility
G. an ability to communicate effectively
H. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
I. a recognition of the need for, and an ability to engage in lifelong learning
J. a knowledge of contemporary issues relevant to engineering practice
K. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

The curriculum has been designed, and is periodically evaluated and refined, to provide students instruction and experiences that lead to the development of these abilities and skills.

All students admitted to CIT are not required to declare a major until the end of the freshman year, and may have selected a variety of Introductory Engineering Electives and associated Restricted Technical Electives within the common foundation specified for freshmen in CIT. Regardless of this selection in the freshman year, a civil engineering major is expected to have completed, in addition to 12-100 Introduction to Civil and Environmental Engineering, the following Restricted Technical Electives by the end of the sophomore year:

<table>
<thead>
<tr>
<th>Course Number</th>

48 units

* Notes: If a student takes an Introduction to Engineering course which has a co-requisite other than Physics II, the co-requisite (either 15-110 or 09-105) should be taken in the freshman year while Physics II will fill the respective slot in the sophomore year.

Since CIT freshmen are not required to select a major, the above curriculum is based on the assumption that a potential CEE student is likely to select 12-100 as one of the two Introduction to Engineering courses in the freshman year. Otherwise, incoming sophomores should take 12-100 in the fall in lieu of Modern Chemistry or the H&SS elective.

#### Notes on Electives

1. One elective must be in the basic sciences, from the following list:
   - 03-121 Modern Biology
   - 12-201 Geology
   - Substitutions may be made only with the approval of the Department Head.
   - Students are encouraged to select a set of civil engineering and technical electives into specialty areas, together with representative course selections, are indicated below.

#### Specialty Areas in Civil Engineering

Students are encouraged to select a set of civil engineering and technical electives in the junior and senior years that enable them to concentrate in a specialty area if they so desire. Some available options for grouping electives in the junior and senior years that enable them to concentrate in a specialty area if they so desire. Some available options for grouping electives into specialty areas, together with representative course selections, are indicated below.

78 units

#### Minimum number of units required for degree:

1. One elective must be in the basic sciences, from the following list:
Double Majors and Minors

Civil engineering students may pursue double majors and minors in a variety of subjects, taking advantage of the free elective courses for other requirements. The College of Engineering has added designated minors to promote flexibility and diversity among engineering students. Many CEE undergraduates pursue designated minors in such areas as Global Engineering or Environmental Engineering and Sustainability.

Co-Operative Education Program

Students in civil engineering are encouraged to undertake professional internships during summer breaks. In addition, a formal cooperative internship program is available for either Jan-Aug or May-Dec in the junior year. Students undertaking these 8-month professional internships would ordinarily graduate after an additional semester of study. Program details are available from the Career Center or the Civil and Environmental Engineering office.

Integrated B.S./M.S. Program

Interested undergraduates may plan a course of study that leads to both the BS in Civil Engineering and the MS in Civil and Environmental Engineering. This course of study will ordinarily require ten semesters of study, although advanced placement or other study may reduce this time. Students can apply appropriate units earned as undergraduates for their MS program as long as they are beyond the 379 units required for the BS in Civil Engineering degree. In the ninth semester of study, students must register in graduate status. Interested students should consult their academic advisor or the CEE department office for information about admission to the MS program.

Faculty

AMIT ACHARYA, Professor of Civil and Environmental Engineering – Ph.D., University of Illinois at Urbana - Champaign; Carnegie Mellon, 2000–.
PETER ADAMS, Professor of Civil and Environmental Engineering and Engineering and Public Policy – Ph.D., California Institute of Technology; Carnegie Mellon, 2001–.
BURCU AKINCI, Paul P. Christiano Professor of Civil and Environmental Engineering – Ph.D., Stanford University; Carnegie Mellon, 2000–.
MARIO BERGES, Assistant Professor of Civil and Environmental Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2010–.
JACOBO BIELAK, Hamerschlag University Professor of Civil and Environmental Engineering – Ph.D., California Institute of Technology; Carnegie Mellon, 1978–.
LAWRENCE G. CARTWRIGHT, Professor Emeritus of Civil and Environmental Engineering and Director of the Civil Engineering Laboratories – M.S., Carnegie Mellon University; P.E.; Carnegie Mellon, 1977–.
JARED L. COHON, University Professor of Civil and Environmental Engineering and Engineering and Public Policy, President Emeritus, Carnegie Mellon University – Ph.D., Massachusetts Institute of Technology, P.E.; Carnegie Mellon, 1997–.
KAUSHIK DAVAL, Associate Professor of Civil and Environmental Engineering – Ph.D., California Institute of Technology; Carnegie Mellon, 2000–.
DAVID A. DZOMBAK, Department Head and Hamerschlag University Professor of Civil and Environmental Engineering – Ph.D., Massachusetts Institute of Technology, P.E.; Carnegie Mellon, 1989–.
JAMES H. GARRETT, JR., Dean, College of Engineering and Thomas Lord Professor, Civil and Environmental Engineering – Ph.D., Carnegie Mellon University, P.E.; Carnegie Mellon, 1990–.
KELVIN GREGORY, Associate Professor of Civil and Environmental Engineering – Ph.D., University of Iowa; Carnegie Mellon, 2006–.
CHRIS T. HENDRICKSON, Hamerschlag University Professor of Civil and Environmental Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1978–.
ATHANASIOS KARAMALIDIS, Assistant Research Professor of Civil and Environmental Engineering – Ph.D., Democritus University of Thrace; Carnegie Mellon, 2010–.
GREGORY LOWRY, Walter J. Blenko, Sr. Professor of Civil and Environmental Engineering – Ph.D., University of Illinois; Carnegie Mellon, 2002–.
H. SCOTT MATTHEWS, Professor of Civil and Environmental Engineering and Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2001–.
HAE YOUNG NOH, Assistant Professor of Civil and Environmental Engineering – Ph.D., Stanford University; Carnegie Mellon, 2013–.
IRVING J. OPPENHEIM, Professor of Civil and Environmental Engineering and Architecture – Ph.D., Cambridge University, P.E.; Carnegie Mellon, 1972–.
MATTEO POZZI, Assistant Professor of Civil and Environmental Engineering – Ph.D., University of Trento, Italy; Carnegie Mellon, 2012–.
MITCHELL J. SMALL, H. John Heinz Professor, Civil and Environmental Engineering and Engineering and Public Policy – Ph.D., University of Michigan; Carnegie Mellon, 1982–.
JAMES M. THOMPSON, Visiting Associate Teaching Professor – Ph.D., Lehigh University, P.E.; Carnegie Mellon, 2012–.
JEANNE VANBRIESEN, Duquesne Light Company Professor of Civil and Environmental Engineering – Ph.D., Northwestern University, P.E.; Carnegie Mellon, 1999–.

Susan Finger, Professor of Civil and Environmental Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1989–.
Department of Electrical and Computer Engineering

Jelena Kovačević, Head
Diana Marculescu, Associate Head
http://www.ece.cmu.edu/

The field of electrical and computer engineering encompasses a remarkably diverse and fertile set of technological areas, including analog and digital electronics, computer architecture, computer-aided design and manufacturing of VLSI/ULSI circuits, intelligent robotic systems, computer-based control systems, telecommunications and computer networking, wireless communication systems, signal and information processing and multimedia systems, solid state physics and devices, microelectromechanical systems (MEMS), electromagnetic and electromechanical systems, data storage systems, embedded systems, distributed computing, mobile computing, real-time software, digital signal processing, and optical data processing. The extraordinary advances in the field during the last fifty years have impacted nearly every aspect of human activity. These advances have resulted not only in advanced computer systems but also in consumer products such as "smart" cars, programmable dishwashers and other home appliances, cell phones and mobile computing systems, video games, home security systems, advanced medical systems for imaging, diagnosis, testing and monitoring. Systems and products such as these serve to enhance our quality of life and have also served as the basis for significant economic activity. In short, the field of electrical and computer engineering has become central to society as we know it.

The Department of Electrical and Computer Engineering at Carnegie Mellon is actively engaged in education and research at the forefront of these new technologies. Because of the diverse and broad nature of the field and the significant growth in knowledge in each of its sub areas, it is no longer possible for any single individual to know all aspects of electrical and computer engineering. Nevertheless, it is important that all electrical and computer engineers have a solid knowledge of the fundamentals with sufficient depth and breadth. Society is placing increasing demands on our graduates to try their skills in new contexts. It is also placing increasing value on engineers who can cross traditional boundaries between disciplines, and who can intelligently evaluate the broader consequences of their actions. Our curriculum is designed to produce world-class engineers who can meet these challenges.

Educational Outcomes and Objectives

The B.S. in Electrical and Computer Engineering is a broad and highly flexible degree program structured to provide students with the smallest set of constraints consistent with a rich and comprehensive view of the profession. It is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. Students are encouraged and stimulated to explore multiple areas of theory and application. The Faculty of Electrical and Computer Engineering have adopted the following outcomes from ABET and have established the following objectives for the B.S. in Electrical and Computer Engineering curriculum:

Educational Outcomes

1. An ability to apply knowledge of mathematics, science and engineering.
2. An ability to design and conduct experiments, as well as to analyze and interpret data.
3. An ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability.
4. An ability to function in multi-disciplinary teams.
5. An ability to identify, formulate and solve engineering problems.
6. An understanding of professional and ethical responsibilities.
7. An ability to communicate effectively.
8. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context.
9. A recognition of the need for, and an ability to engage in life-long learning.
10. A knowledge of contemporary issues.
11. An ability to use the techniques, skills and modern engineering tools necessary for engineering practice.

ECE Education Objectives

The ECE program objectives are shown below. They represent our vision for what our students will be doing in their engineering careers five years after they have graduated. The principal behaviors we seek to foster in our students are expertise, innovation and leadership. Our graduates will be:

Experts
- They will solve problems by applying ECE fundamentals
- Their solutions will reflect depth of understanding in their sophistication.
- Their solutions will reflect breadth of understanding by drawing on multiple disciplines.

Innovators
- They will demonstrate creativity in their engineering practice.
- They will consider holistic systems-oriented approaches in their designs.
- They will think strategically in their planning and execution.

Leaders
- They will take initiative, and demonstrate resourcefulness.
- They will collaborate in multidisciplinary teams.
- They will be leaders in their organizations, their profession and in society.

Curriculum Overview

Minimum number of units required for degree: 379 units.

In addition to the Carnegie Institute of Technology general education and freshman year requirements (143 units), the B.S. in Electrical and Computer Engineering requires 15-122 Principles of Imperative Computation (10 units), Physics II (12 units), two math or science electives (18 units), a Probability and Statistics course (9 units), 109 units of Electrical and Computer Engineering coursework, and 2 math co-requisites (21 units). The remaining units needed to reach the 379 required to graduate are Free Electives (57 units).

Carnegie Mellon University
The Electrical and Computer Engineering coursework is divided into the categories of Core, Area Courses, Coverag, and Capstone Design. The Core consists of five courses (18-100 Introduction to Electrical and Computer Engineering, 18-220 Electronic Devices and Analog Circuits, 18-240 Structure and Design of Digital Systems, 18-213 Introduction to Computer Systems, and 18-290 Signals and Systems). There are also two math co-requisites (18-202 and 21-127) and Physics Ii that are required co-requisites for the core. These courses provide the fundamental knowledge base upon which all other electrical and computer engineering courses are built. 18-100 is generally taken during the freshman year, while the remaining courses in the Core are started in the sophomore year. The core courses are ideally completed by the end of the junior year (The department strongly recommends that students not take more than two core courses in the same semester. Although the core courses (and their co-requisites) may be taken in any order, students generally first take the course in their primary area of interest. This gives added flexibility later to course selection in related areas.

Students are also required to complete a seminar course during the fall semester of the sophomore year. This course, 18-200 Emerging Trends in Electrical and Computer Engineering, introduces students to the many areas within ECE and helps them decide which areas are of primary interest to them.

To satisfy the ECE Area Courses Requirement, at least two Area courses must be completed from one of the following five principal areas in ECE (24 units):

- **Device Sciences and Nanofabrication**: Solid State Physics, Electromagnetic Fields and Waves, Magnetics, Optics, etc.;
- **Signals and Systems**: Digital Signal Processing, Communication Systems, Control Systems, etc.;
- **Circuits**: Analog and Digital Circuits, Integrated Circuit Design, etc.;
- **Computer Hardware**: Logic Design, Computer Architecture, Networks, etc.; and
- **Computer Software**: Programming, Data Structures, Compilers, Operating Systems, etc.

One additional course from a second area must be taken (12 units)

For Coverage any additional ECE course(s) can be taken or an approved Computer Science course (see the ECE website for the list of approved Computer Science courses) totaling at least 12 units.

Finally, all students are required to take a Capstone Design course. In the Capstone Design courses, numbered 18-5XX, students participate in a semester-long design project with teams of other students. Students learn project management skills, make oral presentations, write reports, and discuss the broader social and ethical dimensions of ECE. Current Capstone Design courses are listed on the ECE Department website (http://www.ece.cmu.edu/undergraduate/guide/details-capstone.html).

B.S. Curriculum

**Minimum number of units required for degree: 379**

For detailed information and regulations of the curriculum along with the most recent version of the ECE curriculum primer and course descriptions, please refer to the ECE Home Page: http://www.ece.cmu.edu/

University Requirement

99-101 Computing @ Carnegie Mellon 3

or 99-102 Computing @ Carnegie Mellon

CIT Requirements (see CIT section of the catalog for specifics (p. 113)):

- CIT General Education 72
- Two semesters of calculus 20
- 33-106 Physics I for Engineering Students 1 12
- One other introductory engineering course (generally taken during the freshman year) 12

1/33-106/107 is the recommended sequence for engineering students, although 33-111/112 or 33-131/132 would also meet the CIT Physics requirement.

Specific ECE requirements:

- One Introduction to Electrical and Computer Engineering course (generally taken during the freshman year)

Other ECE Requirements:

- 15-112 Fundamentals of Programming and Computer Science | 12 |
- 15-122 Principles of Imperative Computation | 10 |
- Two Math/Science electives | 18 |
- 36-217 Probability Theory and Random Processes or 36-225 Introduction to Probability Theory | 9 |
- Free Electives | 18 |

The math/science requirement can be satisfied with any course from The Mellon College of Science or The Department of Statistics except for 100-level courses in Mathematics or Statistics, and courses designed for non-science or engineering majors, such as (but not limited to) 09-103, 09-104, 21-257, 33-124, 36-201, 36-202, 36-207 or 36-208. Although shown in the Fall of the Junior and Senior years, these courses may be taken at any time. Mathematics courses of particular interest to students in ECE are:

- 21-228 Discrete Mathematics | 9 |
- 21-241 Matrices and Linear Transformations | 10 |
- 21-259 Calculus in Three Dimensions | 9 |
- 21-260 Differential Equations | 9 |

[56 units]Free Electives

A Free Elective is defined as any graded course offered by any academic unit of the university (including research institutes such as the Robotics Institute (http://www.ri.cmu.edu) and the Software Engineering Institute (http://www.sei.cmu.edu)). A total of at least 60 units of Free Electives must be taken.

Up to 9 units of ROTC and Physical Education courses or other courses taken as Pass/Fail may also be used toward Free Electives.

Transfer of courses from other high-quality universities may be accepted through submission of the Transfer Credit Request form on the CIT web page (http://www.cit.cmu.edu/current_students/services/transfer_credit.html).

The large number of units without categorical constraints provides the student, in consultation with their Faculty Advisor or Mentor, with the flexibility to design a rich educational program.

Notes on the Curriculum

Policy on ECE Coverage Courses with Fewer than 12 Units

The basic curriculum requirements for Breadth, Depth, Coverage and Capstone Design are stated in terms of courses rather than units. The nominal total of 60 units for these categories is determined by assuming that each course is 12 units. In the event that courses with fewer than 12 units are used to satisfy some or all of these requirements, additional courses from the ECE coverage lists must be taken until the total units in ECE courses beyond the core meets or exceeds 60 units. Any ECE coverage course is acceptable, and any excess units may be counted as free elective credit.

QPA Requirement and Overload Policy

An overload is defined as any schedule with more than 54 units in one semester. A student will only be permitted to overload by 12 units if he or she achieved a QPA of at least 3.5 out of 4.0 in the previous semester he or she is registering for, or if his or her overall QPA is at least a 3.5.

Pass/Fail policy

Up to 9 units of ROTC and Physical Education courses or other courses taken as Pass/Fail may be used toward Free Electives. ECE core courses may not be taken as pass/fail. ECE project-based courses (including capstone design courses) may not be taken pass/fail. No ECE requirements may be fulfilled using a pass/fail course (except for 99-10x and 18-200).

Other Graduation Requirements

To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative QPA to fall below 2.0, this requirement is modified to be a cumulative QPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student’s final transcript will be calculated based on all grades in all courses taken, including freshman year. Students are encouraged to confirm all graduation requirements with their academic advisor.

CIT has the following requirement for graduation. “Students must complete the requirements for their specified degrees with a cumulative quality point average of 2.00 or higher for all courses taken after the freshman year (this is the CIT QPA on the Academic Audit). In addition, a student is expected to achieve a cumulative quality point average of 2.00 in a series of core departmental courses.” In ECE, this means that the student must complete 18-100 Introduction to Electrical and Computer Engineering, ECE Core, Area Courses, Coverage, and Capstone Design courses with a minimum QPA of 2.0 to graduate. When more than one possibility exists for meeting a specific requirement (e.g., Area Course), the courses used for calculating the ECE QPA will be chosen so as to maximize the QPA. Similarly, when an ECE course is retaken, the better grade will be used in the computation of the minimum QPA for the ECE QPA requirement.

Other Opportunities in ECE

ECE Cooperative Education Program

The ECE Co-Op is a unique 8-month contiguous extended internship experience in which ECE students with a minimum QPA of 3.0 may opt to participate in. Students typically engage in this option in the spring semester of their junior year, from January through August. A May through December option is also available. Students who engage in this program typically graduate in 4.5 academic years (but still eight semesters). Eligible students interested in participating should contact their advisor in the ECE Undergraduate and Graduate Programs Office. Students are required to submit a formal application consisting of a transcript, a resume, and a one-page statement explaining why they would like to undertake an academic plan. Students then work with the Career Center to find a Co-op position. Once a Co-op position is found, a Co-op job description is required from the employer, to be approved by the ECE Undergraduate Office.

While on the Co-op assignment, the students are participating in a recognized CIT educational program, retaining their full-time student status, akin to our students who study abroad in established exchange programs (such as NCTU or EPFL) for one or two semesters.

Upon returning to Carnegie Mellon, the students are required to submit for approval the following two documents to the ECE Undergraduate Office: a three to five page technical report of the Co-op work, and a one page assessment and evaluation of the Co-op experience.

Students may obtain more detailed information through the department, the Career Center in the University Center, or online at http://www.ece.cmu.edu/undergrad/ Integrated M.S./B.S. Degrees Program

The Integrated Master’s/Bachelor’s program (otherwise known as the IMB program) is an exciting opportunity for students who excel academically to achieve not just a Bachelor’s degree in ECE, but also a Master’s degree through our Professional MS degree program-without needing to apply separately. This means no application fee, and no need to take the GRE (Graduate Record Exam). In order to be awarded the MS degree in the IMB program, the student must also earn their BS degree, either simultaneously with the MS degree or in a semester prior to the awarding of the MS degree. If a course is eligible for the MS degree but must be used to complete the BS degree, the BS degree takes priority over the MS degree.

If a student is at least a 2nd semester junior, has completed at least 270 units and has at least an overall 3.00 QPA, he or she is guaranteed admission into the Professional MS degree in ECE through the IMB program. To be officially admitted, the student must complete the IMB Program form. If a student does not meet the exact overall 3.00 QPA requirement, he or she is eligible to petition for his or her admission into the IMB program during his or her senior year. Students may obtain the petition forms through a meeting with the assigned academic advisor.

Professional MS Degree Requirements:

Please see the ECE web site for the requirements for the Professional MS degree (http://www.ece.cmu.edu/graduate/masters). For students in the ECE IMB program, all requirements for the Professional MS degree are in addition to the requirements for the BS in ECE. No requirements for the MS degree may be used in any way toward the BS degree, including minors, additional majors or dual degrees.

Residency requirements and financial impacts:

Once a student in the IMB program has completed all of the requirements for the BS degree, he or she may become a graduate (Masters) student. To do this, the student’s undergraduate degree is certified, and that student officially graduates with the BS degree. Once a student’s undergraduate degree has been certified, no more courses may then be applied toward the BS degree. This includes courses toward minors and additional majors, although students pursing an undergraduate dual degree with another department may still continue to apply additional coursework toward that second degree.

If a student takes more than 8 semesters to complete both the BS and MS degrees, then he or she must be a graduate student for at least one semester before graduating.
To determine the most appropriate time for an undergraduate student to become a graduate student, he or she should consult with Enrollment Services to understand how becoming a graduate student will affect financial aid, and with his or her academic advisor to determine a course schedule. When a student is a graduate student through the IMB program, the department is able to provide some financial assistance through Teaching Assistantships. Please see the ECE web site for further information regarding this financial assistance.

Faculty

DAVID ANDERSEN, Adjunct Professor of Electrical and Computer Engineering.

JAMES ANTAKI, Professor of Biomedical Engineering, Courtesy Professor of Electrical and Computer Engineering; Associate Professor of Bioengineering and Surgery at the University of Pittsburgh – Ph.D., University of Pittsburgh; Carnegie Mellon, 2014–.

JIM BAIN, Professor of Electrical and Computer Engineering and Materials Science Engineering; Associate Director, Data Storage Systems Center – Ph.D., Stanford University; Carnegie Mellon, 1995–.

NIKHL BALRAM, Adjunct Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2014–.

LUJO BAUER, Adjunct Research Professor of CyLab and Electrical and Computer Engineering – Ph.D., Princeton University; Carnegie Mellon, 2005–.

VIJAYAKUMAR BHAGAVATULA, Associate Dean for Graduate and Faculty Affairs of the College of Engineering; Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1982–.

RONALD P. BIANCHINI, Adjunct Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2005–.

SHAWN BLANTON, Professor of Electrical and Computer Engineering; Director of the Center for Silicon System Implementaton – Ph.D., University of Michigan, Ann Arbor; Carnegie Mellon, 1995–.

TIMOTHY X. BROWN, Visiting Professor of Electrical and Computer Engineering and Energy Engineering at CMU Rwanda – PhD, California Institute of Technology.

DAVID BRUMLEY, Associate Professor of Electrical and Computer Engineering, Technical Director of CyLab – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2008–.

RANDAL E. BRYANT, Dean and University Professor of the School of Computer Science; Courtesy Professor of Electrical and Computer Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1984–.

L. RICHARD CARLEY, ST Microelectronics Professor of Electrical and Computer Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1984–.

DAVID P. CASASENT, Emeritus George Westinghouse Professor of Electrical and Computer Engineering – Ph.D., University of Illinois; Carnegie Mellon, 1969–.

TSUHAN CHEN, Adjunct Professor of Electrical and Computer Engineering; Professor of Electrical and Computer Engineering at Cornell University – Ph.D., California Institute of Technology; Carnegie Mellon, 1997–.

HOWIE CHOSET, Professor of the Robotics Institute; Courtesy Professor of Electrical and Computer Engineering – Ph.D., California Institute of Technology; Carnegie Mellon, 1996–.

NICOLAS CHRISTIN, Assistant Research Professor of Electrical and Computer Engineering and CyLab – Ph.D., University of Virginia; Carnegie Mellon, 2005–.

EDMUND M. CLARKE, Fore Systems University Professor of Computer Science; Courtesy Professor of Electrical and Computer Engineering – Ph.D., Cornell University; Carnegie Mellon, 1982–.

ANUPMAN DATTA, Associate Professor of Computer Science and Electrical and Computer Engineering; Assistant Research Professor of CyLab – Ph.D., Stanford University; Carnegie Mellon, 2007–.

ROBERT DAVIS, John and Claire Bertucci Distinguished Professor of Materials Science and Engineering; Courtesy Professor of Electrical and Computer Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2010–.

JOHN DOLAN, Principal Systems Scientist of The Robotics Institute; Courtesy Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–.

HAKAN ERODGUS, Associate Teaching Professor of Software Engineering at CMU Silicon Valley – Ph.D., Université du Québec; Carnegie Mellon, 2014–.

CHRISTOS FALOUTSOS, Professor of Computer Science and Electrical and Computer Engineering – Ph.D., University of Toronto; Carnegie Mellon, 1998–.

BABAK FALSafi, Adjunct Professor of Electrical and Computer Engineering and Computer Science; – Ph.D., University of Wisconsin, Madison; Carnegie Mellon, 2001–.

GARY FEDDER, Howard M. Wilkoff Professor of Electrical and Computer Engineering and Robotics; Director of ICES; Director of MEMS Laboratory – Ph.D., University of California at Berkeley; Carnegie Mellon, 1994–.

RANDY FEENSTRA, Professor of Physics and Electrical and Computer Engineering – Ph.D., California Institute of Technology; Carnegie Mellon, 1995–.

FRANZ FRANCHETTI, Associate Research Professor, Electrical and Computer Engineering – Ph.D., Vienna University of Technology; Carnegie Mellon, 2001–.

RAJEEV GANDHI, Systems Engineer, Electrical and Computer Engineering – Ph.D., University of California at Santa Barbara; Carnegie Mellon, 2003–.

GREGORY R. GANGER, Jatras Professor of Electrical and Computer Engineering Science; Director PDL – Ph.D., University of Michigan; Carnegie Mellon, 1997–.

AMINATA GARBA, Assistant Teaching Professor of Electrical and Computer Engineering at CMU Rwanda – Ph.D., McGill University; Carnegie Mellon, 2013–.

GARTH GIBSON, Professor of Computer Science and Electrical and Computer Engineering – Ph.D., University of California at Berkeley; Carnegie Mellon, 1991–.

PETER GILGUNN, Assistant Research Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2012–.

VIRGIL GLIGOR, Professor of Electrical and Computer Engineering; Co-Director, CyLab – Ph.D., University of California, Berkeley; Carnegie Mellon, 2008–.

SERGIO GOLDBEIN, Associate Professor of Computer Science and Electrical and Computer Engineering – Ph.D., University of California at Berkeley; Carnegie Mellon, 1995–.

DAVID W. GREVE, Professor of Electrical and Computer Engineering – Ph.D., Lehigh University; Carnegie Mellon, 1982–.

MARTIN GRISS, Professor of Electrical and Computer Engineering, Director of the Disaster Management Initiative — Carnegie Mellon Silicon Valley – Ph.D., University of Illinois; Carnegie Mellon, 2008–.

PULKIT GROVER, Assistant Professor – Ph.D., University of California at Berkeley; Carnegie Mellon, 2013–.

MOR HARCHOL-BALTER, Associate Professor of Computer Science and Electrical and Computer Engineering – Ph.D., University of California at Berkeley; Carnegie Mellon, 1999–.

FRED HIGGS, Assistant Professor of Electrical and Computer Engineering and Mechanical Engineering – Ph.D., Rensselaer Polytechnic Institute; Carnegie Mellon, 2003–.

ALEX HILLS, Professor of Electrical and Computer Engineering; Distinguished Service Professor of Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1992–.

JAMES F. HOBURG, Emeritus Professor of Electrical and Computer Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1975–.

JAMES HOE, Professor of Electrical and Computer Engineering and Computer Science; Associate Department Head, Electrical and Computer Engineering; Co – Director CALCM, ITRI Lab@CMU – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2000–.

RALPH HOLLIS, Research Professor Robotics and Electrical and Computer Engineering; Director, Microdynamics Systems Laboratory Carnegie – Ph.D., University of Colorado, Boulder; Carnegie Mellon, 1993–.

GABRIELA HUG, Assistant Professor, Electrical and Computer Engineering – Ph.D., ETH Zurich, Switzerland; Carnegie Mellon, 2009–.

MARIJA ILIC, Professor of Electrical and Computer Engineering and Engineering and Public Policy – D.Sc., Washington University; Carnegie Mellon, 2002–.
MOHAMMAD ISLAM, Assistant Professor of Chemical Engineering, Electrical and Computer Engineering and Materials Science Engineering – Ph.D., Lehigh University; Carnegie Mellon, 2008–.

COLLIN JACKSON, Assistant Research Professor of Electrical and Computer Engineering, CyLab and Information Networking Institute, Carnegie Mellon Silicon Valley – Ph.D., Stanford University; Carnegie Mellon, 2009–.

TAKEO KANADE, U.A. and Helen Whitaker Professor of Computer Science and Robotics, Professor of Electrical and Computer Engineering – Ph.D., Kyoto University; Carnegie Mellon, 1980–.

SOUMYA KAR, Assistant Research Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2011–.

PRADEEP KOHLA, Philip and Marsha Dowd Professor of Electrical and Computer Engineering and Robotics; Dean, Carnegie Institute of Technology; Co-Director, Carnegie Mellon CyLab – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1986–.

HYONG S. KIM, Drew D. Perkins (E’86) Professor of Electrical and Computer Engineering; Director, CyLab Korea – Ph.D., University of Toronto; Carnegie Mellon, 1990–.

PHILIP J. KOOPMAN, Associate Professor of Electrical and Computer Engineering and Computer Science – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1988–.

JELENA KOVACEVIC, Professor of Biomedical Engineering and Computer Engineering; Co-Director, Center for Bioimage Informatics – Ph.D., Columbia University; Carnegie Mellon, 2003–.

BRUCE H. KROGH, Professor of Electrical and Computer Engineering – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 1983–.

MARK H. KRYDER, University Professor of Electrical and Computer Engineering; Chief Technical Officer and Vice President of Research, Seagate (Retired) – Ph.D., California Institute of Technology; Carnegie Mellon, 1978–.

DAVID N. LAMBETH, Emeritus Professor of Electrical and Computer Engineering and Materials Science and Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1989–.

DAVE LAUGHLIN, ALCOA Professor of Materials Science Engineering; Professor of Electrical and Computer Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1974–.

XIN LI, Assistant Professor, Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2001–.

JASON LOHN, Associate Research Professor of Electrical and Computer Engineering; Senior Research Scientist, Carnegie Mellon Silicon Valley – Ph.D., University of Maryland, Carnegie Mellon, 2009–.

YI LOU, Assistant Professor of Electrical and Computer Engineering – Ph.D., Columbia University; Carnegie Mellon, 2005–.

KEN MAI, Assistant Professor of Electrical and Computer Engineering – Ph.D., Stanford University; Carnegie Mellon, 2003–.

WOJCIECH MALK, U.A. and Helen Whitaker Professor of Electrical and Computer Engineering – Ph.D., Polish Academy of Sciences, Warsaw; Carnegie Mellon, 1986–.

DIANA MARCULESCU, Professor of Electrical and Computer Engineering – Ph.D., University of Southern California; Carnegie Mellon, 2000–.

RADU MARCULESCU, Professor of Electrical and Computer Engineering – Ph.D., University of Southern California; Carnegie Mellon, 2000–.

ROY MAXION, Principle Systems Scientist Computer Science and Electrical and Computer Engineering – Ph.D., University of Colorado; Carnegie Mellon, 1984–.

TIMOTHY MCCOY, Adjunct Professor of Electrical and Computer Engineering; Director, Research and Development Converteam North America – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2008–.

M. GRANGER MORGAN, Professor of Electrical and Computer Engineering; Lord University Professor and Head, Department of Engineering and Public Policy; Professor, H.J. Heinz III School of Public Policy and Management – Ph.D., University of California, San Diego; Carnegie Mellon, 1974–.

JAMES MORRIS, Professor of Computer Science and Electrical and Computer Engineering; Dean, Carnegie Mellon Silicon Valley – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1982–.

JOSE M. F. MOURA, University Professor of Electrical and Computer Engineering; Professor of Biomedical Engineering – D.Sc., Massachusetts Institute of Technology; Carnegie Mellon, 1986–.

TODD MOWRY, Associate Professor of Computer Science and Electrical and Computer Engineering; Co-Director CALCM – Ph.D., Stanford University; Carnegie Mellon, 1997–.

TAMAL MUKHERJEE, Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1996–.

ONUR MUTLU, Assistant Professor of Electrical and Computer Engineering and Computer Science – Ph.D., University of Texas at Austin; Carnegie Mellon, 2009–.

WILLIAM NACE, Assistant Teaching Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2008–.

PRIYA NARASIMHAN, Associate Professor of Electrical and Computer Engineering – Ph.D., University of California at Santa Barbara; Carnegie Mellon, 2001–.

ROHIT NEGII, Professor of Electrical and Computer Engineering – Ph.D., Stanford University; Carnegie Mellon, 2000–.

CHARLES P. NEUMAN, Professor of Electrical and Computer Engineering – Ph.D., Harvard University; Carnegie Mellon, 1969–.

DAVID O’HALLORAN, Professor of Computer Science and Electrical and Computer Engineering; Director Intel Research, Pittsburgh – Ph.D., University of Virginia; Carnegie Mellon, 1989–.

JEYANANDH PARAMESH, Assistant Professor of Electrical and Computer Engineering – Ph.D., University of Washington; Carnegie Mellon, 2007–.

JON M. PEHA, Professor of Engineering and Public Policy and Electrical and Computer Engineering – Ph.D., Stanford University; Carnegie Mellon, 1991–.

CÉCILE PÉRAIRE, Assistant Teaching Professor at CMU Silicon Valley – Ph.D., École polytechnique fédérale de Lausanne; Carnegie Mellon, 2014–.

ADRIAN PERRIG, Professor of Electrical and Computer Engineering, Engineering and Public Policy and Computer Science; Technical Director, CyLab – Ph.D., Carnegie Mellon; Carnegie Mellon, 2002–.

GIANLUCA PIAZZA, Associate Professor – Ph.D., University of California at Berkeley; Carnegie Mellon, 2012–.

LAWRENCE T. PILEGGI, Tanoto Professor of Electrical and Computer Engineering; – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1996–.

MARKUS PÜSCHEL, Adjunct Professor – Ph.D., University of Karlsruhe; Carnegie Mellon, 1999–.

RAGUNATHAN RAJKUMAR, Professor of Electrical and Computer Engineering and computer Science; Co – Director - GM-CM CRL; Director , Real-Time and Multimedia Systems Laboratory, Ph.D., Carnegie Mellon University; Carnegie Mellon, 1992–.

DAVID RICKETTS, Assistant Professor of Electrical and Computer Engineering – Ph.D., Harvard University; Carnegie Mellon, 2006–.

GUSTAVO ROHDE, Assistant Professor of Biomedical Engineering and Electrical and Computer Engineering – Ph.D., University of Maryland; Carnegie Mellon, 2006–.

RONALD ROHRER, Emeritus Professor of Electrical and Computer Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2008–.

ANTHONY ROWE, Assistant Research Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2009–.

ROB A. RUTENBAR, Adjunct Professor of Electrical and Computer Engineering and Computer Science; Director, MARCO Focus Center for Circuit and System Solutions – Ph.D., University of Michigan; Carnegie Mellon, 2008–.

ASWIN SANKARANARAYANAN, Assistant Professor – Ph.D., University of Maryland; Carnegie Mellon, 2013–.

MADHAV SATYANARAYANAN, Carnegie Professor of Computer Science; Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1983–.

MARIOS SAVVIDES, Associate Research Professor; Director, CyLab Biometrics Center – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2005–.

TUVAH E. SCHLESINGER, David Edward Schramm Professor of Electrical and Computer Engineering; Head, Department of Electrical and Computer Engineering – Ph.D., Carnegie Institute of Technology; Carnegie Mellon, 1985–.

SRINIVASAN SESHA, Associate Professor of Computer Science and Electrical and Computer Engineering – Ph.D., University of California at Berkeley; Carnegie Mellon, 2000–.
DANIEL P. SI EWOREK, Buhl University Professor of Electrical and Computer Engineering and Computer Science; Director, Human Computer Interaction Institute – Ph.D., Stanford University; Carnegie Mellon, 1972–.

BRUNO SINOPOLI, Associate Professor of Electrical and Computer Engineering, Robotics Institute and Mechanical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2007–.

MARVIN A. SIRBU, Professor of Engineering and Public Policy, Electrical and Computer Engineering and Tepper School of Business – D.Sc., Massachusetts Institute of Technology; Carnegie Mellon, 1985–.

METIN SITTI, Associate Professor of Mechanical Engineering, Electrical and Computer Engineering and Robotics Institute – Ph.D., University of Toledo; Carnegie Mellon, 2002–.

ASIM SMAILAGIC, Research Professor of ICES and Electrical and Computer Engineering; Director, LINCS – Ph.D., University of Sarajevo and University of Edinburgh; Carnegie Mellon, 1992–.

DAWN SONG, Adjunct Professor of Electrical and Computer Engineering and Computer Science – Ph.D., University of California at Berkeley; Carnegie Mellon, 2002–.

DANIEL D. STANCIL, Adjunct Professor of Electrical and Computer Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1986–.

PETER STEENKISTE, Professor of Electrical and Computer Engineering and Computer Science – Ph.D., Stanford University; Carnegie Mellon, 1987–.

RICHARD M. STERN, JR., Professor of Electrical and Computer Engineering, Language Technologies Institute, Computer Science, and Biomedical Engineering; Lecturer, Music – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1977–.

ANDRZEJ J. STROJWAS, Keithley Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1983–.

THOMAS SULLIVAN, Associate Teaching Professor, Electrical and Computer Engineering; Lecturer, Music – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1996–.

PATRICK TAGUE, Assistant Research Professor of Electrical and Computer Engineering, CyLab and Information Networking Institute, Carnegie Mellon Silicon Valley – Ph.D., University of Washington; Carnegie Mellon, 2009–.

SAROSH N. TALUKDAR, Emeritus Professor of Electrical and Computer Engineering – Ph.D., Purdue University; Carnegie Mellon, 1974–.

DONALD E. THOMAS, JR., Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1977–.

OZAN TONGUZ, Professor of Electrical and Computer Engineering – Ph.D., Rutgers University; Carnegie Mellon, 2000–.

ELIAS TOWE, Professor of Electrical and Computer Engineering; Albert and Ethel Grobstein Memorial Professor of Materials Science and Engineering; Director, CNXT – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2001–.

TAHA SELIM USTUN, Assistant Professor of Electrical and Computer Engineering at CMU Rwanda – Ph.D., Victoria University; Carnegie Mellon, 2013–.

PAULO VERISSIMO, Adjunct Professor of Electrical and Computer Engineering and Professor of University of Lisboa, Portugal – Ph.D., IST of the Technical University of Lisboa; Carnegie Mellon, 2008–.

ANTHONY WASSERMAN, Professor of Software Engineering Practice, Carnegie Mellon Silicon Valley, Electrical and Computer Engineering – Ph.D., University of Wisconsin; Carnegie Mellon, 2008–.

JEFF WELDON, Assistant Professor of Electrical and Computer Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2011–.

ROBERT WHITE, Emeritus University Professor Emeritus of Electrical and Computer Engineering and Engineering and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1993–.

JEANNETTE WING, President’s Professor of Computer Science; Professor of Electrical and Computer Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1985–.

OSMAN YAĞAN, Assistant Research Professor of Electrical and Computer Engineering at CMU Silicon Valley – Ph.D., University of Maryland, College Park; Carnegie Mellon, 2013–.

ERIK YDSTIE, Professor of Chemical Engineering and Electrical and Computer Engineering – Ph.D., Imperial College, London; Carnegie Mellon, 1992–.

BYRON YU, Assistant Professor – Ph.D., Stanford University; Carnegie Mellon, 2009–.

HUI ZHANG, Professor of Computer Science and Electrical and Computer Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1995–.

PEI ZHANG, Assistant Research Professor of Software Engineering at CMU Silicon Valley, Electrical and Computer Engineering, Information Networking Institute and CyLab – Ph.D., Princeton University; Carnegie Mellon, 2008–.

JIA ZHANG, Associate Professor of Software Engineering at CMU Silicon Valley – Ph.D., University of Illinois, Chicago; Carnegie Mellon, 2014–.

JIAN-GANG ZHU, ABB Professor of Electrical and Computer Engineering; Director, DSSC.; Professor of Materials Science and Engineering and Physics – Ph.D., University of California, San Diego; Carnegie Mellon, 1997–.

JINGXI ZHU, Assistant Professor of the Joint Institute of Engineering; Visiting Professor of Electrical and Computer Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2014–.

Courtesy Appointment

BOB IANNUNCI, Associate Dean and Director of Silicon Valley Campus, Distinguished Service Professor – PhD, Massachusetts Institute of Technology.
Department of Engineering and Public Policy

Overview of the Undergraduate Programs in EPP

The undergraduate double major program in EPP combines the strong foundation in mathematics and physical sciences, and the development of engineering skills with a rigorous preparation in the analysis of social and political problems. The curriculum includes subject matter which is not part of traditional technical or social science curricula, but which contains elements of each. Students complete courses in four core areas: economics, statistics, decision-making, and communication. Breadth is achieved through EPP Technology-Policy elective courses. Finally, students apply their skills in a project preparatory course and two interdisciplinary problem-solving projects. Problem areas for these projects are chosen from local, state, and national situations, and include such topics as industrial automation and robotics, environmental control, telecommunication and computer technologies, product safety, and energy systems. Students from several CMU colleges enroll in these projects courses exposing EPP double majors to working in truly interdisciplinary situations. Examples of past project course topics (http://www.epp.cmu.edu/undergraduate/project_courses.html) and final reports are available.

Additional Major in Engineering and Public Policy

The EPP department offers an additional major in Engineering and Public Policy (EPP) with each of the five traditional engineering departments in the engineering college. The engineering double major leads to a fully accredited engineering degree that prepares students for traditional technical careers. EPP double major engineers are not educated to be a different kind of engineer. Rather, their education is intended to enable them to be better, more socially responsible engineers in the traditional technical fields.

Additional Major in Science, Technology, and Public Policy

Beginning in Fall 2014, we also offer an additional major in Science, Technology and Public Policy (STPP) for students outside of the engineering college who are earning a B.S. degree. This includes students in the Mellon College of Science, the School of Computer Science, and select majors in the Dietrich College. Similar to the additional major in Engineering and Public Policy, the additional major is meant to broaden the perspectives on a student’s primary major and provide additional skills for future careers.

Minor

The department also offers a minor in Technology and Policy for non-engineering majors. The Technology and Policy minor exposes students to issues at the interface of science, technology, and society, and how interdisciplinary approaches are needed to solve complex problems.

Career Options with EPP

Students who select the EPP double major graduate with a regular accredited engineering degree, and thus have all of the options for traditional technical careers as their single major classmates. A large portion of our double major students pursue traditional technical careers after graduation.

The advantage of the double major is the added set of skills and perspectives, which allow a graduate of the program to improve the quality, sensitivity, and social responsiveness of their work, and the work of their colleagues. Employers recognize these skills and often view graduates as more attractive for a traditional engineering position. Firms contact the EPP department every year to recruit EPP graduates because of their satisfaction with the knowledge and skills acquired by EPP students.

The double major also opens up a collection of other options that are not available to most technical graduates. These include jobs in policy analysis in federal, state, and local government or in public policy consulting firms. Alumni also pursue careers in companies to deal with issues like government regulation, environmental control, worker health and safety, product liability and safety, telecommunications policy, energy systems, and the social impact of large technological systems.

Students also choose to continue their formal education, doing graduate work in engineering, the social sciences, law, or interdisciplinary programs.

Faculty Advisors

Faculty in several departments serve as advisors and information resources to students selecting the EPP undergraduate programs. Given the interdisciplinary perspective of EPP, students may find that a faculty member outside their traditional major can provide support and guidance with EPP-related courses and career paths. The EPP Associate Department Head for Undergraduate Affairs is Deanna Matthews. Dr. Matthews can provide general academic advice and guidance for all EPP double majors. Other faculty affiliated with the undergraduate programs in EPP are:

- Civil Engineering: Peter Adams, Scott Matthews, Mitch Small
- Chemical Engineering: Meagan Mauter
- Computer Science: Lorrie Cranor
- Electrical and Computer Engineering: Marija Ilic, Marvin Sirbu
- Engineering and Public Policy: Ines Azevedo, Liz Casman, Erica Fuchs, Paulina Jaramillo, Deanna Matthews, Granger Morgan, Jon Peha
- Mechanical Engineering: Jeremy Michalet, Edward Rubin
- Material Science and Engineering: Jay Whitacre
- Social and Decision Sciences: Paul Fischbeck, Baruch Fischhoff

EPP Program Educational Objectives

Society needs engineers and scientists who understand how they impact the surrounding environment and it needs policy makers with more depth of technical expertise. EPP graduates help bridge this gap. Through required courses, carefully selected electives, and project activities, double major students in Engineering and Public Policy develop the perspectives and skills that enable students to understand and work at the interface between technology and society.

Together with the objectives of the traditional technical majors, the Engineering and Public Policy undergraduate program aims to produce graduates who:

- are leaders and innovators in their professions and communities,
- value and make use of the broader perspective and analysis skills acquired through their additional major experience on Engineering and Public Policy in the workplace and beyond.

EPP Student Outcomes

By the end of the combined B.S. programs in a traditional engineering program and the EPP program, students should have attained the following:

1. an ability to apply knowledge of mathematics, science, and engineering;
2. an ability to design and conduct experiments, as well as to analyze and interpret data;
Core Area Courses

73-100 Principles of Economics

Introductory Courses

19-101 Introduction to Engineering and Public Policy
19-201 EPP Sophomore Seminar

19-201 EPP Sophomore Seminar is required in addition to any corresponding seminar course in a student’s traditional degree program.

19-351 Applied Methods for Technology-Policy Analysis
76-270 Writing for the Professions
76-271 Introduction to Professional and Technical Writing
19-351 or 19-352 Technology and Policy Writing for Lay Audiences
19-351 or 19-352 EPP Projects
Three EPP Technology-Policy Electives

Course Requirements for the Additional Major in EPP

Students pursuing an additional major in EPP must complete three sets of requirements: courses for the EPP additional major, courses for their traditional disciplinary major, and general education courses. The student is referred to the relevant sections of this catalog for the required courses in the traditional disciplinary major. The EPP additional major is designed to be completed with a traditional disciplinary major in the standard four-year time frame. However, additional units or course work may be required. Some courses for the EPP additional major may also satisfy requirements for traditional disciplinary majors or for general education courses.

Technology-Policy Electives

- At least 3 courses of EPP Technology-Policy electives (24 units minimum)

EPP Technology-Policy Electives include courses that belong to three categories. First, EPP Technology-Policy Electives include courses that synthesize engineering analysis and social analysis perspectives and apply them to problems with substantial societal and technological components. Specific areas of interest for these courses are (1) energy, resources, and the environment, (2) risk assessment, (3) forensic engineering, (4) urban engineering, (5) information and communication technology, and (6) product engineering and design, among others. Second, EPP Technology-Policy Electives include courses that teach methods or analysis skills necessary for solving complex problems. Examples include mathematical or statistical courses related to optimization or estimation, or economics courses related to economic analysis. Finally, EPP Technology-Policy Electives include courses that provide technical background for policy relevant issues. These courses are fundamental for understanding our current engineering systems and how proposed changes can be implemented. Examples include courses on electricity systems, engine design, or atmospheric systems.

Qualifying courses for EPP Technology-Policy Electives are determined each semester. The majority of 19-xxx EPP departmental courses are considered EPP Technology-Policy Electives. Exceptions will be identified when the courses are offered. 19-301 and 19-351 are required courses for the EPP additional major and may not be used as EPP Technology-Policy electives. Courses from other departments also are acceptable as electives. Students should work with their advisors to define areas of concentration or a selection of breadth courses for the EPP Technology-Policy Electives.

Students are required to take at least three EPP Technology-Policy electives for a minimum of 24 units. Units may be added in any combination, but a maximum of one 3-unit course is permitted. Up to 9 units of research may be added with approval. Students may not use a required course from their traditional disciplinary major for these elective units. However, students may use an elective course from their traditional major requirements to meet the requirements of both their traditional engineering major and an EPP Technology-Policy elective, but the units for the course will not be double-counted toward units required for their degree. Some EPP Technology-Policy elective courses may fulfill requirements for CIT General Education categories (e.g., 19-411 Global Competitiveness: Firms, Nations and Technological Change is an I&I course), otherwise students use Free Elective units to complete this requirement.

Capstone Courses

- 19-351 Applied Methods for Technology-Policy Analysis
- 19-451 or 19-452 EPP Projects (taken twice)
The capstone courses synthesize the technical skills and knowledge from a student’s traditional major with the social science skills and broad perspective of the EPP major.

19-351 Applied Methods for Technology-Policy Analysis is a preparatory course for the EPP Projects. 19-351 may be completed as a co-requisite of 19-451/19-452 EPP Projects. The course fulfills CIT General Education free elective units.

19-451/19-452 EPP Projects are taken twice by all students. EPP Projects are technology/policy projects which deal with research and development of recommendations for solving actual and critical problems currently affecting society. The students, faculty, and graduate student managers for the project are drawn from EPP, Social and Decision Sciences, and the Heinz College, and other CMU departments, and hence bring different areas of expertise to the structuring and solution of the problem. The topics for EPP Projects are drawn from diverse areas such as environmental systems and resources, public transportation, urban engineering problems, energy and fuel utilization, the interaction of law and technology, strategic materials and vulnerability of supply, technical issues in national security, and problems in automation, robotics, and communication technology. Students use Free Elective units to complete this requirement.

The minimum number of units to complete a traditional engineering major plus the EPP additional major are listed below. In some cases, additional units beyond those required for the traditional major alone are required, or elective choices may result in additional units being taken.

Notes on EPP double major requirements

Students should follow the suggested curriculum timelines for completing the math, science, and engineering course requirements of the traditional major with the exception of 36-220 which should be taken as early as possible and no later than the end of sophomore year.

All students must complete 76-101 Interpretation and Argument. Some courses as noted above may be used to fulfill requirements of general education courses. Acceptable courses for the CIT General Education requirements are maintained by the CIT Dean’s Office. Students must submit a plan during their first semester as an EPP student (usually Fall sophomore year) for these general education courses demonstrating their relevance to EPP.

In addition to any other graduation requirements (e.g., regarding course work, minimum GPA, pass/fail course work, etc.) of the student’s traditional disciplinary major, students must earn a minimum GPA of 2.0 in all courses required for the EPP major.

Side-by-side curriculum charts (http://www.epp.cmu.edu/undergraduate/curriculumcharts.php) of the curricula for the traditional engineering majors alone versus the traditional engineering majors with the EPP double major can assist students in determining the course requirements and scheduling needed to complete the degree requirements.

A proposed semester plan is below. Students work with their faculty advisors to determine the best sequence of courses given the varied requirements in the traditional majors.

Course Requirements for the Additional Major in STPP

The requirements for the Science, Technology and Public Policy additional major are the same as those for the Engineering and Public Policy additional major. Similar to CIT-EPP students, some courses will fulfill some major requirements or "general education" requirements (e.g., 73-100 for Economics students, 15-221 for Computer science students, statistics course for most majors). Other courses will use students’ elective spaces or free elective units. Core courses required for a student’s major will not be allowed to double-count for Technology Policy electives, but elective courses can be selected that fulfill both major elective requirements and Technology Policy electives. Students pursuing the STPP additional major should work with their advisors to determine how best to fit the additional major requirements into their coursework.

Students may complete some of the introductory and core area courses as part of their primary major or General Education course requirements. Required courses in a primary major cannot be used to fulfill Technology-Policy electives; however, elective courses in a primary major may be able to fulfill Technology-Policy elective requirements as well.

### Fifth Year M.S. program in Engineering and Public Policy

Students affiliated with the department may apply for the fifth year masters program that will lead to the additional degree of Master of Science in Engineering and Public Policy. This course of study will ordinarily require two additional semesters of study beyond that required for the undergraduate degrees in the primary major and EPP double major. Some coursework towards the MS may be able to be completed during the student’s senior year, however no courses taken may count for both a BS in CIT and the MS in EPP. The primary concern for scheduling and completing this integrated program is completing the core courses in the EPP graduate program, as some of these courses are taught every other academic year only. Students interested in the program must have a minimum 3.0 QPA and should contact their advisor for details on the application process and course requirements.
Minor in Technology and Policy
The department also offers a minor in Technology and Policy to non-CIT majors. This minor allows students outside of engineering to sample the EPP requirements and develop exposure and awareness to issues at the interface of science, technology, and society. Details of this program are provided in the discussion of CIT minors; see Technology and Policy Minor Description (p. 124).

Bachelor of Science in Engineering and Public Policy and Master of Science in Public Policy and Management
Highly motivated and talented students can earn the EPP double major bachelor’s degree, and a master’s degree in the H. John Heinz College of Public Policy and Management in a five-year course of study. Students interested in the combined degree program should enroll in a standard double major program in an engineering specialty and EPP. During the third year of study, the student applies to the Heinz College for admission to the master’s program; an academic record of B average or better is normally a prerequisite for admittance.

The five-year course of study is possible because of specific course load overlaps between the EPP and Heinz College programs: (1) some social analysis requirements in EPP, usually four semester courses, can be satisfied with Heinz College common core courses in economics and social science; (2) at least one project course is common and applicable to both curriculums; (3) at least one additional EPP technical elective, engineering option, or project course will be accepted for Heinz College credit following the usual request to the master’s committee.

Students desiring this option should seek faculty advice and counsel in their freshman or sophomore year so that a curriculum satisfying all the degree requirements can be ensured. Contact the Associate Department Head for Undergraduate Affairs in EPP for more information. For general information on Heinz 3-1-1 programs please contact the Heinz College or refer to their undergraduate and graduate students. These “dual level” courses are offered in two formats:

• Some courses are taught under both an undergraduate and graduate number. An example is 19-402 Telecommunications Technology, Policy & Management. In these types of courses, students who sign up under the 700-level (graduate) course number may be expected to perform the same coursework at a higher level, and/or complete additional coursework, compared to 19-4XX students. Undergraduates who choose to take the course under the graduate number will be also be expected to work at the higher expectation coursework level.

• Other courses are taught under a 600 level number. An example is 19-608 Innovation for Energy and the Environment. These courses may be taken by undergraduates as a senior level course, or by graduate students as a graduate level course. As with dual number courses, graduate level students or undergraduates taking the course for graduate credit may be required to perform coursework at a higher level and/or complete additional coursework. Undergraduates who are taking a 600 level course for graduate credit should identify this fact to both the course instructor and to their EPP department advisor.

Students who have questions about the requirements of a specific EPP 400/700, or 600 level course, should contact the course instructor.

Other departments may have different policies regarding courses offered under both an undergraduate and graduate number, and courses offered under numbers other than the 100, 200, 300, 400, or 700 levels. Students who wish to take these courses should check with those departments for their specific policies.

Faculty
PETER ADAMS, Professor of Civil and Environmental Engineering / Engineering and Public Policy – Ph.D., Caltech; Carnegie Mellon, 2001–.
JAY APT, Professor of Technology of The Tepper School of Business / Engineering and Public Policy – Ph.D., MIT; Carnegie Mellon, 2000–.
V. S. ARUNACHALAM, Collaborating Professor of Engineering and Public Policy / Materials Science and Engineering / Robotics Institute – Ph.D., Wales D.Eng. (h.c.), Roorkee; Carnegie Mellon, 1992–.
INES LIMA AZEVEDO, Associate Professor of Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2009–.
MICHIEL BEZY, Distinguished Service Professor of Engineering and Public Policy; Associate Director, Carnegie Mellon University in Rwanda – Ph.D., Université Catholique de Louvain; Carnegie Mellon, 2011–.
ALFRED BLUMSTEIN, J. Erik Jonsson Professor of Urban Systems and Operations Research; Professor of The H. John Heinz III College / Engineering and Public Policy – Ph.D., Cornell University; Carnegie Mellon, 1969–.
SERGUEY BRAGUINSKY, Associate Professor of Social and Decision Sciences / Engineering and Public Policy – Ph.D., Cardiff University; Carnegie Mellon, 2008–.
TRAVIS BREAUX, Assistant Professor of Computer Science / Engineering and Public Policy – Ph.D., North Carolina State University; Carnegie Mellon, 2010–.
KATHLEEN M. CARLEY, Professor of the Institute of Software Research / Social and Decision Sciences / The H. John Heinz III College / Engineering and Public Policy – Ph.D., Harvard University; Carnegie Mellon, 1984–.
ELIZABETH CASMAN, Associate Research Professor of Engineering and Public Policy – Ph.D., The Johns Hopkins University; Carnegie Mellon, 1997–.
JARED L. COHON, University Professor of Civil and Environmental Engineering / Engineering and Public Policy / President Emeritus – Ph.D., MIT; Carnegie Mellon, 1997–.
LORRIE FAITH CRANOR, Professor of Computer Science / Engineering and Public Policy – D.Sc., Washington University in St. Louis; Carnegie Mellon, 2003–.
NEIL M. DONAHUE, Professor of Chemical Engineering / Chemistry / Engineering and Public Policy – Ph.D., MIT; Carnegie Mellon, 2000–.
PEDRO FERREIRA, Assistant Professor of The H. John Heinz III College / Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2007–.
PAUL S. FISCHBECK, Professor of Social and Decision Sciences / Engineering and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1990–.
BARUCH FISCHHOFF, Howard Heinz University Professor; Professor of Social and Decision Sciences / Engineering and Public Policy – Ph.D., Hebrew University; Carnegie Mellon, 1987–.
EDEN S. FISHER, Professor of the Practice of Engineering and Public Policy; Executive Director, MS Program in Engineering and Technology Innovation Management – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–.
ERICA R. H. FUCHS, Associate Professor of Engineering and Public Policy – Ph.D., MIT; Carnegie Mellon, 2007–.
MICHAEL GRIFFIN, Associate Research Professor of Engineering and Public Policy – Ph.D., University of Rhode Island; Carnegie Mellon, 2000–.
CHRISTOPHER T. HENDRICKSON, University and Duquesne Light Professor of Engineering; Professor of Civil and Environmental Engineering / Engineering and Public Policy – Ph.D., MIT; Carnegie Mellon, 1978–.
ALEX HILLS, Distinguished Service Professor of Electrical and Computer Engineering / Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1992–.
DAVID A. HOUSNSHELL, David M. Roderick Professor of Technology and Social Change; Professor of Social and Decision Sciences / Engineering and Public Policy – Ph.D., University of Delaware; Carnegie Mellon, 1991–.
GABRIELLA HUG, Assistant Professor of Electrical and Computer Engineering / Engineering and Public Policy – Ph.D, Swiss Federal Institute of Technology Zurich; Carnegie Mellon, 2009–.
MARIJA D. ILC, Professor of Electrical and Computer Engineering / Engineering and Public Policy – D.Sc., Washington University in St. Louis; Carnegie Mellon, 2002–.
PAULINA JARAMILLO, Assistant Professor of Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2008–.
RAMAYYA KRISHNAN, Dean of The H. John Heinz III College; William W. and Ruth F. Cooper Professor of Management Science and Information Systems; Professor of Engineering and Public Policy – Ph.D., University of Texas at Austin; Carnegie Mellon, 1987–.
DEANNA MATTHEWS, Assistant Teaching Professor of Engineering and Public Policy; Associate Department Head for Undergraduate Affairs – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2001–.
H. SCOTT MATTHEWS, Professor of Civil and Environmental Engineering / Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1999–.

MEAGAN MAUTER, Assistant Professor of Chemical Engineering / Engineering and Public Policy – Ph.D., Yale University; Carnegie Mellon, 2012–.

JEREMY J. MICHALEK, Professor of Mechanical Engineering / Engineering and Public Policy – Ph.D., University of Michigan; Carnegie Mellon, 2005–.

M. GRANGER MORGAN, University and Lord Chair Professor of Engineering; Professor of Engineering and Public Policy / Electrical and Computer Engineering / The H. John Heinz III College – Ph.D., University of California, San Diego; Carnegie Mellon, 1974–.

SPIROS N. PANDIS, Research Professor of Chemical Engineering / Engineering and Public Policy – Ph.D., California Institute of Technology; Carnegie Mellon, 1993–.

JON M. PEHA, Professor of Engineering and Public Policy / Electrical and Computer Engineering – Ph.D., Stanford University; Carnegie Mellon, 1991–.

ALLEN ROBINSON, Raymond J. Lane Distinguished Professor; Head of Mechanical Engineering; Professor of Mechanical Engineering / Engineering and Public Policy – Ph.D., University of California, Berkeley; Carnegie Mellon, 1998–.

EDWARD S. RUBIN, Alumni Chair Professor of Environmental Engineering and Science; Professor of Engineering and Public Policy / Mechanical Engineering – Ph.D., Stanford University; Carnegie Mellon, 1969–.

DOUGLAS SICKER, Head of Engineering and Public Policy; Professor of Engineering and Public Policy / Computer Science – Ph.D., University of Pittsburgh; Carnegie Mellon, 2014–.

JEFFREY J. SIIROLA, Distinguished Service Professor of Sustainable Energy Systems, Chemical Engineering / Engineering and Public Policy – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2011–.

MARVIN A. SIRBU, Professor of Engineering and Public Policy / Industrial Administration / Electrical and Computer Engineering – Sc.D., MIT; Carnegie Mellon, 1985–.

MITCHELL J. SMALL, The H. John Heinz III Professor of Environmental Engineering; Professor of Civil and Environmental Engineering / Engineering and Public Policy; Associate Department Head for Graduate Affairs – Ph.D., University of Michigan; Carnegie Mellon, 1982–.

DEBORAH STINE, Professor of the Practice of Engineering and Public Policy – Ph.D., American University; Carnegie Mellon, 2012–.

ESWARAN SUBRAHMANIAN, Research Professor of Institute for Complex Systems / Engineering and Public Policy – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1994–.

SUBRA SURESH, President of Carnegie Mellon University; Professor of Materials Science and Engineering / Engineering and Public Policy / Biomedical Engineering / Public Policy and Management – Ph.D., MIT; Carnegie Mellon, 2013–.

JOEL A. TARR, Richard S. Caliguiri Professor of Urban and Environmental History and Policy; Professor of History / Engineering and Public Policy / The H. John Heinz III College – Ph.D., Northwestern University; Carnegie Mellon, 1967–.

JAY WHITACRE, Associate Professor of Materials Science and Engineering / Engineering and Public Policy – Ph.D., University of Michigan; Carnegie Mellon, 2007–.

HAIBO ZHAI, Assistant Research Professor of Engineering and Public Policy – Ph.D., North Carolina State University; Carnegie Mellon, 2008–.

Emeriti Faculty

TUNG AU, University Professor of Civil and Environmental Engineering / Engineering and Public Policy, Emeritus – Ph.D., University of Illinois; Carnegie Mellon, 1957–.

JAMES GOODBY, Distinguished Service Professor, Emeritus – A.B., Harvard; Carnegie Mellon, 1989–.

FRANCIS MCMICHAEL, Walter J. Blenko, Senior Professor of Environmental Engineering; Professor of Civil and Environmental Engineering / Engineering and Public Policy, Emeritus – Ph.D., California Institute of Technology; Carnegie Mellon, 1967–.

BENOÎT MOREL, Associate Teaching Professor of Engineering and Public Policy / Physics, Emeritus – Ph.D., University of Geneva; Carnegie Mellon, 1987–.
Department of Mechanical Engineering

Allen Robinson, Raymond J. Lane Distinguished Professor and Department Head
Scaife Hall 401
http://www.cmu.edu/me

General Overview

Mechanical engineers design, analyze, and manufacture new products and technologies. They address society’s needs by combining mechanical engineering fundamentals with innovative ideas. We structure our curriculum by emphasizing engineering theory, hands-on experience and technical skills. By doing so, our students learn how to solve practical problems and analyze situations by converting concepts into reliable and cost-effective devices and processes.

Mechanical engineers work in a variety of sectors: small start-up companies, multi-national corporations, government agencies, national laboratories, consulting firms, and universities. Specializing in research, design, manufacturing, or management, they design and implement devices that affect our daily lives. For example:
- Jet Engines
- Automobiles
- Aircraft and Spacecraft
- Acceleration and Pressure Sensors
- Heating, Ventilating, and Air Conditioning Systems
- Power Generations Systems
- Biomedical and Biomechanical Devices (such as artificial hip implants)
- Mechanical and Electronic Systems (such as robots)

Through our curriculum, students receive a solid scientific foundation from the start. During their first year, students take courses in mathematics, physics, computer programming, and chemistry. In addition, students also take two introductory engineering courses which expose them to the different engineering departments. Our mechanical engineering introductory course is project-oriented; students learn about the various disciplines of mechanical engineering through lectures, laboratories, and hands-on projects.

In their sophomore and junior years, students take core engineering courses to develop strong engineering fundamentals. These course topics include:
- Solid and Fluid Mechanics
- Thermodynamics
- Heat Transfer
- Dynamics
- Systems and Controls
- Design Methods and Skills
- Experimentation and Numerical Methods

During their senior year, students complete a capstone course in engineering design. In this course, students work on teams to develop prototype hardware for new products. These projects expose students to the design process, from concept to product, and emphasize effective communication and presentations skills. Past design projects include:
- low-squeal disk brakes
- high efficiency engines
- neck gear to minimize spinal injury in sports
- stabilizer support arm for movie cameras

Additionally, students can utilize our flexible elective structure to pursue individual interests. We recognize the broad role mechanical engineers play in society—as leaders in business, government, and law. Therefore, we offer elective options that enable students to:
- begin taking elective courses during their junior year
- specialize in a particular area of mechanical engineering
- emphasize a technical area within another engineering or science department
- pursue interests in another Carnegie Mellon department (such as foreign language, design, music, or business) to earn a double major or minor

We offer advanced courses that students can choose as electives, depending on their interests. Electives include:
- energy conversion
- controls
- vibrations
- dynamics
- manufacturing
- robotics
- internal combustion engines
- mechatronics
- fluid and solid mechanics
- aerodynamics
- engineering design

As mentioned, students can also take technical and non-technical electives from other Carnegie Mellon departments. Students can use these courses to pursue a double major or minor, or develop an individual concentration with a faculty advisor.

Students can also tailor their undergraduate experiences through study abroad, research, or the Accelerated Graduate Program. In today's global society, a study abroad experience is crucial and should serve as an integral part of an undergraduate engineering education, including a possible college International Engineering minor. An academic experience abroad is encouraged and assistance provided for course choices, but students may also participate in research, complete an internship, or partake in an international service-learning engineering (ISLE) project abroad. Exceptional students are eligible to participate in departmental or college senior honors research under faculty supervision, which students find enriching. In the Accelerated Graduate program, students take graduate courses during their senior year, accumulating credit toward their Master’s degrees. Students can then complete all the requirements for the M.S. degree (course-work option) in the summer and fall following their B.S. degree.

Students use the latest computer-based design and analysis methods for their courses and project work, including industry-standard design tools aided by computers. We provide an undergraduate computer lab where students can complete design work, structural analyses, thermal/flow finite element analyses, and dynamic system simulations. Using computer tools, students can visualize a product’s performance before they fabricate it.

We also provide students with a variety of resources including MIG welding, rapid prototyping, and a fully equipped student shop (includes lathes, drill presses, milling machines, band saws, and other hand and power tools). Our Thermal Fluids and Mechanical Systems laboratories contain state-of-the-art experimentation hardware and software.

Our faculty performs research sponsored by industry and government agencies. Faculty often use their research results as specific examples, case studies, and projects in undergraduate courses, allowing students to see firsthand the recent advances in mechanical engineering.

We also sponsor frequent seminars and invite nationally and internationally reputed speakers to give lectures. We encourage all students to attend these seminars to learn about broad perspectives on mechanical engineering.

You can find additional information about the Mechanical Engineering program on our website, http://www.cmu.edu/me/. Additionally, we describe our resources and policies in more detail in our Undergraduate Student Handbook, available online.

Educational Objectives

According to ABET (http://www.abet.org/) which evaluates applied science, computing, engineering and technology programs for accreditation, "program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation." In view of this definition, the Mechanical Engineering program at Carnegie Mellon has the two following program educational objectives:

- Graduates distinguish themselves as innovative problem solvers and leaders in multidisciplinary settings, making use of a high quality and rigorous technical education that is enriched by a flexible curriculum and interdisciplinary research opportunities.
- Graduates excel in diverse career paths or either the engineering profession or an alternative field, or succeed in graduate studies.

The undergraduate curriculum in the Department of Mechanical Engineering offers students significant opportunities to pursue directions of personal
interest, including minors, double majors, participation in research projects, and study abroad. Design and teamwork experiences occur at regular intervals in the curriculum, and graduates have significant hands-on experience through laboratories and projects. The faculty of the Department has endorsed the following set of skills, or outcomes that graduates of the program are expected to have:

A. an ability to apply knowledge of mathematics, science, and engineering
B. an ability to design and conduct experiments, as well as to analyze and interpret data
C. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
D. an ability to function on multidisciplinary teams
E. an ability to identify, formulate, and solve engineering problem
F. an understanding of professional and ethical responsibility
G. an ability to communicate effectively
H. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
I. a recognition of the need for, and an ability to engage in lifelong learning
J. a knowledge of contemporary issues
K. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

Curriculum

The following template outlines the four-year B.S. program through the standard and recommended course sequence. To ensure that prerequisites are completed and to prevent scheduling conflicts, students should discuss any changes to this sequence with the department academic advisor.

Freshman Year

Notes on the Curriculum

1. Students need a minimum of 382 units to complete the B.S. degree.
2. During the first year, students complete 24-101 Fundamentals of Mechanical Engineering and another introductory engineering course. If students did not take 24-101 during their first year, they should take 24-101 during their fall semester of their sophomore year in place of the General Education Course. They can then replace that General Education Course in their junior or senior years.
3. Students must pass the following three courses before they begin the core Mechanical Engineering courses in the fall of their sophomore year: 21-120 Differential and Integral Calculus (10 units) 24-122 Integration and Approximation (10 units) 33-106 Physics I for Engineering Students (12 units)* 33-106/33-107 is the recommended sequence for engineering students, although 33-111/33-112 or 33-131/33-132 would also meet the CIT Physics requirement.

Mechanical engineering undergraduates must satisfy a Science Laboratory requirement to graduate. Normally the Science Laboratory requirement is satisfied by passing 09-101 Introduction to Experimental Chemistry (3 units). Students can also satisfy the Science Laboratory requirement by passing one of the following courses:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>03-124</td>
<td>9</td>
</tr>
<tr>
<td>33-100</td>
<td>6</td>
</tr>
</tbody>
</table>
These courses may have prerequisites and tight enrollment limits that students should consider in their planning.

4. Students are required to complete 36-220 Engineering Statistics and Quality Control, which may be scheduled in any semester. The sequence of calculus courses (21-129, 21-122, 21-259) and 21-260 Differential Equations should be scheduled as indicated, due to Mechanical Engineering Core class prerequisites.

5. The communications requirement can be satisfied by completing at least one of the following options:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>24-302 Mechanical Engineering Seminar I</td>
<td>2</td>
</tr>
<tr>
<td>spring</td>
<td></td>
</tr>
<tr>
<td>70-340 Business Communications</td>
<td>9</td>
</tr>
<tr>
<td>76-270 Writing for the Professions</td>
<td>9</td>
</tr>
</tbody>
</table>

6. Students must enroll in 24-452 Mechanical Systems Experimentation in the fall of their senior year.

7. 24-441 Engineering Design II: Conceptualization and Realization may be taken in either fall or spring of senior year.

**Restricted Technical Electives**

Students should have the following courses completed by the end of their sophomore year. These courses are listed as “Restricted Technical Electives” in the example course sequence. Students have some flexibility in how they sequence these courses during their freshman and sophomore years:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>33-107 Physics II for Engineering Students</td>
<td>12</td>
</tr>
<tr>
<td>09-101 Introduction to Experimental Chemistry</td>
<td>3</td>
</tr>
<tr>
<td>09-105 Introduction to Modern Chemistry I</td>
<td>10</td>
</tr>
<tr>
<td>15-110 Principles of Computing</td>
<td>10</td>
</tr>
</tbody>
</table>

**Mechanical Engineering Technical Electives**

We require students to take at least one elective labeled as “Mechanical Engineering Technical Elective” in the example course sequence. Students must take at least one non-core 24-xxx course (9-unit minimum) to fulfill the technical elective requirement. Options include:

**Design and Manufacturing**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>24-341 Manufacturing Sciences</td>
<td>9</td>
</tr>
<tr>
<td>24-674 Design of Biomechatronic Systems for Humans</td>
<td>12</td>
</tr>
<tr>
<td>24-681 Computer-Aided Design</td>
<td>12</td>
</tr>
<tr>
<td>24-682 Computer-Aided Engineering</td>
<td>12</td>
</tr>
<tr>
<td>24-683 Design for Manufacture and the Environment</td>
<td>12</td>
</tr>
<tr>
<td>24-688 Introduction to CAD and CAE Tools</td>
<td>12</td>
</tr>
</tbody>
</table>

**Mechanical Systems**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>

<tr>
<td>24-615 Microfluidics</td>
<td>12</td>
</tr>
<tr>
<td>24-616 Tribology-Friction, Lubrication and Wear</td>
<td>12</td>
</tr>
<tr>
<td>24-623 Molecular Simulation of Materials</td>
<td>12</td>
</tr>
<tr>
<td>24-642 Fuel Cell Systems</td>
<td>12</td>
</tr>
</tbody>
</table>

Students can also take certain mechanical engineering graduate courses to fulfill the technical elective requirement. However, students must have the appropriate prerequisites and the instructor must approve taking the course. Students can find a list of graduate courses we offer on our website.

Students cannot use the research or project courses to fulfill the technical elective requirement. However, they can use these courses to fill the remaining five elective slots. Courses that do not fulfill the technical elective requirements are:

24-391/24-392 Mechanical Engineering Project
24-491/492 Department Research Honors
39-xxx CIT series courses

**Electives**

Students must complete five elective courses, as indicated in the example course sequence. Students can take either technical or non-technical courses to fill these five slots from either the mechanical engineering department, College of Engineering, or any other Carnegie Mellon department. However, students may only use one elective slot for a physical education course or for ROTC. We offer these electives so students can pursue individual interests or obtain a minor or double major.

**Constructing a Program of Study**

In order to properly plan their course sequence, students should select their six elective courses with the department academic advisor. If students are pursuing minors, double majors, or double degrees, they should choose electives that meet requirements of these programs. We provide more information on selecting courses and electives in the Undergraduate Student Handbook. We offer the following options to students for tailoring our program to fit their needs and interests.

**Specialization Within Mechanical Engineering**

Students can specialize in a specific area by taking additional mechanical engineering electives beyond the one required technical elective. Students can choose courses from the Mechanical Engineering Technical Electives list or take approved mechanical engineering graduate courses.

**Research and Independent Study Projects**

Students can work on a design or research project if supervised and coordinated by a faculty advisor. Interested students should contact faculty members to identify potential projects of mutual interest. Projects generally involve lab, analytical, field, design or computer work.

Students complete projects and research by taking either or both of the following courses for their electives. As previously mentioned, students cannot use these courses to fulfill the technical elective requirement.

24-391/392 Mechanical Engineering Project
24-491/492 Department Research Honors

*Students enrolled in 24-391/392 do not have an additional QPA (quality point average) requirement for this course.

Qualified students enrolled in 24-491/492 are recognized at commencement. To graduate with research honors, students must have a QPA of 3.2 or higher, complete 18 units of 24-491/492 with at least at least a "B" grade, and submit an approved thesis to their faculty research advisor.

Students who complete all requirements for CIT Honors Research will also graduate with research honors. These students must complete 18 units of (39-500) CIT Honors Research under the supervision of a mechanical engineering faculty member.

**Developing a Concentration of Interdisciplinary Studies**

Students can also take courses outside of mechanical engineering to fill elective slots. Usually students select courses around a common theme; although courses span several departments, students choose courses to form a specific concentration. Students can either construct an informal program of study based on their interests or they can pursue a minor or double major using these courses.

**Pursuing a Minor or Double Major**

The College of Engineering offers designated minors for students wishing to specialize in an engineering area. Students can find a list of minors on the CIT website (www.cit.cmu.edu). Students can generally complete a designated minor without increasing the number of units required for graduation, but they should plan early in order to complete a minor on time.

Students can also complete a double major within the College of Engineering. Students can earn double majors in Mechanical Engineering...
and Engineering and Public Policy, or Mechanical Engineering and Biomedical Engineering.

Additionally, students can pursue minors or double majors with other Carnegie Mellon departments. Interested students should contact the main department of the minor/double major they seek to learn the requirements for that program.

**Advising**

The department academic advisors are assigned initially to all new students and will continue to assist with any curriculum questions and registration issues until they graduate.

The department academic advisors will:

- Verify progress toward degree requirements
- Discuss course alternatives for CIT requirements and electives
- Register research credit
- Assist with pre-requisite waivers
- Offer basic information regarding double major/minors, study abroad procedures, etc
- Explain summer transfer credit policies

Faculty mentors will:

- Explain technical content of coursework
- Suggest appropriate concentrations that match students' career objectives
- Discuss research opportunities
- Offer graduate school and employment advice
- Offer general advice and mentoring

Students should attend the fall sophomore lunch to meet professors, utilize introductions during sophomore core classes and check the website for additional faculty information. Faculty appointments as needed, may also be arranged through the academic advising office. The academic advisor will assign a faculty mentor to students that have not indicated a selection at the end of the sophomore year.

As a regular part of monitoring progress toward completion of the degree, students should compare their transcripts with the department’s degree requirements. Academic Audit - the HUB website- www.cmu.edu/hub.

**Accelerated Graduate Program (AGP)**

We offer an accelerated graduate program to CIT undergraduate students interested in completing the M.S. in Mechanical Engineering- Course Option degree. Exceptional students can apply to the program at the end of their first semester as a junior. We can only admit students who meet all of the program’s admissions requirements, refer to the AGP website (http://www.cmu.edu/me/undergraduate/accelerated-master.html) for criteria.

Students are able to complete the M.S. degree in conjunction with their B.S. degree if they do it in eight semesters. These students will be charged undergraduate tuition and are able to use their undergraduate financial aid. Students may also take nine or ten semesters to complete the M.S. degree. These students will be graduate students and charged graduate student tuition after the eighth semester. We do not offer financial aid for graduate students pursuing a M.S. degree. Interested students should contact the AGP advisor for further information.

Students in the Accelerated Graduate Program must:

- Complete at least 24 units of graduate coursework by the end of their senior year.
- Obtain a QPA of at least a 3.0 in these courses.
- Not use these courses to satisfy their B.S. requirements.
- If necessary, complete up to 12 units of 24-793 Supervised Reading and/or 24-794 Master of Science Project in the summer immediately following their senior year.
- Complete a total of 96 units to fulfill the M.S. Course Option requirements.

**Quality Point Average Requirements**

To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative QPA to fall below 2.0, this requirement is modified to be a cumulative QPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student’s final transcript will be calculated based on all grades in all courses taken, including freshman year. The Mechanical Engineering Department requires that students attain a quality point average of 2.00 or higher for all required Mechanical Engineering core courses.

Pursuant to university rules, students can repeat a course in which a grade below C was attained in order to achieve the QPA requirement. When a course is repeated, all grades will be recorded on the official academic transcript and will be calculated in the student’s QPA. The highest grade so obtained will be used to calculate the quality point average for all required Mechanical Engineering courses.

**Full-Time Faculty**

SHELLEY ANNA, Professor of Mechanical Engineering – Ph.D., Harvard University; Carnegie Mellon, 2003–.

JACK LEE BEUTH, Professor of Mechanical Engineering – Ph.D., Harvard University; Carnegie Mellon, 1992–.

JONATHAN CAGAN, George Tallman and Florence Barrett Ladd Professor of Mechanical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1990–.

STEVEN COLLINS, Assistant Professor of Mechanical Engineering – Ph.D., University of Michigan; Carnegie Mellon, 2010–.

MAARTEN P. DE BOER, Associate Professor of Mechanical Engineering – Ph.D., University of Minnesota; Carnegie Mellon, 2007–.

NOE VARGAS HERNANDEZ, Associate Professor of Mechanical Engineering – Ph.D, Arizona State University; Carnegie Mellon, 2014–.

C. FRED HIGGS III, Professor of Mechanical Engineering – Ph.D., Rensselaer Polytechnic Institute; Carnegie Mellon, 2003–.

LEVENT BURAK KARA, Associate Professor of Mechanical Engineering – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2007–.

PHILIP R. LEDUC, William J. Brown Professor of Mechanical Engineering – Ph.D., The Johns Hopkins University; Carnegie Mellon, 2002–.

SHAWN LITSTER, Associate Professor of Mechanical Engineering – Ph.D, Stanford University; Carnegie Mellon, 2008–.

CARMEL MAJIDI, Assistant Professor of Mechanical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2011–.

JONATHAN A. MALEN, Associate Professor of Mechanical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2009–.

ALAN J.H. MCGAUGHEY, Professor of Mechanical Engineering – Ph.D., University of Michigan; Carnegie Mellon, 2005–.

JEREMY J. MICHALEK, Professor of Mechanical Engineering – Ph.D., University of Michigan; Carnegie Mellon, 2005–.

O. BURAK OZDOGANLAR, Ver Planck Professor of Mechanical Engineering – Ph.D, University of Michigan; Carnegie Mellon, 2004–.

ALBERT PRESTO, Assistant Research Professor of Mechanical Engineering – Ph.D, Carnegie Mellon University; Carnegie Mellon, 2012–.

NOÉ VARGAS HERNÁNDEZ, Associate Professor of Mechanical Engineering – D.Sc., Technion-Israel Institute of Technology; Carnegie Mellon, 2000–.

ALLEN L. ROBINSON, Raymond J. Lane Distinguished Professor & Department Head – Ph.D., University of California, Berkeley; Carnegie Mellon, 1998–.

EDWARD STEPHEN RUBIN, Professor of Mechanical Engineering – Ph.D., Stanford University; Carnegie Mellon, 1969–.

SHENG SHEN, Assistant Professor of Mechanical Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2011–.

KENJI SHIMADA, Theodore Ahrens Professor of Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1996–.

LEVENT BURAK KARA, Associate Professor of Mechanical Engineering – Ph.D, University of Wisconsin-Madison; Carnegie Mellon, 2012–.

METIN SITTI, Professor of Mechanical Engineering – Ph.D., University of California at San Diego; Carnegie Mellon, 2012–.
VENKAT VISWANATHAN, Assistant Professor of Mechanical Engineering – Ph.D., Stanford University; Carnegie Mellon, 2013–.

SHI-CHUNE YAO, Professor of Mechanical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1977–.

YONGJIE ZHANG, Associate Professor of Mechanical Engineering – Ph.D., University of Texas at Austin; Carnegie Mellon, 2007–.

Emeriti

ADNAN AKAY, Lord Emeritus Professor of Mechanical Engineering – PhD, North Carolina State University; Carnegie Mellon, 1992–.

NORMAN CHIGIER, Emeritus Professor of Mechanical Engineering – Sc.D., University of Cambridge; Carnegie Mellon, 1981–.

JERRY HOWARD GRIFFIN, William J. Brown Emeritus Professor of Mechanical Engineering – Ph.D., California Institute of Technology; Carnegie Mellon, 1981–.

WILFRED THOMAS ROULEAU, Emeritus Professor of Mechanical Engineering – Ph.D., Carnegie Institute of Technology; Carnegie Mellon, 1954–.
Department of Materials Science and Engineering

Gregory S. Rohrer, Head Office: Wean Hall 3327  
http://materials.cmu.edu

Materials Science & Engineering (MSE) is an engineering discipline that applies the tools of basic and applied sciences and engineering to the manufacture and application of materials and devices. The four broad classes of Materials to which this paradigm is applied are metals, polymers, ceramics, and composites. Essentially every technology (historical, modern, and future) depends on materials development and innovation.

The overarching paradigm of MSE is to determine and to exploit the connection between processing, structure, and properties of materials to engineer materials that fit the performance criteria for specific applications, which are useful for the technological needs of our society. In addition to this product specific knowledge, MSE is concerned with the implications of materials production and their sustainable use on the environment and energy resources.

Graduates of the MSE department are pursuing careers in an expanding spectrum of companies, national laboratories, and universities. Their activities cover a wide range of materials related endeavors that include microelectronics, energy production and storage, biomedical applications, aerospace, information technology, nanotechnology, manufacturing and materials production. Many of our undergraduate alumni choose to attend graduate school; they are accepted into the top Materials graduate schools in the country.

The standard curriculum of the department provides fundamental training for all materials science and engineering areas (http://materials.cmu.edu/ugrad/std_fresh.html). The core courses provide understanding and training on tools for working with the (atomic) structure of materials that governs their properties, the thermodynamic relationships that govern the stability of materials, and the rates at which changes take place in materials. Students complete their training with a capstone design experience in the final year, which integrates their materials knowledge and training with engineering team skill development. To supplement the core course program, students may also participate in the current research programs of the faculty and conduct undergraduate research projects as part of their program of study.

While the core program is focused on the understanding of the internal or surface structure of materials in order to predict and engineer their properties, there is also an elective program that allows students to focus within a chosen material class, whether it is ceramics, semiconductors, metals, composites, magnetic or optical materials, bio-materials or polymers. The option of concentration in the one or more of the areas of application such as electronic materials*, engineering design*, biomedical engineering*, environmental engineering*, manufacturing engineering*, mechanical behavior of materials*, biomedical and health engineering**, and engineering and public policy**, is also available. (* = Designated Minor, ** = Double Major). Our curriculum is designed to provide a strong foundation in fundamental knowledge and skills that provide an excellent base for our graduates planning to continue on to graduate studies. For our graduates who seek employment in industry, the program provides the foundation on which a graduate can build his/her domain specific knowledge. For students that develop or seek opportunities in other disciplines after graduation, the MSE curriculum provides a modern liberal education combined with the engineering rigors, i.e. one that inculcates a thoughtful, problem-solving approach to professional life. It is thus the goal of our education to provide a global and modern education in Materials Science and Engineering to support our graduates during their careers in materials industries or as a foundation for further studies in any of the leading global institutions of graduate education.

Educational Objectives

The faculty of the Department of Materials Science and Engineering, in consultation with students, alumni and other interested parties, has decided that the overarching objective of the MSE curriculum is to provide an education that enables our graduates to be productive and fulfilled professionals throughout their careers.

Specifically, our program will produce graduates who:

1. are successful in a top graduate school and/or in materials science & engineering positions;
2. excel in professionalism and leadership in modern interdisciplinary materials engineering practice, while accounting for the impact of their profession on an evolving society;
3. creatively advance our collective understanding of the principles of materials science and engineering and/or innovate the design of technological systems;
4. contribute effectively as an individual, team member, and/or a leader to achieve personal, group and institutional goals.

Based on these objectives, our program is focused to allow our students to be successful regardless of their future career choice.

Accreditation

The MSE Undergraduate Program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org

Student Outcomes

The Materials Science and Engineering Program has the following student outcomes to prepare graduates to attain the program educational objectives:

- **MSE Outcome A:** An ability to apply a knowledge of mathematics, science and engineering
- **MSE Outcome B:** An ability to design and conduct experiments, as well as to analyze and interpret data
- **MSE Outcome C:** An ability to design a system component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- **MSE Outcome D:** An ability to function on multidisciplinary teams
- **MSE Outcome E:** An ability to identify, formulate, and solve engineering problems
- **MSE Outcome F:** An understanding of professional and ethical responsibility
- **MSE Outcome G:** An ability to communicate effectively
- **MSE Outcome H:** The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- **MSE Outcome I:** A recognition of the need for, and ability to engage in life-long learning
- **MSE Outcome J:** A knowledge of contemporary issues
- **MSE Outcome K:** An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

379Minimum number of units required for degree:

* The Materials in Engineering course 27-100 may also be taken in the spring semester, and must be taken before the end of the sophomore year (the H&SS Elective in the Sophomore Spring may be moved to later in the program to accommodate the 27-100 course).

** These courses must be taken before the end of the sophomore year, but need not be taken in the same order or semester as listed above.

# The recommended sequence is 33-106 / 33-107 for Engineering students. However, 33-111 / 33-112 or 33-131 / 33-132 will also meet the CIT Physics requirement.

Industrial Intern Program

An industrial internship option (IIO - cooperative educational program) within the department offers an MSE student an opportunity to obtain valuable experience and insight from alternating periods in industry and on campus (beginning the spring after the sophomore year). The combination of learning while participating in an industrial environment with academic course work creates strongly motivated students and a personalized learning situation. Graduation with a B.S. degree occurs four and one-third calendar years after entering the university. Exceptionally able students may be admitted to a program leading to both the B.S. and M.S. degrees in five years. Students in the IIO program should consult with their faculty advisors before electing to participate in any of the designated minor programs.

Following the standard or industrial internship programs the graduate of the Department of Materials Science and Engineering is well prepared for leadership in our highly technological society which continues to demand more and more from the materials used in engineered systems. Many of our graduates elect to continue their education to the Master’s and Doctoral Level in order to satisfy their need for advanced education in the discipline.

Notes on the Curriculum

Quality Point Average

In addition to the College requirement of a minimum cumulative quality point average of 2.00 for all courses taken beyond the freshman year, the Department requires a quality point average of 2.00 or higher in courses taken in the MSE department. Students may repeat a course to achieve the QPA requirement. Only the higher grade will be used for this departmental calculation.

MSE Restricted Electives

The MSE Restricted Electives are listed below. Each student in the Standard or Industrial Internship program must take at least 45 units from this list. In double major programs at least 36 units are required. The total number of units may be reached through any combination of the courses below.
Integrated B.S./M.S. Program

Undergraduates who excel academically have the unique opportunity to receive simultaneously or sequentially both B.S. and M.S. degrees from the department. The primary purpose of the Integrated Master and Bachelor (IMB) Degree Program is to provide students with superior breadth and depth in technical material, which will better prepare them for careers in industry. Students interested in pursuing the IMB Degrees are encouraged to begin taking some of the required graduate courses before their last year. The MSE department offers two M.S. degrees: one in Materials Science and Engineering (MSE), a coursework degree, and one in Materials Science (MS), a coursework + research degree. The IMB Degree Program to obtain an M.S. in MSE (MS) degree normally requires two (three to four) additional full academic semesters of coursework (coursework + research) beyond the B.S. Degree Requirements (normally eight academic semesters). Experience has shown that students complete the IMB program in eight to ten full academic semesters after enrolling at CMU.

Degree Requirements

IMB students can be enrolled in either the M.S. in MSE (coursework) or the M.S. in MS (coursework + research) degree programs, depending on their preference.

Students must meet the requirements of either the M.S. in MSE or the M.S. in MS degree programs, as well as any specially stated rules below.

Eligibility

The IMB Program is available to all undergraduates who maintain a cumulative GPA of 3.0 or better, including the freshman year and the years in which they are enrolled in the IMB. Exceptions can be made by the Department on the basis of other factors, including extenuating (e.g., medical) circumstances, improvement in grades, strong recommendation letters, etc. Students become eligible to apply to the program during the spring semester of their junior year (5th semester), or the semester in which they accumulate 280 or more units, whichever is earlier.

Enrollment

Students interested in the IMB program are not required to follow the formal application process for acceptance into the MSE graduate program. There is no requirement to provide a formal application, application fee, GRE scores, recommendation letters, official transcripts, or a statement of purpose. Interested students are encouraged request acceptance into the program by contacting the Department Head of MSE by email prior to the middle of the semester in which they become eligible.

Requirements to Enroll as a Graduate Student

If a student takes more than 8 semesters to complete both the B.S. and M.S. in MSE (coursework), then he or she must be a graduate student for at least one full-time 15-week academic semester (Fall or Spring) before graduating, whether or not they have already completed their B.S. degree.

If a student takes more than 8 semesters to complete both the B.S. and M.S. in MS (coursework + research), he or she must be a graduate student for at least two full-time 15-week academic semesters (Fall or Spring) before graduating, whether or not they have already completed their B.S. degree.

Tuition Assistance

When a student is a full-time graduate student through the IMB program, the department is able to provide some tuition assistance through optional Teaching Assistantships.

Additional Information

Once the student has been accepted, the student should meet with his or her IMB academic advisor(s) to determine a course schedule.

The student must indicate departmental program coordinator at which point they intend, if necessary, to register as a graduate student.

Once a student in the IMB program has completed all of the requirements for the B.S. degree, he or she should become a graduate student.

To determine the most appropriate time for an undergraduate student to become a graduate student, he or she should consul with Enrollment Services to understand how becoming a graduate student will affect financial aid.

Faculty

CHRIS BETTINGER, Assistant Professor – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2010–.

MICHAEL BOCKSTALLER, Professor – Ph.D., Max-Planck Institute for Polymer Research; Carnegie Mellon, 2005–.

ROBERT F. DAVIS, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–.

Overview

The College of Fine Arts at Carnegie Mellon University was founded in 1905 as the first comprehensive arts learning institution in the United States. For 110 years it has educated outstanding artists, architects, designers, theater artists and musicians who have made important contributions to culture in the United States and the world. The alumni of the College of Fine Arts have shaped the worlds of television, stage, film, and electronic media; have composed for and are performing in and conducting major symphonic orchestras, choruses and opera companies throughout the world; have built notable buildings, pioneered innovative sustainable design strategies and created interactive software systems; created significant innovations in graphic and industrial design; and are professors and deans in major arts institutions.

The College of Fine Arts concentrates on the education of professionals in the arts in the broader context of Carnegie Mellon University. Beyond their education in their chosen field, through required and elective course work, students are involved with other disciplines within the College of Fine Arts and within the other colleges of Carnegie Mellon University. Further, the College’s location in the Oakland District of Pittsburgh with its broad cultural resources (The Carnegie Museum of Art, the Carnegie Museum of Natural History, The Carnegie Library, the University of Pittsburgh, The Hillman Library, the Frick Fine Arts Building, and Phipps Conservatory and Botanical Gardens) places the College of Fine Arts at the center of a premier cultural environment.

The College of Fine Arts has a 9:1 student faculty ratio which provides a rigorous learning environment. It is a highly spirited federation of schools (Architecture, Art, Design, Drama and Music) made up of students and faculty who have an intense need to create and excel. Interacting among the schools, the University and the wider community are research centers such as the Frank-Ratchye Studio for Creative Inquiry, the Center for Building Performance and Diagnostics, Remaking Cities Institute, Center for Iranian Music, and the Center for Arts in Society. The intellectual and artistic life of the College is interwoven with a dense calendar of theater performances, concerts, exhibitions, film and media presentations and lectures by visiting artists, practitioners and scholars.

The College of Fine Arts offers a wide range of professionally oriented majors and minors in each of its schools. In addition, the College offers the Bachelor of Humanities and Arts (BHA), jointly with the Dietrich College of Humanities and Social Sciences, the Bachelor of Science and Arts (BSA), jointly with the School of Computer Science, and the Bachelor of Fine Arts (BFA), which is not an intercollege major. The College also offers the Master of Fine Arts (MFA) in Architecture, the Master of Fine Arts (MFA) in Design, and the Master of Fine Arts (MFA) in Music.

Architecture Office: CFA 201

The School of Architecture offers a five-year NAAB accredited Bachelor of Architecture undergraduate degree for students who seek professional careers in architectural practice. Beyond standard preparation in architectural design, history and representation, its curriculum stresses the centrality of aesthetics, scientific knowledge and tectonic resolution in the education of future practicing professionals. A core of university course work in mathematics, physical sciences, social sciences, writing and history is prerequisite to sequences in design, building and environmental technology, and architectural history. The school offers M.S. degrees in Architecture, Architecture, Engineering & Construction Management; Building Performance and Diagnostics; and Sustainable Design. In addition, the School offers a Masters of Urban Design and a Masters of Tangible Interaction Design. The School of Architecture has a well-known architectural Ph.D. program that provides qualified students with the opportunity to continue their studies in the areas of specialization for which the School is recognized.

Art Office: CFA 300

The primary mission of the School of Art is to develop in the individual student the skills, knowledge, and commitment required to work as an artist in society. The four-year undergraduate program leads to a Bachelor of Fine Arts degree in Art. Concentrations within the art major are offered in four areas: 1) Painting, Drawing, Print Media and Photography; 2) Electronic and Time-Based Work; 3) Sculpture, Installation, and Site Work; and 4) Contextual Practice. A Master of Fine Arts degree in Art is also offered.

Design Office: MM 110

The School of Design combines its professional program with a sound education in the liberal arts, leading to careers in many fields of design. It offers the following degrees: Bachelor of Design with concentrations in Communications, Products, and Environments; M.Design in Design for Interactions; M.P.S. in Design for Interactions; M.A. in Design; M. of Integrated Innovation for Productions & Services (a joint degree with the Department of Mechanical Engineering and the Tepper School of Business); Ph.D. in Design; Doctor in Design.

Drama Office: PCA 220

The School of Drama offers a highly focused, world-class theatre education with thorough preparation for sustained careers and innovation in today’s widely-varied entertainment industries. The undergraduate programs lead to BFA degrees in Drama, with focuses in Acting, Music Theatre, Directing, Dramaturgy, Design, Production Technology and Management; MFA programs are offered in Scene, Costume, Sound, and Lighting Design; Directing; Dramatic Writing; and Production Technology and Management.

Music Office: CFA 105

The School of Music has as its goal the preparation of musicians for careers in performance, composition, conducting, music education and music technology. The programs provide the opportunity to study with world-class artists utilizing the best aspects of conservatory training in the context of a major research university, combining the educational with the intensely professional. The Bachelor of Fine Arts is offered in Music Composition, Music Performance, and Music and Technology (a joint degree with the School of Computer Science and the Electrical and Computer Engineering Department) with minors in Collaborative Piano, Conducting, Music Education, Music Performance, and Music Technology available. The Bachelor of Music is offered in Composition, Conducting, Performance, Music Education, and Music and Technology (a joint degree with Computer Science and the Electrical and Computer Engineering Department).

Music Office: CFA 105

The Bachelor of Humanities and Arts (BHA) is a four-year intercollege degree-granting program designed for students interested in blending studies in the College of Fine Arts and the Dietrich College of Humanities and Social Sciences. The BHA degree combines a General Education requirement, a concentration of courses in the College of Fine Arts, a concentration of courses in the Dietrich College of Humanities and Social Sciences, and free electives. Please refer to Intercollege Programs in this catalog for details.

The Bachelor of Science and Arts (BSA) is a four-year intercollege degree-granting program designed for students interested in combining studies in the College of Fine Arts and the Mellon College of Science. It combines General Core requirements, a concentration of courses in the College of Fine Arts, a concentration of courses in the Mellon College of Science, and free electives. Please refer to Intercollege Programs in this catalog for details.

The Bachelor of Computer Science and Arts (BCSA) is a four-year intercollege degree-granting program designed for students interested in pursuing fields that comprehensively meld technology and the arts through courses offered in the College of Fine Arts and the School of Computer Science. It combines General Core requirements, a concentration of courses...
in the College of Fine Arts, a concentration of courses in the School of Computer Science, and free electives. Please refer to intercollege Programs in this catalog for details.

The Master of Arts Management Program
1116 Hamburg Hall
The search for both increased support and larger audiences has intensified over the last decade and now, more than ever, arts organizations seek skilled managers. To meet this need, the College of Fine Arts and the Heinz College’s School of Public Policy and Management jointly developed the Master of Arts Management (MAM) Program to provide strong leadership in theater companies, dance companies, orchestras, opera companies, museums, galleries and arts policy organizations. In addition to the traditional two-year graduate degree structure, the Master of Arts Management Program provides undergraduate students the opportunity to complete the Bachelor of Fine Arts and Master of Arts Management degrees within a period of five years through the Heinz College’s Accelerated Masters Program (AMP). MAM Program alumni can be found managing music and arts service organizations; marketing orchestras, theaters and dance companies; fund-raising for museums, opera companies, ballet companies and public television stations; and managing the finances of university arts departments and private businesses working in the arts and entertainment industry.

Student Defined Majors in the College of Fine Arts
To apply for a Student Defined Major in the College of Fine Arts, one:
1. Must be a student in good standing in the University and have completed at least one semester successfully.
2. Must have a cumulative QPA of 2.75 or better. A student whose QPA is under 2.75 may still submit a proposal. If the proposal is accepted by the Associate Deans, the student must apply for transitional status for the following semester and have 1 semester to improve his or her QPA to the 2.75 minimum. If the student is not successful in raising the QPA to the 2.75 minimum, he or she may lose the affiliation with the current home department in the College of Fine Arts. If this happens the student must either re-admitted back into the old program or seek admittance into another department or college.
3. Must have a statement of purpose that explains how and why the proposed course of study will be the best way for the student to receive an education and degree from Carnegie Mellon. This statement should detail the academic backbone of the program and project possible career paths after graduation.
4. Must outline the proposed courses to be taken and the semester in which they might be taken.
5. Must have a faculty mentor in the College of Fine Arts who has agreed to mentor the student through the completion of the degree. This mentor should be from the school where the student is taking the majority of his or her courses, and be approved by the Associate Deans.
6. Once the proposal has been submitted to the Associate Deans and they have reviewed it, the student will be required to go to the academic advisors in the school/schools where he or she will be taking courses and have them sign-off on the courses which are specific to their schools. Once the student has obtained all the necessary signatures, the completed proposal should be returned to CFA 100 for final review and approval by the Associate Deans.

All signed documentation should be submitted to the Office of the Dean of Fine Arts, CFA 100, by May 1 to be effective in the fall semester, and by October 1 to be effective in the spring semester. The proposal will be considered by the Associate Deans of the College, in consultation with the appropriate School Heads and Academic Advisors. Proposals that come in after these dates will be considered, but may not be able to be processed until the following semester. In that case, the student has the option to become a transitional student for a semester.

Under most circumstances the degree conferred at graduation will be a Bachelor of Arts. To continue in the program a student must show academic progress toward the degree. The academic actions of the College will apply to all student-defined majors. The Office of the Dean, in consultation with the faculty mentor and academic advisor, will determine certification of the degree.

Student Organizations
Professional and honorary societies for students in the College of Fine Arts are the American Institute of Architects, Architecture Peer Mentors, Architecture Student Advisory Council, the Design League, American Institute of Graphic Arts (AIGA), Industrial Designers Society of America (IDSA), United States Institute for Theatre Technology (USITT), Phi Mu Alpha Sinfonia (music fraternity for men), Sigma Alpha Iota (music sorority for women), Pi Kappa Lambda (honorary for students in music) and the Music Educators’ National Conference.

Academic Standards
Grading Practices
Grades given to record academic performance in the College of Fine Arts are detailed in the catalog section entitled “Undergraduate Academic Regulations.” All courses taught by the schools in the College of Fine Arts follow the standard letter grade system of the university. Responsibility for the grade given the student rests entirely with the instructor and the school concerned. A permanent grade may not be raised by taking a second examination. Students who wish to repeat a course already passed must obtain approval from the Dean of the College. At the time of approval, the Dean will decide in the light of circumstances whether the new grade or the old grade will be the official grade used as the computing factor for honors. Both grades, however, will appear on the official transcript.

Academic Actions
The decision to impose academic action is first initiated at the conclusion of each semester by the School faculty most involved in the student’s primary area of study and then presented at the end of the semester to the Academic Actions sub-committee of the College Council for confirmation.

A student who is not making satisfactory progress toward meeting professional standards or toward completing graduation requirements in a School may have any of the academic actions listed below imposed by that School even though the student has received “passing” grades.

The academic actions listed below do not follow a particular sequence; any of the actions may be appropriately imposed at any time upon recommendation of the School faculty concerned and confirmation by the College Council.

Warning: For failure to maintain professional standards in a required course; or insufficient evidence of serious application to the professional standards of the School; or an overall quality point average below a satisfactory level. Warning action is intended to notify the student of unsatisfactory performance, and to suggest that the student take steps to determine and correct the cause of the difficulty.

Probation: For failure to pass any professional course as outlined by the faculty of the School; or failure to meet the professional standards of the School although no failing grades are given; or failure to earn the minimum quality point average required to continue in the School. A student on probation may be required to achieve a specified quality point average. The student must improve scholastic standing to an acceptable level in order to be removed from Probation. A student not doing so may be Suspended or Dropped at the end of the semester.

Final Probation: For significantly poor performance, or for continued failure to maintain the professional standards of the School. The student must improve scholastic standing to an acceptable level in order to be removed from Final Probation. A student not doing so may be Suspended or Dropped at the end of the semester. This action may be taken without previous academic action.

School Suspension: For poor performance, or for personal problems that create an impediment to professional achievement in the School. A student is suspended from the School, but not the University, when it is deemed in the best interest of the student to allow continuation of study outside of the School during the period of the suspension. The student is not permitted to take courses in the School for a period to be determined by this faculty action, but will be re-admitted at the end of the period of School Suspension specified by the faculty after the condition of the School Suspension is satisfied.

Drop from the School: A student is dropped from the School when it is clear that the student’s progress in professional training is insufficient to warrant continuing in the current professional field of study in this College. This action is taken in the case of a student who has been lacking in some essential requirement in the chosen professional field, but whose general scholastic ability, habits and character justify an opportunity in some other field of education. This action terminates the student’s enrollment in the current School, but is not intended to prejudice admission to another Department, School, or College of the University, or to another institution.

This academic action allows the student three choices:

• Transfer to another Carnegie Mellon University Department or School. A student must contact that Department or School of choice to discuss possible transfer.
Drop procedures.

of the College. (See Undergraduate Academic Regulations (p. 45) for Add/Drop procedures.)

Courses may be added or dropped within the times stated in the college calendar. No courses may be added or dropped after the stated deadline dates except with the approval of the student’s School Head and the Dean of the College. (See Undergraduate Academic Regulations (p. 45) for Add/Drop procedures.)

Exceptions to this stipulation can be recommended by a school faculty in unusual cases, but the concurrence of the College Council is necessary before final approval of an exception can be given.

To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative QPA to fall below 2.0, this requirement is modified to be a cumulative QPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student’s final transcript will be calculated based on all grades in all courses taken, including freshman year. Some programs may have additional QPA requirements in order to graduate.

Other graduation requirements in the College of Fine Arts are described in the curriculum of each school. Further questions about specific course requirements and the total number of units required should be directed to the respective school advisors.

Dean's Honor List

Each semester the College of Fine Arts recognizes those students who have attained outstanding semester quality point averages by naming them to the Dean's List. To be eligible, students must complete at least 36 factorable units and have no conditional, missing or failing grades in core classes at the time when final semester grades are recorded. The top 35% of eligible students in each of the College of Fine Arts schools are named to the Dean's List.

Graduation Requirements

Because of the special nature of work in the College of Fine Arts, the first year in all schools should be considered probationary, a period in which a student and faculty can evaluate professional promise in terms of the college’s standards. Graduation from the College of Fine Arts follows the general university guidelines. As part of a student's qualification for an undergraduate degree, the equivalent of two terms of full-time work must be pursued under the direction of faculty members in the college during the period immediately prior to the degree award. Courses completed at other institutions will not be acceptable as terminal credit for a degree.

Exceptions to this stipulation can be recommended by a school faculty in unusual cases, but the concurrence of the College Council is necessary before final approval of an exception can be given.

Dean's Honor List

Other Regulations Affecting Student Status

Schedule Changes

Courses may be added or dropped within the times stated in the college calendar. No courses may be added or dropped after the stated deadline dates except with the approval of the student’s School Head and the Dean of the College. (See Undergraduate Academic Regulations (p. 45) for Add/Drop procedures.)
Minors Offered by the College of Fine Arts

The College of Fine Arts offers minors in Architecture, Art, Design, Drama, and Music to students from other colleges at Carnegie Mellon University. These minors allow students at Carnegie Mellon to take courses and develop a direction for electives in any of the five schools in CFA. Students in the College of Fine Arts may also earn minors outside of their major within other schools in the College. They may also study any of the minors offered by the other colleges to the University at large, thus taking advantage of the broad educational opportunities available at Carnegie Mellon University.

Minors Offered by the College of Fine Arts:

- Architecture
- Architectural History (available also to B. Arch candidates)
- Architectural Representation and Visualization (available also to B. Arch candidates)
- Architectural Technology
- Art
- Building Science (available only to B. Arch candidates)
- Communication Design
- Drama
- History of the Arts
- Industrial Design
- Music
- Music Technology
- Music Theory
- Photography

Guidelines for students are: 1) except where so designated, CFA students are not eligible to earn a minor in their own school; students from outside CFA may earn a minor in any school in CFA; 2) faculty advisors in the student's home school (in consultation with the academic officer of the other unit involved) will advise students as to the structuring of the courses in each minor; 3) a minor is not to be considered an overload; rather, through the assistance of faculty advisors it should be integrated into a student's overall units required for graduation; 4) the advisors will also monitor the student's development in these minors and keep records in their files which indicate the fulfillment of the course requirements in the minors, as well as in the majors in the student's own school. Courses listed as possible for the minors may be available, but not all courses are offered every semester. Students should consult with their advisors.

Students interested in earning a minor in any of the CFA schools should contact: Architecture: Heather Workinger; Art: Keni Jefferson; Design: Melissa Cicconi; Drama: Ari Blackford; Music: Sharon Johnston.

Minors under Architecture

Minor in Architecture

This sequence is for candidates who intend to develop intellectual links to the architectural profession. The scope of courses offered includes a full spectrum of professional issues in architecture.

Minor in Architectural History

(available also to B. Arch Candidates)

This sequence is intended for candidates interested in the history of architecture in its many manifestations, including high style and vernacular buildings, western and non-western traditions, built and theoretical works, and rural to urban contexts. Non-architecture majors are required to take 54 units of architectural history. Architecture majors wishing to minor in Architectural History must fulfill the three core required courses in architectural history, plus four additional architectural history electives, for a total of 63 units. Students wishing to pursue the minor should meet with the Architecture advisor to determine if a course is eligible.

Minor in the History of Arts
This minor of six or more courses as designated below, will offer students a grouping of Arts History courses that can provide a broad survey in the arts or a highly specialized field. For College of Fine Arts students, all courses meeting the requirements of the Minor in the History of the Arts must be taken outside of their major School, with the exception of the School of Architecture. Interested students should contact Patty Doane in the College of Fine Arts, Room 100.

27 unitsIntroductory Level Courses:
(chose at least three. CFA students pick 3 outside of major)
48-240 Historical Survey of World Architecture and Urbanism I (pre-requirement for all advanced architecture classes below) 9
51-271 Design History I 9
54-239 History of Architecture and Decor Var.
54-245 History of Clothing Var.
54-246 History of Clothing 2 Var.

62-360 Photographers and Photography Since World War II 9
62-371/79-372 Photography, The First 100 Years 9
79-395 The Arts in Pittsburgh 9
79-396 Music and Society in 19th and 20th Century Europe and the U.S. 9

minimum units required: 54

* Other courses not on this list may qualify as approved by CFA Dean's Office (College of Fine Arts, Room 100).
Minor in Design

Minoring in Design is a great way for students to diversify their studies and incorporate design skills and thinking into their overall academic experiences. Students who are already School of Design majors are not eligible to earn a Design minor. The 54 required units must be unique to the Design minor. No courses may be double counted.

36 units Electives Courses

Elective courses are to be chosen from those listed in the current course catalog. This program description is based on the latest information at the time of publication. Interested students should contact the School of Design regarding any changes in the program and the availability of courses.

Minimum units required: 54

Applications

Students must submit transcripts, personal statements, and completed applications by the beginning of February, and submit portfolios or design projects by the beginning of March. They must also obtain permission to complete minors from their major advisors. The minor application form includes detailed requirements.

Admission Requirements

1. The student must successfully pass one Drama course prior to being considered for minor status.
2. The student must apply to enter the program in the office of the Drama Sr. Academic Advisor, PCA 223.
3. The student must apply to enter the program in the office of the Director of Student Services (CFA 108).

Minor in Drama

The Drama minor provides students with a well-rounded opportunity to obtain preliminary professional exposure to the theatre arts. Courses may involve acting, directing, playwriting, design, production technology and management, and dramatic literature courses. Students also become involved with Drama productions by signing up for Production for Non-Majors, which involves evening crew work on various Drama productions.

Admission Requirements

1. The student must apply to enter the program in the office of the Drama Sr. Academic Advisor, PCA 223.
2. The student must successfully pass one Drama course prior to being considered for minor status.

25 units Required Courses

<table>
<thead>

<td>6</td>
</tr>
</tbody>
</table>

Students must meet with the School of Drama Production Manager (PCA 224) for assignments related to Production for Non-Majors.

30 units Elective Courses

The remainder of the minor is fulfilled with Drama courses of the student’s choosing, with approval from the Sr. Academic Advisor in the School of Drama. For certain courses, students may need instructor permission to register.

Elective Courses not requiring instructor permission:

<table>
<thead>
<tr>

</tr>
<tr>
<td>54-191/192 Acting for Non-Majors</td>
<td>9</td>
</tr>
</tbody>
</table>

Additional Drama Courses are available by instructor agreement and may require an audition, interview, or portfolio review. Students should contact the Drama Sr. Academic Advisor to inquire about permission for specific courses in which they are interested.

Minimum units required: 55

Minors in Music

Minor in Music

This sequence is for candidates who are majors from any discipline in the university other than music who have some background in music and would like to know more about music.

Admission Requirements

1. The student must apply to enter the program in the office of the Director of Student Services (CFA 108).

0-3 units Prerequisite Course

Beginning Piano is required of students who do not pass a piano proficiency test.

18 units Elective Courses

Elective courses are to be chosen from those listed for the School of Music in the current course catalog. Performance electives are encouraged. (An audition is required for all School of Music performance ensembles.)

Minimum units required: 67

Minor in Music Technology

This sequence is for candidates who majors from any discipline in the university who have some background in music and would like to know more about music technology.

Note: Students in the School of Music have slightly different requirements for the Minor in Music Technology. See School of Music (p. 192).

Admission Requirements

The student must apply to enter the program in the office of the Director of Student Services (CFA 108).
0-3 units Prerequisite Course
Beginning Piano is required of students who do not pass a piano proficiency test.

57-294 Beginning Piano Test 0
57-329 Beginning Piano for Minors 3

25 units Required Music Courses
Basic Harmony I and/or Basic Solfege I are required of students who do not qualify for entrance into Harmony I and/or Solfege I, based on their scores on the theory and solfege placement tests.

57-152 Harmony I 9
57-161 Eurhythms I 3
57-173 Survey of Western Music History 9
57-181 Solfege I 3
57-188 Repertoire and Listening for Musicians 1

21 units Sound Recording Courses
57-337 Sound Recording 6
57-338 Sound Editing and Mastering 6
57-438 Multitrack Recording 9

21 units Music Technology/Sound Courses (choose 3)
Choose three courses. One of the three courses must be either Introduction to Computer Music or Electronic and Computer Music. (Note that 15-112 is a prerequisite for 15-322; 57-101 or 57-171 is a prerequisite for 57-347.) Other courses may be taken with the permission of the music technology minor advisor.

15-322 Introduction to Computer Music 9
15-323 Computer Music Systems and Information Processing 9
33-114 Physics of Musical Sound 9
54-509 Theatrical Sound System Design 9
54-666 Production Audio 6
57-347 Electronic and Computer Music 6

Minimum units required: 67

Minor in Music Theory
This sequence is for candidates who are majors from any discipline in the university who have some background in music and would like to know more about music theory.

Note: Students in the School of Music have slightly different requirements for the Minor in Music Theory. See School of Music (p. 192).

Admission Requirements
The student must apply to enter the program in the office of the Director of Student Services (CFA 108).

0-3 units Prerequisite Course
Beginning Piano is required of students who do not pass a piano proficiency test.

57-294 Beginning Piano Test 0
57-329 Beginning Piano for Minors 3

25 units Required Music Courses

57-152 Harmony I 9
57-161 Eurhythms I 3
57-173 Survey of Western Music History 9
57-181 Solfege I 3
57-188 Repertoire and Listening for Musicians 1

21 units Required Theory Courses

57-151 Counterpoint in Theory and Application 6
57-153 Harmony II 9
57-408 Form and Analysis 6

6 units Upper Level Theory Course (choose 1)
See theory courses on the Music Support Courses Two-Year Rotation list. It is available on the Inside Music website: http://music.cfa.cmu.edu/. Click on Music Support Course Two-Year Rotation. A graduate course may be taken with the permission of the instructor.

18 units Elective Courses
Elective courses are to be chosen from those courses listed for the School of Music in the current course catalog.

Minimum units required: 70

Minors under CFA Dean's Office

Minor in Photography
The Photography Minor exposes students to the breadth of photography offering experiences in traditional photography (i.e. film exposure and silver printing) to digital shooting and output. The student who takes the Photography Minor will become familiar with photography’s craft, its history and significant practitioners, and develop his/her own distinct engagement with the medium.

Students may apply for the Photography Minor after they have taken a CFA or Pittsburgh Filmmakers’ beginning photography course. Freshmen should not apply for the minor. Students in four-year undergraduate programs may apply in their sophomore or junior year. Students in five-year undergraduate programs, such as Architecture, may apply in their second, third, or fourth year. Applications are accepted in both the fall and spring semesters. Students will be admitted to the minor based on their aptitude, appropriate level of photography skills, and space availability within the program. Once admitted, students will be assigned a faculty advisor who will help them determine a sequence of courses that best fits their needs and interests.

Application Requirements
The application process for the Photography Minor requires submission of: a completed application form signed by the home department advisor, a personal statement, and a portfolio of photographs. Contact the CFA Photography Administrator, Jamie Gruzska, MM B18, for further information and an application form.

Minimum 27 units Photography Required Courses (3)

62/60-141/51-265 Black and White Photography I* ** 10
62-241 Black and White Photography II 10
62-142 Digital Photography I 10

Minimum 9 units Photography Elective (1)
Choose one (1) additional photography course from the list below in consultation with the photo advisor, or consult Jamie Gruzska for current offerings. Also, photo courses may be taken at Pittsburgh Filmmakers. Please refer to their course catalog that is available in the CFA Dean’s Office, CFA 100, or online: pghfilmakers.org (http://www.pghfilmakers.org)

62-165 Mutable Landscape: Large Format Photography The Antiquarian Avant-Garde 10
62-245 Portrait Photography 10
62-265 Alternative Photo Processes 10
62-325 View Camera 10
62-326 Photographic Narrative 9
62-375 Large Format Photography: The Antiquarian Avant-Garde 10

9 units Photo History Required Course (1)

62-371 Photography, The First 100 Years ** or 62-360 Photographers and Photography Since World War II 10

9 units History, Theory, or Criticism of the Visual Arts Elective (1)
Choose one (1) additional History, Theory or Criticism of the Arts course in consultation with the photo advisor. A second Photo History course (62-360 or 62-371) can be used for this requirement.

* prerequisite for photo courses other than history, theory, and/or criticism course
** or course approved by the photography advisor
Minimum units required: 54
School of Architecture

Stephen R. Lee, AIA, LEED AP, Head
Office: CFA 201
http://www.cmu.edu/architecture

The School of Architecture (SoArch) provides deep immersion in the discipline of architecture, intensified by the broader Carnegie Mellon culture of interdisciplinary innovation and creative inquiry.

We define the discipline of architecture as the integrated pursuit of design creativity, historical perspective, social responsibility, technical expertise, and global environmental leadership. Our undergraduate and graduate degree programs prepare students to be excellent, discipline-defining design thinkers in diverse global contexts.

This world-class architecture education is enhanced by our position within one of the world’s leading research and entrepreneurship institutions, and by the foundational premise that architectural excellence demands both rigorous training in fundamentals and the development of unique specializations. Students may extend their core knowledge either through concentration in architecture subdisciplines like sustainable or computational design, or through interdisciplinary interaction with CMU’s other renowned programs—whether the sciences, the humanities, business, or robotics. Though every School of Architecture student graduates with intensive architecture knowledge, no two graduates leave with the same education.

In the twenty-first century, few architecture problems are straightforward. Graduates of SoArch excel in the roles architects have performed for centuries—and in new roles catalyzed by the depth and breadth of their education—to create and execute innovative solutions to a huge range of emerging global challenges.

Bachelor of Architecture Program

The NAAB-accredited five-year Bachelor of Architecture (B.Arch) program prepares students to be design-thought leaders in a variety of fields, as well as to continue on their path to licensure in the profession of architecture. The B.Arch program begins with three largely scripted years of studio and coursework, providing students a strong, multifaceted foundation in architectural principles and methods. In the fourth and fifth years, students tailor their studio and course choices to the interests they’ve honed in their first three years: they may choose to continue a general-studies approach or may concentrate their work more heavily in a specific architectural subdiscipline. All B.Arch graduates are thoroughly prepared to continue toward professional licensure, but the tone of their education is distinctly personal.

Each course required for the B.Arch program falls into one of seven categories, each pursuing a set of specific objectives for student learning:

- **Studio** (168 units): Architectural design studio (prescribed for the first three years and selective thereafter) is the backbone of every semester in the B.Arch program. Students learn to combine rigorously rational and resourcefully creative techniques to identify design problems, collect and analyze data, apply theoretical and practical strategies in creation of a design solution, and evaluate its results through extensive testing; and to describe and work at various points along the continuum between form-finding and form-making. (Courses: Foundation I & II, Elaboration I & II, Integration I & II, Advanced Synthesis Options Thesis/ Studio I & II)

- **Critical Practice** (42 units): A multifaceted field of practice, architecture interacts with dynamic social, organizational, economic, professional, and cognitive contexts. In this sequence, students learn to use methods from cognitive psychology to analyze the influence of human factors on design, construction and occupancy; to resolve ethical dilemmas with adjudication strategies based in architectural case study; to demonstrate critical awareness and broad understanding of the factors informing the intelligent resolution of architecture and construction; and to identify the roles of architects, urban designers and planners in shaping the built environment in a global context. (Courses: First Year Seminar: Architecture Edition I & II, Context, Human Factors in Architecture, Real Estate Design and Development, Issue of Practice)

- **Design Tools** (24 units): Drawing and modeling both by hand and with the computer are core skills for developing powers of observation, the ability to think in three dimensions, and the communication of architectural ideas. By using a range of analog and digital design tools to engage in the act of making, students will be able to explore, analyze, formulate, fabricate, and represent ideas about the built environment. (Courses: Analog Media I & II, Digital Media I & II)

- **Environmental Science** (27 units): Environmental education is one of our highest priorities. In this sequence, students learn to describe first principles of and computational approaches to the lighting and thermal performance of buildings; to demonstrate qualitative and quantitative climate- and environment-responsive strategies (energy conservation, passive heating/cooling, daylighting, natural ventilation); to select, configure, and represent building service systems; and to maintain global awareness of high-performance systems-integration strategies. (Courses: Building Physics, Environment I: Climate & Energy, Environment II: Mechanical Systems for Buildings)

- **History** (27 units): In architectural history courses, students learn to identify chronologically and geographically diverse building styles, building types, and urban plans; to describe the cultural, intellectual and aesthetic contexts surrounding the creation of those buildings and sites; to write clearly and persuasively about the historic built environment; and to demonstrate critical thinking, quality research, and effective information management. In addition to the two-semester Historical Survey of World Architecture, each student completes one elective course on architectural history within the School of Architecture. A minor in architectural history is available to students completing four additional, approved, nine-unit architectural history courses beyond these three required courses. (Courses: Historical Survey of World Architecture and Urbanism, Modern Architecture, Architectural History III)

- **Building Technology** (18 units): We understand technical knowledge as design knowledge and place major emphasis on understanding the state-of-the-art and innovative building structure, enclosure, mechanical, lighting, and interior systems. Students learn to design gravity- and lateral load-resisting systems for buildings; to select, configure and size construction systems in wood, masonry, steel, and concrete; and to distinguish among construction materials with regard to their process of manufacture, their physical properties, their environmental performance, and their methods of selection and specification. (Courses: Materials and Assembly, Structures/Statics)

- **General Studies** (135 units): University coursework in mathematics, physical sciences, social sciences, writing, and history are prerequisite to the School’s own offerings. (Courses: Interpretation and Argument, Computing @ Carnegie Mellon, Descriptive Geometry, University Electives)

Minors in Architecture
Undergraduate students in the SpArch can also qualify to earn one of three minors within the subject of architecture. These are the Minor in Architectural History, the Minor in Building Science, and the minor in Architectural Representation and Media.

The Minor in Architectural History is intended for those students that want to deepen their knowledge in architectural history. It is earned by completing the three required architectural history courses and then an additional four elective courses in architectural history.

The Minor in Building Science is intended for those students that want to deepen their knowledge in the building sciences and for those who are interested in gaining advanced placement in the M.S. programs offered by the School in the areas of Building Performance & Diagnostics and Sustainable Design. It is earned by completing the two required building technology and three environmental science courses and then an additional three elective courses in the building sciences.

The Minor in Architectural Representation and Media is intended for those students that want to deepen their knowledge in architectural representation and media for those who are interested in gaining advanced placement (AMP) in the M.S. programs offered by the School in the areas of Computational Design, Tangible Interaction Design and/or Emerging Media. It is earned by completing the four required media courses and then an additional three elective courses in these areas.

Minors in Other Disciplines
Undergraduate architecture students may also earn minors in many of the departments or schools on campus. Generally, a student must take six courses within a specific department or concentration to receive a minor. Students interested in minors must contact the school or department of interest to determine specific requirements or prerequisites. Since students of architecture are required to take fifteen electives (135 units), students can easily complete a minor without adding additional coursework to their curriculum.

Graduate Degree Programs
Carnegie Mellon University is recognized for outstanding contributions to science, technology, management, policy, and the fine arts. The School of Architecture builds on a tradition of interdisciplinary study.

Our faculty's diverse set of backgrounds and commitment to professional practice and scholarly research make for a rich learning experience.

Our graduates hold positions in innovative design practices, research organizations, federal and municipal governments, the building and manufacturing industries, and at leading universities both in the US and abroad.

Our programs reflect a commitment to excellence. Students with motivation and ability receive an outstanding educational opportunity at Carnegie Mellon University's School of Architecture.

The School of Architecture offers seven (7) post-professional Master, and three (3) PhD degrees in the following areas of study:

Master of Science in Architecture
The Master of Science in Architecture (MSA) is a post-professional, research-based degree program intended primarily for practitioners in the building industry who are interested in broadening their knowledge base and skill set for use in professional practice. This program is structured on a 9-month (2-semester) curriculum, allowing those already established in the field to take a leave of absence and return with relatively little discontinuity to their careers.

The MSA program allows each student the freedom to customize his or her own curriculum. While this program is ideal for students seeking to enhance an existing skill set, it can also act as a testing ground where students are able to explore new and varied areas of academic study. Whether one chooses to delve deeply into a focused area of research or acquire a broad overview, students are encouraged to draw from resources both within the School of Architecture and throughout the University.

Master of Science in Computational Design and Doctor of Philosophy in Computational Design
One of the first and best-known Computational Design programs in the US, our legacy continues today. Under the direction of dedicated faculty and in collaboration with other departments in the University, (e.g., School of Computer Sciences and the Department of Civil & Environmental Engineering), our visionary students continue to push for innovation and evolution of the state-of-the-art in design technology.

Master of Science in Building Performance and Diagnostics and Doctor of Philosophy in Building Performance and Diagnostics
Building Performance & Diagnostics deals with the comprehensive integration of building design and advanced technology, as a means of producing high performance architecture. Led by the Center for Building Performance & Diagnostics (CBPD) and housed within the Robert L. Preger Intelligent Workplace (http://www.cmu.edu/greenpractices/greenign-the-campus/green-buildings/intelligent-workplace.html), students have the opportunity to gain both diversity and depth of knowledge from world-renowned an experienced faculty.

Master of Urban Design
Building on our legacy of Urban Design, and in partnership with the Remaking Cities Institute (RCI) (http://www.cmu.edu/rci), our 12-month, Studio-based Master of Urban Design program emphasizes environmental, economic, social and cultural issues affecting the contemporary metropolis, while providing a comprehensive foundation in design, theory, history, policy, management and technical skill.

Master of Science of Tangible Interaction Design
The Master of Tangible Interaction Design (mTID) is truly an interdisciplinary program that integrates computational intelligence and the physical world.
MTID students make interaction tangible by building and programming working prototypes. Housed in the Computation Design (CoDe) Lab (http://code.arc.cmu.edu), and leveraging our state-of-the-art Digital Fabrication (dFab) Lab (http://www.cmu-dfab.com), the program cultivates experimentation and collaboration in an intimate studio setting.

Master of Science in Sustainable Design
At the forefront of research in sustainable design and technology for over 35 years, Carnegie Mellon’s School of Architecture is recognized internationally for its large core of dedicated faculty, providing a solid foundation from which students can learn how to positively and sustainably affect the future of the built environment. This is a post-professional degree program that integrates Design and Technology to provide a comprehensive knowledge base for professional practice.

Master of Science in Architecture-Engineering Construction Management and Doctor of Philosophy in Architecture-Engineering Construction Management
A joint effort between the School of Architecture and the Department of Civil & Environmental Engineering, the Architecture-Engineering Construction Management (AECM) programs prepare building delivery professionals for careers in capital project delivery. Graduates are educated to become effective decision makers who can positively impact economic, environmental, and ethical aspects of the built environment through professional management strategies. AECM programs deal with the entire life-cycle of capital projects, from pre-design, to design, construction, commissioning, operation, and maintenance stages. They focus on the integration of design and technology, in particular, advanced information systems, as a means of improving building performance, and eliminating negative environmental impact.

Advanced Standing in Master Degree Programs
The School of Architecture offers a unique opportunity to undergraduate students who wish to pursue a Masters degree in an architecture-related field through the Accelerated Masters Program (AMP). Undergraduate students may apply to the AMP in their 4th year of their architecture education, and if accepted, can apply units earned in their 5th year of their undergraduate architecture degree to their graduate degree. This allows students to graduate with a Masters degree in an accelerated period of time.

Student Advising
At the end of every semester, the faculty reviews each student’s progress in all courses. Reviews during the first year are intended to determine a student’s capabilities in relation to the study of architecture at Carnegie Mellon University, and the School works with each student to ensure placement within the university if a change is desired. Subsequent reviews monitor and ensure continued progress in all courses of the program. Students are urged to meet with their assigned faculty advisor to review their academic progress and plans before each semester. Such meetings are important to take full advantage of elective possibilities within the curriculum, general progress toward graduation, and professional goal setting. Students should also check their progress using the online academic audit in the Student Information Online (SIO).

Study Away Program
The School of Architecture strongly encourages students to study away. The perspective gained through immersion in another culture and language is invaluable. Study abroad can fall into four categories: University Direct Exchanges, University Sponsored Programs, External Programs, and Departmental Summer Programs.

To receive credit for courses taken away, the student must have a C or better (not C-) in the course and have an official translated transcript sent to the School of Architecture. Studio work conducted abroad must be presented to the School Head and Studio Coordinator for approval.

Students should make the decision to study away by the fall of their third year, so they can plan their courses accordingly. Students are allowed one semester away for which they receive studio credit except for those students at approved yearlong direct exchange programs. To qualify for study away, a student must have completed the third-year of their program, have a minimum overall QPA of a 3.00 (or 2.75 for SoArch summer study abroad) and be in good academic standing.

Summer Courses
Students can receive credit for passing comparable courses at other institutions with advanced approval from the School. A Transfer Credit Evaluation form must be completed prior to enrollment at the other institution for a course to be considered for transfer.

Faculty
OMER AKIN, Professor – PhD, Carnegie Mellon University; Carnegie Mellon, 1973–.
MARYLOU ARSCOTT, Studio Professor – BArch, Architectural Association; Carnegie Mellon, 2007–.
MARTIN AURAND, Principal Architecture Librarian/Archivist – MLIS, University of Pittsburgh; Carnegie Mellon, 1987–.
AZIZAN AZIZ, Senior Researcher, CBPD – MS Building Performance & Diagnostics, Carnegie Mellon University; Carnegie Mellon, 1997–.
NINA BARBUTO, Adjunct Instructor – MArch, Southern California Institute of Architecture; Carnegie Mellon, 2014–.
JOSHUA BARD, Adjunct Assistant Professor – MArch, University of Michigan; Carnegie Mellon, 2012–.
WILLIAM BATES, Adjunct Associate Professor – MArch, University of Miami; Carnegie Mellon, 2014–.
ERIC BROCKMEYER, Adjunct Assistant Professor – MTID, Carnegie Mellon University; Carnegie Mellon, 2011–.
LEE CALISTI, Adjunct Associate Professor – BArch, Kent State University; Carnegie Mellon, 2002–.
DONALD K. CARTER, Director, Remaking Cities Institute – BArch, Carnegie Mellon University; Carnegie Mellon, 2009–.
ERICA COCHRAN, Assistant Professor and UDream Coordinator – PhD, Carnegie Mellon University; Carnegie Mellon, 2009–.
DOUG COOPER, Andrew Mellon Professor – BArch, Carnegie Mellon University; Carnegie Mellon, 1976–.
LIZA CRUZE, – MArch, Virginia Tech;.
DANA CUPKOVA, Assistant Professor, Lucian & Rita Caste Chair – MArch, UCLA; Carnegie Mellon, 2013–.
GERARD DAMIANI, Associate Professor – BArch, Syracuse University; Carnegie Mellon, 1996–.
STEPHANI DANES, Adjunct Professor – MArch, Yale University; Carnegie Mellon, 1986-2001, 2009–.
JEFFREY DAVIS, Adjunct Professor – BS Architecture, University of Illinois, Urbana-Champaign; Carnegie Mellon, 1996–.
DONNA FICCA, Adjunct Assistant Professor – BArch, Virginia Tech; Carnegie Mellon, 2011–.
JONATHAN GOLLI, Adjunct Assistant Professor – MArch, University of Toronto; Carnegie Mellon, 2007–.
MATTHEW HUBER, Adjunct Assistant Professor – BArch, Carnegie Mellon University; Carnegie Mellon, 2014–.
EDDY KIM, Visiting Assistant Professor, George N. Pauley Jr. Fellow – MDesS, Harvard University; Carnegie Mellon, 2014–.
JEFF KING, Adjunct Assistant Professor – MArch, Tulane University; Carnegie Mellon, 2005–.
SUZY (ZEKUN) LI, Adjunct Instructor – MUD, Carnegie Mellon University; Carnegie Mellon, 2014–.
NICHOLAS LIADIS, Adjunct Assistant Professor – MArch, University of Detroit; Carnegie Mellon, 2010–.
NICHOLAS LIADIS, Adjunct Assistant Professor – MArch, University of Detroit; Carnegie Mellon, 2010–.
JENNIFER LUCCHINO, Adjunct Associate Professor – MArch, Rice University; Carnegie Mellon, 2002–.
JAMES O’TOOLE, Adjunct Associate Professor – BArch , Penn State University; Carnegie Mellon, 2008–.
RAMI EL SAMAHY, Assistant Teaching Professor – MArch, Harvard University; Carnegie Mellon, 2006–.
JOHN EBERHARD, Professor Emeritus – M.S., Industrial Management, Massachusetts Institute of Technology; Carnegie Mellon, 1989–.

JEREMY FICCA, Associate Professor, Director dFab Lab – MArch, Harvard University; Carnegie Mellon, 2007–.

JOHN FOLAN, T. David Fitz-Gibbon Associate Professor – MArch, University of Pennsylvania; Carnegie Mellon, 2008–.

JONATHAN GOLLI, Adjunct Assistant Professor – MArch, University of Toronto; Carnegie Mellon, 2007–.

KAI GUTSCHOW, Associate Professor – PhD, Columbia University; Carnegie Mellon, 1998–.

VOLKER HARTKOPF, Professor, Director CBPD – PhD, University of Stuttgart; Carnegie Mellon, 1972–.

HAL HAYES, Studio Professor – BArch, Carnegie Mellon University; Carnegie Mellon, 2008–.

DELBERT HIGHLANDS, Professor Emeritus – MArch, Carnegie Mellon University; Carnegie Mellon, 1985–.

KELLY HUTZELL, Associate Teaching Professor – MS Architecture and Urban Design, Columbia University; Carnegie Mellon, 2005–.

JONATHAN KLINE, Adjunct Professor – MFA, Penn State University; Carnegie Mellon, 2002–.

RAMESH KRISHNAMURTI, Professor – PhD, University of Waterloo; Carnegie Mellon, 1989–.

KRISTEN KURLAND, Teaching Professor – BArch, University of Pittsburgh; Carnegie Mellon, 1996–.

KHEE POH LAM, Professor – PhD, Carnegie Mellon University; Carnegie Mellon, 2003–.

STEPHEN LEE, Professor and Head – MArch, Carnegie Mellon University; Carnegie Mellon, 1981–.

DAVID LEWIS, Teaching Professor Emeritus – MArch, Leeds College of Architecture; Carnegie Mellon, 1982–.

CINDY LIMAUR, Professor, Drama – MFA in Lighting Design, Florida State University; Carnegie Mellon, 1987–.

VIVIAN LOFTNESS, University Professor – MArch, Massachusetts Institute of Technology; Carnegie Mellon, 1981–.

ARTHUR LUBETZ, Adjunct Professor – BArch, Carnegie Mellon University; Carnegie Mellon, 1988–.

GERRY MATTERN, Adjunct Professor – B.E., Rose Polytechnic Institute; Carnegie Mellon, 1982–.

MICK MCNUTT, Adjunct Associate Professor – MArch, Syracuse University; Carnegie Mellon, 2007–.

CHRISTINE MONDOR, Adjunct Associate Professor – BArch, Carnegie Mellon University; Carnegie Mellon, 1999–.

IRVING OPPENHEIM, Professor – PhD, Cambridge; Carnegie Mellon, 1972–.

STEPHEN QUICK, Adjunct Professor – MArch, Cornell University; Carnegie Mellon, 2010–.

CHARLES ROSENBLUM, Adjunct Assistant Professor – PhD, University of Virginia; Carnegie Mellon, 2000–.

DIANE SHAW, Associate Professor – PhD, University of California - Berkeley; Carnegie Mellon, 1996–.

SCOTT SMITH, Director, Shop – MFA, Cranbrook; Carnegie Mellon, 1984–.

GREGORY SPAW, Visiting Assistant Professor – MArch, Harvard University; Carnegie Mellon, 2014–.

KENT SUHRBIER, Adjunct Associate Professor – BArch, Carnegie Mellon University; Carnegie Mellon, 2000–.

FRANCESCA TRELLO, Adjunct Associate Professor – PhD, Politecnico Torino; Carnegie Mellon, 2007–.

VAVARA TOULKERIDOU, Adjunct Instructor – PhD, Carnegie Mellon University; Carnegie Mellon, 2013–.

RICHARD TURSKY, Assistant Director, Digital Fabrication Lab – MArch, University of Michigan; Carnegie Mellon, 2014–.

VALENTINA VAVASIS, Adjunct Associate Professor – MBA, Northwestern University; Carnegie Mellon, 2014–.

SPIKE WOLFF, Adjunct Assistant Professor – MArch, SCI-Arc; Carnegie Mellon, 2003–.
School of Art

John Carson, Head
Office: College of Fine Arts 300
http://www.cmu.edu/art

The university-based undergraduate program offered by the School of Art is designed to develop individuals capable of working as artists in a complex, rapidly changing global culture. The program incorporates an expansive approach to art and acknowledges that “working as artists” leads toward a wide variety of pursuits.

Admission to the undergraduate program is highly competitive. Students must show promise of excellence in both academic and artistic performance. Evidence of creative leadership is a plus.

The art faculty, all practicing artists or scholars, provide an intense, professional learning environment in which students develop close ties with their instructors and each other.

Art students are encouraged to take full advantage of the university environment through exposure to faculty and students in other departments in the College of Fine Arts and throughout the University. They are also encouraged to participate in the numerous cultural opportunities on campus and in the larger Pittsburgh community.

The School of Art maintains a variety of studio and workshop accommodations to make possible its wide range of media offerings. It occupies the top two floors of the College of Fine Arts building, as well as a significant portion of Doherty Hall. Numerous exhibition venues inform or present student work including the Ellis Gallery, The Miller Gallery, and the Frame Gallery, which is managed entirely by students.

The progressive curriculum requires that students attain high levels of knowledge, skill and commitment. The four-year undergraduate program offers one general Bachelor of Fine Arts (B.F.A.) in Art.

Using five categories of courses, the curriculum presents art-making in a unique manner which respects tradition and encourages innovation. The course categories are:

I. Concept Studios
II. Media Studios
III. Advanced Studios
IV. Academic Art Courses
V. University Academic Courses

Studio courses comprise over sixty percent of the course of study and academic courses comprise the remainder. The division of the studio curriculum into conceptually-driven and media-driven courses acknowledges that neither concept nor media can be presented independently of one another. This curriculum ensures that all students experience high-quality, consistent training in a variety of approaches.

I. Concept Studios

The Concept Studios are the core of the art curriculum. Students are required to complete five concept studios, but may enroll in additional semesters. Experiences gained in the other four components of the program are integrated into Concept Studios. Themes and topics addressed in Concept Studios include: the self and the human being, space/time, systems/processes, contextual practice, and senior studio.

Freshman and sophomore Concept Studios are organized around structured assignments designed to assist the student in developing a personal, non-medium-specific approach to generating art as well as in learning transferable conceptual skills. The progression from semester to semester leads toward increasing complexity and independence. Contextual Practice Studios embrace the context or social conditions in which an artwork exists, leading toward increasing complexity and independence. Contextual Practice Studios embrace the context or social conditions in which an artwork exists, leading toward increasing complexity and independence.

II. Media Studios

The Media Studios can be viewed as the foundation courses for the program. Students take a total of seven Media Studios within the freshman and sophomore years. These studios ensure that all students have an exploratory experience with all of the media resources of the school. They also serve as preparation for advanced studio work.

Two-Dimensional Media Studios introduce drawing and imaging during the freshman year, and painting or print media during the sophomore year. Electronic Media Studios introduce the moving image through video and animation during the freshman year, and interactivity in the sophomore year. Three-Dimensional Media Studios introduce media such as ceramics, welding, wood, metals, kinetic sculpture, and digital fabrication during the freshman year.

III. Advanced Studios

Students take a total of twelve Advanced Studio elective courses over the course of the second semester of the sophomore year and the junior and senior years. These courses address specialized studio work in one of the four artistic concentration areas in the school, which are:

- Drawing, Painting, Print Media, and Photography (DP3)
- Sculpture, Installation, and Site Work (SIS)
- Electronic and Time-Based Work (ETB)
- Contextual Practice (CP)

A minimum of four courses must be taken in one of these concentration areas. One of the twelve Advanced Studio courses must be a College of Fine Arts interdisciplinary course or in one of the Schools outside of Art: Architecture, Design, Drama, Music.

IV. Academic Art Courses

First-semester freshmen are required to take Contemporary Issues Forum (60-104), an introduction to current practices in the visual arts. A three-semester art history/theory survey sequence is then required of all students:

Freshman Year (spring): Adventures in Arts Time
Sophomore Year (fall): Modern Visual Culture:

Sophomore Year (spring):

Contemporary Visual Culture:

to the Present

After the sophomore year, students must take two elective academic art courses.

V. University Academic Courses

Eleven academic courses outside of Art are required.

Freshman Year

The student is required to take the following three courses:

Computing @ Carnegie Mellon (99-101), Global Histories (79-104), and Interpretation and Argument (76-101).

After Freshman Year

The student must take one course in each of the following academic areas or “options”:

- Humanities and Languages or “Culture Option”
- Math, Science and Engineering or “Technical Option”
- History, Psychology, Economics or “Social Science Option”

The student must then take at least three additional courses from ONE of the academic areas/options listed above.

Finally, the student must take two additional, but unspecified, academic electives.

In selecting courses for the university academic component of the curriculum, students are encouraged to complete a cluster of courses that appeals to and develops their interests as emerging artists. In the process of taking their university electives, students can often simultaneously earn a minor.
Bachelor of Fine Arts (B.F.A.) Curriculum

Below is the recommended distribution of courses in the four-year B.F.A. curriculum. After the freshman year, students may begin to choose university electives. After the first semester of the sophomore year, students have more options regarding the sequencing and selection of their coursework.

384 Total Units for the B.F.A. Art Degree

Sophomore and Senior Year Reviews

Students give an overview of their work twice in their four-year course of study. At the end of the sophomore year, students undergo a faculty review of their work to date in the program. A successful review is required for advancement to the junior year.

Art Majors Minoring or Double Majoring in Another Department

About a third of current B.F.A. Art students pursue a minor or a second major. If students are contemplating this option, they must discuss their plans with academic advisors from the minor or second major department as well as with the School of Art academic advisor.

Study Abroad

Art students are encouraged to spend either a semester of their junior year, or a summer before or after their junior year, in one of many available international programs. These programs include exchange programs sponsored by the School of Art in which a student's financial aid package remains in effect, and programs sponsored by other institutions.

International exchange programs currently active include the following:
- China Chinese University of Hong Kong, Shatin, Hong Kong
- France Ecole nationale superieure des Beaux-Arts, Paris
- Germany Universitat der Kunste Berlin, Berlin
- Israel Bezalel Academy, Jerusalem
- Japan Tokyo Polytechnic University, Tokyo
- Korea The Korean National University of the Arts, Seoul
- New Zealand Auckland Institute of Technology, Auckland

Programs with other Pittsburgh Institutions

Art students are eligible to take courses at the nearby University of Pittsburgh's History of Art and Architecture Department, at Pittsburgh Filmmakers, and at the Pittsburgh Glass Center. Established agreements with these institutions and other Pittsburgh colleges, universities or centers offer cross-registration opportunities at no additional expense to the student.

BXA Intercollege Degree Programs

Bachelor of Computer Science and Arts (BCSA) Bachelor of Humanities and Arts (BHA) Bachelor of Science and Arts (BSA) Bachelor of Engineering and Arts (BEA) Carnegie Mellon University offers a degree program that combines an Art Focus (11 courses for BHA, BSA and BEA, 12 courses for BCSA) with a focus in the Dietrich College of Humanities and Social Sciences, the Mellon College of Science, the Carnegie Institute of Technology, or the School of Computer Science. The Assistant Head of the School advises BXA majors in selecting...
courses in the Art Focus. A description of these four programs, and a list of requirements and electives, can be found in the in the BXA Intercollege Degrees Program section of this catalog.

Art Minors
Students from other colleges and departments are eligible to pursue a minor in art. A minor requires six courses in the School of Art, selected from a list of requirements and electives as described in the Minors Offered by the College of Fine Arts section of this catalog.

Master of Fine Arts (M.F.A.) Degree
The School of Art offers a three-year program leading to a Master of Fine Arts in Art. This is a unique program designed to connect art-making to the university at large, and to Pittsburgh communities and organizations. Information about this program is available at the School of Art website: http://www.cmu.edu/art.

Master of Arts Management (M.A.M.) Degree
The College of Fine Arts and the Heinz College School of Public Policy and Management co-sponsor a Master of Arts Management degree. Students admitted to the M.A.M. degree program in their junior year may complete both a Bachelor of Fine Arts degree and a Master of Arts Management degree in five years. Students interested in this graduate degree should consult with advisors early in their undergraduate program.

Pre-College Programs
The School of Art maintains two pre-college programs: a Saturday program during the academic year and a six-week program during the summer. These programs are designed to prepare the college-bound high school student for college level work in art. Information on these programs may be obtained by contacting the School of Art.

Full-Time Tenure Track Faculty
KIM BECK, Associate Professor of Art – M.F.A., Rhode Island School of Design; Carnegie Mellon, 2004–.

PATRICIA BELLAN-GILLEN, Dorothy L. Stubnitz Professor of Art – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1986–.

BOB BINGHAM, Professor of Art – M.F.A., University of California, Davis; Carnegie Mellon, 1993–.

LOWRY BURGESS, Professor of Art - Post-Graduate Degree, Pennsylvania Academy of Fine Arts/University of Pennsylvania; Carnegie Mellon, 1989–.

JOHN CARSON, Regina and Marlin Miller Professor of Art and Head of the School of Art – M.F.A., California Institute of the Arts; Carnegie Mellon, 2006–.

JAMES DUESING, Professor of Art – M.F.A., University of Cincinnati; Carnegie Mellon, 1997–.

ANDREW JOHNSON, Associate Professor of Art – M.F.A., Carnegie Mellon University; Carnegie Mellon, 2004–.

ELAINE A. KING, Professor of Art History and Theory – Ph.D., Northwestern University; Carnegie Mellon, 1981–.

CAROL KUMATA, Professor of Art – M.F.A., University of Wisconsin, Madison; Carnegie Mellon, 1979–.

GOLAN LEVIN, Associate Professor of Art – M.S., Massachusetts Institute of Technology; Carnegie Mellon, 2004–.

JOSEPH MANNINO, Professor of Art – M.F.A., University of Southern Illinois; Carnegie Mellon, 1986–.

CLAYTON MERRELL, Professor of Art – M.F.A., Yale University; Carnegie Mellon, 1998–.

ALI MOMENI, Assistant Professor of Art – Ph.D., University of California at Berkeley; Carnegie Mellon, 2012–.

PAOLO PEDERCINI, Associate Professor of Art – M.F.A., Rensselaer Polytechnic Institute; Carnegie Mellon, 2009–.

RICHARD PELL, Associate Professor of Art – M.F.A., Rensselaer Polytechnic Institute; Carnegie Mellon, 2008–.

MARTIN PREKOP, Professor of Art – M.F.A., Rhode Island School of Design; Carnegie Mellon, 1993–.

MELISSA RAGONA, Associate Professor of Visual Culture and Critical Theory – Ph.D., State University of New York at Buffalo; Carnegie Mellon, 2003–.

JON RUBIN, Associate Professor of Art – M.F.A., California College of Arts and Crafts; Carnegie Mellon, 2006–.

SUZIE SILVER, Professor of Art – M.F.A., The School of the Art Institute of Chicago; Carnegie Mellon, 1999–.

SUSANNE SLAVICK, Andrew W. Mellon Professor of Art – M.F.A., Tyler School of Art; Carnegie Mellon, 1984–.

Visiting Faculty
SCOTT ANDREW, Visiting Assistant Professor of Art – M.F.A., Carnegie Mellon University; Carnegie Mellon, 2014–.

CARA BENEDETTO, Visiting Assistant Professor of Art – M.F.A., , Columbia University School of the Arts; Carnegie Mellon, 2014–.

JOSHUA REIMAN, Visiting Assistant Professor of Art – M.F.A., Syracuse University; Carnegie Mellon, 2011–.

JEN DELOS REYES, Kraus Visiting Faculty – M.F.A., University of Regina; Carnegie Mellon, 2015–.

DEVAN SHIMOYAMA, Visiting Assistant Professor of Art – M.F.A., Yale University; Carnegie Mellon, 2014–.

Full-time Joint Appointments
CHARLEE BRODSKY, Associate Professor of Art and Photography – M.F.A., Yale University; Carnegie Mellon, 1978–.

ROGER DANNENBERG, Senior Research Computer Scientist and Artist – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1982–.

JAMIE GRUZSKA, Special Faculty and CFA Photography Administrator – M.F.A., University of Buffalo; .

JUDITH SCHACHTER, Professor of Anthropology, History, and Art – Ph.D., University of Minnesota; Carnegie Mellon, 1984–.

DYLAN VITONE, Associate Professor, School of Design – M.F.A., Massachusetts College of Art; Carnegie Mellon, 2006–.

Adjunct Courtesy Appointments
SARAH ELDRIDGE, Adjunct Faculty.

PATRICIA MAURIDES, Adjunct Faculty – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1999–.

Design at Carnegie Mellon

Design is the thoughtful activity that humanizes our environment through visual communication and the shaping of products that help us in our daily lives. Whether in magazines and books, posters and exhibitions, video and film, human-computer interactions, or any of the myriad of everyday products such as furniture, consumer goods, vehicles, or medical equipment, designers play an important role in shaping the form and content of our experience.

Designers are concerned with aesthetics, but they are equally concerned with serving people. This requires more than skill in the fine arts. It also requires knowledge about the needs, desires, expectations, and capabilities of human beings. It requires skills of observation and interpretation that help us understand the people that we want to serve. More than this, however, designers must also understand the technological issues that stand behind effective products. They must understand the materials, tools, and production processes of the modern world. An education in design is an education for the mind as well as the eye and hand.

The undergraduate program enables students to develop specialized skills in the areas of Product (Industrial) Design, Communication (Graphic) Design and Environments (design for physical and digital environments), while providing them with a solid foundation in design studies. Students study systems thinking; the ability to see and solve problems at multiple levels of scale, and situate their work within larger social and environmental contexts.

The over-arching theme of the curriculum is design for interactions, which acknowledges that ‘ecologies’ of products and communications often come together within complex physical and digital environments. Coursework balances making and theory with the integration of new, emergent technologies. Students are encouraged to explore the scope of design as well as the responsibility and ethics involved in the design of interactions between people, the built world, and the environment.

The curriculum is one that provides students with the ability to customize their degree: they may choose to specialize in one of three areas offered (Products, Communications, Environments), but also have the option of combining any two, to create a unique, interdisciplinary design degree.

The undergraduate curriculum also introduces students to three important areas of design focus: design for service, design for social innovation and transition design. These represent both new and established design approaches to framing and solving problems. In their senior year, students bring their disciplinary specialty (communications, products or environments) to projects that are situated within the areas of design for service and/or design for social innovation.

The School offers a Bachelor of Design with tracks in Communications, Products, or Environments.

Communications

The ability to communicate and shape meaning is one of the most powerful and ubiquitous forms of design in today’s world. Students learn to design effective communications across a wide variety of media that always exist within complex webs of interactions between people, products, and environments. Areas of study include narrative and storytelling, information design, and a variety of analog and digital visualization techniques. Students develop the ability to identify specific audiences and communicate to them through effective visual, verbal and aural communications that educate, inform and delight.

They study the dynamic and ‘emergent’ characteristics of communications in a globally networked society where technologies and modes of individual and mass communication are constantly changing. Students learn systems thinking and engage in an iterative, multi-disciplinary and collaborative design process that involves research, observation, prototyping and rigorous evaluation. Students develop the ability to identify and communicate to specific audiences through effective visual and verbal communications that educate, inform, delight and invite participation.

Products

Students learn to design products and their interactions within the context of human needs and they develop a deep understanding of the ways in which products shape behavior. Our curriculum acknowledges that no product exists in isolation—it always part of a larger system comprised of people, communications and environments. Within the context of design for service, products exist as ‘touchpoints’ in a service ecology. For this reason, students learn systems thinking and engage in an iterative, multi-disciplinary and collaborative design process that involves research, observation, modeling/prototyping and rigorous evaluation.

Students are introduced to current production and manufacturing processes as well as sustainable approaches, such as cradle-to-cradle, lifecycle analysis and the use of new, more environmentally friendly materials. The School has a well-equipped analog and digital prototyping facility where students work with traditional materials such as wood and metal and learn to design and prototype using CAD software and 3D digital printers.

Environments

Students learn to design for complex environments that exist in the digital, physical and multi-modal realms. Most of the products and communications we interact with are situated within complex physical spaces (our homes, classrooms, places of business, shopping malls, even amusement parks). We also interact with complex online environments such as large websites, social networking and virtual reality environments. And increasingly we interact in ‘smart’ physical spaces with multi-modal communications in a combination of the analog and the digital.

In our curriculum, environments are seen as integrated and dynamic systems that require the design of interactions at multiple levels of scale. Students acquire a diverse set of skills that includes a deep understanding of spatial relationships, designing with and for emerging, multi-media technologies and an understanding of the cognitive challenges presented by multi-modal spaces.

Students who focus on the design of environments delve deep into systems thinking and systems dynamics and spend time learning to collaborate and lead within multi-disciplinary teams (solving large problems involving complex spaces almost always involves teams of people from different disciplines).

Design Minor Program

The School also offers a minor in Design for well-qualified students. Further information on the minor program is provided earlier in the catalog.

The Design Curriculum

The design curriculum is for students who are interested in full-time undergraduate study leading to entry-level professional employment or advanced graduate study in the areas of Communication Design, Product Design, or Design for Environments. The first year is a period of discovery, where students explore studio projects and supporting courses in the ideas and methods of design practice as well as courses in design studies. The second and third years are a period of concentration and development primarily within the student’s area(s) of specialization. The fourth year is a period of integration and advanced study, with studio projects involving teams of students from all areas of design. There are studio courses throughout all four years, supported by departmental electives in the ideas and methods of design practice and other courses in the history, theory, and criticism of design. In addition, the School also requires all students to take a substantial number of general education courses offered by other departments throughout the university. General education is an essential part of the education of a professional designer.

Foundation Year

In their freshmen year, students are introduced to all three areas of design specialty: Product (Industrial), Communication (Graphic) and digital and physical Environments. Here, they explore these unique and complementary areas of design and gain a wide range of skill sets such as systems thinking, iterative process, collaboration and visualization, and work in both two and three dimensional materials as well as digital media.

At the end of their freshman year, students are given the opportunity to begin to focus their interests in two of three design areas (products/
communications/environments) and will eventually decide upon a single area of focus or a dual path of study. This is the first-year curriculum for all design students.

**Second Year**

Following the first-year program, students select two out of three areas of interest: Products[P], Communications[C], Environments[E]. In the fourth semester students select one of the two areas to study more deeply. Students investigate the relationships people form with designed artifacts and the roles that physical, visual, and digital forms play in our lives. They apply what they learn to the design of products, communications, and environments that facilitate interactions. Students are also required to take general education courses to gain a broad vision of many disciplines and fields of knowledge that are relevant to design.

**Second Year**

- Students investigate the relationships people form with designed artifacts and the roles that physical, visual, and digital forms play in our lives. They apply what they learn to the design of products, communications, and environments that facilitate interactions. Students are also required to take general education courses to gain a broad vision of many disciplines and fields of knowledge that are relevant to design.

**Third Year**

In the fifth and sixth semesters, students may choose to continue their fourth semester area of focus, or they may choose to study their second area of study from the third semester. Students study how design functions at various levels of scale and degrees of complexity situated in specific contexts. They design products, communications, and environments that function as cohesive systems that live within the built and social worlds.

Fourth Year

In the senior year, students work to identify their next steps in professional practice, entrepreneurship, or in academia. They apply their design skills and knowledge to client-based and/or self-defined projects that focus on the design of services or social innovation.

The fall semester features the Design Research Studio, a semester-long project where students work in teams applying skill and knowledge learned in Products, Communications, and/or Environments. In the spring the Capstone Project challenges students to work independently on a semester-long project, deepening their understanding of service or social innovation design principles.

### Other Requirements

General education courses should be selected from other departments throughout the university. Students are strongly advised to select a balanced set of general education electives in addition to Interpretation and Argument, Global Histories and Introduction to Psychology - from three broad areas of study: arts and humanities, social and behavioral sciences, and natural sciences and engineering, including mathematics. While free electives may include studio courses in other departments, academic electives are non-studio (lecture) courses in other departments. Specific recommendations (and general requirements) for electives in all of these areas are available from advisors in the School of Design. The School places strong emphasis on the value of general education for personal growth as well as professional development. General education electives allow a student to obtain a minor in another department or program, such as business, human-computer interaction, IDEATE, engineering, professional and technical writing, or architecture.

Students may enroll for no more than 18 units of independent study courses, and no more than one independent study per semester. A minimum 3.0 GPA is required for independent study. Independent study is permitted only in the third and fourth years of the program. Proposals for independent study courses must be developed jointly by the student and a faculty advisor. Guidelines are available from the School.

A minimum GPA of 2.0 is required to maintain Program status. Grades lower than “C” in required Design courses will result in academic probation, suspension, or drop from the School of Design.

Full-time students are required to enroll for a minimum of 36 units per semester, with 45 units required for expected degree progress (typically five courses per semester). The minimum number of units required for graduation in Design is 360.

### Standards

The design curriculum adheres closely to the fundamental professional entry-level standards established by the two leading national design organizations: the American Institute of Graphic Arts (AIGA) and the Industrial Designers Society of America (IDSA).

### Applications

The School of Design accepts applications from students who are completing secondary education or who wish to transfer from within Carnegie Mellon University. The School also accepts applications from students who wish to transfer from other institutions. Students applying for the program are asked to either 1) submit a portfolio or 2) complete a design project (available as a PDF on the Design web site) as evidence of design ability. This is considered in balance with evidence of academic ability, based on secondary school grades, SAT scores, class rank, and letters of recommendation. The School also accepts applications for the design minors program for a limited number of spaces. Details are available from the design office.

### Faculty

ERIC ANDERSON, Associate Professor of Design – M.A., Ohio State University; Carnegie Mellon, 1998–.

MARK BASKINGER, Associate Professor of Design – M.F.A., University of Illinois; Carnegie Mellon, 2003–.

CHARLEE MAE BRODSKY, Professor of Photography – M.F.A., Yale University; Carnegie Mellon, 1978–.

WAYNE CHUNG, Associate Professor of Photography – M.F.A., Yale University; Carnegie Mellon, 2007–.

JO DI FORLIZZI, Professor, joint faculty in Design and Human Computer Interaction Institute – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–.

BRUCE HANINGTON, Associate Professor of Design of Environmental and Industrial Design – Master of Environmental and Industrial Design, University of Calgary; Carnegie Mellon, 1998–.

KRISTIN HUGHES, Associate Professor of Design – M.F.A., Virginia Commonwealth University; Carnegie Mellon, 2001–.

AISLING KELLIHER, Associate Professor – M.S. & Ph.D, MIT; Carnegie Mellon, 2012–.

STACIE ROHRBACH, Associate Professor of Design – M.G.D, North Carolina State University; Carnegie Mellon, 2003–.
PETER SCUPELLI, Assistant Professor – MDes & Ph.D, Carnegie Mellon; Carnegie Mellon, 2011–.

STEPHEN J. STADELMIEIER, Associate Professor of Design – M.S., Cornell University; Carnegie Mellon, 1977–.

CAMERON TONKINWISE, Associate Professor – Ph.D, University of Sydney; Carnegie Mellon, 2012–.

ANDREW TWIGG, Assistant Teaching Professor – B.A., Allegheny College; Carnegie Mellon, 2014–.

DYLAN VITONE, Associate Professor – M.F.A., Massachusetts College of Art; Carnegie Mellon, 2004–.

JOHN ZIMMERMAN, Associate Professor, joint faculty in Design and Human Computer Interaction Institute – MDes, Carnegie Mellon University; Carnegie Mellon, 2002–.

MATT ZYWICA, Assistant Teaching Professor – B.F.A., University of Illinois; Carnegie Mellon, 2014–.

**Courtesy Appointments**

LUIS VON AHN, Assistant Professor of Computer Science – Ph.D, Carnegie Mellon University; Carnegie Mellon, 2005–.

JONATHAN CAGAN, George Tallman Ladd Professor of Mechanical Engineering – Ph.D., University of California Berkeley, . .

SUGURU ISHIZAKI, Associate Professor of Rhetoric and Visual Design – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2005–.

DAVID S. KAUFER, Professor of English and Rhetoric – Ph.D., University of Wisconsin; Carnegie Mellon, 1980–.

GOLAN LEVIN, Associate Professor of Art – M.S., Massachusetts Institute of Technology; Carnegie Mellon, 2004–.

**Special Faculty**

ROBERT O. SWINEHART, Professor of Design, Emeritus – M.F.A., Northern Illinois University; Carnegie Mellon, 1974 - 2010–.
School of Drama

Peter Cooke, Head of School
Office: Purnell Center for the Arts, 221
The information contained in this section is accurate as of July 31, 2014 and is subject to change. Please contact the School of Drama with any questions.

The School of Drama at Carnegie Mellon University is the oldest drama program in the country. CMU Drama offers rigorous, world-class classical training in theatre while providing thorough preparation for contemporary media.

As a member of the Consortium of Conservatory Theatre Training Programs, the school chooses students to participate in the program based on their potential ability. Every Drama student is treated as a member of a theatrical organization and must acquire experience in all phases of the dramatic arts. Students are also asked to broaden their knowledge through courses in the other colleges of the university. The undergraduate Drama program, which incorporates approximately 200 students, leads to a Bachelor of Fine Arts in Drama. The options available are: Acting, Music Theatre, Design, Production Technology and Management, Directing, Dramaturgy, and Theatre Studies. The production of plays, a natural extension of demanding class work, is our lab, and constitutes one of the school's major activities. The choice of texts used is determined by the particular needs of current students. Each semester, 15 to 25 lab productions, directed by faculty, guest directors, and advanced students, are presented in our three theatre spaces. The labs range from completely mounted, full-length dramatic and musical works to more simply produced directing projects and one-acts. The Drama program is vigorous and exacting, making demands on students that necessitate good health, a willingness to work and a commitment to professional discipline at all times. Because of full daytime class work and heavy production schedules, much production preparation takes place in the evening. Drama students, therefore, are advised to live in residence halls or in the immediate vicinity of the campus.

Acting Option

The Acting option is designed to prepare the student for immediate entry into the profession. It is a sequence-based training program with accumulative skills building upon each other over the course of four years. It is a conservatory training course, and the curriculum focuses primarily on the technique and craft of theatre. At the same time it offers skills that are applicable to all media. Courses in acting, voice, speech, movement, and theatre history are integral parts of the program at all four levels. In addition to studio classes, Acting majors are required to take at least one liberal arts class each semester that will allow students to experience the breadth of the course of study from the immediate vicinity of the campus. All students must demonstrate a commitment to growth, show continued progress in their work and in the knowledge of their craft, and show a respect for professional standards in discipline, quality and ethics. The freshman year is a discovery year and provides an introduction to basic skills-working from self, learning to play objectives and actions and the beginning of character exploration. In the sophomore year these skills are solidified and deepened as more sophisticated, verbally complex material is introduced, through a focus on in-depth scene study, both contemporary and Shakespeare. In the junior year students continue to develop their craft by investigating a variety of styles, including Greek, Brecht, and Restoration. Skills are now tested and strengthened through public performance. The senior year provides a bridge from training to the professional world and offers the opportunity to appear on the School of Drama's main stage. At the end of the senior year, students are introduced to the profession through Showcase performances in New York City and Los Angeles. The privilege to participate in Showcase is subject to the approval of the School of Drama faculty, and as a rule is granted only to students who have obtained the necessary credits for graduation.

Music Theatre Option

The students in the Music Theatre program share the training philosophy and much of the same curriculum as others in the acting option. In addition, they take courses particular to the demands of Music Theatre. These include private voice along with training in a variety of dance techniques (Ballet, Jazz, Tap and Broadway Styles) and music theatre styles and skills.

Design Option

Design students are expected to develop artistic ability in the conception and execution of scene, lighting, sound and costume design for plays of all periods under varying theatrical conditions. Students may elect to have a focus on one or two areas but must have a solid background in all four. Freshmen in design receive instruction in drawing and painting, three-dimensional techniques, and in the application of basic design principles through courses in drawing and design. Sophomores learn to apply design principles to the theatre through research, play analysis, and studies in the fundamentals of scene, lighting, sound and costume design. Design assignments cover various styles and periods and include the preparation of models, renderings, and working drawings, lighting storyboards, and light plots. Juniors and Seniors take specialized courses in two areas of stage design and are expected to head studio and main-stage production crews. As part of the degree work, juniors may design sets, lights, sound or costumes for a production in the Studio Theatre and seniors may design sets, lights, sound or costumes for a Master's thesis show or a main-stage production. Designing for lab productions, both those that are highly resourced and those that are moderately resourced, requires a variety of creative approaches, preparing designers for a variety of real-world situations.

Directing Option

The John Wells Directing Program promotes creativity, intellectual curiosity, a broad and well-rounded understanding of the theatre and leadership ability. It provides a detailed exploration of the technique of directing for stage and for camera. The curriculum is designed for those serious about the art of directing and intending to pursue a career in theatre, film or television. Course work in scene design, lighting and costume design develops the students' visual sophistication as well as an understanding of how these elements combine in practical production situations. Stage management skills are studied and practiced. Theatre history, criticism, play-writing, play development and theatre management classes introduce the student to the wide range of knowledge necessary for directing. There are many avenues open for practical application: scene work in class, a short film written and directed by the students, opportunities in multi-camera directing and a studio project. The broad scope of the directing curriculum encourages the director's interaction with all the theatrical disciplines. Collaboration in all forms, so necessary to the art, is the goal.

Production Technology and Management (PTM) Option

The Production Technology and Management program develops the technologists and managers of the future with an intensive curriculum designed to synthesize academic development and production experience. The curriculum focuses on the production requirements of live performance, in the form of traditional theatrical presentation, while also providing exposure to television, film and emerging technology-based art forms. Integrated in a world class research university environment, the School of Drama is uniquely positioned to contribute to the advancement of the collaborative arts. The goal of the PTM program is to prepare today's students to become tomorrow's leading professionals in the entertainment industry. All undergraduate students begin with the development of visual and written communication skills. The first four semesters immerse the student in a range of collaborative and individual studies: scenery, costume, sound and lighting design fundamentals; dramatic structure and interpretation; manual and computer-based drafting; perspective and figure drawing; fundamentals of directing; production management and preparation, history of art and history of architecture and décor. The last four semesters focus in the student's analytical skills within their chosen area of concentration: technical direction or stage/production management.

Technical Directors are offered classes in: material applications, metal working techniques, structural design, scenic crafts, fabrication design and detailing, machinery design, rigging techniques, power system and electronic design fundamentals, introduction to sound design, automation
system technology, technical management and production management. Technical Directors may take a single semester internship at an approved regional or commercial producing organization, in lieu of one semester of study. Student selected elective courses, outside the School of Drama, provide balance and breadth to the professional undergraduate education offered in the PTM program of study.

Stage Managers and Production Managers are offered classes in: stage management, production planning and scheduling, theater management, introduction to accounting, cash budgeting, producing for television and film, camera lab, computer applications, technical management, organizational behavior, principles of economics, business communications and production management workshop. Stage and Production Managers may take a single semester internship at an approved regional or commercial producing organization, in lieu of one semester of study. Student selected elective courses, outside the School of Drama, provide balance and breadth to the professional undergraduate education offered in the PTM program of study.

Dramaturgy Option

Dramaturgy is the number-one growth field in the entertainment industry. Dramaturgs are theatre insiders who thrive on the process of being behind living theatre events. They love reading, writing, and thinking and believe in the power of theatre to enlighten, stimulate and entertain audiences. Through Carnegie Mellon University's new and innovative Dramaturgy Option you'll become an expert on historical practices and aesthetic theories behind any text, whether in production or waiting to come alive on stage. You will have the insights to reveal playwrights' intentions and the ability to communicate them to producers, directors, performers, and audiences.

The Dramaturg adapts traditional, historical, and classic texts for the modern stage; aids directors, designers, and performers in clarifying their insights; collaborates with artistic directors in choosing exceptional repertory; finds social relevance in every work; links audiences with the ideas behind the productions in program notes, lectures, and talk-backs.

You will receive rigorous, highly structured academic and artistic training; broad and deep historical research; intensive study of aesthetic and critical theories; practical, professional-level experience in full scale theatre productions; opportunities to develop diversity by studying with Carnegie Mellon University professors in other arts as well as in the sciences and humanities; opportunities to study abroad; opportunities to work with professional companies in the US, Asia, Latin America, Africa, and Europe.

Your career possibilities include literary management; story editing for films and television; production dramaturgy; teaching; developing the talents and insights of students at educational institutions.

Theatre Studies Option

The Theatre Studies option offers students from any of the School’s conservatory areas of specialized study the opportunity to continue developing their theatre related skills while expanding their interests to other artistic and academic areas. This option will only be available to Drama students in go that have completed their sophomore year in the School of Drama (ie: two years of conservatory training). Students are required to write a proposal outlining their interests in the Theatre Studies option, and the proposal must be approved by the Head of the School of Drama.

The goal of the Theatre Studies option is to enable students to explore the diverse opportunities for which conservatory drama training can be a basis, and to examine the possibility of post graduate education in a new area of specialization after obtaining a BFA in Drama. As the intent of the Theatre Studies option is to broaden your experiences, a semester studying abroad or participating in a recommended internship is required for one semester, either in the fall or spring. Individualized courses of study are established for each student in consultation with an appropriate faculty advisor.

Curriculum

The School of Drama curriculum is continuously reviewed and modified in an effort to provide the best conservatory experience for undergraduate students in the School of Drama. The following curriculum is subject to change. Not all requirements are listed, and units are often variable within each Option based on performances, production assignments, and individual projects.

Advanced Topics in Stage Management- Mini 3 & Mini 4  
NON-DRAMA ELECTIVES:  
PTM students take a minimum of seven Non-Drama Electives,  
6-9 units each.  
Notes:  
* Foundations of Drama I will be taken only one semester in the freshman  
year. Half of the freshmen PTM students will take it in the fall, the  
rest will take it in the spring. PTM students take 99-101 Computing @  
Carnegie Mellon in the semester they are not taking Foundations of  
Drama I.  
** Foundations of Drama II will be taken only one semester in the  
sophomore year. Sophomore PTM students will be required to take  
an approved Humanities and Social Sciences (H&SS) elective in the  
Director College during the semester they are not taking Foundations of  
Drama II. This course counts as one of the required seven Non-Drama  
Electives.  
*** All PTM students are required to complete Special Topics in Drama:  
History, Literature and Criticism. It may be taken at any time after  
Foundations II has been completed.  
~ Classes offered in alternating years.

**Notes:**
- Dramaturgy students starting a modern language at the 100-level should begin in the fall of freshman year.
- Dramaturgy 3, 4, 5, and 6 may be taken in any order in the sophomore, junior, and senior year.
- Dramaturgy students are required to take a total of 18 units of Special Topics in Drama: History, Literature and Criticism during their junior and senior year.
- Dramaturgy Internship may be completed in the summer, fall, or spring semester of junior senior year.

**Faculty**

WENDY ARONS, Professor, Dramatic Literature – Ph.D., University of California, San Diego; Carnegie Mellon, 2007–.

NATALIE BAKER-SHIRER, Associate Professor, Voice & Speech – M.F.A., University of Pittsburgh; Carnegie Mellon, 1992–.

CLAUDIA BENACK, Associate Teaching Professor, Music Theatre – M.F.A., Carnegie Mellon; Carnegie Mellon, 1993–.

DICK BLOCK, Teaching Professor, Design – M.F.A., Northwestern University; Carnegie Mellon, 1988–.

DAVID BOEVERS, Associate Professor, Production Technology and Management – M.F.A., Yale University; Carnegie Mellon, 2000–.
C. TODD BROWN, Assistant Teaching Professor, Lighting – B.A., Ohio State University; Carnegie Mellon, 2001–.

JAMES CATON, Associate Teaching Professor, Dance Carnegie Mellon, 1988–.

JUDITH CONTE, Teaching Professor, Dance – B.F.A., University of Wisconsin/Milwaukee; Carnegie Mellon, 1978–.

TOME COUSIN, Assistant Professor, Dance Carnegie Mellon, 2011–.

THOMAS DOUGLAS, Associate Teaching Professor, Dance Carnegie Mellon, 1991–.

JUDITH CONTE, Teaching Professor, Dance – B.F.A., University of Wisconsin/Milwaukee; Carnegie Mellon, 1978–.

TOME COUSIN, Assistant Teaching Professor, Dance Carnegie Mellon, 2011–.

ROB HANDEL, Associate Professor, Dramatic Writing – M.F.A., Brown University; Carnegie Mellon, 2009–.

JED ALLEN HARRIS, Associate Teaching Professor, Directing – M.F.A., Carnegie Mellon; Carnegie Mellon, 1991–.

KEVIN HINES, Assistant Teaching Professor, Production Technology & Management – M.F.A., Yale University; Carnegie Mellon, 1998–.

CAMERON KNIGHT, Assistant Professor, Acting – M.F.A., University of Delaware; Carnegie Mellon, 2012–.

SUTTIRAT LARLARB, Associate Professor, Design – M.F.A., Yale University; Carnegie Mellon, 2013–.

CINDY LIMAUNO, Professor, Lighting Design – M.F.A., Florida State; Carnegie Mellon, 1987–.

Caden MANSO, Associate Professor, Directing – B.A., University of Texas, Austin; Carnegie Mellon, 2014–.

MOLLY MCCARTER, Assistant Teaching Professor, Stage Management – M.F.A., Yale School of Drama; Carnegie Mellon, 2014–.

CATHERINE MOORE, Associate Teaching Professor, Movement – M.F.A., University of Cincinnati, College-Conservatory of Music; Carnegie Mellon, 2000–.

ANNE MUNDELL, Associate Professor, Design – M.F.A., Brandeis University; Carnegie Mellon, 1989–.

SARAH PICKETT, Assistant Professor, Sound Design – M.F.A., Yale University; Carnegie Mellon, 2012–.

JOE PINO, Associate Professor, Sound Design – M.F.A., University of Virginia; Carnegie Mellon, 1999–.

MEGAN RIVAS, Associate Professor, Dramaturgy – M.F.A., University at Austin, Texas; Carnegie Mellon, 2013–.

BRIAN RUSSMAN, Associate Teaching Professor, Costume Production – M.F.A., Ohio State University; Carnegie Mellon, 2009–.

TINA SHACKLEFORD, Assistant Teaching Professor – M.F.A., University of California, San Diego; Carnegie Mellon, 2004–.

LARRY SHEA, Associate Professor, Video and Media Design – M.F.A., Massachusetts College of Art; Carnegie Mellon, 2010–.

NARELLE SISSONS, Associate Professor, Design – M.A., Central/St Martins and The Royal College of Art in London, UK; Carnegie Mellon, 2007–.

ANDREW SMITH, Assistant Professor, Acting – M.F.A., University of California, San Diego; Carnegie Mellon, 2014–.

ROBB THOMSON, Associate Professor, Lighting Carnegie Mellon, 2014–.

DON WADSWORTH, Professor, Voice & Speech – M.F.A., University of Pittsburgh; Carnegie Mellon, 1989–.

KAF WARMAN, Associate Teaching Professor, Movement – M.F.A., Goddard College, Ecole; Carnegie Mellon, 1996–.
The School of Music at Carnegie Mellon University offers the best aspects of conservatory training within a great university, combining preparation for a lifetime in performance, composition or music and technology with the advantages of learning in an intense academic environment. Every student in the School of Music is a performer, composition or music and technology major. The School of Music is an accredited institutional member of the National Association of Schools of Music.

Each performance major is challenged to develop through individual instruction with master teachers. The School’s relationship with the renowned Pittsburgh Symphony Orchestra is among the strongest conservatory-symphony orchestra relationships in the United States, and Pittsburgh’s uniquely strong sense of musical community fosters close relationships with the Pittsburgh Opera, Opera Theater of Pittsburgh, Pittsburgh Ballet Theatre, Pittsburgh Chamber Music Society, and a host of other professional musical organizations.

Regular performing ensembles include the Carnegie Mellon Philharmonic, Wind Ensemble, Baroque Ensemble, Contemporary Ensemble, Jazz Orchestra, Jazz Vocal Ensemble, Choirs, and Opera Production. Some of the School’s ensembles are instrument specific: Chamber Music ensembles and the Percussion Ensemble, among others. Opportunities for performance are stressed – undergraduate performance majors perform junior and senior recitals, chamber music is publicly presented, frequent performance opportunities on and off campus are provided, and community outreach is vigorously supported.

The School of Music has an intense commitment to new music, led by composition faculty, conductors who devote fully rehearsed cycles of the Philharmonic to works by student composers, and studio faculty whose own performing careers regularly feature new works, and including regular performances of student works in almost every Contemporary Ensemble Program, frequent opportunities with the Wind Ensemble and Choirs, and inclusion on student recitals. The School’s state-of-the-art recording facilities are an especially important resource for composers beginning their public careers.

All teaching is entrusted to professional faculty — there are no assistant studio teachers or doctoral teaching fellows — and specialists in Musicoogy, Theory, Counterpoint, Analysis, Composition, Computer Music, Eurhythmics, Solfege, Music Education, Pedagogy, Collaborative Piano and Coaching, Acting and Movement, Diction, Literature and Repertoire, Baroque Music, Chamber Music, Jazz, Conducting, and Recording Science provide a broad and rich platform for comprehensive musical preparation. At the same time, the university provides the greatest possible support for students combining their majors with minors in all disciplines, unique joint degree programs, and double major programs. These opportunities significantly increase a student’s career options and marketability in the changing professional world of music.

Facilities

The teaching facilities of the School of Music are located on the ground, main, and mezzanine floors of the College of Fine Arts, on the first floor of Margaret Morrison Hall, and in Skibo Gymnasium. Teaching, rehearsal, and practice rooms are equipped with Steinway pianos. Music students also have access to a state-of-the-art recording studio and music technology cluster. Performances take place in Kresge Recital Hall, Carnegie Music Hall, Alumni Concert Hall, and Mellon Institute Auditorium. The Hunt Library houses a fine collection of books, records, and scores. Listening and conference rooms are also available in the library.

School of Music Options

The School of Music offers a Bachelor of Fine Arts in the following areas:

- Performance (Instrumental, Voice, Piano, Organ)
- Composition

To earn a Bachelor’s degree in either of these options, a candidate must satisfactorily fulfill all the requirements of the School of Music.

Within the options listed above students may elect specializations in the following areas:

- Dalcroze Eurhythmics Certificate
- Piano Pedagogy Certificate
- Collaborative Piano Minor
- Conducting Minor
- Music Education Certification Minor
- Music Technology Minor
- Music Theory Minor

The School of Music jointly with the School of Computer Science and the Carnegie Institute of Technology offers a Bachelor of Science in the following area:

- Music and Technology

Dalcroze Eurhythmics Certificate

This program is designed to prepare teachers in the Dalcroze approach to music learning. The course of study includes eurhythmics, piano improvisation, and Dalcroze pedagogy. Carnegie Mellon undergraduates may enter the Dalcroze Training Program during their junior year. However, the certificate will be granted only upon completion of their undergraduate degree. This program is designed particularly to students who would like to incorporate Dalcroze principles into their teaching and to those who want to obtain more experience in this field.

Piano Pedagogy Certificate

A two-year program leading to certification in piano pedagogy is open to current Carnegie Mellon keyboard majors. Piano and organ majors learn to teach piano in a closely supervised environment of class piano instruction. This program has received national acclaim as a model of excellence, with Carnegie Mellon children consistently capturing prestigious awards in national piano competitions.

COLLABORATIVE PIANO Minor

The collaborative piano minor consists of a six-semester sequence of courses designed to give the students experience with vocalists and instrumentalists. There are individual coaching sessions as well as practical experience in vocal and instrumental studies.

Conducting Minor

This program is designed for students who are interested in acquiring conducting skills, in anticipation of either graduate study in conducting or a music education career. It includes required courses in basic conducting techniques for both choral and instrumental ensembles, orchestration, score reading/keyboard harmony, and elective courses in instrumental and vocal methods, diction, and literature and repertoire.

Music Education Certification Minor

Music Education Certification is a five-year program, with courses starting in the sophomore year. Bachelor of Fine Arts candidates who complete this program and pass the Praxis tests will receive Pennsylvania state certification in music (K-12), which is recognized in almost all other states.

Music Technology Minor

The student will take a series of courses which may include electronic and computer music, recording technology, the physics of sound, and computer programming. A rich computer music research environment enables talented students to work as programmers with outstanding faculty researchers, whose current projects are gaining international recognition in the areas of computer music and artificial intelligence.

Music THEORY Minor

This program is designed for students who are interested in advanced theory and analysis skills, in anticipation of either graduate study in theory or graduate study that requires a substantial level of theory knowledge. The student will take advanced theory and analysis courses and also support courses in the physics of musical sound and the psychology of music.
Performances and Activities of the School of Music

The School of Music sponsors performances, master classes, and lectures by outstanding national and international guest artists. Announcements of faculty, student, and guest performances are released every month to the students and the community.

General Requirements for BFA Candidates

Candidates for the Bachelor of Fine Arts degree in composition are required to complete a composition for orchestra in their senior year.

Candidates for the Bachelor of Fine Arts degree in performance are required to give public performances in their junior and senior years. Candidates for the Bachelor of Fine Arts degree in string performance are required to give public performances in their sophomore, junior, and senior years.

Candidates for the Bachelor of Fine Arts degree in performance are required to pass one semester (piano majors must pass two semesters) of a course that includes experience with pedagogy for their major studio area.

- Bagpipe, organ and saxophone majors must fulfill the pedagogy requirement as part of satisfying all demands outlined in their Major Studio syllabi, 57-522 Major Studio (Bagpipe), 57-502 Major Studio (Organ) and 57-514 Major Studio (Saxophone).
- Piano majors must take 57-273 Piano Pedagogy I and 57-274 Piano Pedagogy II.
- Voice majors must take 57-010 Voice Studio Performance Class.

Candidates for the Bachelor of Fine Arts degree in applied areas other than piano are required to pass a piano proficiency test.

Candidates for all School of Music degrees are required to pass four repertoire proficiency tests, and to participate in a major choral ensemble or a major instrumental ensemble as assigned and to attend Convocation every semester of residence in the School of Music.

Music Curriculum

The music curriculum is based on the following five building blocks:

1. Studio — This is the heart of the school. Students receive individualized instruction with senior faculty in their major area of study: performance or composition.
2. Theory — These courses are designed to help students develop listening skills, to acquire theoretical knowledge, to recognize structural techniques and manipulate technological resources. It includes courses in sight-reading, ear-training, eurhythmics, harmony, contrapuntal techniques, analysis of musical forms, 20th-21st century techniques, orchestration, score reading, and electronic and computer music for compositional and educational purposes. One music support course in the piano, organ, and instrumental curricula must be a theory course.
3. History - These courses cover in depth the music of the western world and survey the styles and musical structures of non-western music.
4. Ensemble — This area includes student participation in some of the following ensembles: Carnegie Mellon Philharmonic, Wind Ensemble, Baroque Ensemble, Contemporary Ensemble, Jazz Orchestra, Jazz Vocal Ensemble, Choirs, Opera Production, Chamber Music ensembles, and Percussion Ensemble.
5. Academics — The School of Music requires one general studies course (outside of the School) each semester and six semesters of elective courses for graduation. These accumulated credits may be applied to minors or majors in other disciplines. Exceptional students in good academic and musical standing within the School are permitted to take additional courses beyond the number required for graduation. There is no charge for extra credits taken at Carnegie Mellon. One elective course in the performance curricula must be a course that includes experience with pedagogy for the student’s major studio area.

Credits — The total number of units required for graduation is 407 for voice majors; 392 for composition majors; 380 for instrumental, organ, and piano majors. Three units equal one credit.

Piano

### Voice

A voice major must also complete an advanced language course of at least 9 units. Recommended: a domestic or international program, after the sophomore year, which includes intensive study for credit in the Italian, German, or French language.

### 57-276 Piano Pedagogy IV | 6
### 57-429 Beginning Piano for Children | 6

### Bachelor of Science in Music and Technology

The Bachelor of Science in Music and Technology is offered jointly by the School of Music, the School of Computer Science (SCS), and the Carnegie Institute of Technology (CIT).

This program consists of a set of courses that span both music and technology, as well as a capstone composition/design/performance project. Courses in all three areas of study are stipulated in the music and technology undergraduate curriculum and provide for students coming from any of the three areas. In other words, regardless of a student’s entry point — an interest in computer science, electrical engineering, or music — the coursework prescribed will allow the student to gain the requisite knowledge and experience in all three areas. Students will work closely with advisors and will be guided in both course selection and capstone projects.

85 units General Requirements

#### Seminar

| 57-570         | Music and Technology Seminar | 8 |

(8 semesters for a total of 8 units)

#### University

| 99-10x         | Computing @ Carnegie Mellon | 3 |
| 76-101         | Interpretation and Argument | 9 |
| 79-104         | Global Histories | 9 |

#### Humanities

| xx-xxx         | Cognition, Choice and Behavior course | 9 |
| xx-xxx         | English, History, Modern Languages, Philosophy, or Psychology course | 9 |

#### Mathematics

| 21-120         | Differential and Integral Calculus | 10 |
| 21-122         | Integration and Approximation | 10 |

#### Science

| 33-114         | Physics of Musical Sound | 9 |
| 33-106         | Physics I for Engineering Students | 12 |

25 units Electives

95 units Music Core

| 57-100         | Convocation | 8 |

(8 semesters for a total of 8 units)

| 57-152         | Harmony I | 9 |
| 57-153         | Harmony II | 9 |
| 57-408         | Form and Analysis | 6 |
| 57-151         | Counterpoint in Theory and Application | 6 |
| 57-258         | 20th-21st Century Techniques | 6 |
| 57-257         | Orchestration I | 6 |
| 57-271         | Orchestration II | 6 |
| 57-189         | Introduction to Repertoire and Listening for Musicians | 3 |
| 57-190         | Repertoire and Listening for Musicians I | 3 |
| 57-289         | Repertoire and Listening for Musicians II | 3 |
| 57-290         | Repertoire and Listening for Musicians III | 3 |
| 57-181         | Solfege I | 3 |
| 57-182         | Solfege II | 3 |
| 57-183         | Solfege III | 3 |
| 57-184         | Solfege IV | 3 |
| 57-161         | Eurhythmics I | 3 |
| 57-162         | Eurhythmics II | 3 |
| 57-273         | Survey of Western Music History | 9 |

120 units Music and Technology Core

| 15-112         | Fundamentals of Programming and Computer Science | 12 |
| 15-122         | Principles of Imperative Computation | 10 |
Minor in Collaborative Piano for Piano Majors in the School of Music

Admission Requirements:

The student must apply to enter the program in the office of the Director of Student Services (CFA 108).

36 units

57-381 Collaborative Piano I 6
57-382 Collaborative Piano II 6
57-383 Collaborative Piano III 6
57-384 Collaborative Piano IV 6
57-385 Collaborative Piano V 6
57-386 Collaborative Piano VI 6

18 units

(choose from the following courses)

57-220 English Diction 3
57-221 Italian Diction 3
57-222 French Diction 3
57-223 German Diction 3
57-332 Introduction to Conducting 6
57-336 Instrumental/Choral Conducting 6
57-431 Italian Literature and Repertoire 3
57-432 French Literature and Repertoire 3
57-433 Musical Theatre Literature and Repertoire 3

Minor in Conducting for Students in the School of Music

Admission Requirements:

1. The student must apply to enter the program in the office of the Director of Student Services (CFA 108) and have an interview with a member of the conducting faculty.
2. A 3.0 cumulative overall QPA and good academic standing are required for acceptance into the minor in conducting. Note that only a limited number of students can be accepted into the program.
3. In addition to the prerequisite courses listed below, the student must display superior solfege skills, by completing Advanced Solfege I and II with "A" or "B" grades or by demonstrating the equivalent level of skills.
4. Introduction to Conducting and Instrumental/Choral Conducting must be completed during the sophomore year with "A" grades before the student can register for the advanced conducting courses.
5. Conducting Practicum must be taken during the same semester as Independent Study in Conducting.
6. A 3.0 cumulative overall QPA is required for graduation with the minor in conducting.

30 units

Prerequisite Courses

57-152 Harmony I 9
57-153 Harmony II 9
57-161 Eurhythmics I 3
57-162 Eurhythmics II 3
57-189 Introduction to Repertoire and Listening for Musicians 3
57-191 Keyboard Studies 3

45 units

Required Courses

57-332 Introduction to Conducting 6
57-336 Instrumental/Choral Conducting 6
57-408 Form and Analysis 6
57-257 Orchestration I 6
57-271 Orchestration II 6
57-459 Score Reading/Keyboard Harmony 6
57-364 Conducting Practicum 3
57-618 Independent Study in Conducting 6

12 units

Electives

(choose from the following courses)

57-220 English Diction 3
57-221 Italian Diction 3
57-222 French Diction 3
57-223 German Diction 3

Minor in Music Performance/Music (Composition) for Students in the School of Music

Admission Requirements:
1. The student must apply to enter the program in the office of the Director of Student Services (CFA 108).
2. The student must perform an acceptable audition. Requirements for the audition can be found in the Admission section of the Undergraduate Catalog.
18 unitsPrerequisite Courses
57-161 Eurhythmics I 3
57-181 Solfège I 3
57-152 Harmony I 9
57-189 Introduction to Repertoire and Listening for Musicians 3

24 unitsRequired Studio Courses
57-496 Minor Studio 6
57-497 Minor Studio 6
57-498 Minor Studio 6
57-499 Minor Studio 6

18 unitsRequired Language Courses (Voice Minors)
Language Course (Choose 1)
82-101 Elementary French I 12
82-121 Elementary German I 12
82-161 Elementary Italian I 12

Diction Course (Choose 1)
An introductory course in the applicable language is a corequisite for each of these courses.
57-221 Italian Diction 3
57-222 French Diction 3
57-223 German Diction 3

Literature and Repertoire Course (Choose 1)
An introductory course in the applicable language is a prerequisite for each of these courses.
57-431 Italian Literature and Repertoire 3
57-432 French Literature and Repertoire 3
57-435 German Literature and Repertoire 3

Minimum Units Required for Music Performance/Music Composition Minor: 24-42

Faculty
DOUGLAS AHLSTEDT, Professor of Voice – M.M., Eastman School of Music; Carnegie Mellon, 1990–.

CHRISTOPHER ALLEN, Artist Lecturer in Percussion.

ALBERTO ALMARZA, Associate Professor of Flute – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1991–.

DONNA AMATO, Artist Lecturer in Piano and Staff Pianist – B.M., University of Arizona; Carnegie Mellon, 1998–.

JENNIFER AYLMER, Assistant Professor of Voice.

LEONARDO BALADA, University Professor of Composition – Diploma, The Juilliard School of Music; Carnegie Mellon, 1970–.

JEANNE BAXTRESSER, Vira I. Heinz University Professor of Flute – B.M., The Juilliard School of Music; Carnegie Mellon, 1997–.

SCOTT BELL, Artist Lecturer in OboeCarnegie Mellon, 1994–.

NEAL BERNTSEN, Artist Lecturer in Trumpet – M.M., Northwestern University; Carnegie Mellon, 2003–.

RAYMOND BLACKWELL, Vocal Coach and Staff Pianist – M.M., SUNY Binghamton; Carnegie Mellon, 2003–.

JEREMY BRANSON, Artist Lecturer in PercussionCarnegie Mellon, 2009–.

WILLIAM CABALLERO, Associate Teaching Professor in Horn – B.M., New England Conservatory; Carnegie Mellon, 2007–.

JUDITH CALEY, Artist Lecturer in Solfege – M.S.Ed., Duquesne University; Carnegie Mellon, 2006–.

CHRISTOPHER CAPIZZI, Artist Lecturer in Jazz Piano – M.A.M., Carnegie Mellon University; Carnegie Mellon, 2004–.

ANDRES CARDENES, Dorothy Richard Starling and Alexander Speyer, Jr. University Professor of ViolinCarnegie Mellon, 1989–.

ANDREW CARLISLE, Director of Piping.

L. MARK CARVER, Associate Teaching Professor in Collaborative Piano – M.M., Carnegie Mellon University; Carnegie Mellon, 1995–.

REBECCA CHERIAN, Artist Lecturer in TromboneCarnegie Mellon, 1993–.

ALEC CHIEN, Artist Lecturer in Piano Literature and Repertoire.

DENIS COLWELL, Head and Associate ProfessorCarnegie Mellon, 1980–.

MURRAY CREWE, Artist Lecturer in Bass TromboneCarnegie Mellon, 2001–.

DANIEL CURTIS, Resident Conductor.

MICHELE DE LA REZA, Assistant Teaching Professor of Dance – M.S., University of Pittsburgh; Carnegie Mellon, 2007–.

CYNTHIA DEALMEIDA, Associate Teaching Professor in Oboe – M.M., Temple University; Carnegie Mellon, 1991–.

ERIC DEFADE, Director of Jazz EnsembleCarnegie Mellon, 2002–.

ROBERT DELL, Artist Lecturer in Music Education.

MARK DOMENICIC, Artist Lecturer in Music Theory – M.M., Carnegie Mellon University; Carnegie Mellon, 2007–.

THOMAS DOUGLAS, Teaching Professor of Voice – M.M., Duquesne University; Carnegie Mellon, 1993–.

PAUL EVANS, Artist Lecturer in Percussion – MM, Temple University; Carnegie Mellon, 1995–.

ROBERT FALLOn, Assistant Professor of Musicology – Ph.D., University of California, Berkeley; Carnegie Mellon, 2009–.

JAMES FERLA, Artist Lecturer in Guitar – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1977–.

CYRUS FOROUGH, Professor of ViolinCarnegie Mellon, 2001–.

NANCY GALBRAITH, Professor of Composition – M.M., West Virginia University; Carnegie Mellon, 1984–.

PAUL GERLACH, Artist Lecturer in Music Education – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1982–.

NANCY GOERES, Artist Lecturer in Bassoon – B.M., Boston University; Carnegie Mellon, 1988–.

PETER GUILD, Artist Lecturer in Double Bass.

DAVID HARDING, Associate Professor in Violin and Chamber Music.

MICAH HOWARD, Artist Lecturer in Double BassCarnegie Mellon, 2010–.

ROSEANNA IRWIN, Associate Teaching Professor of Coaching and Accompanying – M.M., Duquesne University; Carnegie Mellon, 1990–.

JOHN PAUL ITO, Assistant Professor of Music TheoryCarnegie Mellon, 2011–.

ANNE JACOVICE, Artist Lecturer in Solfege.

CURTIS JOHNSON, Artist Lecturer in Saxophone.

PAUL JOHNSTON, Artist Lecturer in Music HistoryCarnegie Mellon, 2005–.

ANNABELLE JOSEPH, Professor of Music – D.A., Carnegie Mellon University; Carnegie Mellon, 1986–.

KENNETH KEELING, Associate Head and Professor Emeritus of Music – D.M.A., Catholic University of America; Carnegie Mellon, 1996–.

SUNG-IM KIM, Staff PianistCarnegie Mellon, 2011–.

Cameron Knight, Assistant Professor of Acting.

Craig KnoX, Artist Lecturer in TubaCarnegie Mellon, 2005–.

Peter KoPe, Assistant Teaching Professor of DanceCarnegie Mellon, 2007–.

Stephen Kostyniak, Artist Lecturer in French Horn.

Carla Larocco, Associate Teaching Professor of Keyboard Studies – M.F.A., Carnegie Mellon University; Carnegie Mellon, 1991–.

Lance Laduke, Artist Lecturer in Euphonium – B.M., Michigan State University; Carnegie Mellon, 2003–.

Elizabeth Lawrence, Artist Lecturer in Voice and Director of Jazz Vocal Ensemble – M.M., Manhattan School of Music; Carnegie Mellon, 1996–.

HANNA WU LI, Professor of Piano and Piano Pedagogy – M.M., Northwestern University; Carnegie Mellon, 1969–.

LUZ MARIQUEZ, Associate Teaching Professor in Collaborative Piano – M.M., Carnegie Mellon University; Carnegie Mellon, 1992–.
JOHN MARCINIZYN, Artist Lecturer in Guitar and Composition – Ph.D., University of Pittsburgh; Carnegie Mellon, 1991-.

JOHN MCCARTHY, String Methods Instructor.

MONIQUE MEAD, Director of Music Entrepreneurial Studies.

STEPHEN NEELY, Artist Lecturer in Eurhythmics – M.M., Carnegie Mellon University; Carnegie Mellon, 1998–.

RODOLFO OJEDA, Staff Pianist Carnegie Mellon, 2011-.

BENJAMIN OPIE, Artist Lecturer in Music Technology – M.M., Duquesne University; Carnegie Mellon, 2005–.

NATALIE OZEAS, Professor of Music Education and Director of Graduate Studies – Ed.D., University of Pittsburgh; Carnegie Mellon, 1989–.

ROBERT PAGE, University Professor Emeritus of Music – M.M., Indiana University; Carnegie Mellon, 1976–.

MILDRED MILLER POSVAR, Artist Lecturer in Voice – BM, Cleveland Institute of Music; Carnegie Mellon, 1981–.

DAVID PREMO, Artist Lecturer in Cello Carnegie Mellon, 1994–.

RICHARD RANDALL, Assistant Professor of Music Theory – Ph.D., Eastman School of Music; Carnegie Mellon, 2008–.

MICHAEL RUSINEK, Artist Lecturer in Clarinet Carnegie Mellon, 1998–.

CHRISTOPHER RUTH, Artist Lecturer in Music History.

VAHAN SARGSYAN, Staff Pianist.

SERGEY SCHEPKIN, Associate Professor of Piano – D.M.A., New England Conservatory; Carnegie Mellon, 2003-.

MARY BETH GLASGOW SCOTTING, Artist Lecturer in Violin.

STEPHEN SCHULTZ, Associate Teaching Professor of Music History and Flute – M.M., San Francisco State University; Carnegie Mellon, 2002-.

RICCARDO SCHULZ, Associate Teaching Professor and Director of Recording Activities – M.A., University of Pittsburgh; Carnegie Mellon, 1988-.

FRANCO SCIANNAMO, Associate Teaching Professor of Film Musicology and CFA Associate Dean.

MARIA SPACAGNA, Associate Professor of Voice.

STEPHEN STORY, Associate Conductor of Wind Ensemble.

PETER SULLIVAN, Artist Lecturer in Trombone Carnegie Mellon, 2000–.

DANIEL TEADT, Artist Lecturer in Voice.

MARGARET THOMAS, Professor of Music – Ph.D., University of Pittsburgh; Carnegie Mellon, 1981–.

THOMAS THOMPSON, Associate Teaching Professor of Clarinet and Co-Director of Wind Ensemble – M.M., Northwestern University; Carnegie Mellon, 1986-.

REZA VALI, Professor of Composition – Ph.D., University of Pittsburgh; Carnegie Mellon, 1988–.

GRETCHEN VAN HOESEN, Artist Lecturer in Harp – M.M., The Juilliard School; Carnegie Mellon, 1985–.

KAREN ROETHLISBERGER VERM, Staff Pianist – M.M., Cincinnati Conservatory; Carnegie Mellon, 2004-.

GEORGE VOSBURGH, Artist Lecturer in Trumpet and Co-Director of Wind Ensemble – B.A., University of Rochester; Carnegie Mellon, 2003-.

JAMES WHIPPLE, Artist Lecturer in Music Theory – BA, Carnegie Mellon University; Carnegie Mellon, 1995-.

COLETTE JOSSE WILKINS, Artist Lecturer in Solfege – First Prize, Conservatoire National de Versailles, France; Carnegie Mellon, 1974–.

DONALD WILKINS, Professor Emeritus of Music and Artist Lecturer in Organ – M.A., Harvard University; Carnegie Mellon, 1966–.

ANNE MARTINDALE WILLIAMS, Artist Lecturer in Cello – Diploma, Curtis Institute of Music; Carnegie Mellon, 1987–.

CHRISTOPHER WU, Artist Lecturer in Violin Carnegie Mellon, 2009–.

The Marianna Brown Dietrich College of Humanities and Social Sciences

Richard Scheines, Dean
Brian Junker, Associate Dean
Joseph E. Devine, Associate Dean for Undergraduate Studies
Gloria P. Hill, Assistant Dean and Director, Dietrich College Academic Advisory Center
http://www.hss.cmu.edu

The Dietrich College of Humanities and Social Sciences is one of Carnegie Mellon’s seven principal colleges. The college consists of the undergraduate program in Economics, and the departments of English, History, Modern Languages, Philosophy, Psychology, Social and Decision Sciences, Statistics, and an interdepartmental program in Information Systems. The college accounts for approximately one-fifth of the university’s undergraduate population; 89% of the college’s students are undergraduates. The college is staffed by 224 full-time faculty, and approximately 27 part-time faculty.

Like its Carnegie Mellon counterparts in engineering, science, computer science, business, and the fine arts, the college has three primary and interrelated foci: undergraduate education, graduate education, and research or creative pursuits. Thus, the college shares in the university’s mission of merging first-rate, innovative research and creativity with undergraduate and graduate education.

Liberal/Professional Education

Edward Fiske, former Education Editor of The New York Times and author of the Fiske Guide to Colleges, long ago noted that the college and university have done “perhaps the most original thinking of any American university in pursuing the twin goals of liberal-professional education.” These goals continue to guide the college’s educational enterprise. The college’s educational program is “liberal” in that it stresses breadth and invites wide-ranging inquiry, both through its general education curriculum and through programs in the humanities, behavioral sciences, and social sciences. The “professional” dimension of the college’s educational program derives from practical application of analytical and problem-solving skills and also from a subset of in-depth major programs which prepare students for a range of career fields as well as for graduate or professional school. In its belief that these two types of knowledge (“liberal” and “professional”) are highly complementary, Dietrich College embraces a philosophy that has its roots in Carnegie Mellon’s institutional origins: namely, that the traditional liberal arts disciplines merit close, rigorous study, while at the same time practical skills are also mastered.

The rationale for this liberal/professional approach stems from the premise that the intellectual foundations of a challenging liberal education and meaningful professional education are essentially the same. Knowledgeable and effective citizens are as much in need of broad intellectual perspectives, analytical skills, and problem-solving strategies as are most professionals. Moreover, as leaders in American higher education generally agree, undergraduate education is not well served if professional specialization in undergraduate programs is achieved prematurely. The challenge is to strike a balance between breadth and depth, both within and outside of one’s specialty. Such a balance insures versatility in one’s profession and the knowledge and ability to keep pace as individuals and citizens with changes in our social, technical, and cultural environments. Thus, the objectives of both liberal and professional education can and should work in tandem to complement and enhance one another.

Degree and Program Options

Dietrich College offers a wide range of majors, as well as minors which provide a secondary focus to one’s primary area of study. In addition, there are a number of special programs which add breadth and enhance a student’s overall experience.

Additional Majors

Dietrich College students may pursue additional majors and/or minors in the college, as well as in other Carnegie Mellon colleges. An additional major refers to the completion of the requirements for a second major while also completing the requirements for the primary major and degree.

Most Dietrich College majors are also available as additional majors; one (Environmental Policy) is available only as an additional major. Students from outside Dietrich College can pursue available additional majors offered by the college, and would be required to complete only those courses in the college’s general education program that are prerequisites to courses required for the Dietrich College major in question.
Minors

Minors are like majors in that they consist of coherent programs of study in a department, or across departments. Minors differ from majors in the number of the courses required and in the breadth and depth of the curriculum in the minor’s area(s) of study. Dietrich College students can also pursue minors offered and made available by other Carnegie Mellon colleges and departments.

There are two types of minors in Dietrich College: departmental minors, which are housed in a single Dietrich College academic department; and interdepartmental minors, which are sponsored by more than one academic department and administered through the faculty advisor’s academic department. The college's minors are available to students from all colleges.

Multiple Degrees

Multiple undergraduate degrees are defined as more than one undergraduate degree granted by the university (whether simultaneous or sequential). One diploma is awarded for each degree; each degree has one primary major associated with it, and the possibility of an additional major and/or minor.

Dietrich College undergraduate students who wish to earn an additional undergraduate degree with a primary major also from Dietrich College must:

- Satisfy all requirements for the primary major to be linked to the additional degree.
- Complete at least 90 units beyond the total units required for the first degree. If the major associated with the additional degree requires less than 90 units, the student would earn additional elective units to reach the 90-unit minimum. If the major associated with the additional degree requires more than 90 units, the student would perfom more than 90 unit minimum in order to fulfill all of the requirements for the additional degree’s primary major.
- Comply with CMU’s Statute of Limitations Policy: All units required for an undergraduate degree, whether earned in residence, transferred from another institution or granted via advanced placement, must have been earned within eight (8) years prior to the date on which the degree is granted.

Non-Dietrich College undergraduate students at Carnegie Mellon who wish to earn an additional undergraduate degree with a Dietrich College primary major must complete all of the requirements listed above, plus any portion of the Dietrich College general education program not already fulfilled by prior undergraduate course work.

Bachelor of Arts & Bachelor of Science

Some Dietrich College majors lead to a Bachelor of Arts (B.A.) degree and others lead to a Bachelor of Science (B.S.) degree. In some majors students may choose between a B.A. or a B.S. degree. B.A. degree programs usually require less course work in technical and/or quantitative disciplines, and more depth and breadth in various humanities, social sciences, and (in some cases) the arts. In contrast, B.S. degrees are offered in majors requiring more technical, quantitative or scientific competencies.

Dietrich College General Education Program

http://www.hss.cmu.edu/gened/

Carnegie Mellon's educational legacy emphasizes the connection between theoretical knowledge and practice. Similarly, the university’s interdisciplinary approach to education embraces the practical application and analysis of knowledge in institutional, social, historical, and global contexts. Carnegie Mellon graduates are excellent practitioners in their chosen fields. The Dietrich College general education program (hereafter referred to as the “GenEd program”) supports the development of that expertise and ensures that students gain well-informed perspectives and methodologies by providing the foundational knowledge required for in-depth study. Additionally, the GenEd program provides freshmen and sophomores - whether they have a specific interest, multiple interests, or are undecided about majors - with a systematic, intentional way of sampling the many options available in order to formulate, pursue and achieve their academic goals.

Categories

To transcend narrow disciplinary boundaries, the GenEd program focuses on five broad intellectual activities that are exercised in nearly all disciplines: communicating, reflecting, modeling, deciding and creating. General subject areas associated with each activity are also indicated below. These activities form the bases for GenEd curriculum categories, in which suitable courses are included from all parts of the university.

The five categories are:

1. communicating (http://www.hss.cmu.edu/gened/gened-category.asp#Communicating): language and interpretation
2. reflecting (http://www.hss.cmu.edu/gened/gened-category.asp#Reflecting): societies and cultures
4. deciding (http://www.hss.cmu.edu/gened/gened-category.asp#Deciding): social sciences and values
5. creating (http://www.hss.cmu.edu/gened/gened-category.asp#Creating): designs and productions

This framework highlights central features of an ideal learning environment and the university’s core intellectual mission.

Courses

(18 units)1. Communicating: Language and Interpretations

Courses in this category give special attention to the study of language as interpretation, expression and argument within and across multiple discourses. Students examine language for its internal logics and structures. They also explore its rhetorical, historical, cultural, or philosophical dimensions, assessing how it functions while expanding their writing skills and sharpening their analytical abilities.
These courses are selected from any GenEd category.

(18 units) 6. TWO Additional GenEd courses

For courses approved for this category, visit the Dietrich College General Education web site (http://www.hss.cmu.edu/gened).

* For a list and descriptions of additional courses approved for this category, visit the Dietrich College General Education web site (http://www.hss.cmu.edu/gened).

(18 units) 2. Reflecting: Societies and Cultures

This category emphasizes the study of history, society, and culture from local and global perspectives. Courses investigate contemporary societies as well as those of the past, along with their rich array of cultural products, artifacts, and ideas. They encourage a comparative and reflective approach to the understanding of the past and what it can bring to the constitution of present social relations and cultural outlooks.

Required Units
79-104 Global Histories 9
xx-xxx One additional "reflecting" course* 9

* For a list and descriptions of additional courses approved for this category, visit the Dietrich College General Education web site (http://www.hss.cmu.edu/gened).

(18 units) 3. Modeling: Mathematics and Experiments (27 units)

Courses in this category stress the interplay of mathematical (formal) theories and experimental work. Some courses investigate the internal structure of theories, whereas others use them as models for producing real-world knowledge. Such models may be drawn from a variety of disciplines including the natural and mathematical sciences, but also such fields as psychology and computer science. The interactions between theorizing and experimenting (observing) can be understood within an intellectual framework that invites comparative assessment.

- mathematical sciences (complete a minimum of 9 units)
- natural sciences (complete a minimum of 9 units)
- one other modeling course (complete a minimum of 9 units)

For courses approved for this category, visit the Dietrich College General Education (http://www.hss.cmu.edu/gened) web site.

(18 units) 4. Deciding: Social Sciences and Values

The theme of this category is the exploration of cognitive, behavioral and ethical dimensions of decision-making on and off the individual and societal levels. Making decisions requires a broad understanding of human rationality and social interaction. Some courses examine the critical collection and analysis of data for achieving such an understanding, whereas others emphasize the historical development of policies and values which form the matrix for decision-making.

Required Units
36-201 Statistical Reasoning and Practice 9
xx-xxx One additional "deciding" course* 9

* For a list and descriptions of additional courses approved for this category, visit the Dietrich College General Education web site (http://www.hss.cmu.edu/gened).

(18 units) 5. Creating: Designs and Productions

In the arts, the humanities, the sciences, and in engineering, it is essential to produce artifacts: e.g., a painting, a poem, a musical performance, a piece of technology, the design of an experiment, or the proof of a mathematical theorem. Courses may center on the students’ creation of artifacts, but they may also analyze such creations by exploring creative processes at work within and across disciplines. Such explorations should be informed by a deep understanding of contexts of production and reception.

For courses approved for this category, visit the Dietrich College General Education (http://www.hss.cmu.edu/gened) web site.

(18 units) 6. TWO Additional GenEd courses

These courses are selected from any GenEd category.

(3 units) 7. University Requirement (UR): Computing @ Carnegie Mellon (99-101 or 99-102)

This course is a 3-unit mini-course, pass/no credit, completed in the first or second semester of the first year.

(9 units) 8. Freshman Seminar Requirement (FSR)

This requirement ensures that all first-year students in the Dietrich College have at least one small-group course experience in their first year. Taught by selected members of the college’s faculty, these seminars enroll 15-17 students, are centered around topics based on faculty research and expertise, and are formatted to encourage a high level of student participation and interaction. For current seminar topic and course descriptions, visit the Dietrich College general education (http://www.hss.cmu.edu/gened) website. NOTE: The freshman seminar will not simultaneously fulfill any other requirement (e.g., in a major or minor).

College Services and Programs

The educational programs in the Dietrich College are complemented by a number of services, special programs, centers, and computing facilities.

Dietrich College Academic Advisory Center

Gloria P. Hill, Assistant Dean and Director
Office: Baker Hall 587
http://www.cmu.edu/hss/advisory-center/

The Dietrich College of Humanities and Social Sciences’ Academic Advisory Center (AAC) is primarily responsible for advising and monitoring the progress of students prior to deciding on a major. As the “home base” for undergraduates who are new to the college, the AAC provides an accessible, welcoming environment where students can seek information, advice, and counsel about selecting courses, the college’s general education program requirements, and the various majors and minors available. Just as important, advisors support students’ transition to the university and, through the advising process, all of the major dynamics of a student’s life. The advisor-student relationship is a reciprocal one; advisors’ goals are to meet students where they are, to help them learn to successfully navigate the Carnegie Mellon environment, to become increasingly self-sufficient, and to make viable academic and personal decisions. This kind of relationship is vital to a student’s ability to progress, grow and thrive in a new and demanding educational environment. Additionally, the AAC serves as the office of student records for the Dietrich College. Acting on behalf of the College Council, the assistant dean oversees adherence to university and college academic policies and procedures, and with staff assistance, processes related transactions.

The AAC is a walk-in center, although individual appointments may be made and are encouraged. The center’s hours are 8:30 a.m. to 5:00 p.m., Monday through Friday.

Globalization and International Politics

Faculty Director (IRP); Kiron K. Skinner, kskinner@andrew.cmu.edu, 412-268-3238, Porter Hall 223F
Faculty Director (GS); John Soluri, jsoluri@andrew.cmu.edu, 412-268-7122, Baker Hall 363
Academic Advisor: Emily Half, ehalf@andrew.cmu.edu, 412-268-7082, Baker Hall A60C
http://www.cmu.edu/ir/
http://www.cmu.edu/hss/globalstudies

As “globalization” accelerates across many domains (politics, economics, trade, culture, the environment, health, etc.), interest in international issues and topics grows steadily. In order to better reflect Carnegie Mellon’s comparative strengths in a range of relevant areas, two Dietrich College majors have emerged from a common foundation. One (International Relations and Politics) offers strong conceptual and methodological roots in the social sciences, while the other (Global Studies) is more squarely planted in humanities methodologies and disciplines such as history, anthropology, languages, and cultural studies. Students are thus able to capitalize on the strengths of each major’s faculty research and teaching in their respective home departments. Having an academic advisor common to both majors provides a critical linchpin to help students with interests in these fields to see and understand their distinctions. They may then work closely with each program’s faculty director for assistance in navigating their way through requirements, vigorously pursuing special opportunities such as a semester in Washington, D.C. or study abroad, and taking part in opportunities for inter-program collaboration.

Dietrich College Senior Honors Program

Joseph E. Devine, Director; Associate Dean for Undergraduate Studies
Office: Baker Hall 154F
The QSSS program is not a freestanding major or a minor, per se. It is a program designed to be taken in conjunction with a social science major in Dietrich College. The program recruits students with a range of interests across the social sciences to create a cohesive interdisciplinary learning community. Majors that could fit well with this program include (but are not limited to) economics, decision science, policy and management, international relations and politics, and statistics.

Special features of the QSSS program include:

- An optional residential component that allows QSSS students to live together in their first year
- An exclusive QSSS freshman seminar (this seminar fulfills the Dietrich College freshman seminar requirement)
- A core curriculum in five segments: mathematical and statistical foundations, social science modeling, regression analysis of large data sets, data collection and generation, and analytic and computational methods.
- A required senior thesis under the supervision of a faculty advisor from the student's home department and benefiting from the QSSS thesis seminar.
- A QSSS seminar series that invites speakers to campus to help students in the program see how the skills they are developing are applied both in research and in practice.

Science and Humanities Scholars Program
William Alba, Director
Office: Doherty Hall 2201

http://www.cmu.edu/shs/

The Science and Humanities Scholars Program (SHS) is designed to enable talented students to develop and pursue an undergraduate program that builds upon their interests and achievements in the humanities, natural sciences, mathematics, or social sciences. The program is based on a special general education core that provides an academic foundation from which students can select a major in either the Dietrich College of Humanities and Social Sciences or the Mellon College of Science.

Features of the SHS program include:

- Equal access to courses in both MCS and Dietrich College
- An optional residential program that allows a group of SHS first-year students to live together in a dormitory cluster
- Opportunities to collaborate with faculty in cutting-edge interdisciplinary research
- A broad selection of freshman seminars led by distinguished faculty across the two colleges

Selected students admitted to Dietrich College and/or MCS are invited to join the SHS program at the same time that they receive their notification of admission to the university. Those accepting are advised by the SHS program director until they declare a major.

Student-Defined Program
Joseph E. Devine, Director; Associate Dean for Undergraduate Studies

Office: Baker Hall 154

For students whose educational goals cannot be as adequately served by the curricula of existing programs, the college provides the opportunity to self-define a major or minor. The procedure for establishing such a major centers on a written proposal, submitted to the college dean's office. This proposal consists of two parts:

- Major description and rationale: A description of the components of the proposed program of study; a presentation of the objectives of the program of study, why it represents a coherent and (given available faculty, courses, and other resources) viable course of study, and the reason(s) why these objectives cannot be accomplished within one or more of the college's existing programs.

- The curriculum: Presentation of a complete outline of all courses that will comprise the requirements for the major, categorized according to that component of the major program to which each belongs (e.g., mathematics prerequisites; research methods; theoretical perspectives; etc.), and second, a semester-by-semester outline that indicates when each course is to be taken (or, for any already taken, when taken and grade received). The
minimum requirement for graduation is, as with all majors in the college, 360 units of credit.

Proposals and curricula are evaluated for clarity of focus, coherence and depth in related areas, and viability within the context of the college and university. Proposals should generally be developed no later than the sophomore year, and approved majors begin their program generally no later than the junior year.

### Study Abroad Scholarships

http://www.hss.cmu.edu/departments/deans_office/studyabroad/scholarships_studyabroad.html

The Dietrich College Dean’s Office and the Department of Modern Languages offer the following scholarships to encourage study abroad:

#### Alumni Study Abroad Scholarships

Funding generously provided by Dietrich College alumni. Multiple scholarships of up to $1,200 are awarded each year to DC, SHS or BHA students to be used toward a semester or full year of study abroad. Current sophomores and juniors will receive preference.

#### Patricia Askwith-Kenner Scholarships

Provided by an endowment from Patricia Askwith-Kenner. Scholarships of $3,000 for majors and minors in Modern Languages for semester or full year. Preference to current sophomores and juniors with no study abroad experience.

#### Patricia Askwith-Kenner Summer Scholarships

Provided by an endowment from Patricia Askwith-Kenner. Scholarships of $1,200 for majors and minors in Modern Languages for summer study. One scholarship will be reserved for members of the MLSAC. Preference to current sophomores and juniors with no study abroad experience.

#### The Hannah Estermann Bergman Fund for Study Abroad

Given in memory of Hannah Estermann Bergman, Margaret Morrison class of 1946. This annual scholarship will provide up to $1,000 to one DC, SHS or BHA student who is currently studying Spanish. Preference will be given to current sophomores and juniors.

#### The Abel M. Bomberault Travel Fellowship

In memory of Abel M. Bomberault, class of 1956. Multiple scholarships of up to $3,000 for DC, BHA, or SHS students for semester or full year study abroad in a French-speaking country with preference for France. Majors and minors in French will be given preference.

#### The Abel M. Bomberault Travel Fellowship (for summer)

In memory of Abel M. Bomberault, class of 1956. Multiple scholarships of up to $1,200 for DC, BHA, or SHS students for summer study abroad in a French-speaking country with preference for France. Majors and minors in French will be given preference.

#### The Brona Stein Beurger Scholarship

Given in memory of Brona Stein Buerger, Margaret Morrison class of 1962. These annual scholarships provide up to $2,000 to one or two DC, BHA or SHS students to be used toward a semester or full year of study abroad. Current sophomores and juniors will receive preference.

#### Sema (MM’49) and Ivan (E ’48) Faigen Scholarship

Made possible by a gift from alumni Sema and Ivan Faigen. Up to $1500 for majors and minors in Modern Languages for summer study abroad.

#### The Lena Foo Study Abroad Scholarship

Provided by an Endowment from Lena Foo. Scholarship of $1,200 for a major or minor in Chinese for summer study in China.

#### Max Kade Scholarships

Provided by a grant from the Max Kade Foundation. Scholarships of $1,200 for students of German for summer study at Goethe Institutes in Germany.

#### Pickering Scholarships

Made possible by a gift from alumna Martha B. Pickering. Scholarships of $1,200 for summer study in Asia. Preference to majors/minors in Chinese or Japanese.

### Dietrich College Summer Internship Opportunity Grants

http://hss.cmu.edu/summerinternopprgrants.html

Dietrich College encourages students to pursue interesting and professionally relevant internship opportunities for summer employment. Often, however, the very positions that provide students with first-rate, challenging work experiences are unpaid or provide minimal pay. To help compensate students for taking on work experiences that will be invaluable in helping them define and move toward their career goals, the Dietrich College Summer Internship Opportunity Grants Program seeks to make it more possible for students to take advantage of unpaid but worthwhile internship opportunities with grants of up to $2,000.

Undergraduates (including SHS students) with primary majors in Dietrich College, as well as BHA students are eligible and encouraged to apply. Current sophomores and juniors receive preference. NOTE: Graduating seniors are not eligible.

Students are expected to find their own internships. There are many resources available to help in finding internships, including the Career and Professional Development Center’s TartanTrak database. Preference for grants is given to students who find positions in government or non-profit agencies.

For more information, including application time line and instructions, see: http://hss.cmu.edu/summerinternopprgrants.html

### Carnegie Mellon University Washington Semester Program

Kiron Skinner, Faculty Director; kskinner@andrew.cmu.edu

Emily Half, Academic Program Manager; ehalf@andrew.cmu.edu; 412-268-7082, Baker Hall A60C

Emily Baddock, Program Director in Washington, DC; ebaddock@andrew.cmu.edu; 202-608-8316, 100 Maryland Ave NE, Suite 510, Washington, DC 20002

http://www.cmu.edu/ir/washington-semester-program/index.html

From embassy headquarters to nongovernmental organizations, think tanks to advocacy organizations, and consulting firms to media outlets, Washington, DC is a focal point for many international and public policy activities.

Undergraduates from any course of study who would value firsthand policy experience are invited to apply to the Carnegie Mellon University Washington Semester Program (CMU/WSP), sponsored by the university’s Center for International Relations and Politics. As a member of the University of California Washington Center (UCDC) consortium of schools, CMU/WSP is part of a broad and diverse intellectual community of faculty and students. In this semester-long program, students live, work, and study in Washington, DC, coming into direct contact with political, business, and community leaders and learning about the most pressing policy issues of the day.

CMU/WSP students earn 48 units for their semester in Washington, interning three days per week in any sector or field of interest within Washington, DC, while taking classes two days per week and in the evenings. Courses are offered by Carnegie Mellon and UCDC faculty. The Center for International Relations and Politics sponsors events and a policy forum in Washington for students participating in the program to further enrich their experience and enhance their understanding of how Washington functions as a hub of international and public policy decision making. UCDC also provides policy-oriented events.

Students should contact the academic program manager for more information or to discuss how the CMU/WSP may fit into their curriculum.

### Curriculum

All students enroll in the following two courses.

- 66-321: CMUWSP Internship Seminar 15

Students select one core seminar from the following list.
Core Seminar
66-323  Core Seminar: Congress  12
66-336  Core Seminar: Washington Media  12
66-325  Core Seminar: General Research  12
66-326  Core Seminar: The Presidency and Executive Branch  12
66-327  Core Seminar: International Policy and The Global System of the 21st Century  12

Students select one elective seminar from the following list.

Elective Seminar
66-230  Elective Seminar: American Political Journalism  12
66-328  Elective Seminar: Lobbying, Money and Influence in Washington  12
66-329  Elective Seminar: Green Governance  12
66-331  Elective Seminar: Spies! The Politics of Intelligence  12
66-332  Elective Seminar: The Theater of Politics  12
66-334  Elective Seminar: Campaigns and Elections  12
66-335  Elective Seminar: Politics of the Middle East  12

Academic Standards, Regulations and Protocols

Transferring into the Dietrich College

Undergraduate students in other Carnegie Mellon colleges who wish to transfer (http://www.cm.edu/hs/sec/advisory-center/transfer/transfer-in.html) to Dietrich College apply through the college's Academic Advisory Center, located in Baker Hall A57. If approved, the transfer is into the college first and then, when appropriate, into a primary major. Decisions regarding transfer requests will be based on evidence of adequate prior academic performance and on the applicant's prospects for success in the major requested.

The earliest point when undergraduates are considered for transfer into Dietrich College is the second semester of the first year. Students interested in transferring to Dietrich College should begin the process well before the course registration period for the upcoming semester. While transfer applications may be submitted at any time, interview will not be scheduled for transfer candidates during the three-week period that includes course registration week for the next semester and the two weeks prior.

Academic Actions

In order to maintain good academic standing, Dietrich College students must attain at least minimum quality point averages for each semester (as well as cumulatively) and also maintain adequate progress toward completing graduation requirements. Minimum quality point averages for good academic standing are 1.75 in the freshman year and 2.00 thereafter. "Adequate progress towards graduation" generally means that students are successfully completing 45-50 units per semester so that at the end of eight semesters they will have accumulated the minimum of 360 units required for graduation.

When a student fails to meet minimum performance criteria, it normally results in an "academic action." Depending on the circumstances, one of the following actions is taken: academic probation, continued probation, suspension, or drop. These academic actions are recommended by the college's departments based on the guidelines described below. However, the sequence of the academic actions is not automatic in all cases. Decisions may be based on unique individual student performance and circumstances, and are not determined purely by grades and quality point averages.

Probation

A student is placed on academic probation when performance either for the semester or cumulatively fails to meet the minimum standard. The term of academic probation is one semester, and signifies to the student the college's insistence that academic performance return to at least the minimum acceptable level. A student is removed from academic probation and returned to good academic standing when both the semester and cumulative quality point averages meet at least the stated minimum, and when adequate progress toward completing graduation requirements is being made. A student who has had one semester on probation and is not yet meeting minimum requirements but is making significant progress may be continued on probation.

Suspension

Academic suspension is the usual action taken when a student fails to meet the minimum semester or cumulative requirements for two consecutive semesters. In general, a freshman will be suspended if the semester and overall QPAs are below 1.75; for sophomores, juniors, and seniors, if these are below 2.00. Failure to maintain adequate progress toward graduation may also be a contributing factor in such decisions.

The minimum period of academic suspension is normally two semesters, during which a student on academic suspension is expected to reflect on the circumstances leading up to the suspension, identify the issues that prevented him or her from achieving academic success, and take actions that address these issues and demonstrate sufficient readiness to return to the university and successfully resume their studies. These actions could include a work or internship experience, a limited amount of approved academic course work at another college or university, and — if relevant — appropriate medical care.

Midway through the semester before a suspended student is eligible to return to the university, he or she will be notified by the Assistant Dean with detailed instructions about the process for requesting approval to return and re-enroll.

Once cleared to return from academic suspension, the Enrollment Services office will be notified and the student will be eligible to enroll. While on academic suspension, students are considered to be on a mandatory "leave of absence," and are governed by college and university policies concerning leaves of absence and withdrawals. See subsequent discussions of "Leave of Absence and Withdrawal from the College." Students returning from academic suspension do so on final academic probation.

Drop

The most severe academic action occurs when a student is dropped from the college and the university, and is not permitted to re-enroll. This normally results when a student, already on final academic probation, continues to perform at levels below the minimum set by the college for good academic standing, and shows no indication of being able to reach an acceptable level of performance or maintain steady progress toward completing graduation requirements. It is also an option when, in unusual cases, a student has performed poorly, and has been unresponsive to outreach efforts by college and/or university offices seeking to offer help and support.

Dietrich College Dean's Honor List

Each semester the college recognizes those students who have attained outstanding semester quality point averages by naming them to the Dietrich College dean's honor list.

Students who complete at least 45 factorable units and attain a semester QPA from 3.50 through 3.74 are named to the Dean's List, with Honors; if the semester QPA is 3.75 or higher, students are named to the Dean's List, with High Honors.

Students who complete at least 36 or up to 44 factorable units and attain a semester QPA of 3.75 or higher are named to the Dean's List, with Honors.

In addition, it is generally the case that students are not eligible for the dean's list who receive conditional grades (i.e., I [incomplete] or X [conditional failure]) at the time when final semester grades are recorded.

Course Overloads

Overloading is defined as taking more than the equivalent of five full-semester courses in one semester; for Dietrich College students this usually means registering for more than 50 units in one semester.

Eligibility to overload is defined as having a QPA of at least 3.00 in the last completed semester, based on a course load of at least 45 factorable units, and a current cumulative QPA of at least 3.00. Students new to the college and university (i.e., first-year students, and new external transfer students) may not overload during their first Carnegie Mellon semester.

Eligibility to overload does not automatically allow the student to register for an overload. Rather, students must complete an overload petition, and meet with their primary academic advisor to discuss the proposed overload. If approved, the academic advisor will increase the student's unit maximum and support.

The first opportunity to register for a course overload is after registration week for the proposed overload semester. Registration week for the spring semester is usually the third week in November; for the fall semester, it is usually the third week in April. Consult the official academic calendar for the exact dates.

If as a result of final grades for the current semester a student approved to overload for the next semester falls below the QPA overload eligibility
Physical Education, StuCo* and Military Science Courses

A maximum of nine units of credit for any combination of Physical Education (69-xxx), StuCo (98-xxx) and all Military Science courses (30-xxx, 31-xxx, 32-xxx) may be counted for credit toward graduation. Physical Education, StuCo and Military Science courses are not included when calculating a student’s QPA or when calculating units to determine eligibility to carry a course overload.

* StuCo (http://www.cmu.edu/stuco) refers to “student led courses” — i.e., courses designed by students, and approved to be offered for academic credit.

Course Failures and Course Repetitions

Students who fail a required course must repeat and pass it (or take and successfully complete another approved course that fulfills the requirement), if a failed course is a prerequisite to more advanced course work within a particular course sequence, the failed course must in general be repeated before moving on to the higher level course. Exception: Dietrich College freshmen seminars may not be repeated, or replaced by a second seminar. Dietrich College students who do not successfully complete their freshman seminar must select and successfully complete an additional course from one of the college’s general education categories.

Failed courses that are repeated and passed, or courses that are passed but repeated in order to obtain a higher grade, are not replaced on the student’s record. Both course grades remain on the record, and are included in calculating the student’s QPA. Students who repeat a course that they have already passed will not be able to apply the second set of units for the course toward graduation requirements.

Internships-for-Credit

An internship-for-credit is a supervised, professional work experience with clear links to a student’s academic, performed primarily or totally outside a regular course structure, and for which a student earns academic credit. Students doing an internship for academic credit must be registered through the academic department of the faculty member supervising the internship, and must register for the internship course during the term (including the summer) when the internship work is being performed. There is no additional tuition charge for internships that are taken during the academic year. Students registered for internships during the summer will be billed for tuition at the per-unit rate set by the university.

To receive academic credit, the internship:

- requires the involvement of a Carnegie Mellon faculty sponsor and an on-site supervisor in the design and evaluation of the internship;
- may include regular or periodic meetings between the student, the faculty sponsor, and/or the internship site supervisor to monitor progress;
- requires an end-product for submission to the faculty sponsor. This usually takes the form of a paper, or may also include a presentation, or some other approved form;
- can be taken for a regular letter grade by registering for the internship course through the sponsoring department. With department approval, the internship may be counted toward program requirements;
- can vary from 3-18 units in any one semester, and is limited only by the college rule of a maximum of 27 units of internship credit that can be applied to graduation requirements.

Policies and practices regarding internships-for-credit vary among academic departments. Departments are not obligated to allow internship credit for its majors, and are free to determine whether an internship may be used to fulfill requirements or serve only as an elective. An internship-for-credit is a graded experience. Each department will determine appropriate criteria for the grade if an internship is approved for credit.

Credits are earned according to the following scale: 9 units = the equivalent of 1 day (9-12 hours) per week during a semester (100 hours), 18 units = the equivalent of 2 days (12-20 hours) per week during a semester (200 hours). A Dietrich College student may not earn more than 18 units of internship credit during a semester or count more than 27 units of internship credit toward fulfillment of graduation requirements.

When the internship sponsor requires that a student receive academic credit from the home institution, the student should contact the Dietrich College Associate Dean for Undergraduate Studies for information and advice about available options.

Dietrich College Credit Policy for Non-Carnegie Mellon Courses

The following policies govern the practice of Dietrich College undergraduates taking courses elsewhere and requesting that credits for these courses transfer to their Carnegie Mellon University academic record. Courses taken elsewhere will be considered for transfer credit if the institution offering them is fully accredited, and if the courses in question are judged to be acceptable for the purposes proposed by the student.

Limits

Once a student enrolls in the university as a degree candidate, he or she may take a maximum of five courses (or their rough unit equivalent) elsewhere and transfer these back for credit toward their Carnegie Mellon degree.

No courses may be transferred and be substituted for the following general education requirements:

- 76-101 Interpretation and Argument or 76-100 Reading and Writing in an Academic Context
- 79-104 Global Histories
- 36-201 Statistical Reasoning and Practice
- 99-101 Computing @ Carnegie Mellon or 99-102 Computing @ Carnegie Mellon
- Freshman Seminar requirement

In addition, no more than two courses from another institution may be counted for Dietrich College general education requirements; no more than one course from another institution may count in any one general education category (e.g., “communicating,” “reflecting,” etc.)

Exceptions

These limits do not apply to courses and credits approved through Advanced Placement examinations, International Baccalaureate examinations, cross-registration through the Pittsburgh Consortium for Higher Education (PCHE), Washington Semester program, and approved study abroad or exchange programs. Exceptions to these restrictions may be made only by way of written petition to the Dietrich College Council (c/o the Dietrich College Academic Advisory Center).

Grades

Courses taken elsewhere must be taken for a regular letter grade (not pass/no credit or pass/fail) in order to be granted transfer credit. Students must earn a final grade of at least “C” in order for the credit to transfer. A “C-” grade is not transferable when its equivalency is below a 2.00 on a 4.00 scale, or 70%. Only units, not grades, transfer for courses taken elsewhere, and thus do not affect a student’s Carnegie Mellon QPA. Courses offered elsewhere only on a “pass/fail” basis are not eligible for CMU transfer credit.

External Transfer Students

For students entering Carnegie Mellon and Dietrich College as external transfers, the same five-course limit applies after they become Carnegie Mellon degree candidates, unless their transfer credits reach the 180-unit limit for transfer credit stipulated by university policy. A candidate for the bachelor’s degree must complete at the university a minimum of four semesters of full-time study, or the equivalent of part-time study, comprising at least 180 units of coursework. If a degree has already been obtained at another institution, courses that count toward that degree may not be used again as transfer credit toward a Carnegie Mellon University undergraduate degree.

Internal Transfer Students

This policy applies retroactively to students who enter Dietrich College through internal transfer. Courses previously approved for transfer credit may be re-evaluated for consistency with relevant Dietrich College or program policies and standards.

Students on Academic Suspension

Subject to the college’s policy limiting transfer course credit, students on academic suspension from Dietrich College will be permitted to receive credit for no more than three courses per semester taken elsewhere, and no more than a total of five courses elsewhere, while on suspension. Approval to take these courses for credit is to be obtained in advance.

While on academic suspension, students are considered to be on a mandatory “leave of absence” and are governed by College and
University policies concerning leaves of absence and withdrawals (http://www.cmu.edu/hub/registration/leave.html).

Dietrich College Department Limits
Dietrich College academic departments may not exceed these college limits, but may impose stricter limits regarding courses that students propose to take elsewhere to fulfill major requirements.

Double-Counting Courses
Double-counting refers to instances when a course taken to fulfill one requirement counts simultaneously toward a requirement in another major or minor program. While the college encourages study in complementary areas where majors and minors frequently share common requirements, it also wants to keep clear the meaning and integrity of the labels “major” and “minor.” To preserve the integrity of these definitions, double-counting is permitted in Dietrich College on a very limited basis, and only in those instances when the course(s) in question represent only a small portion of the second program.

The college and its departments have developed program-specific guidelines for this practice that appear throughout the Dietrich College section of this catalog, and particularly in the case of major and minor programs that students frequently pursue in combination.

Graduation Requirements
Eligibility for graduation in Dietrich College requires that a student:
1. complete all general education requirements,
2. complete all course requirements in a primary major,
3. achieve a cumulative quality point average of at least 2.00 for all courses taken (or, alternatively, for all courses taken after the 1st year),
4. earn at least 360 units with a minimum of 180 units taken at Carnegie Mellon University,
5. be recommended (certified) for graduation by the faculty of the primary major in the college,
6. meet all financial obligations to the university, and
7. qualify for graduation within eight years of the date on which the degree is granted.

The college reserves the right to modify these academic standards, regulations, and protocols.

Graduation with University Honors
Dietrich College students who achieve an overall QPA of at least 3.50 will be recommended for graduation with university honors.

Graduation with College Honors
Students who successfully complete a senior honors thesis under the auspices of the Dietrich College senior honors program qualify for graduation with Dietrich College honors.
Dietrich College Interdisciplinary Majors

When addressing complex issues, we often rely on approaches that take advantage of a variety of relevant disciplines. The college houses the special category of “interdepartmental majors” for programs where this interdisciplinary approach is most pronounced and in which the varied disciplinary perspectives are most fully integrated. These majors are presented here separately, rather than as departmentally-based options, to reflect and underscore their sponsorship by more than one academic department and the unique features that follow from this structure.

Interdepartmental majors are administered by the academic department of the major’s faculty advisor.

The Major in Economics and Mathematical Sciences

Faculty Advisor: Carol Goldburg
Office: GSIA 133
Email: cg28@andrew.cmu.edu

The B.S. in Economics and Mathematical Sciences (http://coursecatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/undergraduateeconomicsprogram/#bsineconomicsandmathematicalsciencescurriculum) is a collaborative effort between the Department of Mathematical Sciences and the Undergraduate Economics Program. Combining advanced mathematics with advanced economic theory is the hallmark of this curriculum. The curriculum provides students with courses that complement and develop depth of understanding of economic theory, applied economics, and applied mathematics. This major offers an integrated curriculum, guiding students through a program of coursework that exploits and builds upon the synergies between mathematics and economics. This degree program equips students with the mathematical tools that are essential for success in Ph.D. programs in economics, mathematics, and key functional areas of business including finance, accounting, marketing, and information systems. Students pursuing this degree will be well prepared for the beginning of their research careers in academia, government, and industry. There are a limited number of student slots in this program; interested students may apply as early as their sophomore year.

The Major in Economics and Statistics

Academic Advisor: Rebecca Nugent
For questions about Economics courses contact: Carol Goldburg or Kathleen Conway
For questions about Statistics courses contact: Rebecca Nugent or Paige Houser
Office: Baker Hall 132A
Email: acadcoord@stat.cmu.edu

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With joint curriculum from the Department of Statistics and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytic and conceptual skills - especially those in economics, finance, education, and public policy.

The requirements for the B.S. in Economics and Statistics are the following:

I. PREREQUISITES 38-39 UNITS

1. Mathematical Foundations 38-39 units

Calculus

21-120 Differential and Integral Calculus 10

and one of the following three:

21-122 Integration and Approximation 10
21-127 Concepts of Mathematics 10
21-257 Models and Methods for Optimization 9

and one of the following:

21-256 Multivariate Analysis 9
21-259 Calculus in Three Dimensions 9

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-202 units.

Linear Algebra

One of the following three courses:

21-240 Matrix Algebra with Applications 10
21-241 Matrices and Linear Transformations 10
21-242 Matrix Theory 10

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Economics Foundations 9 units

73-100 Principles of Economics 9

3. Statistical Foundations 18 units

36-201 Statistical Reasoning and Practice 9

and one of the following:

36-202 Statistical Methods 9
36-208 Regression Analysis 9
36-309 Experimental Design for Behavioral and Social Sciences 9

Or extra statistical elective**

*Acceptable equivalents for 36-201 are 36-207 (70-207), 36-220 and 36-247.

**Students who enter the program with 36-225/36-226 should discuss options with their advisors.

II. DISCIPLINARY CORE 126 UNITS

1. Economics Core 36 units

73-230 Intermediate Microeconomics 9
73-240 Intermediate Macroeconomics 9
73-270 Writing for Economists 9
73-363 Econometrics 9

*Starting Fall 2015 21-256 or 21-259 will be a prerequisite for 73-230.

2. Statistics Core 36 units

36-225 Introduction to Probability Theory 9

and one of the following two courses:

36-226 Introduction to Statistical Inference 9
36-326 Mathematical Statistics (Honors) 9

and both of the following two courses:

36-401 Modern Regression 9
36-402 Advanced Methods for Data Analysis 9

*In order to be a major in good standing, a grade of C or better is required in 36-225 (or equivalents), 36-226 or 36-326 and 36-401. Otherwise you will not be allowed to continue in the major.
It is possible to substitute 36-217 or 21-325 for 36-225. (36-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

3. Computing 9 units

36-350 Statistical Computing * 9

*A higher level Computer Science course approved by your Academic Advisor may be used as a substitute.

4. Advanced Electives 45 units

Students must take three advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-363, 73-407 and 73-450) and two advanced Statistics elective courses (numbered 36-303, 36-315, 36-350 or 36-410 through 36-495).

**Total number of units for the major 191-192 units**

**Total number of units for the degree 360 units**

Recommendations for Prospective PhD Students

Students interested in pursuing a PhD in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses, perhaps with Mathematical Sciences as the Concentration Area. They should see a faculty advisor as soon as possible. Students should consider 36-226 Mathematical Statistics (Honors) as an alternative to 36-226. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students considering PhD programs may wish to take 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses should include both 21-127 Concepts of Mathematics and 21-355 Principles of Real Analysis I.

Prospective PhD students should also consider additional courses among 21-228 Discrete Mathematics, 21-260 Differential Equations, 21-341 Linear Algebra, and 21-356 Principles of Real Analysis II.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

<table>
<thead>
<tr>
<th>Freshman</th>
<th>Sophomore</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall</td>
<td>Spring</td>
</tr>
<tr>
<td>21-120 Differential and Integral Calculus</td>
<td>21-259 Calculus in Three Dimensions</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>21-240 Matrix Algebra with Applications</td>
<td>21-241 Matrix Algebra with Applications</td>
</tr>
<tr>
<td>21-240</td>
<td>21-241</td>
</tr>
<tr>

</tr>
</tbody>
</table>

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students might add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

Students who elect Economics and Statistics as a second major must fulfill all Economic and Statistics degree requirements. Majors in many other programs would naturally complement a Statistics Major, including Business Administration, Social and Decision Sciences, Policy and Management, History and Policy, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics and three Statistics) that do not count for their primary major. If students do not have at least six, they typically take additional electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites.

**Additional Major in Environmental Policy**

Faculty Director: John Soluri
Office: Baker Hall 240
E-mail: jsoluri@andrew.cmu.edu

The additional major in Environmental Policy focuses on human-environment interactions from a multitude of disciplinary perspectives. The curriculum draws on the expertise of faculty across several Carnegie Mellon colleges in order to provide students with the interdisciplinary background and skills necessary to understand environmental problems and the means to mitigate them. It emphasizes three general areas: (1) natural science and technology; (2) social sciences; and (3) the humanities. The flexible curriculum features training in research methods; a set of core courses on fundamental environmental issues including energy, pollution, and biological diversity; and a project course experience geared toward policy formulation. The total units required are 121.

Note that some courses carry prerequisites and/or reserve seats for primary majors. Students interested in pursuing the additional major must meet beforehand with the Faculty Director and their home unit academic advisor in order to evaluate the feasibility of completing the additional major and to map out a course of study. Double counting follows guidelines set by the Dietrich College. Students are encouraged to be alert to new course offerings; every effort will be made to find equivalent courses that meet student interest when done in consultation with the faculty director.

Prerequisites 55-57 units

**Complete ALL of the following courses:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>21-111</td>

The Major in Ethics, History, and Public Policy

Director: Professor Jay Aronson; aronson@andrew.cmu.edu, Baker Hall 246B, 412-268-2887
http://www.cmu.edu/hss/ehpp/

The B.A./B.S. in Ethics, History, and Public Policy is an interdepartmental major offered jointly by the Departments of History and Philosophy. It prepares students for leadership positions in law, public policy, ethics, and advocacy by providing them with a rigorous, interdisciplinary humanistic and social-scientific education. It also serves as an excellent springboard for graduate study in a wide variety of disciplines. The program focuses equally on the historical understanding of how modern-day problems have evolved, and the importance of developing clear criteria for ethical decision-making. The capstone project course provides students with the opportunity to engage with real-world public policy challenges using the methods, theories, and knowledge that they have gained through the major. Offered jointly by the departments of History and Philosophy, the B.A./B.S. in EHP encourages specialization, internship experiences, and research in a wide range of policy areas.

Curriculum

Students graduating with a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science Degree (additional requirements apply; see below). Basic requirements include 123 units encompassing 9 units in Economics, 39 units in History, 36 units in Philosophy, 27 units of elective courses, and a 12-unit senior capstone course. This program may also be taken as an additional (e.g., second) major.

9 unitsI. Economics Requirement

Choose one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>73-100 Principles of Economics</td>
<td>9</td>
</tr>
<tr>
<td>88-220 Policy Analysis I</td>
<td>9</td>

12 unitsIV. Senior Capstone Project Course (79/80-449)

The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to a client organization in the community.

27 unitsV. Elective Courses

Choose any three courses from any category or categories shown below.

Engineering and Public Policy (some courses have prerequisites; see EPP catalog listing)

Dietrich College Interdisciplinary Majors

73-148 Environmental Economics 9
73-310 Evolution of Economic Ideas and Analysis 9
73-352 Public Economics 9
73-357 Regulation: Theory and Policy 9
73-358 Economics of the Environment and Natural Resources 9
73-359 Benefit-Cost Analysis 9
73-365 Firms, Market Structures, and Strategy 9
73-372 International Money and Finance 9
73-375 History of Money and Monetary Policy 9
73-408 Law and Economics 9
73-476 American Economic History 9

88-251 Economics of the Environment and Natural Resources 9
88-256 Modern Moral Philosophy 9
88-305 Rational Choice 9
88-423 Institutions, Entrepreneurship, and Innovation 9
88-444 Public Policy and Regulation 9

VI. Bachelor of Science Option

Students may elect to earn a Bachelor of Science rather than a Bachelor of Arts degree by completing two courses from the list below, or by petitioning the Director of EHPP to accept equivalent courses as substitutions.

21-257 Models and Methods for Optimization 9
36-202 Statistical Methods 9
or 36-208 Regression Analysis 9
36-207 Probability and Statistics for Business Applications 9
36-303 Sampling, Survey and Society 9
36-309 Experimental Design for Behavioral and Social Sciences 9
80-305 Rational Choice 9
88-251 Empirical Research Methods 9

Additional Major

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy, Professor Jay Aronson, aronson@andrew.cmu.edu.

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter the EHPP major, and begin major course requirements, as early as the start of the sophomore year, or even in the first year. Students should consult their advisor when planning their program.

The Major in Information Systems

Faculty Program Director: Randy S. Weinberg
Office: Porter Hall 224C, rweinberg@cmu.edu
Program Advisor: Carol Young
Office: Porter Hall 222F, caroly@cmu.edu
Faculty: C.F. Larry Heimann, Jeria Quesenberry, Raja Sooriamrthi

Information Systems (IS) is a unique and innovative undergraduate interdisciplinary program, drawing on a wide range of exciting college and university strengths. IS is an internationally recognized undergraduate major for students who want to design and implement effective solutions to meet organizational and management needs for information and decision support. IS majors learn how elements of organizations, technology, economics, social aspects and human interaction work together to create effective computer-based information systems to affect real outcomes.

Graduates of the Program are ideally situated to take a leading role in managing and shaping our information-based future.

For full program information, go to The Major in Information Systems (p. 245).

The Major in Linguistics

Tom Werner, Director
Office: Baker Hall 155F
Email: twerner@andrew.cmu.edu

Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.
The major in Linguistics reflects the multidisciplinary character of the field and of the Linguistics faculty here at Carnegie Mellon, offering a program which provides students with the fundamental tools of linguistic analysis while maintaining a focus on the human context in which language is learned and used. The major is available as either a primary major or an additional major, it is an ideal choice for students with a general interest in their own or other languages, and combines well thematically with studies in any of the departments represented in the major.

Curriculum

The Linguistics major requires a total of 12 courses, which includes 2 semesters of language study. In addition, primary majors in Linguistics are required to write a Senior Thesis in their final year. At least three courses (not including specific language courses) must be at the 300-level or higher. All courses counted towards the major must be taken for a letter grade and passed with a grade of "C" or above. For Dietrich College students, up to 2 of these courses may be counted also as satisfying the college's general education requirements (as long as the double-counting maximum established by the college is not exceeded), with permission of the major director. Students from other colleges may fulfill their Humanities requirements using courses taken towards the Linguistics Major. However, no courses may be counted simultaneously towards the Linguistics Major and any other major.

Introductory course

80-180 Nature of Language 9

Fundamental Skills

Take one course from each of the following core subject areas:

Sounds
80-282 Phonetics and Phonology I 9

Structure
80-280 Linguistic Analysis 9
76-389 Rhetorical Grammar 9
80-389 Natural Language Syntax 9

Meaning
80-381 Meaning in Language 9
80-383 Language in Use 9
76-385 Introduction to Discourse Analysis 9

Breadth

Take one course from each of the following breadth subject areas:

Area 1: Language Learning and Language Cognition
76-420 Process of Reading and Writing 9
82-280 Learning About Language Learning 9
82-383 Second Language Acquisition: Theories and Research 9
82-585 Topics in Second Language Acquisition 9
85-354 Infant Language Development 9
85-421 Language and Thought 9

Area 2: Discourse, Society and Culture
76-318 Communicating in the Global Marketplace 9
76-385 Introduction to Discourse Analysis 9
76-386 Language & Culture 9
82-273 Introduction to Japanese Language and Culture 9
82-305 French in its Social Contexts 9
82-311 Arabic Language and Culture I 9
82-312 Arabic Language and Culture II 9
82-333 Introduction to Chinese Language and Culture Var.

Electives

Take four additional electives. These can be additional courses from the Fundamental Skills courses or Breadth courses listed above, or any other course which is approved by the Director as a linguistics elective. Listed below are the additional electives taught on a regular basis. Additional appropriate courses are offered irregularly or on a one-off basis. The Director will provide students with a list of possible electives each semester, and will assist students in selecting electives which are consistent with their goals and interests.

76-373 Topics in Rhetoric: Argument 9
76-378 Literacy: Educational Theory and Community Practice 9
76-451 Topics in Language Study 9
76-476 Rhetoric of Science 9
80-281 Language and Thought 9
80-283 Syntax and Discourse 9
80-380 Philosophy of Language 9
80-382 Phonetics and Phonology II 9
80-384 Linguistics of Turkic Languages 9
80-385 Linguistics of Germanic Languages 9
82-345 Introduction to Hispanic Literary and Cultural Studies 9
82-373 Structure of the Japanese Language 9
82-378 Japanese Conversation Analysis 9
82-388 Understanding Second Language Fluency 9
82-442 Analysis of Spoken Spanish 9
82-444 The Structure of Spanish 9
82-476 Japanese Discourse Analysis 9
82-480 Social and Cognitive Aspects of Bilingualism 9
82-488 Language Learning in a Study Abroad Context 9
11-411 Natural Language Processing 12
11-716 Graduate Seminar on Dialog Processing 6
11-721 Grammars and Lexicons 12
11-722 Grammar Formalisms 12
11-761 Language and Statistics 12
11-762 Language and Statistics II 12
15-492 Special Topic: Speech Processing 12

Language Requirement

Students must successfully complete two semesters of consecutive language courses. (Note that students may not ‘test out’ of this requirement. However, language courses taken at other institutions or as part of a study abroad program will typically substitute for a semester of language study.)

Senior Thesis [primary majors only]

Primary majors must complete a senior thesis (a workload equivalent to a 12-unit course) during their senior year. Topics must be approved by an advisor, who will work with the student and guide the thesis project.

Notes

Course numbers 82-305, 82-311, 32-312, 82-373, 82-378, 82-442, 82-444, 82-476 are taught in the language of analysis.

Course number 82-345 topics vary: consult with Director.

All 11-xxx and 15-xxx courses have significant Computer Science prerequisites. Interested students should check with the course instructor before registering.

Language specific "Language and Culture" courses may be taken either as electives or towards the second breadth area. However only one such course per language area may be counted towards the major.

The Major in Psychology and Biological Sciences

This unified major is intended to reflect the interdisciplinary nature of our current research in the fields of psychology and biology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences. Students entering from the Dietrich College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students entering from the Mellon College of Sciences receive a Bachelor of Science in Biological Sciences and Psychology. Students entering from the Science and Humanities Scholars (SHS) program can complete the SHS educational core and choose either departmental order for their diploma.

Pre-Major Requirements

The unified major specifies particular pre-major requirements in the areas of mathematical sciences and statistics, natural science, and computational reasoning. Particular courses are specified in these areas because they are prerequisites for courses required in the major and therefore they are the most efficient way to complete the general education requirements for
either Dietrich College or SHS. All other general education categories can be filled in any way that satisfies the requirements of the student’s college or of the SHS program.

The major in Psychology and Biological Sciences is offered only as a B.S. degree. Full curriculum requirements can be viewed here (p. 271).

**Student-Defined Major Program**

Joseph E. Devine, Director; Associate Dean for Undergraduate Studies
Office: Baker Hall 154F
Email: jd0x@andrew.cmu.edu
http://www.hss.cmu.edu/studentdefinedmajor.html

For Dietrich College students whose educational goals cannot be as adequately served by the curricula of existing majors, the college offers the opportunity to self-define a major. The procedure for establishing such a major centers on a written proposal, submitted to the Dietrich College Dean’s Office. This proposal consists of two parts:

**Major description and rationale.** A description of the components of the proposed program of study; a presentation of the objectives of the program of study, how it represents a coherent and (given available faculty, courses, and other resources) viable course of study, and the reason(s) why these objectives cannot be accomplished within one or more of the college’s existing majors.

**The curriculum.** Presentation of a complete outline of all courses that will comprise the requirements for the major. These courses should be categorized in two ways: first, according to that component of the major program to which each belongs (e.g., mathematical prerequisites; research methods; theoretical perspectives; etc.); and second, a semester-by-semester outline that indicates when each course is to be taken (or, for any already taken, when taken and grade received). In addition to courses taken at Carnegie Mellon, the major’s curriculum may include courses taken (or to be taken) at other schools, related projects or internships, or programs of study abroad. The minimum requirements for graduation is, as with all majors in the college, 360 units of credit and completion of the Dietrich College general education program.

Proposals and curricula are evaluated for clarity of focus, coherence and depth in related areas, and viability. Proposals should generally be developed no later than the sophomore year, and approved majors begin their program generally no later than the junior year.

The student-defined option is also possible to propose as an additional major or minor. These options extend to undergraduates from all Carnegie Mellon colleges.
Dietrich College Interdisciplinary Minors

Dietrich College interdepartmental minors are programs whose content and components span two or more academic departments to form coherent patterns of study.

A number of interdepartmental minors are offered by Dietrich College and are, in general, available to all Carnegie Mellon undergraduate students. As well, there are numerous other minors offered by other colleges in the university that are generally available to Dietrich College students. The full list of minors available to Carnegie Mellon students is located in the catalog index under “Minors.”

Completion of the requirements for any of these minors is noted on the final transcript.

To declare a Dietrich College interdepartmental minor, students should contact the college’s Academic Advisory Center (AAC) and the faculty advisor for that minor.

To discuss the possibility of declaring a non-Dietrich College minor, contact the advisor listed for the minor in question.

In general, unless noted, no course taken to fulfill requirements for these interdepartmental minors may apply toward any other program’s requirements.

The Minor in African and African American Studies

Faculty Director: Edda L. Fields-Black
Undergraduate Advisor: Naum Kats
Office: Baker Hall 240

Mission

The African and African American Studies minor will expose students to the following regions: sub-Saharan Africa, the Americas, and the Caribbean. Broad geographic coverage and a comparative framework encourage students to make connections between Africa and the African Diaspora, as well as among Diasporan communities. The minor offers undergraduate students the opportunity to undertake an empirical and theoretical examination of the cultural, political, social, and historical experiences of Africans and people of African descent. This unique minor brings together departments and colleges within the university and allows students to develop analytical skills particular to the arts, humanities, social sciences, public policy, and management. The African and African American Studies minor is also designed to allow students a considerable degree of freedom in their choice of electives and independent research projects, including opportunities to study and conduct research in a relevant foreign language.

Courses taken to fulfill requirements in other major or minor programs may not be applied to this minor.

Requirements

- The minor is composed of 54 units - two core courses and four elective courses.
- The elective courses must include one research course.
- Students may take an additional two core courses as electives, but not more than four total courses.
- Students must take courses in at least two of the four regions (African, African American, Latin American, and the Caribbean) between their core and elective courses.

18 units Core Courses

| African | 79-226 | Introduction to African History: Earliest Times to 1780 | 9 |
| 79-227 | Introduction to African History: 1780-1994 | 9 |
| African American | 76-232 | African American Literature | 9 |
| 76-332 | African American Literature: The African American Crime Novel | 9 |
| 79-241 | African American History: Africa to the Civil War | 9 |
| 79-242 | African American History: Reconstruction to the Present | 9 |

36 units Elective Courses

| African | 79-162 | Freshman Seminar: “Slavery” and “Freedom” in African History | 9 |
| 79-225 | West African History in Film | 9 |
| 79-237 | Comparative Slavery | 9 |
| 79-290 | States/Stateless Societies and Nationalism in West Africa | 6 |
| 79-291 | Globalization in East African History | 6 |
| 79-385 | The Making of the African Diaspora | 9 |
| 79-386 | Entrepreneurs in Africa, Past, Present and Future | 9 |
| 82-304 | The Francophone World | 9 |

| African American | 57-480/79-357 | History of Black American Music* | 6 |
| 76-333 | African American Studies | 9 |
| 76-432 | Advanced Seminar in African American Studies* | 9 |
| 79-237 | Comparative Slavery | 9 |
| 79-243 | African American Women’s History | 9 |
| 79-304 | African Americans in Pittsburgh | 6 |
| 79-371 | African American Urban History | 9 |
| Caribbean | 79-235 | Caribbean Cultures | 9 |
| 79-237 | Comparative Slavery | 9 |
| 79-295 | Race Relations in the Atlantic World | 9 |
| 79-385 | The Making of the African Diaspora* | 9 |
| 82-304 | The Francophone World* | 9 |
| 82-454 | The Hispanic Caribbean: Rhyme, Reason and Song** | 9 |

| Latin American | 79-317 | Art, Anthropology, and Empire | 9 |
| 82-343 | Latin America: Language and Culture | 9 |
| 82-451 | Studies in Latin American Literature and Culture | 9 |

Notes:

* Denotes courses that require a research paper/project and fulfill requirement for research course

** Denotes courses taught in a foreign language

The Minor in Environmental Studies

Faculty Director: John Soluri
Office: Baker Hall 240
E-mail: jsoluri@andrew.cmu.edu

The minor in Environmental Studies draws on the expertise of faculty across several Carnegie Mellon colleges in order to provide students with an introduction to the interdisciplinary background and skills necessary to understand environmental problems and the means to mitigate them. It emphasizes three general areas: (1) natural science and technology; (2) social sciences; and (3) the humanities and arts. Coursework covers key environmental topics related to energy, pollution, and biological diversity; and a project course experience geared toward policy analysis and formulation.

Note that some courses carry prerequisites and/or reserve seats for primary majors. Students interested in pursuing the minor should meet with the Faculty Director to map out a course of study. Double counting follows guidelines set by the Dietrich College.
The Minor in Film and Media Studies

Faculty Advisor: David Shumway

Film and the electronic media have become a crucial part of contemporary culture and society; they constitute an important tool for understanding social arrangements, historical changes, and the role in the development of aesthetic and cultural theory. The H&SS minor in Film and Media Studies takes an interdisciplinary approach to the study of film and other electronic media. Courses provide techniques for analyzing and criticizing film and other media, for assessing their value as historical, anthropological and social scientific data, and for understanding the aesthetic and philosophical premises of various media texts. In addition, students may take courses in the processes of film-making, offered through special arrangement with the Pittsburgh Filmmakers (a non-profit media arts center, operating since 1971, that provides workshops, seminars, screenings, exhibitions, and training programs in the media and photographic arts).

Courses taken to fulfill requirements for other major or minor programs may not be applied to the Film and Media Studies Minor requirements.

54 UnitsCurriculum

The courses listed below are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. The minor faculty advisor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

9 UnitsIntroductory Course
76-239 Introduction to Film Studies (prerequisite for 76-439) 9

9 UnitsRequired Intermediate Course
76-339 Advanced Studies in Film and Media (May be taken up to three times and counted for additional credit toward Intermediate Courses if topics differ) 9

27 UnitsIntermediate Courses
Complete a minimum of 27 units of course work, chosen in any combination from the following three course groups. (All courses are 9 units unless otherwise indicated).

1. Film and the Study of Society
76-238 Media and Film Studies 9
82-296 A Century of Russian Film 9

2. Film and Anthropology
79-278 Rights to Representation: Indigenous People and their Media 9

3. Filmmaking
76-269 Survey of Forms: Screenwriting 9
FM 200 Intermediate Filmmaking (please go to CFA 100 to register for this course)

Other 200 or 300 level courses in English, History, and Modern Languages can be counted in this category when their primary topic is film and media. Please consult the minor faculty advisor.

9 UnitsAdvanced Courses
Complete one advanced course that concentrates on film directly or that uses it as a tool of social or cultural analysis. One additional advanced course may be taken in place of an intermediate course.

FM 301 Advanced Filmmaking (please go to CFA 100 to register for this course)
76-438 Film and Media Studies: Television 9
76-439 Advanced Seminar in Film and Media Studies: Hollywood Film Genres 9
76-469 Advanced Screenwriting Workshop 9
82-491 Literature, Politics and Film in Russia & East Europe Today Var.

The Minor in Gender Studies

Faculty Advisor: Kristina Straub

Office to declare minor: English, Baker Hall 259

Gender studies is an interdisciplinary field that investigates how gender is embedded in social, cultural, and political relationships. It understands gender as a category of power that intersects with other power relations, including race, class, and sexuality. Courses allow students to develop a deeper understanding of how gender operates, and to transfer the analytical skills they acquire to other courses as well as to their personal and professional lives. The minor combines coursework in English, history, anthropology, psychology, philosophy, economics, and modern languages.

Courses taken to fulfill requirements in other major or minor programs may not be applied to the Gender Studies minor requirements (and vice versa).

54 unitsCurriculum

The courses listed below are offered with at least general regularity. Participating departments may develop and offer other courses that, while not listed here, are appropriate for the study of gender. Consult the minor advisor to confirm the relevance of unlisted, gender-focused courses.

18 unitsRequired Introductory Courses
Complete one of the following (9 units)
76-241 Introduction to Gender Studies 9
79-331 Body Politics: Women and Health in America 9

and one of the following (9 units):
79-244 Women in American History 9
79-320 Women, Politics, and Protest 9
Global Systems. Please consult with the GSM Advisor before embarking on the semester of study abroad.

NOTE: Participating departments may develop and offer other courses that, while not listed here, are deemed appropriate for GSM. Students may develop and submit to the GSM Advisor customized plans that substantially meet the requirements of this minor while allowing the student a personally-crafted learning experience. Proposals should generally be developed no later than the sophomore year, and the minor program started no later than junior year. Proposals will be evaluated for clarity of focus, coherence and depth in areas related to global project development and viability within the context of the Dietrich College and University. Prior approval must be obtained to begin a customized course of study.

Double Counting of Courses

Students may apply one course taken to fulfill a requirement in another major or minor program toward the GSM minor.

Core Course

Required course:

67-329 Contemporary Themes in Global Systems (Spring Semester Only) 9

18 unitsCommunications

Complete two courses:

70-321 Negotiation and Conflict Resolution 9
70-340 Business Communications 9
70/85/88-341 Organizational Communication 9
70-342 Managing Across Cultures 9
76-270 Writing for the Professions 9
76-318 Communicating in the Global Marketplace 9
76-366 Language & Culture 9
85-375 Crosscultural Psychology 9
88-419 Negotiation 9

27 unitsHumanities, Heritage and Culture (HHC) & International Management (IM)

(Complete 9 units of HHC and 18 units of IM ---OR--- 18 units of HHC and 9 units of IM)

Humanities, Heritage and Culture consists of:

• History Department courses: 79-200 level or above covering international/regional studies that are outside of U.S. history
• Modern Languages Department courses: 82-200 level or above, covering international or regional studies but not including elementary or intermediate language courses

79-203 Social and Political Change in 20th Century Central and Eastern Europe 9
79-205 20th Century Europe 9
79-212 China and Its Neighbors: Minorities, Conquerors, and Tribute Bearers 9
79-221 Development and Democracy in Latin America 9
79-225 West African History in Film 9
79-226 Introduction to African History: Earliest Times to 1780 9
79-227 Introduction to African History: 1780-1994 9
79-229 Origins of the Arab-Israeli Conflict, 1880-1948 9
79-230 Arab-Israeli Conflict and Peace Process since 1948 9
79-235 Caribbean Cultures 9
79-236 Introduction to African Studies 9
79-251 India/America: Democracy, Diversity, Development 9
79-254 The Jewish Diaspora in Latin America 9
79-255 Irish History 9
79-256 20th Century Germany 9
79-257 Germany and the Second World War 9
79-258 French History: From the Revolution to De Gaulle 9
79-259 France During World War II 9
79-261 Chinese Culture and Society 9
79-262 Modern China 9
79-263 China’s Cultural Revolution 6
212 Dietrich College Interdisciplinary Minors

79-264 China in the Age of Reform, 1978-Present 9
79-265 Russian History: From the First to the Last Tsar 9
79-266 Russian History: From Communism to Capitalism 9
79-267 The Soviet Union in World War II: Military, Political, and Social History 9
79-272 Iberian Encounters: Muslims, Christians, and Jews in Spain 9
79-274 19th and 20th Century Russia: Society, Art, Music and Theater 9
79-275 Introduction to Global Studies 9
79-278 Rights to Representation: Indigenous People and their Media 9
79-291 Globalization in East African History 6
79-292 China Inside Out: Going Global, 19th to 21st Centuries 9
79-295 Race Relations in the Atlantic World 9
79-297 Dilemmas and Controversies in Anthropology 9
79-307 Religion and Politics in the Middle East 9
79-308 18th Century China Through Literature 9
79-309 20th Century China Through Film 9
79-310 Religions of China 9
79-312 International Human Rights Institutions in Theory and Practice 6
79-322 Family and Gender in Russian History 9
79-323 Family, Gender, and Sexuality in European History, 500-1800 9
79-326 History of Modern Germany through its Cinema 9
79-341 The Cold War in Documents and Film 9
79-349 The Holocaust in Historical Perspective 9
79-355 World Citizenship 9
79-358 The Pacific Encounters the West: An Anthropology of Globalization 9
79-375 China’s Environmental Crisis 9
79-381 Petrocultures: How Oil Changed the World 9
79-385 The Making of the African Diaspora 9
79-386 Entrepreneurs in Africa, Past, Present and Future 9
82-215 Introduction to Modern Arabic Literature and Culture Var.
82-253 Korean Culture Through Film 9
82-273 Introduction to Japanese Language and Culture 9
82-276 Intensive Japanese Language and Culture: Intermediate Level Var.
82-303 French Culture 9
82-304 The Francophone World 9
82-305 French in its Social Contexts 9
82-306 Intensive French Language and Culture: Advanced Level Var.
82-311 Arabic Language and Culture I 9
82-312 Arabic Language and Culture II 9
82-320 Contemporary Society in German, Austria and Switzerland 9
82-323 Germany, Austria and Switzerland in the 20th Century 9
82-326 Intensive German Language and Culture: Advanced Level Var.
82-333 Introduction to Chinese Language and Culture Var.
82-342 Spanish: Language and Culture 9
82-343 Latin America: Language and Culture 9
82-345 Introduction to Hispanic Literary and Cultural Studies 9
82-346 Intensive Spanish Language and Culture: Advanced Level Var.
82-361 Introduction to Italian Culture 9
82-362 Italian Language and Culture II 9
82-396 The Faust Legend at Home and Abroad Var.
82-399 Special Topics: Russian in Context Var.
82-415 Topics in French and Francophone Studies 9
82-416 Topics in French and Francophone Studies 9
82-425 Topics in German Literature and Culture 9
82-431 China and the West 9
82-433 Topics in Contemporary Culture of China 9
82-441 Studies in Peninsular Literature and Culture 9
82-450 Advanced Research in Hispanic Language & Culture 9
82-456 Topics in Hispanic Studies 9
82-473 Topics in Japanese Studies 9
82-474 Topics of Japanese Studies 9

International Management

19-411 Global Competitiveness: Firms, Nations and Technological Change 9
67-319-67-331 Global Technology Consulting Groundwork - Technology Consulting in the Global Community (these two courses are taken sequentially) 6
70-342 Managing Across Cultures 9
70-365 International Trade and International Law 9
70-430 International Management 9
70-480 International Marketing 9
73-372 International Money and Finance 9
79-384 Garbage Gone Global: Managing Surplus, Waste, and Desire 9
88-326 Theories of International Relations 9
88-378 International Economics 9
88-384 Conflict and Conflict Resolution in International Relations 9
88-411 The Rise of the Asian Economies 9
88-412 Energy, Climate Change, and Economic Growth in the 21st Century 9
88-415 Global Competitiveness: Firms, Nations, and Technological Change 9

MINIMUM NUMBER OF UNITS REQUIRED FOR MINOR 54

Minor in Health Care Policy and Management

Sponsored by:
H. John Heinz III College
Dietrich College of Humanities and Social Sciences
Mellon College of Science

Faculty Advisors:
Jason D’Antonio, Mellon College of Science
James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

60 units minimum Curriculum

Seven courses (a minimum of 60 units) are required to complete this minor.

Entry into the minor requires completion of 73-100 Principles of Economics or 88-220 Policy Analysis I or the equivalent by approval.

39 units Required Courses

Students are required to take the following courses.

79-330 Medicine and Society 9
90-836 Health Systems 6
90-861 Health Policy 6
94-705 Health Economics 12

27 units
The Minor in Linguistics

Tom Werner, Director
Office: Baker Hall 155F
Email: twerner@andrew.cmu.edu

Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.

The interdepartmental Minor in Linguistics is sponsored by the departments of English, Modern Languages, Philosophy and Psychology and the Language Technologies Institute. It synthesizes the linguistics related offerings in these departments and provides students with an academic experience that reflects both the interdisciplinary character of the subject and its cross-departmental representation at Carnegie Mellon.

Curriculum

The Linguistics Minor requires a total of 6 courses. All courses counted towards the Minor must be taken for a letter grade and passed with a grade of "C" or above. For Dietrich College students, up to 2 of these courses may be counted also as satisfying the college's general education requirements. Humanities and Social Sciences Courses (9 units each)

Humanities and Social Sciences Courses (9 units each)
- 76-494 Healthcare Communications 9
- 79-335 Drug Use and Drug Policy 9
- 79-383 Epidemiology, Disease, and Public Health 9
- 80-245 Medical Ethics 9
- 80-247 Ethics and Global Economics 9
- 85-241 Social Psychology 9
- 85-442 Health Psychology 9
- 85-446 Psychology of Gender 9

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

The Minor in Neural Computation

Director: Dr. Tai Sing Lee
Administrative Coordinator: Melissa Stupka

Electives

Take three additional courses. These can be additional courses from the Fundamental Skills category above, or any other course which is approved by the director as a linguistics elective. Listed below are the additional electives taught on a regular basis. Other appropriate courses are offered irregularly or on a one-off basis. The director will provide students with a list of possible electives each semester.

Electives are listed below with an indication of the broad areas into which they fall. Students are free to select any configuration of courses from any areas. The director will assist students in selecting electives which are consistent with their goals and interests.

Language Learning and Cognition
- 76-378 Literacy: Educational Theory and Community Practice 9
- 76-420 Process of Reading and Writing 9
- 80-291 Language and Thought 9
- 82-480 Social and Cognitive Aspects of Bilingualism 9
- 82-280 Learning About Language Learning 9
- 82-383 Second Language Acquisition: Theories and Research 9
- 82-388 Understanding Second Language Fluency 9
- 82-488 Language Learning in a Study Abroad Context 9
- 85-354 Infant Language Development 9
- 85-421 Language and Thought 9

Discourse, Society and Culture
- 76-318 Communicating in the Global Marketplace 9
- 76-325 Topics in Rhetoric: Intertextuality 9
- 76-373 Topics in Rhetoric: Argument 9
- 76-385 Introduction to Discourse Analysis 9
- 76-386 Language & Culture 9
- 76-457 Topics in Rhetoric 9
- 82-273 Introduction to Japanese Language and Culture 9
- 82-305 French in its Social Contexts 9
- 82-311 Arabic Language and Culture I 9
- 82-312 Arabic Language and Culture II 9
- 82-333 Introduction to Chinese Language and Culture 9
- 82-345 Introduction to Hispanic Literary and Cultural Studies 9
- 82-378 Japanese Conversation Analysis 9
- 82-476 Japanese Discourse Analysis 9

Linguistic Analysis Conceptual Foundations
- 80-380 Philosophy of Language 9
- 82-373 Structure of the Japanese Language 9
- 82-442 Analysis of Spoken Spanish 9
- 82-444 The Structure of Spanish 9
- 80-382 Phonetics and Phonology I 9
- 11-721 Grammars and Lexicons 12
- 11-722 Grammar Formalisms 12

Language Technologies
- 11-411 Natural Language Processing 12
- 11-716 Graduate Seminar on Dialog Processing 6
- 11-761 Language and Statistics 12
- 11-762 Language and Statistics II 12
- 15-492 Special Topic: Speech Processing 12

Notes

Course numbers 82-305, 82-311, 82-312, 82-378, 82-476, 82-373, 82-442, 82-444 are taught in the language of analysis.

All 11-xxx and 15-xxx courses have significant Computer Science prerequisites. Interested students should check with the course instructor before registering.
The minor in Neural Computation is an inter college minor jointly sponsored by the School of Computer Science, the Mellon College of Science, and the Dietrich College of Humanities and Social Sciences, and is coordinated by the Center for the Neural Basis of Cognition (CNBC) (http://www.cnbc.cmu.edu).

The Neural Computation minor is open to students in any major of any college at Carnegie Mellon. It seeks to attract undergraduate students from computer science, psychology, engineering, biology, statistics, physics, and mathematics from SCS, CIT, Dietrich College and MCS. The primary objective of the minor is to encourage students in biology and psychology to take computer science, engineering and mathematics courses, to encourage students in computer science, engineering, statistics and physics to take courses in neuroscience and psychology, and to bring students from different disciplines together to form a community. The curriculum and course requirements are designed to maximize the participation of students from diverse academic disciplines. The program seeks to produce students with both basic computational skills and knowledge in cognitive science and neuroscience that are central to computational neuroscience.

Curriculum
The minor in Neural Computation will require a total of five courses: four courses drawn from the four core areas (A: Neural Computation, B: Neuroscience, C: Cognitive Psychology, D: Intelligent System Analysis), one from each area, and one additional depth elective chosen from one of the core areas that is outside the student's major. The depth elective can be replaced by a one-year research project in computational neuroscience. No more than two courses can be double counted toward the student's major or other minors. However, courses taken for general education requirements of the student's degree are not considered to be double counted. A course taken to satisfy one core area cannot be used to satisfy the course requirement for another core area. The following listing presents a set of current possible courses in each area. Substitution is possible but requires approval by the director of the minor program.

A. Neural Computation

- 15-386 Neural Computation 9
- 15-387 Computational Perception 9
- 15-883 Computational Models of Neural Systems 12
- 85-419 Introduction to Parallel Distributed Processing 9
- 86-379 Computational Perception 9
- Pitt-Mathematics-1800 Introduction to Mathematical Neuroscience 9

B. Neuroscience

- 03-362 Cellular Neuroscience 9
- 03-363 Systems Neuroscience 9
- 03-761 Neural Plasticity 9
- 85-765 Cognitive Neuroscience Var.
- Pitt-Neuroscience 1000 Introduction to Neuroscience 9
- Pitt-Neuroscience 1012 Neurophysiology 9

C. Cognitive Psychology

- 85-211 Cognitive Psychology 9
- 85-213 Human Information Processing and Artificial Intelligence 9
- 85-412 Cognitive Modeling 9
- 85-419 Introduction to Parallel Distributed Processing 9
- 85-426 Learning in Humans and Machines 9
- 85-765 Cognitive Neuroscience Var.

D. Intelligent System Analysis

- 10-601 Introduction to Machine Learning 12
- 15-381 Artificial Intelligence: Representation and Problem Solving 9
- 15-386 Neural Computation 9
- 15-387 Computational Perception 9
- 15-486 Artificial Neural Networks 12
- 15-494 Special Topic: Cognitive Robotics 12
- 16-299 Introduction to Feedback Control Systems 12
- 16-311 Introduction to Robotics 12
- 16-385 Computer Vision 9
- 18-290 Signals and Systems 12
- 24-352 Dynamic Systems and Controls 12
- 36-225 Introduction to Probability Theory 9
- 36-247 Statistics for Lab Sciences 9
- 36-403 Modern Regression 9
- 36-410 Introduction to Probability Modeling 9
- 42-631 Neural Data Analysis 9
- 42-632 Neural Signal Processing 12
- 86-375 Computational Perception 9
- 86-631 Neural Data Analysis 9

Prerequisites
The required courses in the above four core areas require a number of basic prerequisites: basic programming skills at the level of 15-110 Principles of Computing and basic mathematical skills at the level of 21-122 Integration and Approximation or their equivalents. Some courses in Area D require additional prerequisites. Area B Biology courses require, at minimum, 03-121 Modern Biology. Students might skip the prerequisites if they have permission of the instructor to take the required courses. Prerequisite courses are typically taken to satisfy the students' major or other requirements. In the event that these basic skill courses are not part of the prerequisite or required courses of a student's major, one of them can potentially count toward the five required courses (e.g. the depth elective), conditional on approval by the director of the minor program.

Research Requirements (Optional)
The minor itself does not require a research project. The student however may replace the depth elective with a year-long research project. In special circumstances, a research project can also be used to replace one of the five courses, as long as (1) the project is not required by the student's major or other minor, (2) the student has taken a course in each of the four core areas (not necessarily for the purpose of satisfying this minor's requirements), and (3) has taken at least three courses in this curriculum not counted toward the student's major or other minors. Students interested in participating in the research project should contact any faculty engaged in computational neuroscience or neural computation research at Carnegie Mellon or in the University of Pittsburgh. A useful webpage that provides listing of faculty in computational neuroscience is http://www.cnbc.cmu.edu/computational-neuroscience. The director of the minor program will be happy to discuss with students about their research interest and direct them to the appropriate faculty.

Fellowship Opportunities
The Program in Neural Computation (PNC) administrated by the Center for the Neural Basis of Cognition currently provides 3-4 competitive full-year fellowships ($11,000) to Carnegie Mellon undergraduate students to carry out mentored research in neural computation. The fellowship has course requirements similar to the requirements of the minor. Students do not apply to the fellowship program directly. They have to be nominated by the faculty members who are willing to mentor them. Therefore, students interested in the full-year fellowship program should contact and discuss research opportunities with any CNBC faculty at Carnegie Mellon or University of Pittsburgh working in the area of neural computation or computational neuroscience and ask for their nomination by sending email to Dr. Tai Sing Lee, who also administers the undergraduate fellowship program at Carnegie Mellon. See http://www.cnbc.cmu.edu/fellowcompneuro for details.

The Program in Neural Computation also offers a summer training program for undergraduate students from any U.S. undergraduate college. The students will engage in a 10-week intense mentored research and attend a series of lectures in neural computation. See the http://www.cnbc.cmu.edu/summercompneuro for application information.

The Minor in Religious Studies
Faculty Director: Alysson Creasman
Undergraduate Advisor: Naum Kats
Office: Baker Hall 240

The Religious Studies minor provides the student with a range of intellectual tools with which to think about religious ideas, behaviors and institutions. A further objective is to enable the student to build a base of knowledge which extends beyond any one particular religious tradition. The minor consists of six courses, totaling at least 54 units.

Courses taken to fulfill requirements in other major or minor programs may not be applied to this minor.
54 units Curriculum

In addition to the general education requirements of the student's college and the requirements of the student's major, Religious Studies minors must satisfy the requirements as outlined below.

The “required” course listed below is offered regularly; the “distribution” and “elective” courses are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. The minor faculty advisor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

9 units Core Course

This required course introduces a variety of methods of religious inquiry such as philosophy of religion, sociological and behavioral approaches to religion, historical analysis of religious subject matter, literary and critical analysis of religious texts, theological modes of thought, and anthropological treatments of religion.

79-281 Introduction to Religion 9

18 units Distribution Requirements

A distribution course is one that applies a particular discipline to more than one religion. Complete a course from each of two different disciplinary approaches. See the faculty advisor for other options.

Anthropological Approaches

79-310 Religions of China 9

Historical Approaches

79-272 Iberian Encounters: Muslims, Christians, and Jews in Spain 9

79-307 Religion and Politics in the Middle East 9

79-353 Religious Identities and Religious Conflicts in 19th Century Europe 9

Philosophical Approaches

80-276 Philosophy of Religion 9

Textual Approaches

76-346 Angles and Diplomats – Renaissance Poetry from Wyatt to Milton 9

27 units Elective Courses

Complete courses totaling at least 27 units. In addition to the Carnegie Mellon courses listed below, electives may be chosen from among any of the courses listed above under “Distribution Requirements” that were not used to fulfill that requirement.

76-330 Medieval Literature 9

76-430 Arthurian Legends in the 20th Century 9

79-202 Flesh and Spirit: Early Modern Europe, 1400-1750 9

79-254 The Jewish Diaspora in Latin America 9

79-349 The Holocaust in Historical Perspective 9

79-350 Early Christianity 9

79-352 Christendom Divided: The Protestant and Catholic Reformation 1450-1650 9

82-313 Readings in Islamic History 9

Students may cross-register for relevant electives at other Pittsburgh institutions with the permission of the faculty advisor for the religious studies minor.

The Minor in Science, Technology and Society

Faculty Advisor: Jay Aronson,
Undergraduate Advisor: Naum Kats
Office: Baker Hall 240

This minor provides varied perspectives on the development and meaning of science and technology in modern society. The core courses provide for the exploration of the philosophical underpinnings, cultural and historical contexts, and economic and literary assessments of the interplay among science, technology, and society. Elective courses allow students to pursue more deeply subjects and approaches that build on both core courses and students’ primary majors.

Courses taken to fulfill requirements in other major or minor programs may not be applied to this minor.

54 units Curriculum

27 units Core Courses

Complete one course from Area 1, two from Area 2, and 3 Electives.

Area 1. Language and Rhetoric in Science and Technology

9 units

51-326 Photography & Family 9

76-319 Environmental Rhetoric 9

76-395 Science Writing 9

76-425 Science in the Public Sphere 9

76-476 Rhetoric of Science 9

76-492 Rhetoric of Public Policy 9

Area 2. History, Philosophy and Social Studies of Science and Technology

(18 units)

79-330 Medicine and Society 9

79-333 Biology and Society: Evolution, Animal Experimentation, and Eugenics 9

79-334 Law, Ethics, and the Life Sciences 9

79-342 Introduction to Science and Technology Studies 9

79-382 History of Biomedical Research 9

80-226 Revolutions in Science 9

80-323 Philosophy of Biology 9

27 units Electives

Complete three courses from the approved list of elective courses. Courses listed in Areas 1, 2 and 3 may also be taken as electives if not already completed for an Area requirement. For a listing of approved courses, consult the description of the minor in Science, Technology and Society on the Dietrich College of Humanities and Social Sciences’ webpage (http://www.hss.cmu.edu/index.html), or contact the faculty advisor directly at aronson@andrew.cmu.edu.

15-xxx Special Topics 9-12

17-400 Electronic Voting 12

18-482 Telecommunications, Technology Policy & Management 12

19-448 Science, Technology & Ethics 9

39-100 Special Topics: WHAT IS ENGINEERING? 9

48-448 History of Sustainable Architecture 9

79-331 Body Politics: Women and Health in America 9

79-332 Medical Anthropology 9

79-335 Drug Use and Drug Policy 9

79-381 Petrocultures: How Oil Changed the World 9

79-383 Epidemic, Disease, and Public Health 9

80-245 Medical Ethics 9

80-247 Ethics and Global Economics 9

80-341 Computers, Society and Ethics 9

88-343 Economics of Technological Change 9

85-380 In Search of Mind: The History of Psychology 9
The Minor in Sociology

Faculty Director, Saurabh Bhargava
Program Advisor, Connie Angermeier
Office: Porter Hall 208A
Email: cla2@andrew.cmu.edu

The Sociology minor provides the student with a solid introduction to the central concepts in sociological theory and a grounding in the methods of empirical inquiry needed to understand societies, their histories, and how they change over time. Students choose among selected topics including social psychology, work and organizations, social networks, technology and society, medical sociology, and gender and family. Exposure to these topics will help students understand and appreciate the processes by which families, groups, and organizations form and evolve over time; by which individuals affect and are affected by the society in which they live; and by which technology and institutions shape and influence society.

This background in empirical tools and social theory will strengthen students’ ability to enter graduate studies in sociology, social history, social science, and organizational theory; to begin professional careers involving social analysis, network analysis, data analysis of teams, groups and organizations, social analysis within journalism, political institutions, the government; and to enter the corporate environment with a thorough understanding of organizational activity.

54 unitsCurriculum

In addition to the general education requirements of the student’s college and the requirements of the student’s major, Sociology minors must satisfy the following requirements. The Core courses comprise 18 units of the minor. One course is taken from the Organizations cluster, and one course is taken from the Methodology cluster. The Elective courses provide 36 units of the minor. Sociology minors should consult with the program advisor to plan a course schedule prior to registration.

NOTE: The core courses are offered regularly; the elective courses are offered with at least general regularity. Participating departments may subsequently develop and offer other courses that, while not listed here, are deemed appropriate for this minor. The program advisor should be consulted (especially when the schedule of courses to be offered for a given semester becomes available) to identify such additional courses.

No more than 9 units in the Sociology minor may be counted to fulfill any other major or minor’s requirements.

Core Courses 18 units

a. Organizations

Complete one course.

70-311 Organizational Behavior 9
88-260 Organizations 9

b. Methodology

Complete one course.

36-202 Statistical Methods 9
70-208 Regression Analysis 9
85-340 Research Methods in Social Psychology 9
88-251 Empirical Research Methods 9

36 unitsElective Courses

Complete four courses (a minimum of 36 units) from the following list. Two courses (18 units) must be taken from one category to complete the depth requirement. One course (9 units) must be taken from the other category. The remaining course (9 units) may be taken from either category. Appropriate courses offered by the Department of Sociology at the University of Pittsburgh (available during the academic year through cross-registration) may also be included as part of this option. Contact the Sociology program advisor for more information.

1. Sociology of Gender, Family, and Culture

70-342 Managing Across Cultures 9
79-244 Women in American History 9
79-261 Chinese Culture and Society 9
79-308 18th Century China Through Literature 9
79-320 Women, Politics, and Protest 9
79-322 Family and Gender in Russian History 9
79-323 Family, Gender, and Sexuality in European History, 500-1800 9
79-331 Body Politics: Women and Health in America 9
79-332 Medical Anthropology 9
79-339 Juvenile Delinquency and Film (1920-1950) 6
79-343 History of American Urban Life 9
79-368 Poverty, Charity, and Welfare 9
79-377 Food, Culture, and Power: A History of Eating 9
79-379 Extreme Ethnography 9
80-230 Ethical Theory 9
80-245 Medical Ethics 9
80-305 Rational Choice 9
85-241 Social Psychology 9
85-446 Psychology of Gender 9

2. Sociology of Work, Organizations, and Technology

70-332 Business, Society and Ethics 9
70-414 Entrepreneurship for Engineers 9
73-432 Economics of Education 9
79-342 Introduction to Science and Technology Studies 9
80-341 Computers, Society and Ethics 9
88-341 Organizational Communication 9
88-345 Perspectives on Industrial Research and Development 9
88-347 Complex Technological Systems: Past, Present, and Future 9
88-371 Entrepreneurship, Regulation and Technological Change 9
88-391 Technology and Economic Growth 9
88-402 Modeling Complex Social Systems 9
88-413 Energy and Climate: History, Science, Technology, & Policy in the US 1776-2076 9
88-415 Global Competitiveness: Firms Nations, and Technological Change 9
88-419 Negotiation 9
88-423 Institutions, Entrepreneurship, and Innovation 9
88-435 Analysis of Uncertain Social Systems 9
88-451 Policy Analysis Senior Project 12
or 88-452 Policy Analysis Senior Project 12

Note: Some courses have additional prerequisites.
Undergraduate Economics Program

Carol B. Goldberg, Executive Director of Undergraduate Economics (Tepper, Room 130)
Kathleen Conway, Assistant Director (Tepper, Room 131)
Program Office: Tepper School of Business, Room 139
E-mail: econpro@andrew.cmu.edu
Advising Appointment Online Scheduler: http://tinyurl.com/tepper-econadvising
http://tepper.cmu.edu/prospective-students/undergraduate/economics

At its most fundamental level, economics is the study of how scarce resources are allocated. What will be produced and consumed, how much, and by whom? These questions are central to the well-being of people throughout the world. Economists identify, model, and analyze problems with the objective of developing practical and efficient solutions to challenges confronting society. Economists are also active participants in the processes and institutions through which economic policies are implemented. In the public arena sphere, economists contribute to design of programs and incentive systems to foster efficient implementation of policies. In the private sector, economists bring modeling and data-analytic skill to bear, both in identifying ways to enhance productive efficiency within the firm and in developing strategies to enhance effectiveness of the firm as it competes in the global marketplace. Increasingly, economists are taking advantage of advances in technology to design new exchange systems in applications as diverse as global electronic markets, kidney exchanges, pollution control, and school choice mechanisms.

Carnegie Mellon University enjoys a rich history of innovative research in the field of economics. The university has a distinctive culture that fosters collaborative, problem-oriented, theoretically rigorous, and empirically tested research. The success of this distinctive approach is manifest in the international recognition accorded past and present faculty, including nine Nobel Prizes in Economics. In the classroom, faculty bring the same rigorous, innovative approach to help develop the tremendous intellectual potential and analytic skills of students who are drawn to study economics at Carnegie Mellon. Project courses and hands-on applications in classes enable our students to gain valuable practical experience in honing their skills in economic reasoning, modeling, and data analysis.

The Undergraduate Economics Program has a unique position at Carnegie Mellon University. It is the sole undergraduate program that is a joint program of the Tepper School of Business and the Dietrich College of Humanities and Social Sciences. The combination of research strength of programs and incentive systems to foster efficient implementation of policies. In the private sector, economists bring modeling and data-analytic skill to bear, both in identifying ways to enhance productive efficiency within the firm and in developing strategies to enhance effectiveness of the firm as it competes in the global marketplace. Increasingly, economists are taking advantage of advances in technology to design new exchange systems in applications as diverse as global electronic markets, kidney exchanges, pollution control, and school choice mechanisms.

Economics majors are considered members of both colleges and enjoy the full support and services of both. Undergraduate economics students should consult the program's website and handbook for details about applicable Tepper and Dietrich academic policies and procedures.

Educational Objectives

The Undergraduate Economics Program offers a range of degrees in economics designed to develop strong analytical skills and a solid foundation in the discipline of economics. More specifically, measurable objectives for our economics curriculum are the following:

- Students should be able to identify, explain, and use economic concepts, theories, models, and data-analytic techniques.
- Students should acquire and use knowledge of economics, mathematics, statistics, and computing flexibly in a variety of contexts, providing the foundation for success in graduate studies and careers in the public and private sectors.
- Students should be able to apply their economic tools to formulate positions on a wide range of social and economic problems and engage effectively in policy debates.
- Students should use the investigative skills necessary for conducting original economic research and participating effectively in project teams.
- Students should be able to deliver effective presentations in which they combine visual communication design with oral arguments and/or the written word.

Advising

The Undergraduate Economics Program is committed to providing students with the opportunity to have meaningful and informative discussions about their academic, intellectual, and career interests with a wide range of advisors and mentors. In college, advising meetings are not the same thing as “being sent to the principal’s office” in high school. Instead, advising meetings are extended discussions which may address both immediate and long-term interests, concerns, and desires/needs. Students pursuing a degree in economics are assigned an economics advisor who meets with them on a regular basis. Any CMU undergraduate student interested in taking an economics courses is invited to meet with an economics advisor. To facilitate scheduling advising meetings, please use the online appointment scheduler (https://booknow.appointment-plus.com/43s8h4xq). The economics curriculum is cumulative; higher-level courses build upon the foundations learned in the core course. This results in students needing to be aware of course-sequencing and the schedule of classes. Students are encouraged to meet frequently with their Undergraduate Economics Program academic advisor to ensure that their courses fulfill the requirements towards their degree and are appropriately sequenced. Historically, successful students typically checked-in with their advisor frequently and sought the advice of their academic advisor in selecting courses, pursuing additional degrees, and planning ahead for study abroad.

First-Year Advising

Most first-year students who major in economics enter the Carnegie Mellon University as Dietrich College students, and are assigned a Dietrich College Academic Advisory Center (http://www.cmu.edu/hss/advisory-center) (AAC) advisor. Students who are considering majoring in economics are encouraged to contact the Undergraduate Economics Program academic advisors so that they will have access to program resources; program-level advising; and the community of faculty, staff, and students.

First-year students are not expected to know which degree option they wish to pursue. For this reason, the first-year curricula are quite similar for the four primary degrees awarded by the program. As students become involved in their course work, participate in the extra- and co-curricular activities sponsored by the Undergraduate Economics Program, and discuss with faculty and economics advisors, the decision of which degree to pursue becomes evident.

Study Abroad

The Undergraduate Economics Program encourages students to consider enriching their undergraduate experience by studying abroad at some point during their undergraduate tenure. Studying abroad is widely defined as either study, work, internship, volunteer, or research opportunities abroad during your college career. Studying abroad provides students with not only more awareness of cultural literacies, but it further enhances their education by providing them with the opportunity to compare and contrast different economies and regimes. Many students consider their study abroad experience to be a watershed moment in their studies. With a bit of careful planning, study abroad can be worked into most any economics student’s 4-year schedule.

Preparation for Professional School Programs

Many economics students will attend professional graduate school programs (e.g., DDS, JD, MBA, MD, MPP, M.Sc. Finance, etc.) immediately after graduation or within the first five years of earning their undergraduate degree. Students who are considering applying to professional graduate schools are encouraged to meet with an economics advisor early in their career at CMU. The economics advisors can provide structure and information that are invaluable during a student’s intellectual and career exploration. Knowing that the choice of courses, student achievement, extra- and co-curricular activities, professional school entrance exam test scores (e.g., GMAT, LSAT, MCAT, etc.), and faculty recommendations are key determinants of acceptance into these varied programs, the economics advisors will help you plan your time at CMU.
Preparation for Ph.D. Programs in Economics

The Undergraduate Economics Program has been successful in preparing students for admission into the nation’s most competitive doctoral programs. The life of a researcher (whether in academia or in the private research sector) requires a set of skills that undergraduate students will begin to acquire through course work, research, and focused conversations with faculty and advisors. Doctoral programs in economics are looking for specific analytical skills. Key determinants of acceptance into these programs are the choice of courses, student achievement, research experience, graduate school entrance exam test scores (specifically the GRE), and faculty recommendations. Students who are considering pursuing a higher academic degree are encouraged to meet an economics advisor early in their career at CMU. Interested students are encouraged to look at the B.S. in Economics and Mathematical Sciences curriculum.

Curricula

In order to accommodate students’ wide variety of goals, four primary degree programs are available: Bachelor of Arts in Economics, Bachelor of Science in Economics, Bachelor of Science in Economics and Mathematical Sciences (jointly administered by the Department of Mathematics and the Undergraduate Economics Program), and Bachelor of Science in Economics and Statistics (jointly administered by the Department of Statistics and the Undergraduate Economics Program).

The four major degree programs have been designed to provide students with a solid understanding of the central theories and analytical tools of the field of economics, while maintaining the flexibility necessary to meet the needs of a diversity of career paths. The four degrees produce strong analytical thinkers who are able to model and analyze complex problems. Graduates of the Undergraduate Economics Program gain employment as economic analysts in both the private and public sectors; pursue advanced professional degrees in business, law, and public policy; as well as enter into Ph.D. programs in economics, statistics, finance, and related fields.

For students who major in other academic fields, additional major programs in Economics and in Economics and Statistics and two minor degree programs in Economics and in Innovation, Economics, and Entrepreneurship are available. Information about these degrees can be found following the discussion about the major curricula.

Major Degree Requirements and Sample Schedules

In addition to completing a minimum 360 units and fulfilling both the Dietrich General Education requirements and all University requirements, recipients of an undergraduate degree in economics must complete courses in mathematics, probability and statistics, writing, economic theory, and economic analysis, as well as a set of advanced electives and other specialized courses. It is important for students to realize that degree requirements are actually the "minimum" set of degree requirements. In fact, most economics students take more courses in their major than is strictly required.

Following the list of requirements for each degree are sample four-year course schedules for a student pursuing an undergraduate degree in economics. As there are many different ways of completing the requirements, students are strongly encouraged to meet with an economics advisor to tailor their courses to their own particular needs. Students are responsible for ensuring that they understand all of the program requirements and that they meet the necessary conditions for graduation. When planning course schedules, students must give consideration to all prerequisite and co-requisite requirements.

In addition to meeting university and college graduation requirements, the Undergraduate Economics Program has the additional requirement: Economics courses counting towards any economics primary degree, additional major, or minor must be completed with a grade of "C" or higher. All economics and business administration courses counting towards the Innovation, Economics, and Entrepreneurship minor must be completed with a grade of "C" or higher.

B.A. in Economics

The B.A. in Economics provides a strong foundation in economic analysis and quantitative methods. The curriculum’s breadth incorporates the study of political, historical, and social institutions so that students may use the economic toolkit to address the current challenges humanity faces. Built into the degree is the opportunity to study political, historical, cultural, and social institutions from other CMU departments; these courses are referred to as “Special Electives”. The advanced data analysis component of the B.A. in Economics Curriculum pays additional attention to ordinal data and the study of surveys. The capstone of the curriculum is the Senior Project course where students use their qualitative and quantitative skills to contribute to the body of knowledge in empirical, experimental, and/or theoretical studies. Students pursuing this degree will be well-equipped to pursue graduate work (professional and academic), enter directly into the business world, or pursue public service.

Advanced Economics Electives (36 units)

Students must take four advanced elective courses. Advanced elective courses are those numbered 73-300 through 73-495 (excluding 73-310 Evolution of Economic Ideas and Analysis, 73-363 Econometrics, 73-407 Fundamentals of Statistical Modeling, and 73-450 Economics Colloquium) as well as selected courses designated by the Program offered by other departments/programs. Additionally, students may work with their advisor to structure alternative sets of courses to meet these requirements based on their particular interests, subject to course availability.

Special Electives (27 units)

Students must take three special elective courses in the humanities and social sciences. The complete list of courses designated as special electives is available to current students at MyTepper (http://mytepper.tepper.cmu.edu). The list below is representative of the courses that qualify as "Special Electives": this is not an exhaustive list of qualifying courses. In particular, the graduate courses from Heinz College which open to B.A. in Economics students are not presented.

Sample Schedule for B.A. in Economics

The sample schedule below is an illustration of how students might plan their four-year schedules. This schedule has been designed to highlight the following characteristics of the degree program: 1) the work load is roughly 45-50 units per semester, hence there is no need for course overloading; and 2) room has been built into the schedule that would allow students to pick up additional degrees and/or study abroad. It is important for students to realize that degree requirements are the actually the "minimum" set of degree requirements. In fact, most economics students take more courses in their major than is strictly required.

**While not required, 73-155 is strongly recommended.

B.S. in Economics

The B.S. in Economics provides a strong foundation in economic theory and advanced quantitative analysis. The curriculum focuses on using

"real-world" data to forecast behavior and to investigate the relationships between observed phenomenon and economic models. Combining these sophisticated economic modeling data analytic skills with our wide range of upper-level economic electives provides students with a rigorous analytical foundation that will allow them to pursue any career that interests them. The capstone of the curriculum is the Senior Project course where students use their qualitative and quantitative skills to contribute to the body of knowledge in empirical, experimental, and/or theoretical studies. Students completing this degree will be well-equipped to pursue graduate work (professional and academic) or enter directly into the business world or public service.

B.S. in Economics and Mathematical Sciences

The B.S. in Economics and Mathematical Sciences is a collaborative effort between the Department of Mathematical Sciences and the Undergraduate Economics Program. Combining advanced mathematics with advanced economic theory is the hallmark of this curriculum. The curriculum provides students with courses that complement and develop depth of understanding of economic theory, applied economics, and applied mathematics. This degree offers an integrated curriculum, guiding students through a program of coursework that exploits and builds upon the synergies between mathematics and economics. This degree program equips students with the mathematical tools that are essential for success in Ph.D. programs in economics; mathematics; and key functional areas of business including finance, accounting, marketing, and information systems. Students pursuing this degree will be well prepared for the beginning of their research careers in academia, government, and industry. There are a limited number of student openings in this program; interested students may apply as early as their sophomore year. Acceptance is based on academic performance and initiative while at Carnegie Mellon.

</table>

#### Mathematics Elective

- One of the following three courses:
  - 36-225 Introduction to Probability Theory
  - 36-226 Introduction to Statistical Inference
  - 36-326 Mathematical Statistics (Honors)

#### Economics Elective

- One of the following courses:
  - 73-240 Intermediate Macroeconomics
  - 73-241 and 21-242 are intended only for students with a very strong mathematical background.

**Students who enter the program with 36-225/36-226 should discuss 36-247.

---

### B.S. in Economics and Statistics

Academic Advisor: Rebecca Nugent

For questions about Economics courses contact: Carol Goldburg or Kathleen Houser

Office: Baker Hall 132A
Email: acadcoord@stat.cmu.edu

The Major in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. With joint curriculum from the Department of Statistics and the Undergraduate Economics Program, the major provides students with a solid foundation in the theories and methods of both fields. Students in this major are trained to advance the understanding of economic issues through the analysis, synthesis and reporting of data using the advanced empirical research methods of statistics and econometrics. Graduates are well positioned for admission to competitive graduate programs, including those in statistics, economics and management, as well as for employment in positions requiring strong analytic and conceptual skills - especially those in economics, finance, education, and public policy.

The requirements for the B.S. in Economics and Statistics are the following:

#### I. ECONOMICS CORE 36 UNITS

<table>
<thead>
<tr>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>21-241</td>
<td>Principles of Economics</td>
</tr>
<tr>
<td>73-270</td>
<td>Writing for Economists</td>
</tr>
<tr>
<td>73-240</td>
<td>Principles of Real Analysis I</td>
</tr>
<tr>
<td>36-309</td>
<td>Econometrics</td>
</tr>
<tr>
<td>36-225</td>
<td>Introduction to Probability Theory</td>
</tr>
<tr>
<td>36-226</td>
<td>Introduction to Statistical Inference</td>
</tr>
</tbody>
</table>

#### II. DISCIPLINARY CORE 126 UNITS

#### 1. Economics Core 36 units

<table>
<thead>
<tr>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>73-230</td>
<td>Intermediate Microeconomics</td>
</tr>
<tr>
<td>73-240</td>
<td>Intermediate Macroeconomics</td>
</tr>
<tr>
<td>73-270</td>
<td>Writing for Economists</td>
</tr>
<tr>
<td>73-363</td>
<td>Econometrics</td>
</tr>
</tbody>
</table>

#### 2. Statistics Core 36 units

<table>
<thead>
<tr>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>36-225</td>
<td>Introduction to Probability Theory</td>
</tr>
<tr>
<td>36-226</td>

<td>Advanced Methods for Data Analysis</td>
</tr>
</tbody>
</table>

#### 3. Computing 9 units

<table>
<thead>
<tr>
<th>Fall</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>36-350</td>
<td>Statistical Computing</td>
</tr>
</tbody>
</table>

#### 4. Advanced Electives 45 units

Students must take three advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-363, 73-407 and 73-450) and two advanced Statistics elective courses (numbered 36-303, 36-315, 36-350 or 36-410 through 36-495).

Total number of units for the major 191-192 units

Total number of units for the degree 360 units
**Recommendations for Prospective PhD Students**

Students interested in pursuing a PhD in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses, perhaps with Mathematical Sciences as the Concentration Area. They should see a faculty advisor as soon as possible. Students should consider 36-236 Mathematical Statistics (Honors) as an alternative to 36-226. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students considering PhD programs may wish to take 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses should include both 21-127 Concepts of Mathematics and 21-355 Principles of Real Analysis I.

Prospective PhD students should also consider additional courses among 21-228 Discrete Mathematics, 21-260 Differential Equations, 21-341 Linear Algebra, and 21-356 Principles of Real Analysis II.

**Sample Program**

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

<table>
<thead>

</tbody>
</table>

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students might add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

Students who elect Economics and Statistics as a second major must fulfill all Economic and Statistics degree requirements. Majors in many other programs would naturally complement a Statistics Major, including Business Administration, Social and Decision Sciences, Policy and Management, History and Policy, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics and three Statistics) that do not count for their primary major. If students do not have at least six, they typically take additional advanced electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites.

---

**Supplemental Programs**

**Honors Program in Economics**

Outstanding students are eligible for the honors programs in both the Tepper School of Business and the Dietrich College of Humanities and Social Sciences. For more information, consult the Dietrich Honors Program website (http://hhs.cmu.edu/seniorhonorsprogram.html).

The Tepper Senior Honors Program in Economics (http://tepper.cmu.edu/prospective-students/undergraduate/economics/curriculum/research/senior-honors-program) provides qualified students with the opportunity to engage in original research during their senior year at Carnegie Mellon. The primary rewards of participating in the Honors Program in Economics are threefold. First comes the satisfaction of undertaking and completing an original piece of research. Working independently or with a faculty member to identify a research question and claim ownership of its discovery process is a rewarding experience. Second is the opportunity to challenge oneself intellectually. The third advantage is the opportunity to graduate with Tepper Honors. For many, this process of intellectual inquiry and knowledge creation is the highlight and culmination of their undergraduate academic experience.

Students are invited into the Tepper Senior Honors Program in Economics during their junior year. Invitation is based on academic achievement at Carnegie Mellon University, ability to work independently, and tenacity of spirit.

**Accelerated Master’s Degree Programs**

**Dual Degree in Economics**

A student pursuing a primary degree outside of the department may obtain both a graduate degree by completing all of the requirements for the B.S. in Economics or the B.S. in Economics and Statistics along with the Dietrich College general education requirements. In addition, the student’s total units completed must be at least 90 units in excess of the requirement for the student’s other degree(s) or at least 450 units, whichever is greater. Interested students should meet with an economics advisor.

**Additional Major in Economics Curriculum**

All university students are eligible to pursue an additional major in economics in conjunction with a major in any department in the university other than economics. The requirements for the Additional Major in Economics are the same as those for the B.S. in Economics, except that the Dietrich College General Education requirements are waived. In order to avoid “double counting” issues, students are encouraged to meet with an economics advisor. When courses are shared across degrees, students pursuing an Additional Major in Economics are asked to take additional advanced economics electives.

**Additional Major in Economics and Statistics Curriculum**

All university students are eligible to pursue a major in economics and statistics in conjunction with a major in any department in the university other than statistics or economics. The requirements for the Additional Major in Economics and Statistics are the same as those for the B.S. in Economics and Statistics, except that the Dietrich College General Education requirements are waived. In order to avoid “double counting” issues, students are encouraged to meet with an economics or statistics advisor. When courses are shared across degrees, students pursuing an Additional Major in Economics and Statistics are asked to take additional advanced economics or statistics electives.

**Minor in Economics**

The Minor in Economics degree program provides students with a solid understanding of economic theory and data analysis.

All university students are eligible to pursue the Minor in Economics in conjunction with a major in any other department in the university. In order...
to avoid “double counting” issues, students are encouraged to meet with an economics advisor. When courses are shared across degrees, students pursuing a minor in Economics are asked to take additional advanced economics electives.

All economics course counting towards the minor must be completed with a grade of "C" or higher.

**Minor in Economics (Total Number of Units for the Minor: 82/91)**

**Mathematics Requirements (19 Units)**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>21-120</td>
<td>Differential and Integral Calculus</td>
<td>10</td>
</tr>
<tr>
<td>21-256</td>
<td>Multivariate Analysis</td>
<td>9</td>
</tr>
</tbody>
</table>

**Economic Theory Requirements (18/27 Units)**

<table>
<thead>
<tr>

</tr>
<tr>
<td>73-240</td>
<td>Intermediate Macroeconomics</td>
<td>9</td>
</tr>
</tbody>
</table>

*21-256 is currently a corequisite for 73-230. Beginning in Fall 2015, 21-256 will be a prerequisite.

Some students may choose to focus their minor in microeconomics theory and applications. These students may elect not to take 73-240 Intermediate Macroeconomics, and instead, replace it with an additional advanced economics elective.

**Quantitative Analysis Requirements (18/27 Units)**

The quantitative analysis path is often determined by the major requirements. The sequence is designed to give students an understanding of probability theory, regression analysis, and quantitative economic analysis. Students are encouraged to talk with an economics advisor to determine which requirements best complement their primary fields of study.

**Option One**

<table>

<tr>
<td>73-407 Fundamentals of Statistical Modeling</td>
</tr>
</tbody>
</table>

**Advanced Economics Electives (18/27 Units)**

Students must take two advanced elective courses. Advanced elective courses are those numbered 73-300 through 73-495 (excluding 73-363 Econometrics, 73-407 Fundamentals of Statistical Modeling, and 73-450 Economics Colloquium) as well as courses designated by the program offered by other departments/programs. Additionally, students may work with their economics advisor to structure alternative sets of courses to meet these requirements based on their particular interests, subject to course availability.

**Minor in Innovation, Economics, and Entrepreneurship**

Innovation (both technological and social) and entrepreneurship are the catalytic forces behind modern economic growth. Today, both developing and developed countries are looking for ways to promote and sustain growth. This minor builds on study of the behavior of individuals and firms to foster an understanding of how organizations manage innovation and learning, how firms and the market respond to technological change, and how entrepreneurs are able to turn ideas into goods and services and new markets.

All university students are eligible to pursue the Minor in Innovation, Economics, and Entrepreneurship in conjunction with any major in the university. The curriculum consists of six courses of which five core courses are required and the sixth course may be chosen from a list of options from across the University.

In order to avoid “double counting” issues, students are encouraged to meet with an economics advisor. When courses are shared across degrees, students pursuing a minor in Innovation, Economics, and Entrepreneurship are asked to take additional advanced economics electives.

All economics and business administration courses counting towards the minor must be completed with a grade of "C" or higher.

**Minor in Innovation, Economics, and Entrepreneurship (Total Number of Units for the Minor: 73/85)**

**Mathematics Requirements (19 Units)**

<table>
<thead>
<tr>
<th>Units</th>

<td>73-465 Technology Strategy</td>
</tr>
<tr>
<td>73-474 The Economics of Ideas: Growth, Innovation and Intellectual Property</td>
</tr>
<tr>
<td>73/70-449 Social, Economic and Information Networks</td>
</tr>
</tbody>
</table>

*This is not an exhaustive list of qualifying courses. In particular, the graduate courses from Heinz College, Human Computer Interaction, Information Networking Institute, and Institute for Software Research which are open to the Minor in Innovation, Economics, and Entrepreneurship students are not presented. The complete list of eligible designated as special electives is available to current students at MyTepper (http://mytepper.tepper.cmu.edu).

**Academic Standards and Policies**

Undergraduate economics students are in the unique position of belonging to two CMU colleges, Mariana Brown Dietrich College of Humanities and Social Sciences and the Tepper School of Business. To find a detailed description of policies governing economics students, please consult the undergraduate section of MyTepper (http://mytepper.tepper.cmu.edu).

**Faculty**

LAURENCE ALES, Assistant Professor of Economics – Ph.D., University of Minnesota; Carnegie Mellon, 2008–.

KATHARINE ANDERSON, Assistant Professor of Economics and Entrepreneurship – Ph.D., University of Michigan; Carnegie Mellon, 2010–.

STEPHEN M. CALABRESE, Visiting Associate Professor of Economics, Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2007–.
Majoring in English: The Four English Degree Options

All students who major in English choose one of the four majors offered by the department as the main focus of their studies:

- The B.A. in English
- The B.A. in Creative Writing
- The B.A. in Professional Writing
- The B.S. in Technical Writing & Communication

Other Options for English Majors

Students who wish to broaden their experience with English courses may do so by taking more than the minimum requirements for each major or by combining two of the majors within the department for a double major in English. Common combinations include Professional Writing and Creative Writing, Creative Writing and the B.A. in English, or the B.A. in English and Professional Writing. Students who are already majoring in one of the English degrees can generally add a second English major by completing additional courses. Consult the English Department and the section below on “Completing an Additional Major in English” for further detail.

How the Curriculum is Structured

In addition to Dietrich College requirements, English majors complete 11 to 12 courses (99 to 114 units) specifically related to their chosen major within English and structured as indicated below. Please note that courses taken to fulfill requirements in other major or minor programs may not be applied to requirements for any of the English Department majors or minors.

Core Requirements for the Specific Major (7 to 9 courses, 63 to 81 units)

Complete seven to nine courses.

- The Core Requirements differ for each major and are designed explicitly to provide both breadth and depth within the specific major the student has chosen.

English Electives (3 to 4 courses, 27 to 36 units)

Complete three to four elective courses.

Elective Courses for the major are designed to add breadth to each student’s study within English and to provide experience with the range of approaches to reading and writing available within the department. Students in all English majors are encouraged to sample widely from the Department’s offerings.

The B.A. in English

An important role of English departments has been to create interpretations of the literature of various historical periods, including the present. The B.A. in English (BBA) at Carnegie Mellon builds on, and also extends, this tradition by teaching texts as part of a complex web of historical conditions and relationships; by teaching both major literary texts and public and non-fiction documents; and by teaching film, television, and other storytelling media alongside more conventional texts.

The B.A. in English is distinctive in drawing from the artistic and research strengths of the Department’s faculty in Literary and Cultural Studies, Rhetoric, and Creative Writing. Literary and Cultural Studies focuses on the way texts are formally constructed and how they function in historical and contemporary contexts. Creative Writing helps students focus on language as a tool to explore and depict experience. Rhetoric focuses on the principles through which writers construct texts and audiences respond to them. Drawing from all of these perspectives, students in the B.A. in English...
learn the research skills and writing strategies to enable them to analyze the language and texts of other writers and to report their research in effective texts of their own. Such training can prepare students for graduate work in literature, cultural studies, or rhetoric, and also for careers in law, business, or government, which require similar skills in interpretation, research, and writing.

The 200-level core courses are designed to introduce students to writing in a variety of genres, to a knowledge of literary and other media forms, and to a basic theoretical knowledge of how texts are produced and interpreted. In the Interpretive Practices course, students are introduced to basic concepts, methods, and practices of literary and rhetorical approaches to texts. In the Survey of Forms course, students learn how to use language to express experience through poetic and narrative forms.

In addition to these courses, students take at least one course in rhetoric, two 300-level EBA core courses, and two 400-level seminars designed to introduce them to the functioning of texts within specific cultural and rhetorical contexts. Two of 300- and 400-level courses must feature a specific historical period, and one of these "period" courses must have a pre-1900 focus. Period study introduces students to a range of historical and cultural texts and to a range of methods for analyzing these texts in their original context and across contexts. Courses that fulfill the Rhetoric Requirement focus explicitly on language and discourse as objects of study and emphasize the relationships of language, text structure, and meaning within specific contexts.

Interpretive Practices (76-294) and Research in English (76-394) are required of students in the B.A. in English. Interpretive Practices grounds students in literary and cultural theory and trains them in writing interpretations of texts. Research in English offers training in gathering information systematically and in building arguments based on that information. Students will hone their skills in reading texts, using critical commentary, assessing print and electronic materials, and conducting interviews and surveys. They will learn how to test their hypotheses against alternatives and present their research to audiences within the discipline of English. The historical or thematic content of this course will vary from one semester to another. While 76-394 is not a pre-requisite for 400 level courses, it is strongly recommended that EBA majors take this course in their junior year. At the advanced level EBA majors are required to take two 400-level seminars for which Interpretive Practices (76-294) is a pre-requisite.

EBA majors also complete three English Electives, one at the 200 or above level and two at the 300 or 400 level. Electives at the 200 level allow students to sample introductory courses in special topics — such as gender and media studies — within rhetorical, literary, and cultural studies, or genre courses in the novel or comedy. Electives at the 300 and 400 level encourage students to explore more advanced study in the various offerings within the department. In choosing their electives, EBA students are encouraged to sample courses from across the department.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, English B.A. majors must complete 11 courses in the following areas:

**EBA Core (8 courses, 72 units)**

Complete both courses:

- 76-26x Survey of Forms (Nonfiction, Fiction, Poetry, or Screenwriting)
- 76-294 Interpretive Practices

Complete six required courses.

1. **Research Course (1 course, 9 units)**

76-394 Research in English

2. **Rhetoric Requirement (1 course, 9 units)**

Complete one course from a set of varied offerings in Rhetoric as designated each term by the English Department. Rhetoric courses focus explicitly on language and discourse as objects of study and emphasize the relationships of language, text structure, and meaning within specific contexts.

3-4. **300-level Courses (2 courses, 18 units)**

Complete two 300-level courses that investigate the production and interpretation of texts and other media from a variety of periods and theoretical and methodological perspectives. Course offerings that meet these requirements are advertised on a seminar-by-seminar basis. For EBA majors, 76-294 Interpretive Practices is a prerequisite for these courses. Course options include but are not limited to the following:

- 76-330 Medieval Literature
- 76-331 Renaissance Literary and Cultural Studies
- 76-332 African American Literature: The African American Crime Novel
- 76-335 20th Century American: Mid-20th Century Fiction
- 76-339 Advanced Studies in Film and Media
- 76-347 American Literary and Cultural Studies: Contemporary Fiction
- 76-386 Language & Culture
- 76-387 Narrative & Argument
- 76-393 Corpus Rhetorical Analysis
- 76-492 Rhetoric of Public Policy

5-6. **400-level Seminar Courses (2 courses, 18 units)**

Complete two 400-level seminar courses which investigate a specific topic in depth and allow students to work on a major research-based paper. Courses in this category will be advertised on a semester-by-semester basis. For EBA majors, Interpretive Practices (76-294) is a prerequisite and Research in English (76-394) is pre- or co-requisite. Among current course offerings, examples include but are not limited to the following:

- 76-431 Chaucer
- 76-439 Advanced Seminar in Film and Media Studies: Hollywood Film Genres
- 76-451 Topics in Language Study
- 76-457 Topics in Rhetoric
- 76-476 Rhetoric of Science
- 76-482 Comparative Rhetoric

**“Period” Course Requirement**

The period course requirement is not a separate course requirement per se but one that needs to be met through the selection of the required 300- and 400-level courses. At least two of these four required courses must be "period" courses, that is, courses that focus on texts that are connected in time and place or through common social concerns. One of these two courses must focus on a historical period prior to 1900. Courses in this category will vary from year to year and be advertised on a semester-by-semester basis. Such courses may be at either the 300 or 400 level.

**English Electives (3 courses, 27 units)**

Complete three courses from the English Department’s offerings. One may be at the 200 level or above; the remaining two must be at the 300 or 400 level. Electives may include any courses offered by the English Department with the exception of courses designed for non-majors. Some semester offerings may include cross-listed courses from Modern Languages or History.

**English B.A. Sample Curriculum**

As a department, we recommend beginning the major in the sophomore year if possible. Students in Dietrich College may declare a major as early as mid-semester of the spring of their first year and begin major requirements the following fall. Interpretive Practices (76-294) should generally be taken in the sophomore year and before Research in English (76-394).

* Interpretive Practices (76-294) is a prerequisite for 300-level EBA courses
The B.A. in Creative Writing

Carnegie Mellon is one of a small number of English departments in the country where undergraduates can major in Creative Writing. In the Creative Writing major (CW), students develop their talents in writing fiction, poetry, screenwriting, and creative nonfiction. While studying with faculty members who are writers, Creative Writing majors read widely in literature, explore the resources of their imaginations, sharpen their critical and verbal skills, and develop a professional attitude toward their writing. Students also have the opportunity to work with other nationally known poets and fiction writers through the department’s Visiting Writers series. The CW program is made up of faculty and students who have an intense commitment to their work. Students who do not exhibit a high level of commitment and promise in the introductory classes will not be encouraged to continue in the major.

Beginning with the Dietrich College requirements, the curriculum for Creative Writing majors is designed to broaden the students’ intellectual backgrounds and encourage their analytical abilities. English courses beyond the Creative Writing core requirements provide additional practice in the careful reading, writing and understanding of literary texts.

Students in the Creative Writing major are required to take two of the introductory Survey of Forms courses, ideally in their sophomore year. Choices include Survey of Forms: Poetry (76-265), Survey of Forms: Fiction (76-260), Survey of Forms: Screenwriting (76-269), and Survey of Forms: Creative Nonfiction (76-261). In order to proceed into the upper level courses in the major (and in each of the genres), students must do well in these introductory courses (receive a grade of A or B). In their junior and senior years, Creative Writing majors take four workshops in fiction, poetry, screenwriting, or nonfiction. At least two of the workshops must be taken in a single genre. In the writing workshops, students develop their critical and verbal abilities through close reading and analysis of poems, stories, and other literary forms. Their work is critiqued and evaluated by peers and the faculty. Students may write a Senior Project or Honors Thesis (if they qualify for Dietrich College honors) under the supervision of a faculty member during their senior year.

Carnegie Mellon also offers Creative Writing majors various extracurricular opportunities for professional development. For example, they may work as interns with the Carnegie Mellon University Press, which is housed in the English Department. The Press publishes scholarly works, and books of poetry and short stories by both new and established American writers. Students may help edit and submit their work for publication to The Oakland Review, a Carnegie Mellon University-sponsored annual journal, and Dossier, the literary supplement to The Tartan (the student newspaper). Students also have opportunities to read their works in a series of readings by student writers held in the Gladys Schmitt Creative Writing Center and to hear nationally known authors as part of the Carnegie Mellon Visiting Writers series. Additionally, the English Department (in cooperation with the Carnegie Mellon University Press) offers prizes for students each year in the writing of fiction, non-fiction, poetry and screenwriting. These include the Pauline Adamson Awards, the Academy of American Poets Prize, the Carnegie Mellon University Press Prizes in poetry and fiction, the Family Friendly Programming Forum Scholarships in Film, and the Topol Award in Creative Writing/Fiction. In addition, the Gladys Schmitt Scholarship Fund and the Gladys Schmitt Student Enhancement Fund provide support for creative writing majors to attend writing conferences and festivals.

Because the Creative Writing program provides a disciplined atmosphere in which to study and write, it appeals especially to students who are as concerned with their personal growth as with vocational goals. Nevertheless, the extracurricular writing activities and a variety of writing internships available on and off campus can provide Creative Writing majors with valuable experiences for planning their future. After graduation, many Creative Writing majors go on to graduate writing programs and to careers in teaching, publishing, public relations, advertising, TV and film, or freelance writing and editing.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, Creative Writing majors must complete 11 courses in the following areas:

Creative Writing Core (7 courses, 63 units)

Two Survey of Forms Courses (2 courses, 18 units)

76-260 Survey of Forms: Fiction * 9
76-261 Survey of Forms: Creative Nonfiction * 9

76-265 Survey of Forms: Poetry * 9
76-269 Survey of Forms: Screenwriting * 9

* A student must receive a grade of A or B in the Survey of Forms class in a specific genre in order to be eligible to enroll in a workshop of that genre. A student who receives a grade of C in a Survey of Forms course may enroll in a related workshop only with the permission of the workshop professor. A student who receives a D or F in Survey of Forms may not take a workshop in that genre.

One Reading in Forms Course (1 course, 9 units)

Complete one of the following courses:

76-362 Reading in Forms 9
76-363 Reading in Forms: Poetry 9
76-364 Readings in Forms: Fiction 9

Four Creative Writing Workshops (4 courses, 36 units)

Complete four Creative Writing workshops, at least two in a single genre. Workshops in all genres may be taken more than once for credit.

76-365 Beginning Poetry Workshop 9
76-460 Beginning Fiction Workshop 9
76-462 Advanced Fiction Workshop 9
76-464 Creative Nonfiction Workshop 9
76-465 Advanced Poetry Workshop 9
76-469 Advanced Screenwriting Workshop 9
76-4xx Elective Workshops (various forms) 9

English Electives (4 courses, 36 units)

Complete four additional courses from the English Department’s offerings. Two of the four English Electives must be courses that are designated as fulfilling the literature requirement and focus on close reading of literary texts. Please consult the list of courses published each semester by the Department for current offerings. English Electives may include any course offered by the Department. Additionally, English Electives can include no more than one course at the 200 level. The remaining English Electives must be at the 300 or 400 level. In choosing Electives, students are encouraged to sample courses from across the Department.

Creative Writing B.A. Sample Curriculum

This plan is presented as a two-year (junior-senior) plan for completing major requirements. Its purpose is to show that this program can be completed in as few as two years, not that it should or must be. In fact, as a department, we recommend beginning the major in the sophomore year if possible. Students in Dietrich College may declare a major as early as mid-semester of the spring of their first year and begin major requirements the following fall.

The B.A. in Professional Writing

Professional Writing combines liberal and professional education with a strong foundation in rhetorical studies. While based firmly in the liberal arts tradition, the major has a strong career orientation and is specifically designed to prepare students for successful careers as writers and communications specialists in a range of fields: publishing, government, journalism, the non-profit sector, education, public and media relations, corporate communications, advocacy writing, and the arts. The major is designed to develop analytical and reflective communications professionals with both the skills needed to enter and negotiate current work contexts (including writing for the web and for other digital media) and the analytic and problem-solving skills needed to understand and keep pace with cultural and technological change.

The Professional Writing major includes 12 courses: 9 PW Core Requirements + 3 English Electives. The 9 Core Requirements include foundations courses in writing (professional, technical & creative), style & editing, and argument plus a cluster of advanced rhetoric, language studies, and specialized writing courses, all designed to closely integrate analysis and production. Through special topics courses—journalism, on-line information design, advocacy writing, document design for print, science writing, public relations and corporate communications, writing for multimedia—students can pursue specializations while working with faculty who are both experts and practicing professionals in these fields. PW majors also gain experience in working on team- and client-based projects and receive focused support to develop a portfolio of polished writing samples to use in their job search and for internships. Through English Electives in Rhetoric, Creative Writing, and Literary and Cultural Studies, students gain additional practice in the careful reading, writing, and analysis of both literary and non-fictional texts and important insights into how texts function in their historical and contemporary contexts. As a capstone experience, senior PW majors have the opportunity to complete a Senior Project or, upon invitation from the college, a Senior Honors Thesis in Rhetoric or Professional Writing. PW students can also apply for Student Undergraduate Research Grants (SURG) or summer fellowships (SURF) to work on independent research projects with department faculty.

While the major appeals to students with strong professional interests, both core and elective requirements develop the broad intellectual background one expects from a university education and prepare students to either enter the workplace or pursue graduate study in fields as diverse as communications, law, business, and education. PW majors also have the opportunity to apply for the Department's accelerated MA in Professional Writing, the MAPW 4+1, which allows them to complete the degree in 2 semesters instead of the usual 3. As they choose elective courses, minors, and additional majors beyond the Department, Professional Writing majors are encouraged to explore courses from across the university, keeping in mind the very important point that to be effective, writers must have both strong writing skills and in-depth knowledge of the subjects that they write about. While there is no formal requirement for these elective courses, students are encouraged to think about what courses will complement their interest in Professional Writing. Students interested in journalism, for example, are encouraged to take courses in history and political science, while those interested in writing for health-related fields are pointed toward courses in biology, chemistry, and healthcare policy. Other possible elective areas include but are not limited to business, organizational behavior, graphic design, the arts, psychology, economics, modern languages, ethics and public policy, and computer programming. Because the major in Professional Writing is deliberately structured as a flexible degree that allows a broad range of options, majors in Professional Writing should consult closely with their English Department advisors on choosing both elective and required courses and in planning for internships and summer employment.

Various opportunities for writers to gain professional experience and accumulate material for their writing portfolios are available through campus publications, department-sponsored internships for academic credit, and writing-related employment on and off campus. Professional Writing majors frequently write for The Tartan, the student-run campus newspaper, and have served as editor-in-chief, section editors, and reporters for both the main paper the Pullibook section on arts, events, and popular culture. PW majors serve similar roles on the undergraduate research journal, The Editor, the editorial staff of The Oakland Review, Carnegie Mellon undergraduate literary journal; and The Triple Helix, an international undergraduate journal of science, society, and law, which has an active chapter on the Carnegie Mellon campus. PW majors have also conceived and published independent projects to fill perceived needs on and beyond campus. Within the last several years, for example, PW majors founded The Cut, an independent magazine focusing on music, and d’Arte, a magazine with a focus on the arts, particularly design and fashion. These publications provide opportunities for students to publish their own written work and to gain experience in skills ranging from editing, to layout, to production, to selling ads or managing business affairs. Students can also write for the faculty and staff newspaper, Focus, under the guidance of the editor, or take a course in editing and publishing with the Carnegie Mellon University Press. Additionally, the English Department offers student awards in Professional Writing each year. The awards are judged by professionals outside the university and include the Pauline Adamson Awards in nonfiction and the Dawe Memorial Award to encourage creativity and innovation in publishing. The Dawe Award provides a junior in the department with a $2000 grant to plan, produce, and publish an innovative magazine, newspaper, or other periodical publication.

Professional Writing majors have the option of taking writing internships for academic credit during their junior or senior year and are also strongly encouraged to seek professional internships throughout their undergraduate years and during their summers. Opportunities in public and media relations, newspaper and magazine writing, healthcare communication, publishing, technical writing, public service organizations, and writing for the web and new media illustrate both internship possibilities and the kinds of employment that Professional Writing majors have taken after graduation. In addition to providing professional experience, these internships help students establish contacts outside the University and add professional publications to their portfolios. Recent academic year and summer internships have included non-profit organizations such as The Museum of Fine Arts Boston, the West Penn Hospital Foundation, and the Pittsburgh Symphony; traditional and new media PR and information design agencies such as Deeplocal, Mind over Media, Marc, and Branding Brands; publications such as Whirl, Pittsburgh Magazine, and the Pittsburgh Post Gazette; TV stations WTAE, KDKA, and WQED; and organizations as diverse as NFL films, The Latin American Literary Review Press, the Lincoln Center Festival, and the New York Islanders.Ideas and guidance for choosing internships, courses, summer employment, and possible career paths are provided through a 3-credit course, Professional Seminar (76-300), which meets once a week during the fall term and provides majors with the opportunity to meet and network with practicing professionals in a range of communications fields.

Curriculum

In addition to satisfying all of the Dietrich College degree requirements for B.A. candidates, Professional Writing majors must fulfill 12 requirements in the following areas:

**Professional Writing Core (9 courses, 81 units)**

Complete nine courses.

<table>
<thead>
<tr>
<th>Foundations Courses (4 courses, 36 units)</th>
</tr>
</thead>
<tbody>
<tr>
<td>76-26x Survey of Forms (Nonfiction, Fiction, Poetry, or Screenwriting)</td>

</tr>
<tr>
<td>76-390 Campus Press</td>
</tr>
<tr>
<td>76-373 Topics in Rhetoric: Argument</td>
</tr>
</tbody>
</table>

Complete one course from designated Rhetoric courses offered and advertised each semester by the Department. Rhetoric courses focus on understanding the role of language and language practices in both personal and professional contexts. Courses emphasize the relationships between texts and their contexts and pay particular attention to textual features, meaning, processes of reading and writing, and the ways in which language practices vary over time and across situations and cultures. The courses also equip students with explicit techniques for analyzing, understanding, and exploring language practices. Rhetoric courses may also be taken as part of a PW major’s requirements for 4 advanced Writing/Rhetoric courses and include but are not limited to the following list.

<table>

The B.S. in Technical Writing & Communication

The B.S. in Technical Writing & Communication (TWC) is one of the oldest undergraduate technical communication degrees in the country with a history that stretches back to 1958. The degree is specifically designed to prepare students for successful careers involving scientific, technical, and computer-related communication, including writing and designing for digital media.

The B.S. in Technical Writing reflects changes taking place in the technical communication fields. At one time in the not too distant past, technical writers worked primarily with print documents and within a relatively narrow range of fields that included the software industry and various organizations concerned primarily with scientific or technological subjects. The recent explosion of information technologies has radically changed that situation. Today’s technical communicators are professional specialists with strong backgrounds in the technology, communication, and design skills needed to enter a broad range of information-based fields. The work that technical writers now do goes well beyond writing documents for print distribution. The expanding range of options includes positions that involve organizing, managing, communicating, and facilitating the use of both technical and non-technical information in a range of fields and media.

Some of the many things that technical communicators do include developing and designing web sites, explaining science and technology to the public, developing print and multimedia materials, developing information management systems, designing and delivering corporate training, and developing support systems for consumer products ranging from software for word processing or personal finances to complex data management systems.

The B.S. in Technical Writing recognizes the important changes taking place in communication-based careers and includes two distinctive “tracks,” one in Technical Communication (TC) and one in Scientific and Medical Communication (SMC). Both tracks begin with a common core of foundation courses in print and on-line communication as well as a shared set of prerequisites in math, statistics, and computer programming. The two tracks differ in the set of theory/specialization courses beyond the core, with each track including a specialized set appropriate to its focus.

In both the TC and SMC tracks, TWC students work on real projects for actual clients, learn group interaction and management skills, and develop a flexible repertoire of skills and strategies to keep up with the rapid advances in software and technology. Above all else, they focus on developing structures and information strategies to solve a broad range of communication and information design problems.

TWC students are able to draw on exceptional resources on and off campus to enhance their education. Most obvious are the course offerings of Carnegie Institute of Technology, the Mellon College of Science, and the School of Computer Science. Additional course offerings in business, organizational behavior, policy and management, psychology, history, and design are also encouraged. As a capstone experience, Senior TWC majors have the opportunity to complete a Senior Project or, upon invitation from the college, a Senior Honors Thesis in Rhetoric or Professional or Technical Writing. TWC students can also apply for Student Undergraduate Research Grants (SURG) or summer fellowships (SURF) to work on independent research projects with department faculty.

While the major appeals to students with strong professional interests, both core and elective requirements develop the broad intellectual background one expects from a university education and prepare students to either enter the workplace upon graduation or pursue graduate study in fields as diverse as communications, business, instructional design, information design, education, and science and healthcare writing. TWC majors also have the opportunity to apply for the Department’s accelerated MA in...
Professional Writing, the MAPW 4+1, which allows them to complete the degree in 2 semesters instead of the usual 3. Various opportunities for writers to gain professional experience and accumulate material for the writing portfolios are available through campus publications, department-sponsored internships for academic credit, and writing-related employment on and off campus. TWC students have the option of doing internships for academic credit during their junior or senior year and are encouraged to pursue a series of internships throughout their 4 years and during their summers. Internships provide both professional experience and exposure to the broad range of career possibilities that technical writers can pursue after graduation. Both coursework and internships also provide writing samples for students' professional portfolios. Recent students have done internships at various on- and off-campus sites including Rockwell Automation, Duquesne Systems, the Carnegie Mellon Robotics Institute, IBM, and the Carnegie Mellon Software Engineering Institute (SEI). Placement patterns after graduation are similarly diverse. Graduates of the Technical Writing program have been hired by organizations nationwide. Firms recruiting and hiring Technical Writing graduates include Microsoft, Intel, AT&T, Digital Equipment, IBM, Boeing, Data General, NCR Corporation, Cisco Systems, and Mellon Financial.

The Technical Communication (TC) Track
The Technical Communication track (TC) prepares students for careers in the rapidly changing areas of software and digital media. Students learn the fundamentals of visual, verbal, and on-line communication as well as the technical skills needed to design, communicate, and evaluate complex communication systems and to manage the interdisciplinary teams needed to develop them. Students become fluent in both print-based and electronic media across a variety of information genres and learn to design information for a range of specialist and non-expert audiences. The TWC/TC major can be pursued as a primary major within Dietrich College or as a secondary major for students in other Colleges with an interest in science or medicine. Beyond these prerequisites, students in both TC and SMC tracks take a common set of 5 TWC Core Requirements in writing, communication, and information design. To complement these foundations courses, TWC students take a set of 3 Theory/Specialization courses specific to either TC or SMC. In addition, students in the SMC track take a series of 3 courses in the natural sciences or engineering relevant to their areas of interest, while TC students take 3 electives in management, technology, and social issues.

The Scientific and Medical Communication (SMC) Track
The Scientific and Medical Communication track (SMC) is designed for students who seek careers that focus on communication and information design problems in these specialized areas. It should appeal to students with interests in the health care professions, science and public policy, patient education, scientific journalism and related fields. Like the TC track, the SMC track is designed to provide both the technical and the communication skills needed to analyze and solve complex communication problems. Students learn the fundamentals of visual, verbal, and on-line communication as well as the technical skills needed to design, communicate, and evaluate complex information systems and to manage the interdisciplinary teams needed to develop them. Students become fluent in both print-based and electronic media across a variety of information genres and learn to design information for a range of specialist and non-expert audiences The TWC/SMC major can be pursued as a primary major within Dietrich College or as a secondary major for students in other Colleges, such as MCS, with an interest in science or medicine.

Curriculum for the TWC degree
All Technical Writing & Communication majors must satisfy the Dietrich College requirements for the B.S. degree, and a set of 3 to 4 prerequisite courses in calculus, statistics, and computer science. All prerequisites should be completed by the beginning of the fall semester, junior year. Prerequisites may double count toward Dietrich College Requirements or requirements for other majors or minors.

Mathematics Prerequisite (1 course, 10 units)
Complete one of the following:
21-111 Calculus I 10
21-112 Calculus II 10
21-120 Differential and Integral Calculus 10
21-127 Concepts of Mathematics 10

Statistics Prerequisite (1 course, 9 units)
Complete one course
36-201 Statistical Reasoning and Practice 9

Computer Science Prerequisites (1 - 2 courses*, 10 - 22 units)
Students in the Technical Communication track must complete two required Computer Science courses:
15-110 Principles of Computing 10
15-112 Fundamentals of Programming and Computer Science 12

Students in the Science and Medical Communication track must complete one required Computer Science course:
15-110 Principles of Computing 10

15-110 Principles of Computing is designed for students with little or no prior programming experience and is appropriate for students in both the SMC and TC tracks. 15-112 Fundamentals of Programming and Computer Science prepares students in the TC track for all other advanced Computer Science courses.

Technical Communication Track
TWC Core Requirements (5 courses, 51 units)
76-26x Survey of Forms (Nonfiction, Fiction, Poetry, or Screenwriting) 9
76-271 Introduction to Professional and Technical Writing 9
76-390 Style 9
76-391 Document Design * 12
76-487 Web Design ** 9
76-488 Web Design Lab 3

* prerequisite = 76-271 Introduction to Professional and Technical Writing
** prerequisite = 76-271 Introduction to Professional and Technical Writing + 76-391 Document Design

Theory/Specialization Courses (3 courses, 27 units)
Complete 3 Advisor-approved courses structured as follows. At least one of the three must be chosen from the “Recommended” options below. The remaining 2 courses can be from the “Recommended” or “Additional Options” lists.
Recommended Options - at least one Theory/Specialization course MUST be from this set (and all three should be strongly considered as options)
76-359 Planning and Testing Documents 9
76-397 Instructional Text Design * 9
76-491 Rhetorical Analysis 9
76-419 Media in a Digital Age 9
76-474 Software Documentation 9
76-481 Writing for Multimedia * 12

or
Additional Options
76-301 Internship Var.
76-318 Communicating in the Global Marketplace 9
76-385 Introduction to Discourse Analysis 9
76-386 Language & Culture 9
76-387 Narrative & Argument 9
76-389 Rhetorical Grammar 9
76-395 Science Writing 9
TWC / TC Track Sample Curriculum

This plan is presented as a five-semester (spring of sophomore year through senior year) plan for completing major requirements. Its purpose is to show that this program can be completed in as few as five semesters not that it should or must be. In fact, as a department, we strongly recommend beginning the major in the fall of the sophomore year if possible. The five-semester time frame is needed because of sequencing issues related to the required core courses. The plan does not include the 4 prerequisite courses, which should be completed by the junior year.

Completing an Additional Major in English

Students with interests that include more than one of the department's majors have the option of completing an additional major within the department. Students may combine any of the B.A. degrees or combine the B.S. in Technical Writing and Communication with either the B.A. in English or the B.A. in Creative Writing. Students may not combine the Professional Writing and the Technical Writing & Communication majors because so many of the courses overlap.

Students majoring in two or more English Department degrees must fulfill the Core Requirements for the Major for both programs. The Survey of Forms core requirement, common to all 4 majors, needs to be taken only once but can count toward both majors. Some majors require courses to be taken only once and can count toward both majors with the understanding that a student must complete the number of English Electives required by the program with the higher number of Electives. For example, a student combining the B.A. in English with the Creative Writing major would take the 4 English Electives required for Creative Writing.

Because the Survey of Forms course and the English Electives are allowed to double count toward both majors, students who are already majoring in one of the English degrees can generally add a second major within the department by completing 6 to 8 additional courses. For example, a student who has fulfilled all 11 requirements for the BA in English can complete the additional major in Creative Writing by adding the 6 courses of the Creative Writing Core beyond the first Survey of Forms requirement: one additional Survey of Forms course, one Reading in Forms course, and 4 Writing Workshops. Because sequencing of courses can become an issue when doing multiple majors, students are strongly advised to consult closely with their English Department advisors about the sequence of their courses.

Completing a Secondary Major in English

Students in other departments who wish to complete a secondary major in the English Department should contact the Academic Coordinator in the English Department Office to file a secondary major application form and be assigned to an English Department advisor. Secondary majors in the four English degrees are required to complete all requirements for the chosen major. Additionally, courses taken to fulfill requirements within the primary major may not double count for requirements within the chosen English Department major. The only exceptions to this rule are the TC electives for the TWC/TC degree and the Natural Science and Engineering requirements for the TWC/SMC degree. In planning schedules for a secondary major, it is critically important that students consult with both departments in which they are majoring to be sure that all requirements for graduation can be met.

Minor in English

The English Department also offers minors in Creative Writing, English Studies, Professional Writing, and Technical Writing. The minors require a minimum of five courses (45 units), plus completion of (or credit for) Interpretation and Argument (76-101) or an equivalent requirement. The minors in English are available to all undergraduate students except English majors, who may not both major and minor in English.

Courses taken to fulfill requirements in other major or minor programs may not be applied to English minor requirements (and vice versa).

Courses that meet the various requirements are advertised on a semester-by-semester basis. Full descriptions are available each semester from the English Department main office. We also publish a document titled “What Counts for What for Minors,” which indicates which courses offered in a given term fulfill specific requirements in each of the minor concentrations.

English Studies Minor

Complete 6 courses, including Interpretation and Argument (76-101) as a prerequisite.

76-101 Interpretation and Argument (or credit for equivalent course) 9
76-294 Interpretive Practices (prerequisite for 300- and 400-level courses) 9
76-xxx Two 300-level courses in Literature, Cultural Studies, or Rhetoric 18
Creative Writing Minor
Complete 6 courses, including Interpretation and Argument (76-101) as a prerequisite.

- 76-101 Interpretation and Argument (or credit for equivalent course)  
  Interpretation and Argument
  or 76-270 Writing for the Professions (or credit for equivalent course)  
  Writing for the Professions
- 76-270 Writing for the Professions
- 76-271 Introduction to Professional and Technical Writing
- 76-3xx/4xx Two 300- or 400-level Writing courses
- 76-3xx/4xx One Rhetoric/Language Studies course
- 76-xxx One 200-level or above English Elective

* A student must receive a grade of A or B in the Survey of Forms class in order to be eligible to enroll in a workshop of that genre. A student who receives a grade of C in a Survey of Forms course may enroll in a related workshop only with the permission of his or her workshop professor. A student who receives a D or R in Survey of Forms may not take a workshop in that genre.

** The English Elective may be any course offered by the English Department.

Rhetorical Grammar 76-372 Topics in Journalism, 76-391 Document Design, 76-395 Science Writing, 76-397 Instructional Text Design, 76-419 Media in a Digital Age 76-474 Software Documentation, 76-479 Public Relations & Marketing for Writers, 76-481 Writing for Multimedia, 76-487 Web Design, 76-489 Web Design Lab, 76-491 Rhetorical Analysis, 76-494 Healthcare Communications, and other options advertised on a semester-by-semester basis. 76-271 Introduction to Professional and Technical Writing is generally the prerequisite for these 300- and 400-level courses. Additionally, 76-391 Document Design is a prerequisite for both 76-481 Writing for Multimedia and 76-487 Web Design.

** The English Elective may be any course offered by the English Department.

Senior Honors Thesis
Seniors in all four majors in the English Department who meet the necessary requirements are invited by the College of Humanities and Social Sciences (Dietrich College) to propose and complete a Senior Honors Thesis during their final year of study. The thesis may focus on research and/or original production in any of the areas offered as a major within the Department. To qualify for the Dietrich College Honors Program, students must have a cumulative Quality Point Average of at least 3.50 in their major and 3.25 overall at the end of their junior year and be invited by Dietrich College to participate. Students then choose a thesis advisor within the Department and propose and get approval from Dietrich College for a Senior Honors Thesis. The Honors Thesis is completed over the two semesters of the senior year (9 units each semester) under the direction of the chosen advisor. By successfully completing the thesis, students earn 18 units of credit and qualify for graduation with “College Honors.”

Creative Writing majors participating in the Senior Honors Thesis program may petition to have one semester of their thesis work count as one of their Workshop course requirements. Students interested in this option should contact the Director of Undergraduate Studies.

Internship Program
Qualified students in all four of the Department’s degree programs have the option of doing one or more professional internships for academic credit during their junior or senior years. These opportunities help students explore possible writing-related careers as well as gain workplace experience. Each internship is arranged, approved, and overseen by the Department’s Internship Coordinator. Particular attention is given to matching students to internship sites of specific interest to them. Students have interned in a wide variety of communications-related positions including placements at local radio, television, and print publications; museums, theaters, and cultural organizations; non-profit and public service organizations; public relations, advertising, and marketing firms; software and technology companies; new media organizations; and hospitals and healthcare communication organizations.

To be eligible for an internship, students must have a Quality Point Average of 3.0 or better and credit for at least one writing course (including Survey of Forms) beyond Interpretation and Argument (76-301). Internships generally carry 3-12 units of credit. A 9-unit internship is the standard and requires a minimum of 120-140 hours (8-10 hours per week over a 15-week term) of work at the internship site during the term. In addition, interns complete a reflective journal and a series of short research and writing assignments relevant to the specific internship. Students doing an internship for credit must be registered for the internship during the term (including summer) when they are working at the internship site. Majors in the Department may count one 9-12 unit internship for one of their degree requirements, generally an English elective.

The Accelerated MA in Professional Writing: MAPW 4+1
The MAPW 4+1 is a special program under which Carnegie Mellon students (usually majors or minors in the English Department or BHA or BHS students with relevant coursework) can qualify to complete the MA in Professional Writing in 2 semesters instead of the usual 3. Students apply for admissions during their junior or senior year and, following admission and evaluation of their transcripts, may receive credit for up to four courses, or one full semester of work toward the MA requirements. The degree has a professional focus, combines intensive work in both writing and visual design, and prepares students for a range of communications careers. The coursework and career options most commonly pursued by students in the degree include:
- Writing for New Media, including web design and information design
- Writing for Print Media, including Journalism
Faculty

MARIAN AGUIAR, Associate Professor of English and Literary and Cultural Studies – Ph.D., University of Massachusetts; Carnegie Mellon, 2002–.

AMAL AL-MALKI, Associate Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., University of London; Carnegie Mellon, 2003–.

JANE BERNSTEIN, Professor of English and Creative Writing – M.F.A., Columbia University; Carnegie Mellon, 1991–.

GERALD P. COSTANZO, Professor of English and Creative Writing – M.A., M.A.T., Johns Hopkins University; Carnegie Mellon, 1970–.

JAMES DANIELS, Thomas S. Baker Professor of English and Creative Writing – M.F.A., Bowling Green State University; Carnegie Mellon, 1981–.

SHARON DILWORTH, Associate Professor of English and Creative Writing – M.F.A., University of Michigan; Carnegie Mellon, 1989–.

LINDA FLOWER, Professor of English and Rhetoric – Ph.D., Rutgers University; Carnegie Mellon, 1980–.

LOIS FOWLER, Professor Emeritus of English.

SUSAN HAGAN, Assistant Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2004–.

PAUL HOPPER, Paul Mellon Distinguished Professor Emeritus of the Humanities, Rhetoric and Linguistics – Ph.D., University of Texas; Carnegie Mellon, 1990–.

LUDMILA HYMAN, Assistant Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2007–.

SUGURU ISHIZAKI, Associate Professor of Rhetoric and Visual Design – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2005–.

BARBARA JOHNSTONE, Professor of Rhetoric and Linguistics – Ph.D., University of Michigan; Carnegie Mellon, 1997–.

DAVID S. KAUFER, Professor of English and Rhetoric – Ph.D., University of Wisconsin; Carnegie Mellon, 1980–.

ALAN KENNEDY, Professor of English and Literary and Cultural Studies – Ph.D., University of Edinburgh; Carnegie Mellon, 1989–.

JON KLANCHER, Associate Professor of English and Literary and Cultural Studies – Ph.D., University of California at Los Angeles; Carnegie Mellon, 1999–.

PEGGY A. KNAPP, Professor of English and Literary and Cultural Studies – Ph.D., University of Pittsburgh; Carnegie Mellon, 1970–.

HILARY MASTERS, Professor of English and Literary and Cultural Studies – Ph.D., University of Wisconsin; Carnegie Mellon, 1983–.

JANE MCCAFFERTY, Associate Professor of English and Creative Writing – M.F.A., University of Pittsburgh; Carnegie Mellon, 1997–.

CHRISTINE NEUWIRTH, Professor of English and Human Computer Interaction; Head of the English Department – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1983–.

KATHLEEN NEWMAN, Associate Professor of English and Literary and Cultural Studies – Ph.D., Yale University; Carnegie Mellon, 1997–.

JOHN J. ODDO, Assistant Professor of English and Rhetoric – Ph.D., Kent State University; Carnegie Mellon, 2011–.

SILVIA PESSOA, Associate Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2007–.

RICHARD PURCELL, Assistant Professor of English and Literary and Cultural Studies – Ph.D., University of Pittsburgh; Carnegie Mellon, 2008–.

DUDLEY REYNOLDS, Teaching Professor, Liberal & Social Sciences, Carnegie Mellon University-Qatar – Ph.D., Indiana University, Bloomington; Carnegie Mellon, 1996–.

ANDREA RITIVOI, Associate Professor of English and Rhetoric – Ph.D., University of Minnesota; Carnegie Mellon, 2001–.

KAREN SCHNAKENBERG, Teaching Professor Emeritus of Rhetoric and Professional Writing – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1995–.

DAVID R. SHUMWAY, Professor of English and Literary and Cultural Studies – Ph.D., Indiana University; Carnegie Mellon, 1985–.

KRISTINA STRAUB, Professor of English and Literary and Cultural Studies; Associate Head of the English Department – Ph.D., Emory University; Carnegie Mellon, 1987–.

CHRISTOPHER WARREN, Assistant Professor of English and Literary and Cultural Studies – Ph.D., University of Oxford; Carnegie Mellon, 2010–.

NECIA WERNER, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2011–.

DANIELLE WETZEL, Associate Teaching Professor of English and Rhetoric; Director of First-Year English – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–.

JEFFREY WILLIAMS, Professor of English and Literary and Cultural Studies – Ph.D., Stony Brook University; Carnegie Mellon, 2004–.

JOANNA WOLFE, Teaching Professor – Ph.D., The University of Texas at Austin; Carnegie Mellon, 2001–.

JAMES WYNN, Associate Professor of English and Rhetoric – Ph.D., University of Maryland; Carnegie Mellon, 2006–.

RICHARD YOUNG, Professor Emeritus of English.

Undergraduate Degree Options in the Department of History

- The B.A. in History
- The B.A. in Global Studies
- The B.A./B.S. in Ethics, History, and Public Policy

The Department of History offers undergraduates a choice of three majors: the major in History, the major in Global Studies, and the interdepartmental major in Ethics, History, and Public Policy. Specific requirements and courses for each are detailed in the sub-sections below.

All three majors emphasize empirical methods and conceptual analysis, as well as reading, research, and writing skills central to a variety of careers. Our students develop strong analytic and writing skills; choose among diverse U.S., global, and thematic courses; learn experientially through internships and/or study abroad; and benefit from small class sizes and easy access to faculty who are internationally known for innovative historical, anthropological, and other social science approaches to the study of social, cultural, and political change. The study of history necessarily includes diverse societies and controversial public issues, usefully blending liberal education with professional development.

History is also excellent preparation for immediate entry into business and management careers. Having been trained to analyze subtle and complex issues, to develop breadth of understanding, to dig out information and make sense of it, and to present their findings effectively, our graduates do extremely well in many types of for-profit, non-profit, governmental, and non-governmental organizations. The U.S. Foreign Service is another path for History majors, especially in combination with foreign language skills. Because History training combines research and writing skills with analysis of social and policy trends, it also prepares graduates for journalism and other writing careers.

All three History degree programs combine easily with majors in Business, Economics, Information Systems, Modern Languages, Philosophy, Professional Writing, Social and Decision Sciences, and Statistics.

ADDITIONAL MAJORS

The major in History (general or with any concentration), the major in Global Studies, and the major in Ethics, History, and Public Policy may all be declared as additional majors in consultation with the director of each program: Professor Steven Schlossman for History (sls@cmu.edu), Professor John Soluri for Global Studies (jsoluri@andrew.cmu.edu), and Professor Jay Aronson for Ethics, History, and Public Policy (aronson@andrew.cmu.edu).

Interdepartmental Majors: In addition to the interdepartmental Ethics, History, and Public Policy major, History faculty are also integral participants in two majors described elsewhere in this catalog: International Relations and Politics (Social and Decision Sciences) and Russian Studies (Modern Languages). History Department courses are also central to the Environmental Policy major (additional major only).

Minors: Options for pursuing a minor in History or Anthropology are discussed below, following the sub-section on Ethics, History, and Public Policy.

Several other minors with strong History content, detailed elsewhere in the Undergraduate Catalog, can be linked with any degree. Students should contact the relevant History faculty members listed below:

- African and African American Studies: Professor Edda Fields-Black (fieldsblack@cmu.edu)
- Environmental Studies: Professor John Soluri (jsoluri@andrew.cmu.edu)
- Gender Studies: Professor Lisa Tetrault (tetrault@andrew.cmu.edu)
- Health Care Policy and Management: Professor Caroline Acker (acker@andrew.cmu.edu)
- Religious Studies: Professor Allyson Creasman (allysonc@andrew.cmu.edu)
- Russian Studies: Professor Wendy Goldman (goldman@andrew.cmu.edu)
- Science, Technology, and Society: Professor Jay Aronson (aronson@andrew.cmu.edu).

Research Centers: The Department of History supports two research centers to coordinate sponsored research by faculty and graduate students and which welcome undergraduates (especially majors) to attend and participate in frequent on-campus seminars and events. These are the Center for African American Urban Studies and the Economy (CAUSE) [Joe W. Trotter, Director], and the Center for History and Policy (Joel A. Tarr, Director).

The Major in History

Director of Undergraduate Studies: Professor Steven Schlossman; sls@cmu.edu, Baker Hall 236A, 412/268-2885
Academic Advisor: Dr. Naum Kats; kats@andrew.cmu.edu, Baker Hall 240, 412/268-2890
http://www.history.cmu.edu/undergraduate/history_major.html

History is a research- and writing-intensive major that emphasizes analysis of change over time and in-depth understanding of the societies, cultures, economics, political systems and conflicts that have shaped our world.

Students may opt for a general History major or elect an in-depth concentration on the United States or one of the following regions of the world: African Diaspora, Asia, Europe, Latin America and the Caribbean, the Middle East, or Russia and the Former Soviet States. For non-U.S. concentrations, study of a relevant foreign language is required and study abroad is encouraged. Electives focus on areas of faculty expertise, such as environment, technology, gender, culture, labor, race, science, criminal justice, war, public health, politics, and diplomacy.

History careers today include not only research and teaching (CMU history graduates have earned Ph.D. degrees at Harvard, Northwestern, and other major universities) but also expert positions in museums, archives, historic sites, media documentaries, and other public history venues. Often, history graduates pursue post-undergraduate professional school, such as law, business administration, education, public policy, urban planning, librarianship, journalism, the ministry, or social work. Schools in these fields usually prefer students who have acquired broad perspectives on human problems in addition to specialized skills.

Curriculum

Students graduating with a primary major in History receive a Bachelor of Arts degree; this program may also be taken as an additional (e.g., second) major. Requirements for both primary and additional History majors are Global Histories (79-104) plus an additional 96 units of either the general major option or a U.S. or regional concentration, for a total of 105 units.

All students in the History major are required to complete two research training courses: Introduction to Historical Research (79-200) and the Historical Research Seminar (79-420). Students must earn a final grade of “C” or better in these two courses in order to fulfill the requirements for the major.

Non-U.S. history concentrations require 18 units, typically two courses, of a relevant foreign language (either language acquisition or thematic instruction in the foreign language). The 18 units of language study will count toward the 105-unit total for the major.

History Major (General)

I. Required History Courses (42 units)

79-104 Global Histories 9
79-200 Introduction to Historical Research (methods) 12
79-240 The Development of American Culture 9
79-420 Historical Research Seminar (senior capstone) 12

II. Required Non-U.S. Survey Course (choose one -- 9 units)

79-202 Flesh and Spirit: Early Modern Europe, 1400-1750 9
79-203 Social and Political Change in 20th Century Central and Eastern Europe 9
History Major With a United States Concentration

I. Required History Courses (42 units)

79-104 Global Histories 9

79-200 Introduction to Historical Research (methods) 12

79-240 The Development of American Culture 9

79-420 Historical Research Seminar (senior capstone) 12

II. Required Non-U.S. Survey Course (choose one -- 9 units)

79-202 Flesh and Spirit: Early Modern Europe, 1400-1750 9

79-203 Social and Political Change in 20th Century Central and Eastern Europe 9

79-205 20th Century Europe 9

79-207 Development of European Culture 9

79-208 Europe's Two Revolutions: Dynamics of Change in the 19th Century 9

79-220 Caribbean: Cultures and Histories 9

79-221 Development and Democracy in Latin America 9

79-222 Between Revolutions: The Development of Modern Latin America 9

79-224 Mayan America 9

79-225 West African History in Film 9

79-226 Introduction to African History: Earliest Times to 1780 9

79-227 Introduction to African History: 1780-1994 9

79-229 Origins of the Arab-Israeli Conflict, 1880-1948 9

79-230 Arab-Israeli Conflict and Peace Process since 1948 9

79-233 The United States and the Middle East since 1945 9

79-251 India/America: Democracy, Diversity, Development 9

79-255 Irish History 9

79-256 20th Century Germany 9

79-258 French History: From the Revolution to De Gaulle 9

79-261 Chinese Culture and Society 9

79-262 Modern China 9

79-264 China in the Age of Reform, 1978-Present 9

79-265 Russian History: From the First to the Last Tsar 9

79-266 Russian History: From Communism to Capitalism 9

III. United States Concentration Courses (27 units)

Students must complete 27 units (typically 3 courses) for the United States concentration, selecting from the list below.

79-231 American Foreign Policy: 1945-Present 9

79-233 The United States and the Middle East since 1945 9

79-241 African American History: Africa to the Civil War 9

79-242 African American History: Reconstruction to the Present 9

79-243 African American Women's History 9

79-244 Women in American History 9

79-245 Capitalism and Individualism in American Culture 9

79-246 Industrial America 9

79-247 The Civil War Era: 1848-1877 9

79-249 20th Century U.S. History 9

79-251 India/America: Democracy, Diversity, Development 9

79-252 Recent U.S. History, 1945-Present 9

79-288 Bananas, Baseball, and Borders: Latin America and the United States 9

79-300 History of American Public Policy 9

79-303 Pittsburgh and the Transformation of Modern Urban America 6

79-304 African Americans in Pittsburgh 6

79-315 Hawai`i: America's Pacific Island State 9

79-318 Sustainable Social Change: History and Practice 9

79-320 Women, Politics, and Protest 9

79-327 History of the American Working Class 9

79-330 Medicine and Society 9

79-331 Body Politics: Women and Health in America 9

79-335 Drug Use and Drug Policy 9

79-339 Juvenile Delinquency and Film (1920-1950) 6

79-340 Juvenile Delinquency and Film: From "Blackboard Jungle" to "The Wire" 6

79-343 History of American Urban Life 9

79-345 The Roots of Rock and Roll, 1870-1970 9

79-346 American Political Humor from Mark Twain to the Daily Show 9

79-348 Abraham Lincoln at 200: From 1809-2009 9

The table above represents a two-year (junior-senior) plan for completing all requirements for the History Major (General). The purpose of this table is merely to show that the History Major (General) can be completed in as few as two years, not that it must be. Students may declare the major and begin course requirements as early as the start of the sophomore year and in some instances in the freshman year. Students should meet with the department’s Director of Undergraduate Studies, Professor Steven Schlossman, sls@cmu.edu, for both short- and long-term course planning.
Concentration in The African Diaspora

Students must complete 27 units (typically 3 courses) in a single area of concentration. The table below represents a two-year (junior-senior) plan for completing all requirements for the History Major with a concentration in African Studies. The purpose of this table is merely to show that the History Major with a U.S. concentration can be completed in as few as two years, not that it must be. Students interested in concentrating in U.S. History should meet with the Director of Undergraduate Studies, Professor Steven Schlossman, sfs@cmu.edu, for both short- and long-term course planning.

### History Major with a Regional Concentration

Students may opt to concentrate on one of the following regions of the world: African Diaspora, Asia, Europe, Latin America and the Caribbean, the Middle East, or Russia and the Former Soviet States. For these concentrations, study of a relevant foreign language is required and study abroad is encouraged.

### Required Dietrich College General Education Course

Required Dietrich College General Education Course: 79-104 Global Histories (need not be completed before beginning the major).
The Major in Global Studies

Director: Professor John Soluri; jsoluri@andrew.cmu.edu, Baker Hall 363, 412-268-7122
Academic Advisor: Emily Half; ehalf@andrew.cmu.edu, Baker Hall A60C, 412-268-7082
http://www.cmu.edu/hss/globalstudies

The major in Global Studies is an interdisciplinary major designed for students interested in humanistic approaches to understanding past and present processes of globalization. Participating faculty in the departments of History, Modern Languages, English, and Philosophy conduct research in Africa, Asia, Europe, Latin America, the Middle East, and the Pacific. The rigorous yet flexible Global Studies curriculum combines anthropology, history, literary and cultural studies, and advanced language training in order to help students make sense of complex interactions among global processes, regional and local cultures, and societal structures. Global Studies majors develop a broad understanding of their prospects and responsibilities as citizens of the world confronting challenging contemporary problems.

There are three required courses for the major: the general education course Global Histories (79-104), Introduction to Global Studies (79-275), and Advanced Seminar in Global Studies (79-400). Majors also choose among several courses focused on theory, research methods, transnational histories, and regional/national histories and cultures. Demonstrating intermediate to advanced level proficiency in a language other than English is a crucial component of the major in Global Studies.

In addition to coursework at Carnegie Mellon, Global Studies majors are encouraged to incorporate a semester of study abroad into their course of study in order to immerse themselves in a society different from their own with unfamiliar cultural practices, language, and history. Global Studies majors may also enroll in 79-506 Global Studies Internship, a course that enables them to earn credit while gaining first-hand experience working with Pittsburgh-based organizations that work across borders.

Majors should consult frequently with the program's academic advisor and with participating faculty who will help students to craft a coherent course of study on specific topics and/or regions that may lead to the capstone research project (79-400 Advanced Seminar in Global Studies) or a Diplomacy College senior honors thesis (http://hss.cmu.edu/seniorhonorsprogram.html). Program faculty and the academic advisor will also work with students to connect their academic interests and their participation in student organizations and/or organizations based in Pittsburgh with transnational reach.

Curriculum

Students graduating with a primary major in Global Studies receive a Bachelor of Arts degree. Global Studies may also be taken as an additional (e.g., second) major. Required courses include 79-104 plus 93 additional units (including 79-275 and 79-400) and proficiency in a modern language other than English. Students may double count a maximum of two courses taken for the Global Studies major that are also being used to fulfill the requirements of other majors and programs. Students should consult with the Global Studies academic advisor (see above) about new courses and study abroad courses that may be approved for students pursuing the major in Global Studies.

I. Required General Education Course (9 units)

97-294 Global Histories 9

II. Global Studies Introductory Course (9 units)

Students must earn a final grade of “C” or better for the course to count toward the major.

97-275 Introduction to Global Studies 9

III. Language Requirement

Demonstrating intermediate to advanced level proficiency in a language other than English is a crucial component of the major in Global Studies. Normally this requirement can be satisfied by successfully completing a course conducted in the second language at the 300 level or above for French, German, Italian, or Spanish, or the fourth semester (Intermediate II) level or above for Arabic, Chinese, Japanese, or Russian. Comparable proficiency for other languages can be considered. Additional advanced cultural, historical, and literary study in the second language is strongly recommended. Courses in a language other than English may also be counted as Global Studies transnational, global, or regional courses or Global Studies electives as appropriate.

IV. Theoretical and Topical Core Courses (18 units)

To gain a solid foundation in the theories, methods, and analytical topics underpinning the major in Global Studies, students select 18 units (typically two classes) from the core courses listed below. Students must earn a final grade of “C” or better in these courses to fulfill the theoretical and topical core course requirement.

76-453 Postcolonial Studies 9
76-497 Culture: Interdisciplinary Approaches 9
79-200 Introduction to Historical Research 12
79-278 Rights to Representation: Indigenous People and their Media 9
79-292 China Inside Out: Going Global, 19th to 21st Centuries 9
79-297 Dilemmas and Controversies in Anthropology 9
79-313 Objects of Value 9
79-314 The Politics and Culture of Memory 9
79-317 Art, Anthropology, and Empire 9
79-318 Sustainable Social Change: History and Practice 9
79-376 Topics in Transnational History 9

Global Studies majors develop a broad understanding of their prospects and responsibilities as citizens of the world confronting challenging contemporary problems.
To gain insight into how complex transnational and global processes shape and are affected by local, national, and regional dynamics, students will select 27 units (typically three courses) from any subcategories below.

### V. Transnational, Global, and Regional Courses (27 units)

Students will be responsible for choosing courses that will enhance their understanding of transnational, global, and regional issues. The courses listed below will provide a comprehensive understanding of these topics.

#### Transnational and Global Courses

**(27 units) VI. Elective Courses**

Students are required to take an additional 27 units (typically 3 courses) of electives, selected from one or both of the subcategories below. Category IV and V courses listed above that are not used to fulfill those requirements may be counted as electives in addition to the courses listed below.

Those students who wish to pursue an optional Global Studies Senior Thesis (9 units) as one of their electives may do so by arrangement with Global Studies faculty; the thesis will often involve work in a language other than English. This option is not to be confused with the two-semester Dietrich College Senior Honors Thesis, for graduating with college-level honors.

Global Studies offers students the opportunity to gain credit for a 9 unit elective while gaining first-hand experience interning with Pittsburgh-based organizations that work across borders. 79-506 Global Studies offers students the opportunity to gain credit for a 9 unit elective while gaining first-hand experience interning with Pittsburgh-based organizations that work across borders. This option is not to be confused with the two-semester Dietrich College Senior Honors Thesis, for graduating with college-level honors.

### VII. Senior Capstone Course (12 units)

The research seminar is the capstone course for Global Studies majors and is designed to give students the chance to define and carry out a research project of personal interest. Students are strongly encouraged to incorporate their prior coursework (including foreign language training), study abroad or internships into their research. Students must earn a final grade of "C" or better for the course to count toward the major.

### Global Studies Major — Sample Curriculum

This sample curriculum represents a plan for completing the requirements for the Global Studies major. Global Studies students are encouraged to spend a semester abroad and the plan below demonstrates that study abroad fits well into the curriculum. Like most majors in the Dietrich College, the Global Studies major can be completed in as few as two years of undergraduate study. Students may declare the Global Studies major and take appropriate courses as early as the second semester of the freshman year and as late as the junior year, and should consult frequently with the Global Studies academic advisor (see above) about their course of study in Pittsburgh and possibly abroad.

*Spring semester of the junior year is a popular semester for study abroad. However, Global Studies majors may instead choose to study abroad in spring of sophomore year, fall of junior year, or fall of senior year. Students should discuss study abroad and curricular planning with the academic advisor.

**Students are not required to complete a college honors thesis. However, many Global Studies majors choose to apply for the senior honors thesis program. Students who do not pursue a senior honors thesis should select an elective in its place.

### Additional Major

Global Studies may be elected as a primary or an additional major; the requirements for each are the same. Contact the academic advisor (see contact information above) to elect the additional major.
The Major in Ethics, History, and Public Policy

Director: Professor Jay Aronson; aronson@andrew.cmu.edu, Baker Hall 246B, 412-268-2887

http://www.cmu.edu/hss/ehpp/

The B.A./B.S. in Ethics, History, and Public Policy is an interdepartmental major offered jointly by the Departments of History and Philosophy. It prepares students for leadership positions in law, public policy, ethics, and advocacy by providing them with a rigorous, interdisciplinary humanistic and social-scientific education. It also serves as an excellent springboard for graduate study in a wide variety of disciplines. The program focuses equally on the historical understanding of how modern-day problems have evolved, and the importance of developing clear criteria for ethical decision-making. The capstone project course provides students with the opportunity to engage with real-world public policy challenges using the methods, theories, and knowledge that they have gained through the major. Offered jointly by the departments of History and Philosophy, the B.A./B.S. in EHPP encourages specialization, internship experiences, and research in a wide range of policy areas.

Curriculum

Students graduating with a primary major in Ethics, History, and Public Policy may elect to receive either a Bachelor of Arts or a Bachelor of Science Degree (additional requirements apply; see below). Basic requirements include 123 units encompassing 9 units in Economics, 39 units in History, 36 units in Philosophy, 27 units of elective courses, and a 12-unit senior capstone course. This program may also be taken as an additional (e.g., second) major.

9 units. Economics Requirement

Choose one of the following:
73-100 Principles of Economics 9
88-220 Policy Analysis I 9

39 units. History Core

Choose one 9-unit course from each category below:

Policy History (9 units)
79-300 History of American Public Policy 9

U.S. History (9 units)
79-240 The Development of American Culture 9
79-249 20th Century U.S. History 9

Non-U.S. History (9 units)
79-205 20th Century Europe 9
79-207 Development of European Culture 9
79-220 Caribbean: Cultures and Histories 9
79-222 Between Revolutions: The Development of Modern Latin America 9
79-226 Introduction to African History: Earliest Times to 1780 9
79-227 Introduction to African History: 1780-1994 9
79-261 Chinese Culture and Society 9
79-265 Russian History: From the First to the Last Tsar 9
79-266 Russian History: From Communism to Capitalism 9
79-307 Religion and Politics in the Middle East 9

Historical Methods and Approaches (12 units)
79-200 Introduction to Historical Research 12

36 units. Philosophy Core

Choose one 9-unit course from each category below. No more than 18 units at the 100 level may be counted toward this requirement.

Ethics (9 units)
80-130 Introduction to Ethics 9
80-230 Ethical Theory 9

Political Philosophy (9 units)
80-135 Introduction to Political Philosophy 9
80-235 Political Philosophy 9

9 units. Applied Philosophy (9 units)

80-221 Philosophy of Social Science 9
80-321 Causation, Law, and Social Policy 9
80-324 Philosophy of Economics 9
80-337 Philosophy, Politics & Economics 9

12 units. Senior Capstone Project Course (79/80-449)

The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to a client organization in the community.

27 units. Elective Courses

Choose any three courses from any category or categories shown below.

Engineering and Public Policy (some courses have prerequisites; see EPP catalog listing)
19-424 Energy and the Environment 9
19-426 Environmental Decision Making 9
19-448 Science, Technology & Ethics 9

Business
70-311 Organizational Behavior 9
70-321 Negotiation and Conflict Resolution 9
70-332 Business, Society and Ethics 9
70-364 Business Law 9
70-365 International Trade and International Law 9
70-430 International Management 9

Economics (some courses have prerequisites; see Economics catalog listing)
73-148 Environmental Economics 9
73-310 Evolution of Economic Ideas and Analysis 9
73-352 Public Economics 9
73-357 Regulation: Theory and Policy 9
73-358 Economics of the Environment and Natural Resources 9
73-359 Benefit-Cost Analysis 9
73-365 Firms, Market Structures, and Strategy 9
73-372 International Money and Finance 9
73-375 History of Money and Monetary Policy 9
73-408 Law and Economics 9
73-476 American Economic History 9

English
76-492 Rhetoric of Public Policy 9

History

Courses from the EHPP History Core (above) may be taken as electives only if they are not being used to fulfill the core requirement. Double counting is not permitted.
79-221 Development and Democracy in Latin America 9
79-231 American Foreign Policy: 1945-Present 9
79-233 The United States and the Middle East since 1945 9
79-242 African American History: Reconstruction to the Present 9
79-267 The Soviet Union in World War II: Military, Political, and Social History 9
Department of History

The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter the EHPP major, and begin major course requirements, as early as the start of the sophomore year, or even in the first year. Students should consult their advisor when planning their program.

The Minor in History

The minor in History involves a minimum of 54 units of History course work. (54 units)

I. Required History Survey Courses (choose two -- 18 units)

Students must complete 18 units (typically 2 courses) from the following list of survey courses:

- 79-202 Flesh and Spirit: Early Modern Europe, 1400-1750
- 79-203 Social and Political Change in 20th Century Central and Eastern Europe
- 79-205 20th Century Europe
- 79-207 Development of European Culture
- 79-208 Europe’s Two Revolutions: Dynamics of Change in the 19th Century
- 79-220 Caribbean: Cultures and Histories
- 79-221 Development and Democracy in Latin America
- 79-222 Between Revolutions: The Development of Modern Latin America
- 79-224 Mayan America
- 79-225 West African History in Film
- 79-226 Introduction to African History: Earliest Times to 1780
- 79-227 Introduction to African History: 1780-1994
- 79-229 Origins of the Arab-Israeli Conflict, 1880-1948
- 79-230 Arab-Israeli Conflict and Peace Process since 1948
- 79-231 American Foreign Policy: 1945-Present
- 79-233 The United States and the Middle East since 1945
- 79-240 The Development of American Culture
- 79-241 African American History: Africa to the Civil War
- 79-242 African American History: Reconstruction to the Present
- 79-245 Capitalism and Individualism in American Culture
- 79-251 India/America: Democracy, Diversity, Development
- 79-252 Recent U.S. History, 1945-Present
- 79-255 Irish History
- 79-256 20th Century Germany
- 79-258 French History: From the Revolution to De Gaulle
- 79-261 Chinese Culture and Society
- 79-262 Modern China
- 79-264 China in the Age of Reform, 1978-Present
- 79-265 Russian History: From the First to the Last Tsar
- 79-266 Russian History: From Communism to Capitalism
- 79-288 Bananas, Baseball, and Borders: Latin America and the United States

II. Elective courses for the Minor in History (36 units)

Students must complete 36 elective History units (typically 4 courses). History minors have considerable flexibility in choosing their elective
courses, but should feel free to consult with the Director of Undergraduate Studies in making their selections.

The Minor in Anthropology

Faculty Advisor: Judith Schachter; jm1e@andrew.cmu.edu
Academic Advisor: Emily Half; ehalf@andrew.cmu.edu, Baker Hall 422D, 412-268-3239

The Minor in Anthropology is offered by the Department of History to train students in ethnographic methods and in theoretical understandings of culture. Students examine the evolution, depth, and complexities of ethnography, and explore notions of "culture" in diverse settings, over time and across space. In today's world, students are increasingly aware of the importance of developing a sophisticated approach to culture and its articulation with changes in the domains of the arts, technology, economics, and politics. The Minor in Anthropology, which may be taken alone but especially complements the majors in Global Studies and in History, provides students with the tools to link artistic practices to various aspects of globalization.

The Minor in Anthropology requires that students complete two "Introductory and Methods" courses (18 units) and four "Anthropological Perspectives" courses (36 units). In addition, 79-104 Global Histories is required (9 units), but it may be taken at any time during the student's coursework. Including this course, the Minor in Anthropology totals 63 units. The minor in Anthropology involves a minimum of 54 units of history department course work (not including 79-104 Global Histories), as described below.

Curriculum (63 units)

I. Required General Education Course (9 units)
This requirement need not be satisfied before beginning any minor in the History Department.
79-104 Global Histories

II. Introductory and Methods Courses (18 units)
Students must complete 18 units (typically 2 courses) for the Introductory and Methods Courses, selecting from the list below.
79-297 Dilemmas and Controversies in Anthropology
79-311 Introduction to Anthropology
79-379 Extreme Ethnography
79-380 Ethnographic Methods

III. Anthropological Perspectives (36 units)
Students must complete 36 units (typically 4 courses) for Anthropological Perspectives Courses, selecting from the list below.
79-203 Social and Political Change in 20th Century Central and Eastern Europe
79-220 Development and Democracy in Latin America
79-222 Between Revolutions: The Development of Modern Latin America
79-224 Mayan America
79-235 Caribbean Cultures
79-261 Chinese Culture and Society
79-262 Modern China
79-275 Introduction to Global Studies
79-278 Rights to Representation: Indigenous People and their Media
79-295 Race Relations in the Atlantic World
79-296 Perspectives on Social Protest
79-299 Trafficking Persons: Children in a Global Context
79-312 International Human Rights Institutions in Theory and Practice
79-313 Objects of Value
79-314 The Politics and Culture of Memory
79-315 Hawai’i: America’s Pacific Island State
79-317 Art, Anthropology, and Empire
79-322 Medical Anthropology
79-355 World Citizenship
79-358 The Pacific Encounters the West: An Anthropology of Globalization
79-375 China's Environmental Crisis
79-384 Garbage Gone Global: Managing Surplus, Waste, and Desire

Senior Honors Thesis: Dietrich College
The Dietrich College Honors Program may be undertaken by students completing the major in History, the major in Global Studies, or the interdepartmental major in Ethics, History, and Public Policy. An Honors Thesis requires two semesters of work. Eligibility requirements are set by the College; contact the Associate Dean of Dietrich College for details.

Senior Thesis: History Department
Seniors may write a one- or two-semester Senior Thesis in History (which differs from the “Honors Thesis” option, described above) with permission of the Director of Undergraduate Studies and a designated History faculty member who will supervise its completion.

Study Abroad
Study abroad is especially encouraged for all students in the History department; this experience can help students better understand the relationship between cultural heritage and modern political processes in a host country. To make study abroad successful and to find how study abroad fits into requirements, History majors should prepare study abroad proposals in consultation with a relevant faculty member.

Faculty
CAROLINE JEAN ACKER, Associate Professor of History; Department Head – Ph.D., University of California, San Francisco; Carnegie Mellon, 1993–.
JAY D. ARONSON, Associate Professor of History; Director of Ethics, History, and Public Policy – Ph.D., University of Minnesota; Carnegie Mellon, 2004–.
ALLYSON F. CREAMAN, Associate Professor of History – Ph.D., University of Virginia; Carnegie Mellon, 2005–.

DAVID W. MILLER, Professor Emeritus of History – Ph.D., University of Chicago; Carnegie Mellon, 1967–.

JOHN MODELL, Professor Emeritus of History – Ph.D., Columbia University; Carnegie Mellon, 1982–.

DANIEL P. RESNICK, Professor Emeritus of History – Ph.D., Harvard University; Carnegie Mellon, 1966–.
The Major in Information Systems

Faculty Program Director: Randy S. Weinberg
Office: Porter Hall 222
http://www.cmu.edu/information-systems/

Information Systems (IS), found within the Dietrich College of Humanities and Social Sciences, is an internationally recognized undergraduate major for students who wish to design and implement effective solutions to modern organizational, societal and management needs for information and decision support.

In today's complex, interconnected world, the effective creation, distribution, and use of information via technology is central to daily life. Computer based information systems facilitate, enable and often define the relationships between corporations and consumers, buyers and suppliers, businesses of all sizes, social networks, and citizens and their governments. Understanding these relationships and effectively addressing the collection, flow, and distribution of information is vital to running a modern organization, enterprise or government agency.

Information Systems involves the effective design, delivery, use and impact of information and communications technologies in organizations and society. The importance of information technology and information systems to organizations and the need for well-educated professionals in the field is the basis for the Information Systems curriculum at Carnegie Mellon. Whether implementing applications, providing management or decision support, managing complex systems projects, or helping organizations design business processes or cope with rapid change, IS professionals fill an essential need across all sectors of society.

Information systems students at Carnegie Mellon learn to use, manage and deploy information technologies to address real problems or opportunities. They develop a solid foundation in computing, communications, and software development principles, languages, methods. Since Information Systems generally operate within organizations, IS students study social sciences and organizational theory. IS students learn how to right-size information technology enabled solutions to meet real-world economic and organizational constraints. Information Systems students also learn, through hands-on experience, the critical importance of professional communications, problem analysis, critical thinking and teamwork. Building on the multi-disciplinary strengths of the university and the Dietrich College of Humanities and Social Sciences, graduates in Information Systems are ideally suited to take a leading role in shaping our information-based future.

The flexible nature of the program encourages students to explore their own interests through program electives, study in a contemporary content area or through optional second majors and minors.

IS students are well prepared to pursue graduate work in a wide range of fields. For students interested in master's degree-level graduate work at Carnegie Mellon, there are many possibilities, including accelerated Masters degree programs in Information Systems Management, Human Computer Interaction, Information Security Policy and Management, Engineering Technology and Innovation Management, and Business Administration.

IS graduates continue to be in high demand in the information-age workplace. There has been a strong job market for IS students in recent years, and national trends indicate that this is likely to continue. IS majors often take jobs in consulting companies, major software firms, large corporations, and start-up companies. Internship opportunities closely parallel the job market.

In addition to the Dietrich College General Education Requirements and basic prerequisites in Mathematics, Statistics and Computer Science, IS students must complete the Professional Core, the Disciplinary Core and a focused Content Area. In the Professional Core (consisting of six courses), students learn the basic skills necessary to analyze, design, implement and test high-quality, cost effective information systems. Two of the Professional Core courses are project-based experiences in which small teams of students develop and deliver solutions to real information problems.

In the Disciplinary Core (consisting of three courses), students study key areas fundamental to understanding and solving problems in information systems: professional communications; quantitative analysis and research methods; and organizations, policy, and social science.

IS students also complete three courses within one Content Area. The content areas are designed to provide students an opportunity to gain additional depth in a focused area. Currently, twelve content areas are available: (1) Business / Enterprise Systems, (2) Computing and Information Systems & Technology, (3) Social and Global Systems, (4) Quantitative Analysis, (5) Game Design, (6) Animation and Special Effects, (7) Media Design, (8) Learning Media, (9) Sound Design, (10) Entrepreneurship for Creative Industries, (11) Intelligent Environments, (12) Physical Computing.

Content areas fundamental to understanding and solving problems in information systems: professional communications; quantitative analysis and research methods; and organizations, policy, and social science.

IS students also complete three courses within one Content Area. The content areas are designed to provide students an opportunity to gain additional depth in a focused area. Currently, twelve content areas are available: (1) Business / Enterprise Systems, (2) Computing and Information Systems & Technology, (3) Social and Global Systems, (4) Quantitative Analysis, (5) Game Design, (6) Animation and Special Effects, (7) Media Design, (8) Learning Media, (9) Sound Design, (10) Entrepreneurship for Creative Industries, (11) Intelligent Environments, (12) Physical Computing.

Study Abroad Options in Information Systems

Given the rise of globalization and its effect on information systems development, we encourage students to consider expanding their international experience by spending a semester studying abroad. The IS program is very flexible in allowing students to pursue these opportunities, and we have a number of strategic alliances with overseas universities to make it easy for students to find courses that will count towards major requirements. With careful planning, study abroad is possible during most semesters. Students interested in study abroad should talk with the IS Academic Advisor to help plan an appropriate course of study. With prior approval, study abroad courses may be applied to major requirements.

Information Systems as Additional Major or Minor

Information Systems is not available as either an additional major or minor.

Transfer into Information Systems

Most IS students are admitted directly into Information Systems as incoming freshmen. Only Information Systems major students are permitted to enroll in the Professional Core courses (67-250 and above), and IS students have enrollment priority in IS electives.

Students in good academic standing may apply to be admitted to the Information Systems major as transfer students. Students accepted as transfers to the IS program would normally be expected to complete the usual prerequisites and begin the Professional Core courses during the next available semester. Applications for admission to the major are considered at the end of each Fall and Spring semester.

Dietrich College undergraduate students who want to transfer to IS must apply through the Dietrich College Academic Advisory Center, Baker Hall A56. Undergraduate students in other Carnegie Mellon colleges who wish to transfer to the Dietrich College and then into Information Systems should also apply through the Dietrich College Academic Advisory Center (http://www.cmu.edu/hss/advisory-center/transferring/transferring-transfer-in.html), Baker Hall A57. Students from other Carnegie Mellon colleges must be approved for admission to both the Dietrich College and Information Systems. Decisions regarding transfer requests will be based on evidence of adequate prior academic performance, the applicant’s prospects for success in the Information Systems major and availability of space in the major.

Students interested in applying for transfer to the Information Systems major should contact the IS Academic Advisor for information regarding availability, application procedures and deadlines. Potential applicants to the IS major should be working toward a sensible alternative major, so that their success at Carnegie Mellon is not predicated on admission to the IS program.

Curriculum

The Information Systems major is offered only as a Bachelor of Science (B.S.) degree. In addition to major requirements outlined below, all Information Systems students must fulfill the General Education requirements for the Dietrich College of Humanities and Social Sciences. A total of 360 units is required for the degree.

Requirements are subject to revision. Advisor approval is required for each student’s major curriculum plan. Any proposed course substitutions to courses required for the IS major must be approved in advance by the IS Academic Advisor.
Prerequisites
Information Systems requires completion of prerequisite courses in Mathematics, Statistics and Computer Science. All prerequisites must be successfully completed prior to the start of Fall semester, junior year.

Mathematics and Statistics
Complete one of the following calculus sequences:

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>21-111 Calculus I</td>
</tr>
<tr>
<td>10</td>
<td>21-112 Calculus II</td>
</tr>
<tr>
<td>10</td>
<td>21-120 Differential and Integral Calculus</td>
</tr>
<tr>
<td>9</td>
<td>21-256 Multivariate Analysis</td>
</tr>
</tbody>
</table>

(Required for advanced business courses)

Complete one course from each of the three Disciplinary Core categories.

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>36-201 Statistical Reasoning and Practice</td>
</tr>
</tbody>
</table>

Computer Science
Three Computer Science courses are required. To maintain normal progress toward the Information Systems degree, students must complete 15-121 Introduction to Data Structures prior to the start of Spring Semester, sophomore year. Students entering the program as freshmen will complete a Computer Science Placement Test. Depending on appropriate Advanced Placement credit and results of the Computer Science Placement Test, entering students may place directly into 15-112 or 15-121. 15-110 is taken as a Computer Science prerequisite unless a student places directly into 15-112 or 15-121. Most students entering the program will begin the sequence with 15-110.

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>15-110 Principles of Computing</td>
</tr>
<tr>
<td>12</td>
<td>15-112 Fundamentals of Programming and Computer Science</td>
</tr>
<tr>
<td>10</td>
<td>15-121 Introduction to Data Structures</td>
</tr>
</tbody>
</table>

Note: Students cannot receive credit for both 15-104 Introduction to Computing for Creative Practice and 15-110 Principles of Computing.

Professional Core
The Professional Core consists of six courses.

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>67-250 The Information Systems Milieux</td>
</tr>
<tr>
<td>9</td>
<td>67-272 Application Design and Development</td>
</tr>
<tr>
<td>9</td>
<td>67-371 Fundamentals of System Development</td>
</tr>
<tr>
<td>9</td>
<td>67-373 Software Development Project</td>
</tr>
<tr>
<td>12</td>
<td>67-475 Innovation in Information Systems</td>
</tr>
</tbody>
</table>

Core courses are only offered once per academic year.

Note: Students transferring into Information Systems may substitute 67-344 Organizational Intelligence in the Information Age for 67-250 The Information Systems Milieux.

Plus, complete 6 to 12 units chosen from the following options:

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>19-402 Telecommunications Technology, Policy &amp; Management</td>
</tr>
<tr>
<td>6</td>
<td>67-306 Special Topics: Management of Computer and Information Systems</td>
</tr>
</tbody>
</table>

Disciplinary Core
Complete one course from each of the three Disciplinary Core categories.

Professional Communications
Information systems professionals communicate with a wide range of people in most organizations and often facilitate communications between diverse groups of stakeholders. Consequently, the most successful professionals typically are those with strong communication skills. These courses help students see that the structure and presentation of information affects how well (and how easily) it can be understood and used.

Complete one course (it is recommended that this requirement be completed by the end of junior year):

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>15-221 Technical Communication for Computer Scientists</td>
</tr>
<tr>
<td>9</td>
<td>36-315 Statistical Graphics and Visualization</td>
</tr>
<tr>
<td>9</td>
<td>51-261 Communication Design Fundamentals</td>
</tr>
<tr>
<td>9</td>
<td>70-321 Negotiation and Conflict Resolution</td>
</tr>
<tr>
<td>9</td>
<td>70-340 Business Communications</td>
</tr>
<tr>
<td>9</td>
<td>70-341 Organizational Communication</td>
</tr>
<tr>
<td>9</td>
<td>70-342 Managing Across Cultures</td>
</tr>
<tr>
<td>9</td>
<td>76-270 Writing for the Professions</td>
</tr>
<tr>
<td>9</td>
<td>88/70/85-341 Organizational Communication</td>
</tr>
</tbody>
</table>

Quantitative Analysis and Research Methods
This area focuses on decision making and data analysis — essential tools in the development of useful information systems. this area exposes students to analytic methods in the social sciences and quantitative methods for approaching complex methods.

Complete one course (it is recommended that this requirement be completed in the sophomore year):

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>21-257 Models and Methods for Optimization</td>
</tr>
<tr>
<td>9</td>

<td>36-303 Sampling, Survey and Society</td>
</tr>
<tr>
<td>9</td>
<td>36-309 Experimental Design for Behavioral and Social Sciences</td>
</tr>
<tr>
<td>9</td>
<td>67-360 Applied Analytics</td>
</tr>
<tr>
<td>9</td>
<td>67-370 Intelligent Decision Support Systems</td>
</tr>
<tr>
<td>9</td>
<td>80-305 Rational Choice</td>
</tr>
<tr>
<td>9</td>
<td>80-405 Game Theory</td>
</tr>
</tbody>
</table>
Organizations, Policy, and Social Science

The focus of this area is on how organizations function in modern social and economic environments. Students will develop a greater understanding of how social policy and technology influence organizations and how they operate.

Complete one course:

<table>
<thead>
<tr>
<th>Course Code</th>

Entrepreneurship for Creative Industries (IDeATe)

Students in this content area will develop the knowledge and skills to lead and innovate in creative industries. Their interdisciplinary, hands-on coursework will emphasize the conceptualization of innovative products and the structuring of innovation processes. Courses and additional information can be found at the Entrepreneurship for Creative Industries website (http://www.cmu.edu/ideate/concentrations-and-minors/entrepreneurship-for-creative-industries.html).

Intelligent Environments (IDeATe)

The focus of this content area is on spaces that support efficiency and high quality of experience, addressing both the integrated development of such environments and the resulting experience. The required portal course for this content area is 62-150 Intro to Signal Processing for Creative Practice (10 units) and 16-223/60-223 Intro to Physical Computing (10 units) and will serve as one of the courses for this content area. Course information can be found at the Intelligent Environments website (http://www.cmu.edu/ideate/concentrations-and-minors/intelligent-environments.html).

Physical Computing (IDeATe)

The barriers between computing devices and their users have slowly dissolved. The physical world is becoming a key interface for computing and the internet of things is becoming the next generation of connectivity. Students in this content area will explore the technical, experiential, and semantic issues of this evolution. Course information can be found on the Physical Computing website (http://www.cmu.edu/ideate/concentrations-and-minors/physical-computing.html).

DOUBLE COUNTING OF COURSES

"Double Counting" refers to instances when a course taken to fulfill one requirement counts simultaneously toward a requirement in another major or minor program. Double Counting is permitted in the Dietrich College on a very limited basis. Information Systems students may double count no more than two courses used to fulfill any Information Systems major requirement (beyond the Dietrich College General Education requirements and Prerequisite courses) with any combination of dual degrees, additional majors, minors or graduate degree programs. Only one course may double count with any minor. No course can count for more than one requirement within the major. Students must also adhere to any policy restrictions on double counting enforced by the academic department of the student’s additional major or minor.

COURSE REPEATS

Per university policy, when a course is repeated, all grades will be recorded on the official academic transcript and will be calculated in the student’s QPA. This is the case regardless if the first grade for the course is a passing or failing grade. Undergraduate students who wish to repeat a course already passed must obtain approval from the student's Dean or Department Head. When a student takes a course s/he has already passed, only one set of units will count towards graduation requirements.

Faculty

C.F. LARRY HEIMANN, Teaching Professor – Ph.D., Washington University (St. Louis); Carnegie Mellon, 1998–.

JOSEPH S. MERTZ, Associate Teaching Professor (joint Appointment with Heinz College) – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1997–.

JERIA QUESENBERRY, Associate Teaching Professor – Ph.D., Pennsylvania State University; Carnegie Mellon, 2007–.

RAJA SOORIAMURTHI, Associate Teaching Professor – Ph.D., Indiana University; Carnegie Mellon, 2007–.

RANDY S. WEINBERG, Teaching Professor; Program Director, Information Systems – Ph.D., University of Minnesota; Carnegie Mellon, 1998–.

MAHER HAKIM, Visiting Associate Teaching Professor – Carnegie Mellon - Qatar - Ph.D., Carnegie Mellon University; Carnegie Mellon; Carnegie Mellon, 2012–.

DIVAKARAN LIGINLAL, Associate Teaching Professor - Carnegie Mellon - Qatar - Ph.D., University of Arizona - Tucson; Carnegie Mellon, 2009–.

SELMA LIMAM MANSAR, Associate Teaching Professor – Carnegie Mellon - Qatar - Ph.D., National Polytechnic Institute of Grenoble; Carnegie Mellon, 2007–.

DANIEL PHELPS, Assistant Teaching Professor – Carnegie Mellon - Qatar - Ph.D., Florida State University; Carnegie Mellon, 2007–.

RAY TSAI, Professor of Practice – Carnegie Mellon - Qatar - Ph.D., University of North Texas; Carnegie Mellon, 2011–.
Department of Modern Languages

The Majors in Chinese Studies, French & Francophone Studies, German Studies, Hispanic Studies, Japanese Studies, and Russian Studies

These majors are designed to lead to acquisition of communicative language proficiency and substantive knowledge of other cultures.

Drawing on the unique interdisciplinary climate of the Carnegie Mellon campus, the undergraduate majors in Modern Languages encourage the acquisition of multiple skills by students with varied backgrounds, talents, and interests. An important resource in support of these goals is the Modern Language Resource Center (MLRC), a state-of-the-art facility that provides students with access to authentic foreign language materials such as original television broadcasts, interactive video projects, Technology Enhanced Language Learning (TELL) courses, international audio and video resources, and computerized assessment tools.

Students majoring in a modern language are also encouraged to enroll, preferably during their junior year, in a study-abroad program or to spend a summer abroad at a language institute or in an internship. Semester or year-long programs are available in places such as China, France, Germany, Japan, Africa, Russia, Spain, and Latin America. The Department also sponsors summer courses in China, Germany, and Spain. Foreign film series, informal conversation tables, native-speaker conversation partners, speaking and writing assistants, and Student Advisory Committee cultural events are some of the activities organized by the Department of Modern Languages to increase students' ability in languages and knowledge of cultures.

The major in Modern Languages is designed to permit students to acquire communicative language proficiency in their language of specialization. Courses in culture and civilization offer students a solid introduction to the main currents in national literatures as well as artistic and social movements. These courses integrate study of cultures with skill development in reading, writing, and aural/oral communication. In addition, the student who majors in Modern Languages will develop a perspective on the learning and use of second languages, from both a social and cognitive point of view, within contemporary American society and in an increasingly global community. Working closely with their advisor, language majors are guided to develop personal interests by taking courses in other disciplines such as fine arts, history, psychology, philosophy, and other humanities and social sciences, which often include readings, discussions, and papers in the foreign language. The rich technological environment of the campus strongly enhances all fields of language study.

Second language proficiency is seen as an asset which enhances the study of all other fields and which will provide students with practical as well as theoretical bases for a variety of paths after graduation. Students will be prepared to pursue graduate studies in second language-related fields (e.g., linguistics, literature, second language acquisition) or they may use their undergraduate background as a complement to careers in fields such as the arts, government or public service, volunteer work, technology, business and management, law, and other areas in which proficiency in a second language and knowledge of other cultures is an asset.

Curriculum

Seven specializations are available in the Department of Modern Languages: Chinese Studies, French and Francophone Studies, German Studies, Hispanic Studies, Japanese Studies, and Russian Studies.

Language-specific faculty advisors for these majors are:

- **Chinese Studies**: Elisabeth Kaske, Assistant Professor of Chinese Studies and Yueming Yu, Teaching Professor of Chinese Studies
- **French & Francophone Studies**: Bonnie Youngs, Teaching Professor of French & Francophone Studies
- **German Studies**: Stephen Brockmann, Professor of German
- **Hispanic Studies**: Therese Tardio, Associate Teaching Professor of Hispanic Studies
- **Japanese Studies**: Keiko Koda, Professor of Japanese and Second Language Acquisition, and Yasufumi Iwasaki, Associate Teaching Professor of Japanese
- **Russian Studies**: Charlene Castellano, Teaching Professor of Russian

96-99 units

**The Major in Chinese Studies**

Students may enter their major and begin major course requirements when they have met the prerequisites described below. Should they desire, students should also be able to complete an additional major or minor.

0-36 units

**Prerequisites**

Students need to complete Elementary Chinese I & II (82-131 & 82-132) and Intermediate Chinese I (82-231) courses, or Intensive Elementary Chinese (82-135). Exemption from these courses can be granted based on Advanced Placement, International Baccalaureate, or Carnegie Mellon internal placement test results.

39-42 units*1. Core Courses in Chinese Studies

Complete all four courses

* Placement out of 82-232 is possible. Students who place out of 82-232 will need to take one more course at the 300-level with a minimum of 9 units. Then the total credits for this category will be 39. The selection should be made between the following two courses based on the specific needs of each individual student:

<table>

82-388 Understanding Second Language Fluency 9
82-480 Social and Cognitive Aspects of Bilingualism 9
82-580 Senior Seminar in Modern Languages 3

(minimum) 9 units.

3. Core Course(s) in History*

Complete one of the following History courses in consultation with the Major Advisor and the designated History or Modern Languages professor.

79-261 Chinese Culture and Society 9
79-275 Introduction to Global Studies 9
79-310 Religions of China 9

* Majors are strongly encouraged to complete at least one more History course focusing on Japanese history in fulfillment of the major requirements. This list will evolve according to the current offerings of the Departments of History and Modern Languages.
The Major in Russian Studies

Faculty Advisor: Charlene Castellano, Teaching Professor of Modern Languages

Russian Studies is jointly administered by the Departments of History and Modern Languages. It is designed for students from all the Carnegie Mellon undergraduate colleges. Carnegie Mellon students who arrive with previous language study and/or who have high AP or CEEB scores will be able to begin taking courses toward the major earlier in their undergraduate program and will also be able, should they so desire, to complete an additional major. In all cases, progress toward the major will be accelerated by study abroad which is recommended for all majors.

99–102 units Russian Studies Major

For majors, there is a three-course History requirement comprised of one required course and two courses selected from a list of electives.

9 units1. Core Course(s) in History

Complete one course.

<table>
<thead>

Should a student enter the Russian Studies program with a demonstrated language proficiency at any of these "Intermediate" or "Advanced" levels, the required total of 27 units is reached by selecting from the advanced language options appearing below in the list of "Required Electives". Advanced language options include “Special Topics: Russian”, a repeatable course, as well as subject-oriented language supplements to existing courses (taught in English) in a variety of fields. The student can add a language supplement (3 units) to selected 9-unit electives, earning a total of 12 units for the language-supplemented course.

18 units5. Required Electives

Complete two courses.

This is presented as a two-year (junior-senior) plan for completing major requirements. It shows that this program can be completed in as few as two years, not that it must be. Students should consult their advisor when planning their program.
Modern Languages

82-294  Topics in Russian Language and Culture  Var.
82-296  A Century of Russian Film  9
82-396  The Faust Legend at Home and Abroad  Var.
82-397  Russia’s Demons  Var.
82-399  Special Topics: Russian in Context  Var.
82-491  Literature, Politics and Film in Russia & East Europe Today  Var.
82-492  The Historical Imagination in Nineteenth-Century Russian Literature  Var.

New courses will be added as appropriate.

3-6 units. Required Independent Research

Complete one course.
82-599  Russian Studies Thesis  Var.

In the senior year, majors are required to undertake an independent research or translation project in which their language skills are applied to Russian-language materials. This project, which earns 3 to 6 units, is conducted in connection with an existing course in Russian history, language, literature or politics. The student works closely with the professor to select a topic requiring the use of Russian sources suitable to the student’s proficiency level. For example, students may choose to prepare a translation of a little-known piece of Russian literature or a debate from a nineteenth-century journal, to compare Soviet and Western newspaper coverage of the Cuban missile crisis, to research Russian opinion of American race relations, or to read and evaluate the reviews of a popular Russian novel.

Faculty Exchange Program

In 1993, the College of Humanities and Social Sciences initiated a faculty exchange program with the Russian State University of the Humanities (RGGU), one of the foremost universities in Russia, located in Moscow. Carnegie Mellon has hosted faculty members from RGGU specializing in history, language and philosophy. These professors have joined our College departments for a semester, offering unique courses and perspectives not generally available to our students. In the past, these Russian visitors have offered courses on the Russian Civil War as well as advanced language and literature courses. Several faculty members from Carnegie Mellon have visited Moscow, using the RGGU exchange to pursue archival research and collaborative projects. The exchange offers students an opportunity to study language from native speakers, gain exposure to different perspectives on history and politics, and gather firsthand knowledge about recent developments in Russia. In addition, the exchange can provide important contacts for students interested in pursuing careers abroad.

Russian Studies, B.A. Sample Curriculum

This sample curriculum assumes that all prerequisites for 82-291 are fulfilled prior to the junior year.

* or 79-266.

This is presented as a two-year (junior-senior) plan for completing major requirements. Its purpose is to show that this program can be completed in as few as two years, not that it must be. Students may enter their major, and begin major course requirements, as early as the start of the sophomore year, and in some instances in the first year. Students should consult their advisor when planning their program.

This plan is an example of the suggested sequence of study for students who have had little or no prior exposure to the language. Such students would need to satisfy the prerequisites (elementary and intermediate language study) during their freshman and sophomore years. Students who arrive at Carnegie Mellon with previous language study and/or who have high AP or CEEB scores will be able to begin taking courses toward the major earlier in their undergraduate program and will also be able, should they so desire, to complete an additional major. In all cases, progress toward the major will be accelerated by study abroad which is strongly recommended for all majors.

Additional Major

All Russian Studies Program requirements for an additional major are the same as those for students obtaining the major in Russian Studies (B.A.).

Modern Languages as an Additional Major

H&Ss students, as well as students from other colleges, may complete a major in Chinese Studies, French and Francophone Studies, German Studies, Hispanic Studies or Japanese Studies in addition to their primary major. Non-H&Ss students interested in an additional major in Modern Languages need to fulfill only the requirements for the chosen Modern Languages major but not the H&Ss General Education program requirements.

Minors in the Department of Modern Languages

In addition to the majors in the Department of Modern Languages, it is also possible to minor in Chinese Studies, French and Francophone Studies, German Studies, Hispanic Studies, Japanese Studies, and Russian Studies.

For the student who has chosen to major in another discipline, a minor in one of these languages is an asset which enhances almost any other field of study. The minor in Modern Languages permits students to acquire similar levels of communicative language proficiency as do students who major in the language but requires fewer courses in complementary areas. Language-specific faculty advisors for these specializations are:

- **Chinese Studies** - Gang Liu, Assistant Teaching Professor of Chinese Studies, Sue-mei Wu, Teaching Professor of Chinese Studies, and Tianxue Yao, Lecturer of Chinese Studies
- **French & Francophone Studies** - Bonnie Youngs, Teaching Professor of French & Francophone Studies
- **German Studies** - Christian Hallstein, Teaching Professor of German Studies
- **Hispanic Studies** - Felipe Gomez, Associate Teaching Professor of Hispanic Studies and Maria del Mar Rosa Rodriguez, Assistant Professor of Hispanic Studies
- **Japanese Studies** - Yasufumi Iwasaki, Associate Teaching Professor of Japanese Studies and Yoshihiro Yasuhara, Assistant Teaching Professor of Japanese Studies
- **Russian Studies** - Charlene Castellano, Teaching Professor of Russian Studies

Curricula

The minimum requirement for the minor in French and Francophone, German or Hispanic Studies is 54 units (not including any 100- or 200-level prerequisite work in the chosen language), as outlined below. The minimum requirement for the minor in Chinese or Japanese Studies is 54-60 units, depending on the student’s point of entry.

57-60 units The Minor in Chinese Studies

<table>

<tbody>
<tr>
<td>Intermediate level proficiency in Chinese. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores.</td>
</tr>
</tbody>
</table>

39 units. Core Courses in Chinese Studies

Complete four courses.

| 82-232 Intermediate Chinese II * | 12 |
| 82-235 Intermediate Chinese for Heritage Students * | 12 |
| 82-331 Advanced Chinese I | 9 |
82-332  Advanced Chinese II  9
82-333  Introduction to Chinese Language and Culture  Var.

* 82-235 Intermediate-level Chinese course may be substituted for 82-232 Intermediate Chinese II.

Students who place out of an Intermediate-level Chinese course will need to take an additional 300-level, 9-unit course. Then the total units for this category will be 39 units. Students must choose from the following two courses based on specific needs of each individual student:

82-335  Readings in Chinese  9
82-337  Mandarin Chinese for Oral Communication I  9

18 units. Chinese Studies and Interdisciplinary Electives

List A. Chinese Studies Electives

Complete one or two courses after consultation with the Minor Advisor. Students may select another course in this category to substitute for the Interdisciplinary Elective.

82-334  Structure of Chinese  9
82-335  Readings in Chinese  9
82-337  Mandarin Chinese for Oral Communication I  9
82-338  Mandarin Chinese for Oral Communication II  9
82-432  Popular Culture in China  9
82-433  Topics in Contemporary Culture of China  9
82-434  Studies in Chinese Traditions  9
82-436  Introduction to Classical Chinese  9
82-439  Modern China Through Literature  Var.

(minimum) 9 units List B. Interdisciplinary Elective

Complete one course. Students may select another course in this category to substitute for the Core Elective.

Units
79-212  China and Its Neighbors: Minorities, Conquerors, and Tribute Bearers  9
79-261  Chinese Culture and Society  9
79-262  Modern China  9
79-308  18th Century China Through Literature  9
79-309  20th Century China Through Film  9
79-310  Religions of China  9
79-375  China’s Environmental Crisis  9
82-280  Learning About Language Learning  9
82-281  Tutoring for Community Outreach  Var.
82-358  Literacies Across Language and Culture  9
82-383  Second Language Acquisition: Theories and Research  9
82-388  Understanding Second Language Fluency  9
82-480  Social and Cognitive Aspects of Bilingualism  9

New courses will be added as appropriate.

54 units. The Minor in French and Francophone Studies

0-42 units. Prerequisites

Intermediate level proficiency in French. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores.

27 units. Core Courses in French and Francophone Studies

Complete three courses.

82-303  French Culture  9
82-304  The Francophone World  9
82-305  French in its Social Contexts  9

27 units. French and Francophone Studies and Interdisciplinary Electives

Complete 27 units from List A or 18 units from List A and 9 units from List B, with advisor’s approval.

List A. French Electives

82-401  French Popular Song  9
82-404  Francophone Realities: Africa  9
82-407  The Arts in Society  Var.
82-415/416  Topics in French and Francophone Studies  * 9
82-501/502  Special Topics: French  Var.
82-505  Undergraduate Internship  Var.

* Students may repeat with new topics.

List B. Interdisciplinary Electives

Architecture
48-340  Modern Architecture and Theory 1900-1945  9
48-341  Theory & Expression in Architecture  9
48-448  History of Sustainable Architecture  9

English
76-385  Introduction to Discourse Analysis  9
76-386  Language & Culture  9
76-387  Narrative & Argument  9

History
79-202  Flesh and Spirit: Early Modern Europe, 1400-1750  9
79-205  20th Century Europe  9
79-207  Development of European Culture  9
79-220  Caribbean: Cultures and Histories  9
79-227  Introduction to African History: 1780-1994  9
79-258  French History: From the Revolution to De Gaulle  9
79-275  Introduction to Global Studies  9
79-350  Early Christianity  9
79-386  Entrepreneurs in Africa, Past, Present and Future  9
79-396  Music and Society in 19th and 20th Century Europe and the U.S.  9

Modern Languages
82-281  Tutoring for Community Outreach  Var.
82-358  Literacies Across Language and Culture  9
82-380  Independent Study in Second Language Acquisition  Var.
82-383  Second Language Acquisition: Theories and Research  9
82-384  Language and Culture: Language in its Social Context  9
82-387  The Film Festival  9
82-388  Understanding Second Language Fluency  9
82-480  Social and Cognitive Aspects of Bilingualism  9
82-484  Language Assessment  9
82-487  Writing in a Second Language  9

Music
57-173  Survey of Western Music History  9
57-306  World Music  6

Philosophy
80-180  Nature of Language  9
80-280  Linguistic Analysis  9
80-281  Language and Thought  9
80-380  Philosophy of Language  9

Psychology
85-375  Crosscultural Psychology  9
85-421  Language and Thought  9

New courses will be added as appropriate.

The Minor in German Studies

0-42 units. Prerequisites

Intermediate level proficiency in German. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level)
or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores.

27 units1. Core Courses in German Studies

Complete three courses.

- 82-320 Contemporary Society in German, Austria and Switzerland 9
- 82-323 Germany, Austria and Switzerland in the 20th Century * 9
- 82-327 The Emergence of the German Speaking World 9

* A 400-level course may be substituted with an advisor’s approval.

27 units2. German Studies & Interdisciplinary Electives

Complete 27 units from List A (400 level German courses) or 18 units from List A and 9 units from List B, with advisors approval.

List A: German Studies Electives

- 82-420 German Classical Literature 9
- 82-421 German Literature of the Nineteenth Century 9
- 82-422 German Literature of the Early Twentieth Century 9
- 82-425/426 Topics in German Literature and Culture 9
- 82-427 Nazi and Resistance Culture 9
- 82-428 History of German Film Var. 9
- 82-429 German Reading and Translation Workshop: Undergraduate 9
- 82-521/522 Special Topics: German Var. 9

List B: Interdisciplinary Electives

- 76-239 Introduction to Film Studies 9
- 76-386 Language & Culture 9
- 76-387 Narrative & Argument 9
- 76-483 Corpus Analysis in Rhetoric 9

History

- 79-205 20th Century Europe 9
- 79-208 Europe’s Two Revolutions: Dynamics of Change in the 19th Century 9
- 79-256 20th Century Germany 9
- 79-257 Germany and the Second World War 9
- 79-349 The Holocaust in Historical Perspective 9

Music

- 57-306 World Music 6

Philosophy

- 80-136 Social Structure, Public Policy & Ethics 9
- 80-180 Nature of Language 9
- 80-251 Modern Philosophy 9
- 80-253 Continental Philosophy 9
- 80-256 Modern Moral Philosophy 9
- 80-275 Metaphysics 9
- 80-280 Linguistic Analysis 9
- 80-380 Philosophy of Language 9

Psychology

- 85-375 Crosscultural Psychology 9
- 85-421 Language and Thought 9

Additional courses from other departments may be added to list as information becomes available.

54 units The Minor in Hispanic Studies

0-42 units Prerequisites

Intermediate level proficiency in Spanish. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores.

1. Core Courses in Hispanic Studies

Complete two courses.

- 82-342 Spain: Language and Culture 9
- 82-343 Latin America: Language and Culture 9
- 82-344 U.S. Latinos: Language and Culture 9

Complete the following course.

- 82-345 Introduction to Hispanic Literary and Cultural Studies 9

27 units2. Hispanic Studies and Interdisciplinary Electives

After consultation with the Minor Advisor, complete 3 courses (27 units) from List A or 2 courses (18 units) from List A and one course (9 units) from List B.

List A: Hispanic Studies Electives

- 82-441 Studies in Peninsular Literature and Culture 9
- 82-442 Analysis of Spoken Spanish 9
- 82-443 Spanish Reading and Translation Workshop 9
- 82-444 The Structure of Spanish 9
- 82-445 U.S. Latino Literature 9
- 82-446 Political Drama of Spain 9
- 82-451 Studies in Latin American Literature and Culture 9
- 82-454 The Caribbean Hispanic: Rhythm, Reason and Song 9
- 82-455/456 Topics in Hispanic Studies * 9
- 82-457 Contemporary Latin American Texts: Revision, Rewriting and Representation 9
- 82-541/542 Special Topics: Hispanic Studies Var. 9

* Students may repeat these courses with new topics.

List B: Interdisciplinary Electives

From possibilities such as but not limited to the following, students should consult with the Major Advisor to identify an interdisciplinary elective to complement their program.

English

- 76-239 Introduction to Film Studies 9
- 76-386 Language & Culture 9
- 76-387 Narrative & Argument 9

History

- 79-208 Europe’s Two Revolutions: Dynamics of Change in the 19th Century 9
- 79-256 20th Century Germany 9
- 79-257 Germany and the Second World War 9
- 79-349 The Holocaust in Historical Perspective 9

Music

- 57-306 World Music 6

Modern Languages

- 82-280 Learning About Language Learning 9
- 82-281 Tutoring for Community Outreach Var.
- 82-358 Literacies Across Language and Culture 9
- 82-383 Second Language Acquisition: Theories and Research 9
- 82-388 Understanding Second Language Fluency 9
- 82-480 Social and Cognitive Aspects of Bilingualism 9

Music

- 57-306 World Music 6

Philosophy

- 80-180 Nature of Language 9
- 80-280 Linguistic Analysis 9
- 80-380 Philosophy of Language 9

Psychology

- 85-375 Crosscultural Psychology 9
- 85-421 Language and Thought 9
54-57 units The Minor in Japanese Studies

0-36 units Prerequisites
Intermediate level proficiency in Japanese. This is equivalent to the completion of four courses (two at the 100-level and two at the 200-level) or exemption based on Advanced Placement, International Baccalaureate or Carnegie Mellon internal placement test scores.

Complete four courses.

82-272 Intermediate Japanese II 12
82-273 Introduction to Japanese Language and Culture 9
82-371 Advanced Japanese I 9
82-372 Advanced Japanese II 9

*Placement out of 82-272 is possible. For students who place out of 82-272, a minimum of 9 additional units must be taken from Category 2 below.

18 units2. Japanese Studies and Interdisciplinary Electives
In consultation with the Minor Advisor, complete two courses from List A, or one course from List A and one course from List B.

List A. Japanese Studies Electives

82-373 Structure of the Japanese Language 9
82-374 Technical Japanese 9
82-378 Japanese Conversation Analysis 9
82-473/474 Topics in Japanese Studies * 9
82-476 Japanese Discourse Analysis 9
82-571/572 Special Topics: Japanese Var.

*Students may repeat with new topics.

List B. Interdisciplinary Electives

English
76-239 Introduction to Film Studies 9
76-386 Language & Culture 9
76-387 Narrative & Argument 9

History
79-261 Chinese Culture and Society 9
79-275 Introduction to Global Studies 9
79-310 Religions of China 9

Modern Languages
82-278 Japanese Literature in Translation 9
82-280 Learning About Language Learning 9
82-281 Tutoring for Community Outreach Var.
82-358 Literacies Across Language and Culture 9
82-383 Second Language Acquisition: Theories and Research 9
82-388 Understanding Second Language Fluency 9
82-480 Social and Cognitive Aspects of Bilingualism 9

Music
57-306 World Music 6

Philosophy
80-180 Nature of Language 9
80-280 Linguistic Analysis 9
80-380 Philosophy of Language 9

Psychology
85-375 Crosscultural Psychology 9
85-421 Language and Thought 9

New courses will be added as appropriate.

The Minor in Russian Studies

Faculty Advisor: Charlene Castellano, Teaching Professor of Russian Studies
Russian Studies, a B.A. Program, is jointly administered by the Departments of History and Modern Languages in the Dietrich College of Humanities and Social Sciences. It is designed for students from all of the Carnegie Mellon undergraduate colleges. It may be taken as a primary major, additional major, or minor.

78 units Curriculum

18 units The History Curriculum
For minors, there is a two-course History requirement comprised of one required course and one course selected from a list of electives. The intermediate-level History courses are generally taken in the sophomore and junior years. They provide a substantive overview of the major events and issues in Russian history and policy.

9 units1. Core Course(s) in History
Complete one course.
79-265 Russian History: From the First to the Last Tsar 9
79-266 Russian History: From Communism to Capitalism 9

* Both courses are recommended.

9 units2. Required Electives in History
Complete one course. Substitutions with advisor’s permission.
79-267 The Soviet Union in World War II: Military, Political, and Social History 9
79-341 The Cold War in Documents and Film 9

42 units The Language and Culture Curriculum
Complete the two prerequisite courses and two intermediate courses.

24 units3. Prerequisite Courses in Modern Languages

3. Prerequisite Courses in Modern Languages 24 units
82-191 Elementary Russian I (or demonstrated equivalent) 12
82-192 Elementary Russian II (or demonstrated equivalent) 12

18 units4. Core Courses in Modern Languages

82-291 Intermediate Russian 9
82-292 Intermediate Russian II 9

Four language courses are required for all students earning a minor in Russian Studies. Should a student enter the Russian Studies Program with a demonstrated language proficiency at any of these “Elementary” and/or “Intermediate” levels, s/he must replace these courses with other 9-unit courses at higher levels. Advanced language options include “Special Topics: Russian”, a repeatable course, as well as subject-oriented language supplements to existing courses taught in English. These supplements earn 3 units each; thus 3 such supplements could replace one 9-unit course. Language supplements must be arranged in consultation with the faculty advisor.

18 units5. Required Electives
Complete two courses.

History
79-205 20th Century Europe 9
79-231 American Foreign Policy: 1945-Present 9
79-265 Russian History: From the First to the Last Tsar 9
79-266 Russian History: From Communism to Capitalism 9
79-267 The Soviet Union in World War II: Military, Political, and Social History 9
79-322 Family and Gender in Russian History 9
79-341 The Cold War in Documents and Film 9

Modern Languages
82-294 Topics in Russian Language and Culture Var.
82-296 A Century of Russian Film 9
82-396 The Faust Legend at Home and Abroad Var.
82-397 Russia’s Demons Var.
82-399 Special Topics: Russian in Context Var.
82-491 Literature, Politics and Film in Russia & East Europe Today Var.
82-492 The Historical Imagination in Nineteenth-Century Russian Literature Var.
New courses will be added as appropriate.

6. Study Abroad

Students in both the major and minor programs are encouraged to spend a semester or summer in Russia via an approved exchange program. Many exchange programs offer instruction in Russian language, history, literature, and culture, in internationally recognized universities. They also offer travel to ancient sites and cities, visits to museums, palaces, exhibitions, and monuments, and the opportunity to live with a Russian host family. Scholarship monies are frequently available.

Faculty

MARIANA ACHUGAR, Associate Professor of Hispanic Studies & Second Language Acquisition – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 1993–.

CHRISTOPHER M. JONES, Teaching Professor of French & Francophone Studies – Ph.D., University of California at Davis; Carnegie Mellon, 2003–.

STEPHEN BROCKMANN, Professor of German with courtesy appointments in English and History – Ph.D., University of Wisconsin Madison; Carnegie Mellon, 1993–.

CHARLENE CASTELLANO, Teaching Professor of Russian with a courtesy appointment in English – Ph.D., Cornell University; Carnegie Mellon, 1990–.

ZEINAB IBRAHIM, Associate Teaching Professor, Carnegie Mellon - Qatar – Ph.D., Georgetown University; Carnegie Mellon, 2009–.

REMI (ADAM) VAN COMPERNOLLE, Assistant Professor of French & Francophone Studies & Second Language Acquisition – Ph.D., Penn State; Carnegie Mellon, 2012–.

KENYA C. DWORKIN Y MENDEZ, Associate Professor of Hispanic Studies with courtesy appointments in English and History – Ph.D., University of California, Berkeley; Carnegie Mellon, 1993–.

GABRIELE EICHMANN, Associate Teaching Professor of German – Ph.D., University of Washington; Carnegie Mellon, 2008–.

MICHEL FOUGERES, Associate Professor Emeritus of French – Ph.D., New York University; Carnegie Mellon, 1969–.

BARBARA FREED, Professor Emeritus of French & Francophone Studies and Second Language Acquisition – Ph.D., University of Pennsylvania; Carnegie Mellon, 1990–.

FELIPE GOMEZ, Associate Teaching Professor of Hispanic Studies – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2006–.

CHRISTIAN HALLSTEIN, Teaching Professor of German and Director of Undergraduate Studies – Ph.D., Pennsylvania State University; Carnegie Mellon, 1979–.

PAUL HOPPER, Paul Mellon Distinguished Professor of the Humanities, Rhetoric and Linguistics with a courtesy appointment in Modern Languages – Ph.D., University of Texas; Carnegie Mellon, 1990–.

YASUFUMI IWASAKI, Associate Teaching Professor of Japanese – Ph.D., University of Illinois; Carnegie Mellon, 2005–.

BARBARA JOHNSTONE, Professor of Rhetoric and Linguistics with a courtesy appointment in Modern Languages – Ph.D., University of Michigan; Carnegie Mellon, 1997–.

CHRISTOPHER M. JONES, Teaching Professor of French & Francophone Studies and Director of Modern Language Resource Center – Ph.D., University of Massachusetts, Amherst; Carnegie Mellon, 1993–.

ELISABETH KASKE, Associate Professor of Chinese – Ph.D., Heidelberg University; Carnegie Mellon, 2010–.

KEIKO KODA, Professor of Japanese and Second Language Acquisition and Director of Graduate Studies – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 1995–.

GANG LIU, Assistant Teaching Professor of Chinese – Ph.D., University of Michigan; Carnegie Mellon, 2010–.

BRIAN MACWHINNEY, Professor of Psychology with a courtesy appointment in Modern Languages – Ph.D., University of California, Berkeley; Carnegie Mellon, 1981–.

MAME NIANG-MEUNIER, Assistant Professor of French & Francophone Studies – Ph.D., Louisiana State University; Carnegie Mellon, 2012–.

SUSAN G. POLANSKY, Teaching Professor of Hispanic Studies and Head of Modern Languages – Ph.D., Boston College; Carnegie Mellon, 1986–.

GIOVANNI PUPPO, Instructor of Italian – Ph.D., University of Rome; Carnegie Mellon, 1975–.
The Department of Philosophy was founded in 1985 and reflects the tradition of philosophy as a central discipline in the humanities. The department has achieved an international reputation through the acclaimed research of its members and its innovative educational programs, not only in traditional topics such as ethics, philosophy of mind, logic, and theory of knowledge, but in such contemporary and applied areas as automated theorem proving, machine learning, the foundations of statistics, causal discovery, forward learning theory, game and decision theory, conflict resolution, and business ethics.

Philosophy thrives through contact with other disciplines. Interdisciplinary work, a traditional strength of the Carnegie Mellon community, is vital to the department and is reflected in the courses we offer, many of which incorporate substantive material from a range of other disciplines. Some courses are actually team-taught with professors from other departments and schools around the university.

Our programs are designed to develop our students' analytical sophistication and their practical and theoretical skills in specializations outside the department (see the sample curricula below). The department welcomes and, indeed, encourages minors and additional majors from other disciplines who are interested in reflecting on the foundation of their own subjects. The department offers two different undergraduate major programs, and jointly sponsors two interdepartmental majors: Ethics, History, and Public Policy (with the Department of History), and Linguistics (with English, Modern Languages, and Psychology):

- the B.A. or B.S. in Ethics, History, and Public Policy (interdisciplinary major with Department of History)
- the B.S. in Logic and Computation
- the B.A. in Philosophy
- the B.A. in Linguistics (interdisciplinary major with Departments of English, Modern Languages, and Psychology)

The major in Logic and Computation is perhaps the most non-traditional of the department's majors. It offers students a firm background in computer science, together with a solid grounding in logic, philosophy, and mathematics. This reflects the department's commitment to the use of formal, analytic methods in addressing philosophical issues. A flexible system of electives allows students to focus their efforts in any of a wide range of disciplines, from engineering to the fine arts. As a capstone to the program, students engage in original research in their senior year, and write a thesis under the direction of an advisor.

The department also sponsors four minor programs:

- the minor in Ethics
- the minor in Linguistics
- the minor in Logic and Computation
- the minor in Philosophy

Finally, the department offers two master's programs directly extending the departmental majors. Both programs are coordinated with and build on the undergraduate programs, so that majors can complete the requirements for the master's degree in one additional year:

- the M.S. in Logic and Computation
- the M.A. in Philosophy

Students who choose the appropriate specialized track in the Logic and Computation major (namely, sample 2 of the Curricula listed below) can be admitted to the M.S. program in Language and Information Technology offered by the School of Computer Science. To complete the discussion of departmental programs, it should be mentioned that the department sponsors as part of the Program in Pure and Applied Logic (offered jointly with the Department of Computer Science and Mathematics) a Ph.D. in Logic, Computation, and Methodology.
### Political Philosophy (9 units)

### 12 units IV. Senior Capstone Project Course (79/80-449)

The Ethics, History and Public Policy Project Course is required for the Ethics, History and Public Policy major and is taken in the fall semester of the senior year. In this capstone course, Ethics, History and Public Policy Majors carry out a collaborative research project that examines a compelling current policy issue that can be illuminated with historical research and philosophical and policy analysis. The students develop an original research report based on both archival and contemporary policy analysis and they present their results to a client organization in the community.

### 27 units V. Elective Courses

Choose any three courses from any category or categories shown below.

**Engineering and Public Policy (some courses have prerequisites; see EPP catalog listing)**

</table>

**Additional Major**

The B.A./B.S. in Ethics, History, and Public Policy may be scheduled as an additional major in consultation with the Director of Ethics, History, and Public Policy, Professor Jay Aronson, aronson@andrew.cmu.edu.
The above sample program is presented as a two-year (junior-senior year) plan for completing EHPP major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter the EHPP major, and begin major coursework requirements, as early as the start of the sophomore year, or even in the first year. Students should consult their advisor when planning their program.

The Major in Linguistics

Tom Werner, Director
Office: Baker Hall 155F
Email: twerner@andrew.cmu.edu

Linguistics is the study of human language, and it encompasses a broad spectrum of research questions, approaches and methodologies. Some linguists are concerned with the cognitive aspects of language learning, production and comprehension; some are concerned with language as a social and cultural phenomenon; others engage in the analysis of linguistic form and meaning, some from a functional and others from a formal perspective. There are also computational approaches to linguistics with both applied and theoretical goals.

The major in Linguistics reflects the multidisciplinary character of the field and of the Linguistics faculty here at Carnegie Mellon, offering a program which provides students with the fundamental tools of linguistic analysis while maintaining a focus on the human context in which language is learned and used. The major is available as either a primary major or an additional major. It is an ideal choice for students with a general interest in their own or other languages, and combines well thematically with studies in any of the departments represented in the major.

Curriculum

The Linguistics major requires a total of 12 courses, which includes 2 semesters of language study. In addition, primary majors in Linguistics are required to write a Senior Thesis in their final year. At least three semesters of language study. In addition, primary majors in Linguistics are required to write a Senior Thesis in their final year. At least three semesters of language study. The Major in Logic and Computation

Joel Smith, Director
Office: Baker Hall 161C
Email: joelm@cmu.edu

The Logic and Computation curriculum takes advantage of the preparation provided by the H&SS General Education Program in mathematics, philosophy, psychology, and statistics. It is flexible in that it permits students to focus on any of a number of areas including (but not limited to):

- computer science;
- language and information technology;
- artificial intelligence and cognitive science;
- logic and the foundations of mathematics;
- methodology and philosophy of science.

Students in the program take a common core of courses in logic, methodology, and computer science, together with an associated seminar in their senior year. The individual focus is achieved by selecting a sequence of four advanced and closely related courses. It is in this area of focus (or specialization) that students write their senior thesis under the supervision of a faculty member. A number of sample curricula are presented below.

The resulting education in logic, analytic philosophy, mathematics, statistics, and computer science enables students to pursue professional careers or graduate study. The analytic and communication skills developed in the major support a wide range of career choices, including those among the fields of technology, business, and law. Fields of graduate study for which students are well prepared include, for example, computer science, cognitive science, philosophy, logic, and linguistics. Students who are interested in pursuing this major, or who are pursuing it already, should take note of the Cognitive Science major in the Department of Psychology. That major is so closely related that it is not difficult to pursue it as an additional major, and it provides an intellectually exciting complement.

Curriculum

Logic and Computation is a B.S. degree. In their freshman and sophomore years, students are expected to take three courses that provide preparation in computer science, mathematics, and statistics: 15-112 Fundamentals of Programming and Computer Science, 21-127 Concepts of Mathematics, 36-201 Statistical Reasoning and Practice. 80-211 Logic and Mathematical Inquiry is part of the major’s Core Requirements, but should be taken no later than the spring of the sophomore year. Four advanced electives are chosen in the area of focus, and should support independent research towards fulfilling the senior thesis requirement. In their senior year, students present and discuss their research in 80-511 Thesis Seminar.

Sample Curricula

Here are five samples of Logic and Computation curricula (beyond the core courses), each reflecting a different emphasis.

Sample 1: A student interested in Computer Science might take the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>80-315</td>
<td>9</td>
</tr>
<tr>
<td>80-413</td>
<td>9</td>
</tr>
<tr>
<td>15-312</td>
<td>12</td>
</tr>
<tr>
<td>15-317</td>
<td>9</td>
</tr>
</tbody>
</table>

Sample 2: A student interested in Language and Information Technology might take the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>80-280</td>
<td>9</td>
</tr>
<tr>
<td>80-281</td>
<td>9</td>
</tr>
<tr>
<td>80-381</td>
<td>9</td>
</tr>
<tr>
<td>80-383</td>
<td>9</td>
</tr>
<tr>
<td>80-580</td>
<td>9</td>
</tr>
</tbody>
</table>

Sample 3: A student interested in Artificial Intelligence and Cognitive Science might take the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>80-313</td>
<td>9</td>
</tr>
<tr>
<td>80-314</td>
<td>9</td>
</tr>
<tr>
<td>80-411</td>
<td>9</td>
</tr>
<tr>
<td>85-412</td>
<td>9</td>
</tr>
</tbody>
</table>

Sample 4: A student interested in Logic and the Foundations of Mathematics might consider the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>80-254</td>
<td>9</td>
</tr>
<tr>
<td>80-312</td>
<td>9</td>
</tr>
<tr>
<td>80-365</td>
<td>9</td>
</tr>
<tr>
<td>80-411</td>
<td>9</td>
</tr>
</tbody>
</table>

Sample 5: A student interested in Methodology might consider the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>80-220</td>
<td>9</td>
</tr>
<tr>
<td>80-222</td>
<td>9</td>
</tr>
<tr>
<td>80-321</td>
<td>9</td>
</tr>
</tbody>
</table>

360 units Logic and Computation Degree Requirements (minimum)
Logic and Computation as a Second Major

The Logic and Computation major is also a suitable second major for students in H&SS or for students in other colleges within the university. Non-H&SS students interested in an additional major in Logic and Computation need to take only those courses in the H&SS General Education Program that are prerequisites to courses required in the major; all other H&SS General Education requirements are waived for these students. Depending on the student's background, the requirements of the second major in Logic and Computation can be fulfilled with as few as five additional courses. However, the department limits the courses that may be "double counted"; the core courses in the Philosophy department may not be double counted.

The M.S. Program in Logic and Computation

The Department of Philosophy also offers a graduate M.S. degree in Logic and Computation, which culminates with the writing of a master's thesis. It is ordinarily a two-year program, but students in the Logic and Computation major are able to complete the additional requirements in one year. Interested students are invited to contact the department for further information and apply to the program in their senior year. Details can be found on the department's homepage: http://hss.cmu.edu/philosophy/

The Major in Philosophy

Joel Smith, Director
Office: Baker Hall 161C
Email: joelm@cmu.edu

The Major in Philosophy is intended to be flexible and to facilitate double majors in other fields (including majors with a strong professional focus). It provides students with a broad humanities education and sharpens their analytical skills. We encourage, but do not require, students to choose a thematic concentration through their electives. Sample curricula emphasizing Pre-Law, Metaphysics and Epistemology, Ethics and Social Philosophy, and Philosophy of Mind are suggested below. However, alternative emphases can be proposed and approved by the Director. The Major in Philosophy is a B.A. degree.

Curriculum

In addition to the general education requirements for the student's college, Philosophy primary majors and additional majors must complete 80-100 Introduction to Philosophy and nine Philosophy courses in the Areas listed below. The 80-100 requirement must be fulfilled before the first semester of the junior year. Only two of the remaining nine courses may be at the 100-level, and two of the nine courses must be at the 300-level or higher. All ten courses, if taken at CMU, must be taken for a letter grade and passed with a grade of "C" or above. Courses from other universities, as well as an 80-100 skills test, may be substituted with permission of the Director. For H&SS students, up to 4 of these courses may be counted also as satisfying the grade of "C" or above. Courses from other universities, as well as an 80-100 skills test, may be substituted with permission of the Director. For H&SS students, up to 4 of these courses may be counted also as satisfying the grade of "C" or above.

Introduction to Philosophy 9 units

80-100 Introduction to Philosophy 9

9 units Area 1: Values and Normative Theory

One of the following:
80-130 Introduction to Ethics 9
80-135 Introduction to Political Philosophy 9
80-136 Social Structure, Public Policy & Ethics 9
80-230 Ethical Theory 9
80-235 Political Philosophy 9
80-244 Environmental Ethics 9
80-245 Medical Ethics 9
80-247 Ethics and Global Economics 9
80-335 Deliberative Democracy: Theory and Practice 9
80-337 Philosophy, Politics & Economics 9
80-348 Health Development and Human Rights 9
80-430 Ethics and Medical Research 9
80-447 Global Justice 9
80-530 Seminar on Ethical Theory Var.

9 units Area 2: Philosophy of Mind/Language/Metaphysics

One of the following:
80-180 Nature of Language 9
80-270 Philosophy of Mind 9
80-271 Philosophy and Psychology 9
80-275 Metaphysics 9
80-276 Philosophy of Religion 9
80-280 Linguistic Analysis 9
80-281 Language and Thought 9
80-282 Phonetics and Phonology I 9
80-283 Syntax and Discourse 9
80-380 Philosophy of Language 9
80-381 Meaning in Language 9
80-382 Phonetics and Phonology II 9
80-383 Language in Use 9
80-384 Linguistics of Turkic Languages 9
80-575 Seminar on Metaphysics Var.
80-580 Seminar on the Philosophy of Language 9

9 units Area 3: Logic/Philosophy of Mathematics

One of the following:
80-110 Nature of Mathematical Reasoning 9
80-210 Logic and Proofs 9
80-211 Logic and Mathematical Inquiry 9
80-212 Arguments and Logical Analysis 9
80-310 Formal Logic 9
80-311 Undecidability and Incompleteness 9
80-312 Philosophy of Mathematics 9
80-313 Philosophical Logic 9
80-314 Logic and Artificial Intelligence 9
80-315 Modal Logic 9
80-411 Proof Theory 9
80-413 Category Theory 9
80-513 Seminar on Mathematical Understanding and Cognition 9
80-514 Categorical Logic Seminar 9

9 units Area 4: Epistemology/Metaphysics

One of the following:
80-150 Nature of Reason 9
80-201 Epistemology 9
80-208 Critical Thinking 9
80-220 Philosophy of Science 9
80-221 Philosophy of Social Science 9
80-222 Measurement and Methodology 9
80-226 Revolutions in Science 9
80-305 Rational Choice 9
80-321 Causation, Law, and Social Policy 9
80-322 Philosophy of Physics 9
80-323 Philosophy of Biology 9
80-324 Philosophy of Economics 9
80-405 Game Theory 9
80-515 Seminar on the Foundations of Statistics 9
80-516 Seminar on Causation Var.
80-520 Seminar on Philosophy Science 9
80-521 Seminar on Formal Epistemology 9

18 units Area 5: History of Philosophy

Two of the following:
80-150 Nature of Reason 9
80-226 Revolutions in Science 9
80-250 Ancient Philosophy 9
80-251 Modern Philosophy 9
80-252 Kant 9
80-253 Continental Philosophy 9
80-254 Analytic Philosophy 9
80-255 Pragmatism 9
80-256 Modern Moral Philosophy 9
80-257 Nietzsche 9
80-258 Hume 9

Var.
Here are four sample curricula, reflecting different emphases.

### 1. For an emphasis on Law & Social Policy, a student might take:

| Area 1 | 80-235 | Political Philosophy | 9 |
| Area 2 | 80-136 | Social Structure, Public Policy & Ethics | 9 |
| Area 3 | 80-275 | Metaphysics | 9 |
| Area 4 | 80-211 | Logic and Mathematical Inquiry | 9 |
| Area 5 | 80-250 | Ancient Philosophy | 9 |
| Area 6 | 80-321 | Causation, Law, and Social Policy | 9 |
| 80-348 | Health Development and Human Rights | 9 |
| 80-447 | Global Justice | 9 |

### 2. For an emphasis on Philosophy of Science, a student might take:

| Area 1 | 80-230 | Ethical Theory | 9 |
| Area 2 | 80-276 | Philosophy of Religion | 9 |
| Area 3 | 80-110 | Nature of Mathematical Reasoning | 9 |
| Area 4 | 80-221 | Philosophy of Social Science | 9 |
| or 80-321 | Causation, Law, and Social Policy | 9 |
| Area 5 | 80-250 | Ancient Philosophy | 9 |
| Area 6 | 80-321 | Causation, Law, and Social Policy | 9 |

### 3. For an emphasis on Ethics and Social Philosophy, a student might take:

| Area 1 | 80-130 | Introduction to Ethics | 9 |
| Area 2 | 80-270 | Philosophy of Mind | 9 |

### 4. For an emphasis on Philosophy of Mind, a student might take:

| Area 3 | 80-211 | Logic and Mathematical Inquiry | 9 |
| Area 4 | 80-201 | Epistemology | 9 |
| Area 5 | 80-251 | Modern Philosophy | 9 |
| Area 6 | 80-275 | Metaphysics | 9 |
| 80-257 | Nietzsche | 9 |
| 80-314 | Logic and Artificial Intelligence | 9 |

### Additional Major

Students who want an additional major in Philosophy must fulfill the same departmental requirements as primary majors in Philosophy.

### Philosophy Department Minors

All majors in the Department allow for minors; in addition, there is a Minor in Ethics and an interdepartmental minor in Linguistics. The requirements are again designed to be flexible and to allow students to tailor courses to their special interests, while providing some breadth.

### The M.A. Program in Philosophy

The Department of Philosophy also offers a graduate M.A. degree in Philosophy, which culminates with the writing of a master’s thesis. It is ordinarily a two-year program, but students in the Philosophy major are able to complete the additional requirements in one year. Interested students are invited to visit the department’s homepage for further information: www.hss.cmu.edu/philosophy/.

### The Minor in Ethics

With the explosive growth of science and technology have come both new possibilities and new problems. Developments in medicine, in biology, in chemistry, in nuclear engineering or in computer science all have costs as well as benefits, and they present us with many hard choices. Some of the hardest of these new problems are moral problems.

The Philosophy Department’s Minor in Ethics introduces students to central ethical concepts and theories proposed and defended by the great philosophers of the past; it provides an understanding of how these theories and concepts can be applied to practical problems. This background in ethical theory and its applications should help students to respond more sensitively and appropriately to the new and unavoidable ethical problems that businesses, unions, and branches of government must face.

### Ethics Core Courses

Complete three courses from any of the following areas with at least two courses at the 200-level or higher.

| Area 1 | 80-130 | Introduction to Ethics | 9 |
| Area 2 | 80-135 | Introduction to Political Philosophy | 9 |
| Area 3 | 80-136 | Social Structure, Public Policy & Ethics | 9 |
| Area 4 | 80-230 | Ethical Theory | 9 |
| Area 5 | 80-235 | Political Philosophy | 9 |
| Area 6 | 80-241 | Ethical Judgments in Professional Life | 9 |
| 80-244 | Environmental Ethics | 9 |
| 80-245 | Medical Ethics | 9 |
| 80-247 | Ethics and Global Economics | 9 |
| 80-335 | Deliberative Democracy: Theory and Practice | 9 |
| 80-337 | Philosophy, Politics & Economics | 9 |
| 80-348 | Health Development and Human Rights | 9 |
| 80-430 | Ethics and Medical Research | 9 |
| 80-447 | Global Justice | 9 |

### Ethics Electives

Complete two courses at the 200-level or higher.
The Minor in Linguistics
The Interdepartmental Minor in Linguistics is jointly sponsored with the departments of English, Modern Languages, and Psychology. It synthesizes the linguistics related offerings in these departments and provides students with an academic experience that reflects both the interdisciplinary character of the subject and its cross-departmental representation in H&SS. Students who wish to receive a minor in Linguistics must complete six courses. For a detailed discussion of the curriculum and the flexible electives, consult the H&SS Interdisciplinary Minors section of the catalog.

The Minor in Logic and Computation
The Minor in Logic and Computation provides students with general course work in logic, the theory of computation, and philosophy. Students must complete six courses, among them the following three core courses.

27 units Logic and Computation Core Courses
- 80-150 Nature of Reason 9
- 80-211 Logic and Mathematical Inquiry 9
- 80-310 Formal Logic 9
- 80-311 Undecidability and Incompleteness 9

27 units Logic and Computation Electives
Students must take two courses in the Philosophy Department at the 300-level or higher, in subjects related to logic and computation, and an additional course at the 300-level or higher in an area that uses logical and computational tools, such as philosophy, computer science, linguistics, mathematics, psychology, or statistics. The choice of electives must be approved by the program director.

18 units Philosophy Electives

The Minor in Philosophy
The Minor in Philosophy allows students to complement their primary majors with a broad philosophical grounding.

9 units Logic/Methodology Requirements
Complete one course:
- 80-110 Nature of Mathematical Reasoning 9
- 80-210 Logic and Proofs 9
- 80-211 Logic and Mathematical Inquiry 9
- 80-212 Arguments and Logical Analysis 9
- 80-220 Philosophy of Science 9
- 80-221 Philosophy of Social Science 9
- 80-222 Measurement and Methodology 9
- 80-226 Revolutions in Science 9
- 80-310 Formal Logic 9
- 80-311 Undecidability and Incompleteness 9
- 80-312 Philosophy of Mathematics 9
- 80-314 Logic and Artificial Intelligence 9
- 80-315 Modal Logic 9
- 80-321 Causation, Law, and Social Policy 9
- 80-322 Philosophy of Physics 9
- 80-323 Philosophy of Biology 9
- 80-324 Philosophy of Economics 9
- 80-411 Proof Theory 9
- 80-413 Category Theory 9
- 80-513 Seminar on Mathematical Understanding and Cognition 9
- 80-514 Categorical Logic Seminar 9
- 80-515 Seminar on the Foundations of Statistics 9
- 80-516 Seminar on Causation 9
- 80-520 Seminar on Philosophy Science 9
- 80-521 Seminar on Formal Epistemology 9

18 units History of Philosophy Requirements
Complete two courses:
- 80-150 Nature of Reason 9
- 80-226 Revolutions in Science 9
KEVIN ZOLLMAN, Associate Professor of Philosophy – Ph.D., University of California, Irvine; Carnegie Mellon, 2009–.

Special Faculty

DAVID GRAY, Assistant Teaching Professor, Carnegie Mellon-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2009–.
ANDY NORMAN, – Ph.D., Northwestern University; .
JOSEPH RAMSEY, Director of Research Computing – Ph.D., University of California, San Diego; Carnegie Mellon, 2006–.
THOMAS WERNER, Assistant Teaching Professor – Ph.D., Linguistics, Rutgers University; .

Affiliated Faculty

WAYNE WU, Associate Professor and Associate Director of CNBC – Ph.D., University of California, Berkeley; Carnegie Mellon, 2010–.

Emeritus Faculty

DANA S. SCOTT, Hillman University Professor of Mathematical Logic, Computer Science and Philosophy (Emeritus) – Ph.D., Princeton University; Carnegie Mellon, 1981–.
Department of Psychology

Michael Tarr, Department Head
Department Office: Baker Hall 346-C
http://www psy.cmu.edu

Can newborn infants perceive the world as we do, or is it just "a blooming buzzing confusion"? Do personality, beliefs and social factors influence health? How do scientists and young children make discoveries, and what abilities make these insights possible? How does brain activity reveal differences in thinking? Can computers think the way people do?

These are some of the questions that psychologists at Carnegie Mellon are trying to answer.

For the student who is majoring in Psychology, Cognitive Science or Neuroscience, studying with faculty who are on the leading edge of research on questions like the above can be a very exciting experience.

The Psychology Department at Carnegie Mellon has long been noted as one of the pioneering Psychology Departments in the world, particularly in such areas as cognitive psychology, cognitive science, social psychology, developmental psychology, cognitive neuroscience, and health psychology. The Psychology Department offers 5 majors: B.A. and B.S. degrees in Psychology, as well as a B.S. degree in Cognitive Science and together with the Department of Biological Sciences, a unified B.S. double major in psychology and Biological Sciences, and an Intercollege major in Neuroscience.

The Major in Psychology

Psychology is a discipline that embraces both biological and social sciences. It is a science concerned with establishing principles and laws regarding the ways in which people think and behave through the scientific study of human behavior.

The orientation of the Carnegie Mellon Psychology curriculum is toward developing highly skilled and knowledgeable graduates. About half of our graduates go on to graduate or professional school. The remainder seek to expand their problem-oriented analytic skills to qualify themselves for job opportunities beyond those typically open to liberal arts students.

Majors in the department are expected not only to learn about findings already established by psychologists, but also to become proficient in the investigation and analysis of behavior. This includes observing behavior, formulating hypotheses, designing experiments to test these hypotheses, running experiments, performing statistical analysis, and writing reports.

The department has many resources for students to use in acquiring these skills. For instance, students interested in child development may be involved in the child development laboratory and observational facilities which are a part of the Carnegie Mellon Children's School which operates under the department's aegis. Students interested in health or clinical psychology might have opportunities to do internships in applied settings, and all Psychology majors have access to extensive computer facilities for data analysis and simulation work. The department also has a state of the art set of undergraduate research laboratories and computer clusters, and has recently acquired, through the Scientific Imaging & Brain Research Center, a magnet for conducting brain imaging studies using fMRI.

In addition to formal class work, students are encouraged to participate in elective research projects and field work via a number of opportunities available to them. They may register for a freshmen research experience course, Independent Reading in Psychology, Independent Research in Psychology, a research internship course or an Internship in Clinical or Developmental Psychology. In the Independent Research course, the student may work on an ongoing research project or develop and carry out a new research project with a faculty member. There is university and departmental funding available to help support student-initiated research projects and student travel to present research results at scientific meetings and conferences. In the Readings courses, the student reads extensively on a particular topic. The faculty member and student meet to discuss the readings, and the student writes a paper on the topic selected. The Psychology Department Website (http://www psy.cmu.edu), provides descriptions of faculty (http://www psy.cmu.edu/people/faculty.html) research interests that the student can use in determining who should be approached to supervise a particular research or reading project. Clinical internships are available with a variety of clinical settings including the prestigious Western Psychiatric Institute and Clinic (the teaching hospital of the Department of Psychiatry at the University of Pittsburgh Medical School). During the internship, students get first-hand experience with different clinical populations. Developmental internships are available in the department-run CMU Children's School (http://www psy.cmu.edu/cs). Finally, outstanding students are invited to participate in an Honors Program during their senior year. Over the course of their senior year, these students develop and carry out an original research project under faculty supervision.

Psychology Curriculum

The curriculum includes three levels of psychological course work. These result in a breadth of knowledge of psychology, training in research methods, and in-depth advanced course work in student chosen areas of psychology. Both the B.A. and the B.S. degrees are available in Psychology. Candidates for both degrees must also complete two semesters of calculus. There are three options in completing this requirement: 21-111/112 or 21-120 and either 21-122 or 21-256. Students are also required to complete a statistics sequence consisting of 36-201 or it's equivalent, followed by 36-309, Experimental Design. Both courses should be completed if possible, before the junior year. A one-semester computer programming course is also required for all Psychology majors. Finally, in addition to the H&SS General Education Natural Science requirement, B.A. candidates take one, and B.S. candidates take three additional semesters of natural science courses outside the department. This breadth of technical and scientific preparation has proven to be valuable both for students going on to graduate or professional schools and those entering the job market upon graduation.

The Department desires that majors acquire both breadth and depth in the subject matter of Psychology. The requirement for demonstration of breadth can be met by taking Introduction to Psychology (85-102) and three 200 level survey courses; it is recommended that this be started as early as possible in the student's program. Alternatively, the breadth requirement can be met by taking an additional survey course beyond the required set of three as a substitution for the intro course. As mentioned earlier, the curriculum is also organized into three broad areas of psychology: cognitive and cognitive neuroscience, developmental and social, personality, and health, each area includes a survey course, a research methods and an array of advanced seminars that allow students to develop depth of knowledge within the chosen area.

Overall, the major includes Introduction to Psychology (or a 4th survey course), 36-309, three survey courses at the 200-level, two research methods courses, two advanced courses and an experimental design course taught in the Department of Statistics. These include a total of 81 units. Advanced courses, which are often in the form of small seminars, examine in great depth different sub areas of psychology. The 18-unit advanced course requirement must be fulfilled by taking content seminars or courses rather than through Independent Research, Independent Reading, or Internship courses. In addition to the small number of required psychology courses, the department offers a variety of other courses, seminars, independent research and supervised experiences and students are encouraged to sample these by means of the large number of elective units that are part of the program.

Prospective Psychology majors are encouraged to begin major requirements and prerequisites prior to the junior year, if possible. In particular, completion of the calculus and statistics sequences, Introduction to Psychology and/or one or more Psychology Survey courses would enable students to take corresponding research methods courses in the sophomore or early in the junior year, and thus prepare themselves to take advantage of advanced research opportunities in the department.

37-38 units
Mathematics & Statistics Prerequisites

<table>

* Student who place out of 21-120 are only required to successfully complete 21-122 or 21-256 instead of the full two-semester sequence. 21-124 may be an acceptable substitute for 21-122 for those students interested in Biology or Neuroscience.
Graduation Brochure.

The completion of a concentration will be recognized in the Psychology copies of the form kept by the student, the advisor and the department. The advisor sign off on the agreed upon concentration courses, with the Undergraduate Program Coordinator, Emilie Rendulic, and having the latter option involves picking up copies of a concentration form from concentrations with the approval of the student's Psychology advisor.

Students who wish to focus their Psychology program on a specific area can do so either by the careful selection of Psychology elective courses that focus on their area of interest or by pursuing one of the following major requirement and B.A. candidates complete one science course beyond the 36-309. In addition, B.S. candidates must take the three-course science calculus prerequisites and the 36-201 statistics course or equivalent and survey courses at the 200-level, two research methods courses, and two in other words, the breadth requirement, computing requirement, three survey courses, constitutes the breadth requirement. The latter option involves picking up copies of a concentration form from the Undergraduate Program Coordinator, Emile Rendulic, and having the advisor sign off on the agreed upon concentration courses, with copies of the form kept by the student, the advisor and the department. The completion of a concentration will be recognized in the Psychology Graduation Brochure.

### Health-Psychology Concentration

For Psychology majors who wish to have a focus of their study on Health Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

**As part of the B.S. science requirement:**

- 03-121 Modern Biology
- + one additional Biology course

**As part of the psychology breadth requirement, at least two of the following:**

- 85-219 Biological Foundations of Behavior
- 85-241 Social Psychology
- 85-251 Personality

**As part of the psychology Research Methods requirement:**

**As part of the advanced coursework in psychology requirement, at least two of the following:**

- 85-442 Health Psychology
- 85-443 Social Factors and Well-Being
- 85-501 Stress, Coping and Well-Being

### Cognitive-Neuroscience Concentration

For Psychology majors who wish to have a focus of their study be on Cognitive Neuroscience, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

**As part of the B.S. Science requirement:**

- 03-121 Modern Biology
- 03-363 Systems Neuroscience

**As part of the psychology Breadth requirement:**

- 85-211 Cognitive Psychology
- 85-219 Biological Foundations of Behavior

**As part of the Research Methods requirement:**

- 85-310 Research Methods in Cognitive Psychology

**As part of the advanced coursework in psychology requirement, at least two of the following:**

- 85-356 Music and Mind: The Cognitive Neuroscience of Sound
- 85-370 Perception
- 85-406 Autism: Psychological and Neuroscience Perspectives
- 85-414 Cognitive Neuropsychology
- 85-419 Introduction to Parallel Distributed Processing
- 85-429 Cognitive Brain Imaging

### Developmental Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Developmental Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

**As part of the B.S. science requirement:**

- 03-121 Modern Biology

**As part of the psychology Breadth requirement:**

- 85-221 Principles of Child Development

**As part of the psychology Research Requirement:**

- 85-320 Research Methods in Developmental Psychology

**As part of the advanced coursework in psychology requirement, at least two of the following:**

- 85-354 Infant Language Development
- 85-363 Attention, Its Development and Disorders

### Additional Major in Psychology

In order to complete an additional major in Psychology, a student must fulfill all of the Psychology major requirements within the department – in other words, the breadth requirement, computing requirement, three survey courses at the 200-level, two research methods courses, and two advanced courses. These courses must include at least 81 units, plus calculus prerequisites and the 36-201 statistics course or equivalent and 36-309. In addition, B.S. candidates must take the three-course science requirement and B.A. candidates complete one science course beyond the GenEd requirement.

### Concentrations within the Psychology Major

Students who wish to focus their Psychology program on a specific area can do so either by the careful selection of Psychology elective courses that focus on their area of interest or by pursuing one of the following concentrations with the approval of the student's Psychology advisor. The latter option involves picking up copies of a concentration form from the Undergraduate Program Coordinator, Emile Rendulic, and having the advisor sign off on the agreed upon concentration courses, with copies of the form kept by the student, the advisor and the department. The completion of a concentration will be recognized in the Psychology Graduation Brochure.

### Cognitive Neuropsychology Concentration

For Psychology majors who wish to focus their study on Cognitive Neuropsychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

**As part of the B.S. science requirement:**

- 03-121 Modern Biology

**As part of the psychology Breadth requirement:**

- 85-211 Cognitive Psychology

**As part of the advanced coursework in psychology requirement, at least two of the following:**

- 85-356 Music and Mind: The Cognitive Neuroscience of Sound
- 85-370 Perception
- 85-406 Autism: Psychological and Neuroscience Perspectives
- 85-414 Cognitive Neuropsychology
- 85-419 Introduction to Parallel Distributed Processing
- 85-429 Cognitive Brain Imaging

### Developmental Psychology Concentration

For Psychology majors who wish to focus their study on Developmental Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor's approval.

**As part of the B.S. science requirement:**

- 03-121 Modern Biology

**As part of the psychology Breadth requirement:**

- 85-221 Principles of Child Development

**As part of the psychology Research Requirement:**

- 85-320 Research Methods in Developmental Psychology

**As part of the advanced coursework in psychology requirement, at least two of the following:**

- 85-354 Infant Language Development
- 85-363 Attention, Its Development and Disorders
85-406 Autism: Psychological and Neuroscience Perspectives
85-423 Cognitive Development

Additional course requirement, one of the following:
85-484 Practicum in Child Development
03-330 Genetics
03-350 Developmental Biology

Additional Course Requirement choose one of the following:
85-507 Research in Psychology or 85-508 Research in Psychology in Development
or an additional advanced seminar in Development

Cognitive Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Cognitive Psychology and/or Cognitive Modeling, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor’s approval.

As part of the B.S. science requirement:
03-121 Modern Biology
As part of the psychology Breadth requirement:
85-211 Cognitive Psychology
As part of the psychology Research Methods requirement:
85-310 Research Methods in Cognitive Psychology
As part of the advanced coursework in psychology requirement, at least two of the following:
85-355 Introduction to Cognitive Neuroscience
85-356 Music and Mind: The Cognitive Neuroscience of Sound
85-370 Perception
85-380 In Search of Mind: The History of Psychology
85-390 Human Memory
85-392 Human Expertise
85-395 Applications of Cognitive Science
85-406 Autism: Psychological and Neuroscience Perspectives
85-412 Cognitive Modeling
85-414 Cognitive Neuropsychology
85-419 Introduction to Parallel Distributed Processing
85-421 Language and Thought
85-426 Learning in Humans and Machines

Additional Course Requirement choose one of the following:
85-507 Research in Psychology or 85-508 Research in Psychology in Cognition
or an additional advanced seminar in Cognition

Social-Personality Psychology Concentration

For Psychology majors who wish to have a focus of their study be on Social and/or Personality Psychology, the following courses should be selected as part of their Psychology Major in conjunction with their Psychology advisor’s approval.

As part of the Psychology breadth requirement:
85-241 Social Psychology
85-251 Personality
As part of the Psychology research methods requirement:
85-340 Research Methods in Social Psychology
As part of the advanced coursework in psychology requirement, at least two of the following:
85-352 Evolutionary Psychology
85-358 Pro-Social Behavior
85-375 Crosscultural Psychology
85-377 Attitudes and Persuasion
85-443 Social Factors and Well-Being
85-444 Relationships
85-446 Psychology of Gender
85-501 Stress, Coping and Well-Being

Additional Course Requirement choose one of the following:
85-507 Research in Psychology or 85-508 Research in Psychology in Social/Personality
or an additional advanced seminar in Social/Personality

Neuroscience Major

The Psychology Department at Carnegie Mellon University has a major focus on the role of the brain and nervous system in cognition and behavior, including biological approaches involving the health impact that arises from the interaction of behavior with the nervous, endocrine, and immune systems. These interests are manifested in faculty research (http://www.psy.cmu.edu), departmental and university centers that operate from or heavily involve the department (e.g., the Center for Cognitive Brain Imaging (http://www.ccbi.cmu.edu), and the Center for the Neural Basis of Cognition (http://www.cnbc.cmu.edu)) as well as undergraduate coursework (http://www.psy.cmu.edu/undergrad_program) and graduate coursework. For undergraduates, there are a number of ways in which students with an interest in these approaches can pursue that interest in an organized fashion.

The Bachelor of Science in Neuroscience is listed in the Undergraduate catalog. It is a joint degree program offered between the Dietrich College of Humanities and Social Sciences and Mellon College of Science. Dietrich students interested in pursuing the BS in Neuroscience should contact Emmanuel Rendulic at emili@andrew.cmu.edu with more information being found on the CMU Neuroscience website (http://www.cmu.edu/neuro).

Finally, for any interested student, there is a minor in Cognitive Neuroscience available through the Psychology department (see below).

Unified Double Major in Psychology & Biological Sciences

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

Note: Students entering from the College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology. Students in the joint Science and Humanities Scholars (SHS) program can complete the SHS educational core or heavily involve the department (e.g., the Center for Cognitive Brain Imaging (http://www.ccbi.cmu.edu), and the Center for the Neural Basis of Cognition (http://www.cnbc.cmu.edu)) as well as undergraduate coursework (http://www.psy.cmu.edu/undergrad_program) and graduate coursework. For undergraduates, there are a number of ways in which students with an interest in these approaches can pursue that interest in an organized fashion.

Depending on a student’s home college (H&SS or MCS), General Education (GenEd) requirements will be different. GenEd requirements for H&SS (p. 196) and MCS (p. 293) are found on their respective Catalog pages.

complete 15-112 Fundamentals of Programming and Computer Science, as their departmental computing course. Because of the number and sequential nature of required courses, prospective Cognitive Science majors are encouraged to begin course work for the major prior to junior year. In particular, completion of calculus, 36-201, and 85-211 or 85-213 before the junior year will enable students to complete 85-310 and 36-309 and by the Fall semester of their sophomore or junior year and, if interested, to then take advantage of research opportunities in the department.

*The 3-Semester sequence 21-111 /21-112/21-256 may be substituted by students who have already taken 21-111 before deciding on the major.

10 unitsComputing Prerequisite
15-112 Fundamentals of Programming and Computer Science 12

37-38 unitsMathematics & Statistics Prerequisites
21-120-21-256 Differential and Integral Calculus - Multivariate Analysis 19
or 21-120 Differential and Integral Calculus and Integration and Approximation
21-127 Concepts of Mathematics 10
36-201 Statistical Reasoning and Practice 9
36-309 Experimental Design for Behavioral and Social Sciences 9

*Students who place out of 21-120 are only required to successfully complete 21-122 or 21-256 instead of the full two-semester sequence.

Computational/ 29–31 units Cognitive Modeling Core
Two of the following:
15-122 Principles of Imperative Computation 10
15-150 Principles of Functional Programming 10
15-251 Great Theoretical Ideas in Computer Science 12

Plus one of the following:
Units
85-412 Cognitive Modeling 9
85-419 Introduction to Parallel Distributed Processing 9
85-426 Learning in Humans and Machines 9

Cognitive Psychology Core
Units
85-211 Cognitive Psychology 9
or 85-213 Human Information Processing and Artificial Intelligence
85-310 Research Methods in Cognitive Psychology 9

One of the following:
Units
85-219 Biological Foundations of Behavior 9
85-355 Introduction to Cognitive Neuroscience 9
85-414 Cognitive Neuropsychology 9

Cognitive Science Concentration (4 courses, concentration approval required)
These four courses are chosen in conjunction with your advisor to form a coherent area of concentration from the course list under “Cognitive Science Concentration” in the current Undergraduate Catalog. Before proceeding with the choice of courses, students must fill out the concentration form, obtained from their advisor, with a description of the concentration area and the planned set of four courses. Courses not represented on the list may, with pre-approval of advisor and department, be used to satisfy part of this requirement. The four courses are not required to be within any single category below but be coherent within the major and the focus may vary across disciplinary boundaries.

36 units

Computer Science
15-385 Introduction to Computer Vision 6
15-453 Formal Languages, Automata, and Computability 9
10-601 Introduction to Machine Learning 12
05-410 User-Centered Research and Evaluation 12
05-432 Personalized Online Learning 12

Psychology
85-219 Biological Foundations of Behavior 9
85-352 Evolutionary Psychology 9
85-355 Introduction to Cognitive Neuroscience 9
85-370 Perception 9
85-375 Crosscultural Psychology 9
85-380 In Search of Mind: The History of Psychology 9
85-390 Human Memory 9
85-392 Human Expertise 9
85-395 Applications of Cognitive Science 9
85-406 Autism: Psychological and Neuroscience Perspectives 9
85-412 Cognitive Modeling 9
85-414 Cognitive Neuropsychology 9
85-419 Introduction to Parallel Distributed Processing 9
85-421 Language and Thought 9
85-422 Infancy 9
85-423 Cognitive Development 9
85-426 Learning in Humans and Machines 9
85-429 Cognitive Brain Imaging 9
85-601/602 Senior Thesis 9
66-501/502 H&SS Senior Honors Thesis I 9

Philosophy
80-210 Logic and Proofs 9
80-211 Logic and Mathematical Inquiry 9
80-220 Philosophy of Science 9
80-254 Analytic Philosophy 9
80-255 Pragmatism 9
80-270 Philosophy of Mind 9
80-310 Formal Logic 9
80-311 Undecidability and Incompleteness 9
80-314 Logic and Artificial Intelligence 9

Linguistics
76-385 Introduction to Discourse Analysis 9
80-280 Linguistic Analysis 9

Decision Sciences
88-302 Behavioral Decision Making 9

Neurosciences
03-362 Cellular Neuroscience 9
03-363 Systems Neuroscience 9
42-202 Physiology 9
15-386 Neural Computation 9
15-883 Computational Models of Neural Systems 12

Appropriate courses offered by the Department of Neuroscience at the University of Pittsburgh (available during the academic year through cross-registration) may also be included as part of this breadth option. This would include the following courses (course numbers are University of Pittsburgh numbers, offered through its Department of Neuroscience) (minimum) 18 units Supplementary Science Requirement

The Cognitive Science program requires two additional science courses (in the same science) beyond the college's two-course Science and Technology General Education requirement.
85-355

These can be selected from any one of the following areas.
03-xxx Biology *
09-xxx Chemistry
33-xxx Physics

* Those interested in a cognitive neuroscience focus are recommended to take biology courses, including if possible, 03-362, or 03-363.

Additional Major in Cognitive Science
In order to complete a double major in Cognitive Science, a student must fulfill the major requirements as listed under the Cognitive Science major. These include the programming requirement (15-112), the Mathematics and Statistics prerequisites, Computational/Cognitive Modeling Core, The Cognitive Psychology Core, the Cognitive Science Concentration Requirement, and the Supplementary Science Requirement. Students will be assigned a department advisor to help plan their program of studies in Cognitive Science.

Minors in Psychology and Cognitive Neuroscience
These are available to all students across the university.

Minor in Psychology
73 units Curriculum - Psychology Minor

I. Introductory course
85-102 Introduction to Psychology 9

II. Area Survey courses
Complete two courses.
85-211 Cognitive Psychology 9
or 85-213 Human Information Processing and Artificial Intelligence 9
85-219 Biological Foundations of Behavior 9
85-221 Principles of Child Development 9
85-241 Social Psychology 9
85-251 Personality 9

III. Statistics
36-201 Statistical Reasoning and Practice 9
36-309 Experimental Design for Behavioral and Social Sciences 9

27 units Upper Level Courses
Complete three courses from categories IV and V, with at least one course from each.

IV. Research Methods Courses (minimum 9 units)
85-310 Research Methods in Cognitive Psychology * 9
85-320 Research Methods in Developmental Psychology * 9

* Prerequisites for all Research Methods courses: 36-309 and the appropriate survey course.
(Note: 36-309 may be taken concurrently as a co-requisite.)

V. Advanced courses (minimum 9 units)
These courses exist within three areas (cognitive, cognitive neuroscience, developmental and social and health psychology), and carry course numbers from 85-341 to 85-442. In cases where it is not obvious which track an advanced course belongs to from the title/description, the advanced courses usually include the appropriate survey course or research method course as a prerequisite in their catalog course description.

Minor in Cognitive Neuroscience
The minor in Cognitive Neuroscience offered by the Department of Psychology is similar to the Neuroscience Minor offered by the Department of Biological Sciences. The differences between the two forms of the minor are determined by one required course, and additionally, by the students' choice of distribution electives.

The requirements for the Cognitive Neuroscience Minor include 7 courses: four required courses, and three distribution and elective courses.

Curriculum - Cognitive Neuroscience

Required coursework:

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td>03-121</td>
<td>Modern Biology</td>
<td>9</td>
</tr>
</tbody>
</table>
The Honors Program

The Honors Program provides recognition of outstanding performance by students in Psychology or Cognitive Science. Participation enables students to pursue their own research ideas through completion of an honors thesis. The honors thesis is completed during the senior year. By completing a thesis, the student earns 18 units of credit and qualifies for graduation with "College Honors." To qualify for the Honors Program, the student must maintain a quality point average of at least 3.50 in the major and 3.25 overall, and be invited by the college to become a participant. A year long senior thesis course exists for students interested in pursuing a sizable research project who do not qualify for the honors program.

Distribution Requirements: Three Courses, including at least 1 from each of the following categories:

<table>
<thead>
<tr>
<th>Approaches to Cognitive Neuroscience</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-362 Systems Neuroscience</td>
<td>9</td>
</tr>
<tr>
<td>03-219 Biological Foundations of Behavior</td>
<td>9</td>
</tr>
<tr>
<td>03-211 Cognitive Psychology</td>
<td>9</td>
</tr>
</tbody>
</table>

Students pursuing the Neuroscience Minor through the Department of Biological Science would take 03-362 Cellular Neuroscience instead.

36-746 Statistical Methods for Neuroscience and Psychology is also a possible choice offered intermittently.

Cognitive Neuroscience Electives

<table>
<thead>

TIMOTHY VERSTYEN, Assistant Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2006–.
The Department of Social and Decision Sciences is a multidisciplinary department that offers undergraduate programs that seamlessly combine frontier knowledge in the social sciences with the practical skills needed to excel in key decision-making roles in the public and private sectors and in advanced studies. Our students learn how to combine intellectual ideas with the realities of human and organizational behavior and to apply these lessons across a wide variety of endeavors, ranging from government service to leadership positions in the information economy.

The department offers undergraduate majors in Decision Science, International Relations and Politics, and Policy and Management. The majors leverage off of our departmental core that includes courses in decision analysis, empirical research, organizations, and policy analysis. In addition to completing this core, students also specialize in their major area through a set of required and elective courses.

Our faculty is committed to the academic success and growth of our students and many of our undergraduates work with faculty on research projects and internships. The directors of the majors are easily accessible and encourage students to talk with them about their curriculum, progress, and available opportunities.

The Department of Social and Decision Sciences has a long history of creating innovative and prescient undergraduate programs that combine key ideas from across the social sciences into cohesive majors that allow our graduates to excel in their chosen professions or in the pursuit of advanced studies. Our emphasis on the theory and practice of individual and social decision making linked with our high-quality, multidisciplinary social science faculty, provides a solid foundation from which graduates can embrace a variety of future paths.

The Major in Decision Science

Baruch Fischhoff, Faculty Director
Office: Porter Hall 219E
Connie Angermeier, Academic Advisor
Office: Porter Hall 208A
Email: cla2@andrew.cmu.edu

The interdisciplinary field of Decision Science seeks to understand and improve the judgment and decision making of individuals, groups, and organizations. Qualified graduates can continue to PhD programs in Decision Science or related fields (e.g., psychology, business), pursue professional degrees (e.g., MBA, MD, JD, MPH), or take professional positions in business, government, consulting, or the non-profit sector. Students work with faculty and the Academic Advisor to tailor their education to their specific needs and interest.

Carnegie Mellon is one of the leading centers for the study of Decision Science - and offers the only undergraduate major that integrates analytical and behavioral approaches to decision making. Our faculty are involved in applying Decision Science in a wide variety of areas, allowing them to share practical experiences with students. These applications include medical decision making (e.g., conveying the costs and benefits of treatment options), legal decision making (e.g., understanding the effects of anger on attributions of responsibility for accidents), risk management (e.g., assessing and communicating the risks of climate change), marketing (e.g., understanding the effects of inter-temporal choice on purchasing decisions), and business (e.g., identifying unrecognized conflicts of interest).

Decision Science is grounded in theories and methods drawn from psychology, economics, philosophy, statistics, and management science. Courses in the major cover the three aspects of decision science: (a) normative analysis, creating formal models of rational choice; (b) descriptive research, studying how cognitive, emotional, social, and institutional factors affect judgment and choice, and (c) prescriptive interventions, seeking to improve judgment and decision making. In addition to gaining a broad education in the principles of judgment and decision making, Decision Science majors gain broadly applicable skills in research design and analysis. They also have the chance to think about and discuss decision making in many different areas.

The core courses in Decision Science cluster into two categories. The theory cluster presents fundamental theories and results from the empirical study of decision making, as well as the application of decision-making research to real-world problems. The research methods cluster introduces students to methods for collecting and analyzing behavioral data. For example, students learn to conduct surveys (e.g., uncovering consumer or managerial preferences), design experiments evaluating psychological and economic theories, and evaluate the effectiveness of interventions.

The elective courses provide students with additional knowledge in areas of decision making that meet their personal, intellectual, and career goals. These courses are organized into six clusters: biological and behavioral aspects of decision making, managerial and organizational aspects, philosophical and ethical perspectives, economic and statistical methods, public policy, and research methods. Students can concentrate in one area or spread their studies across them. In addition to coursework, the department offers research opportunities for interested and qualified students. Participating in research helps students to extend their mastery of decision science, discover whether a research career is right for them, and get to know faculty and graduate students better.

Prerequisites

All Decision Science majors must complete mathematics, statistics, and analytic methods prerequisites (see below), by the end of the sophomore year.

Mathematics Prerequisite

21-111 21-112 Calculus I-II
or 21-120 Differential and Integral Calculus

Statistics Prerequisite

36-201 Statistical Reasoning and Practice

Students must take one course from the following set (or an approved alternative). Students may not count a course used to fulfill the Mathematics Prerequisite as also filling the Analytic Methods Prerequisite.

Analytic Methods Prerequisite

21-122 Integration and Approximation
21-256 Multivariate Analysis
21-257 Models and Methods for Optimization
36-309 Experimental Design for Behavioral and Social Sciences
36-401 Modern Regression
36-410 Introduction to Probability Modeling
80-211 Logic and Mathematical Inquiry
80-212 Arguments and Logical Analysis

Curriculum

The core curriculum in Decision Science consists of two courses in empirical research methods and five courses providing the theoretical perspectives of Decision Science.

Theoretical Perspectives

88-120 Reason, Passion and Cognition
85-211 Cognitive Psychology
88-220 Policy Analysis I
88-223 Decision Analysis and Decision Support Systems
88-302 Behavioral Decision Making

** 88-120 should be taken in the freshman or sophomore year.

Research Methods

36-202 Statistical Methods
45 units Electives

Complete at least 45 units of courses from the following categories. The selected courses may be from one category or from any combination. Note that not all elective courses are offered every year.

At least three of these courses (27 units) must be Department of Social and Decision Sciences courses (88-xxx).

Complete at least 45 units of courses from the following categories. The following categories must each be represented by at least one course;

This is presented as a two-year (junior-senior) plan for completing major requirements, with the exception of 88-120 and 36-202. Its purpose is to show that this program can be completed in as few as two years, not that it must be. Students may enter their major, and begin major course requirements, as early as the start of the sophomore year. Students should consult their advisor when planning their program. Students who are planning to study abroad or to apply for the Heinz Accelerated Masters Program will have a very different curriculum map and should consult early – and often – with the Academic Advisor.

Students are encouraged to consider the Washington Semester Program as part of their education. Suitable courses will be considered as fulfilling requirements of electives in the major. Please send the course syllabus, along with a note explaining how the course addresses fundamental aspects of decision science in one of the six elective categories.

**This course should be taken as the first course in the Decision Science sequence. It is intended for students in their first or second year; it is offered in Spring semesters. It may be taken as late as the junior year.**

### Additional Major in Decision Science

Students who elect Decision Science as an additional major must fulfill all of the requirements of the Decision Science major.

Students pursuing International Relations and Politics with an additional major in Decision Science may only count 36-202, 88-220, and 88-251 toward the completion of both majors.

Students pursuing Policy and Management with an additional major in Decision Science and may only count 36-202, 88-220, 88-223, and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Decision Science should see the Academic Advisor of the Decision Science program.

### The Major in International Relations and Politics

Kiron K. Skinner, Faculty Director; kskinner@andrew.cmu.edu

Emily Half, Academic Program Manager; ehalf@andrew.cmu.edu, Baker Hall A60C, 412-268-7082

http://www.cmu.edu/ir

The International Relations and Politics (IRP) major analyzes the role of politics at the national, regional, international, and transnational levels;
examine political and institutional arrangements within and among these levels; and investigates the grand strategy of nation-states.

Statesmen, scholars, and policy makers often define grand strategy as the combination of diplomatic, economic, military, and political factors used by leaders to defend their respective nation-states. The IRP major investigates the way in which leaders and citizens construct grand strategy and national security policy more generally; the impact of domestic and international forces on states’ security and economic policies; and the significance of alliances, coalitions, and international institutions for world politics.

Although the study of grand strategy and political institutions is the flagship initiative of the major, students are also able to study the effects of culture, economics, and society on the international system through a rich set of elective courses.

Thinking systematically about international and domestic politics is the core objective of the IRP major. To this end, the major has prerequisites in analytical methods, mathematics, and statistics that help to sharpen students’ ability to undertake scientific analysis in the required substantive and historical courses. The major is rooted in the discipline of political science but also utilizes the interdisciplinary strengths of the Department of Social and Decision Sciences (SDS), which include behavioral decision science, complex social systems, economics, the department’s program in strategy, entrepreneurship and technological change, and political history. Thus, students pursuing this major will use the analytic tools of game theory, economic and statistical analysis, qualitative analysis, rational choice theory, and theories of behavioral decision making as they study alliances, coalitions, institutions, and political strategy.

Recognizing the influence of language and culture on politics, students are required to complete the intermediate (200) level, or its equivalent, in a modern language other than English. Advanced-level study is strongly encouraged.

Open to all Carnegie Mellon undergraduates, the Carnegie Mellon University Washington Semester Program (CMU/WSP) (http://www.cmu.edu/washington-semester-program) allows students to study public policy and intern in Washington for one semester. Courses taken through CMU/WSP will count toward the elective sequence in public policy for IRP majors.

Students’ understanding of politics is further informed by courses and colloquia offered by CMU’s top-ranked departments, divisions, and schools in business, computer science, engineering, and the humanities. IRP majors interested in developing their research skills are encouraged to apply for a research position with the Center for International Relations and Politics. They are also encouraged to join student organizations focused on domestic or international politics. Becoming involved in the Social and Decision Sciences Department and the Student Advising Council, as well as attending lectures and events sponsored by the Center for International Relations and Politics and SDS, will provide additional opportunities for students.

The International Relations and Politics major is offered through the Department of Social and Decision Sciences. It is available as a primary major and an additional major in the Dietrich College of Humanities and Social Sciences.

Prerequisites

All International Relations and Politics majors must complete mathematics, statistics, and analytic methods prerequisites (see below) by the end of the sophomore year.

Mathematics Prerequisite

Language Requirement

Students are required to complete the intermediate (200) level or the equivalent in a modern language other than English. Advanced level study is strongly encouraged. Students who successfully pass a language placement exam on campus at the intermediate II level or higher will be required to take an advanced language course to satisfy the language requirement.

45 units Electives

International Relations and Politics students will either:

Option 1) take 45 units (five courses) from the elective lists below. Students must take three courses (27 units) from the Department of Social and Decision Sciences category. The remaining two courses (18 units) must come from the Economics and Society and/or International Cultures categories. At least two courses (18 units) must be from the Department of Social and Decision Sciences (88-xxx). Most courses listed below are 9-unit courses, but some are fewer. When courses offered for fewer than 9 units are chosen, students should note that a minimum of 45 units is required, and should plan to take one or more additional courses as appropriate.

OR

Option 2) complete all (or the majority of) their electives via the Carnegie Mellon University Washington Semester Program (CMU/WSP) Public Policy elective sequence. Any elective units not fulfilled during CMU/WSP may be completed through coursework from the Grand Strategy and Political Institutions elective list.

The Washington Semester Program (CMU/WSP) Public Policy Elective Sequence includes:

- Core Seminar (12 units)
- Elective Seminar (12 units)
- Internship and Internship Seminar (15 units)
- Policy Forum (9 units) - This course will count toward the IRP Capstone Policy Forum (88-450) Core Course Requirement.

NOTE: Some courses have additional prerequisites.

International Relations and Politics, B.S.

These sample curricula represent a plan for completing the requirements for the B.S. in International Relations and Politics. International Relations and Politics students are encouraged to spend a semester studying and interning in Washington, DC, through the CMU/WSP (http://www.cmu.edu/ir/washington-semester-program), and/or study abroad. The plan below demonstrates that a semester off-campus fits well into the curriculum. As with most majors in the Dietrich College, the International Relations and Politics major can be completed in as few as two years of undergraduate study, not that it must be. Students may declare the B.S. in International Relations and Politics and take appropriate courses as early as the second semester of the freshman year and as late as the junior year, and should consult frequently with the academic program manager (see above) about their course of study.

### Freshman

### Senior

*All students are strongly encouraged to participate in the CMU/WSP (http://www.cmu.edu/ir/washington-semester-program) and/or in a study abroad program. Spring semester of the junior year is a popular semester to study off-campus. However, International Relations and Politics majors may instead choose to participate in the CMU/WSP or study abroad in spring of sophomore year, fall of junior year, or fall of senior year. Students should consult the academic advisor when planning their curricular program.

**Students are not required to complete a college honors thesis. However, many International Relations and Politics majors choose to apply for the senior honors thesis program. Students who do not pursue a senior honors thesis should select an elective in its place.

### Additional Major

Students who elect International Relations and Politics as an additional major must fulfill all of the requirements of the International Relations and Politics major.

Students pursuing Decision Science or Policy and Management with an additional major in International Relations and Politics may only count 36-202, 88-220, and 88-251 toward the completion of both majors. Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor.

### The Major in Policy and Management

Paul Fischbeck, Director
Office: Porter Hall 208F
Connie Angermeier, Academic Advisor

The Policy and Management major prepares students for key decision-making and management roles in government, non-profit organizations, and business. The major emphasizes analytic approaches to decision making and practical management skills necessary for graduates to excel in both the public and private sectors. The multidisciplinary curriculum merges frontier knowledge on both the ideals of decision making, policy, and organization, as well as the realities of individual and organizational behavior that must be confronted if high-quality outcomes are going to be attained.

The major is comprised of four clusters of courses. The Analytic Methods requirement consists of four courses that provide theoretical training and practical experience in problem solving and decision making. These courses provide systematic methods for dealing with the complexities that make decisions difficult, ranging from incorporating issues of risk and uncertainty in decision making to dealing with choices that have mutually conflicting objectives. For example, a business or government agency may need to decide on a policy for mitigating the uncertain impacts of air pollution while simultaneously trying to minimize the costs of such a policy on manufacturing. A firm might want to consider the uncertain reductions in security dangers from alternative policies to protect against terrorism.

In this requirement, students will gain an appreciation of the economic analysis of complex decisions, as well as the trade-offs between economic and political-based decision making.

The Organizational Context requirement is a course that emphasizes the analysis of how people organize and coordinate their behavior to perform complex tasks that are beyond the capability of any single individual. The course uses a multidisciplinary approach to analyze the potential shortcomings of large organizations, such as inertia, group-think, coordination failure, and bureaucratic infighting.

The Research Methods requirement is comprised of two courses focused on key methods for collecting and analyzing data that are needed to make informed decisions. Students learn to use interviews, surveys, experiments, and econometric methods to enhance their ability to test existing, and design new, policies.

Finally, the Electives requirement consists of five courses chosen by the student, in coordination with the Academic Advisor, to add depth and breadth to the major. These courses are chosen from five categories that emphasize different aspects of decision making and management: (1) policy making, (2) management, (3) technology and information, (4) international policy, and (5) political science and law. The selected courses may be from one category or from any combination of categories.

The Policy and Management major provides an excellent combination of theoretical and practical skills for students who intend to seek managerial positions. Because of its strong analytic orientation, it is also an excellent major for those who intend to go on to professional school programs in law, business, or public policy. It is also an appropriate choice for students pursuing graduate degrees in economics, political science, or decision science. One such graduate option is the accelerated masters program offered by the H. J. Heinz III School of Public Policy and Management, in which a student earns both a B.S. in Policy and Management and a M.S. in Public Policy and Management in five years.

### Prerequisites

All Policy and Management majors must complete mathematics and statistics prerequisites (see below), by the end of the sophomore year.

**Mathematics Prerequisites**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>21-111-21-112 Calculus I-II</td>
<td>10-20</td>
<td></td>
</tr>
<tr>
<td>21-120 Differential and Integral Calculus</td>
<td>10</td>
<td>21-122 Integration and Approximation or 21-256 Multivariate Analysis</td>
</tr>
</tbody>
</table>

Students who successfully pass the proctored Calculus Assessment on campus or who receive credit through accepted standardized exams (such as AP, IB, or Cambridge) at the 21-122 level will be required to take a more advanced 21-xxx course for this prerequisite. 21-240 or 21-256 are suggested.

**Statistics Prerequisite**

<table>
<thead>
<tr>

<tr>
<td>88-221 Policy Analysis II</td>
<td>9</td>
<td></td>
</tr>
<tr>
<td>88-223 Decision Analysis and Decision Support Systems</td>
<td>9</td>
<td></td>
</tr>
</tbody>
</table>
At least 27 units (a minimum of three courses) must be Social and Decision Sciences from one category or from any combination of categories. The categories were created only to help in your selection process. You may select courses from one category or from any combination of categories.

Complete at least 45 units (a minimum of five courses) from the following categories of courses. Most courses listed below are 9-unit courses, but some are less. When courses offered for less than 9 units are chosen, students should note that a minimum of 45 units is required, and should plan to take one or more additional courses as appropriate. The categories were created only to help in your selection process. You may select courses from one category or from any combination of categories. At least 27 units (a minimum of three courses) must be Social and Decision Sciences courses (88-xxx).

### 1. Policy Making
- **Units**
- 36-303 Sampling, Survey and Society 9
- 73-328 Health Economics 9
- 73-331 Political Economy of Inequality and Redistribution 9
- 73-340 Labor Economics 9
- 73-352 Public Economics 9
- 73-357 Regulation: Theory and Policy 9
- 79-335 Drug Use and Drug Policy 9
- 79-374 American Environmental History: Critical Issues 9
- 80-321 Causation, Law, and Social Policy 9
- 88-352 Environmental Economics and Policy 9
- 88-365 Behavioral Economics and Public Policy 9
- 88-423 Institutions, Entrepreneurship, and Innovation 9
- 88-435 Analysis of Uncertain Social Systems 9

### 2. Management
- **Units**
- 70-321 Negotiation and Conflict Resolution 9
- 70-332 Business, Society and Ethics 9
- 70-342 Managing Across Cultures 9
- 70-430 International Management 9
- 80-241 Ethical Judgments in Professional Life 9
- 80-244 Environmental Ethics 9
- 80-344 Management, Environment, and Ethics 9
- 88-341 Organizational Communication 9
- 88-360 Behavioral Economics 9
- 88-363 Behavioral Economics Theory 9
- 88-367 Behavioral Economics in the Wild 9
- 88-387 Social Norms and Economics 9
- 88-402 Modeling Complex Social Systems 9
- 88-403 Network and Social Systems 9
- 88-419 Negotiation 9
- 19-402 Telecommunications Technology, Policy & Management 9
- 19-448 Science, Technology & Ethics 9
- 73-474 The Economics of Ideas: Growth, Innovation and Intellectual Property 9
- 79-342 Introduction to Science and Technology Studies 9
- 80-341 Computers, Society and Ethics 9
- 88-345 Perspectives on Industrial Research and Development 9
- 88-347 Complex Technological Systems: Past, Present, and Future 9

### 3. Technology and Information
- **Units**
- 88-371 Entrepreneurship, Regulation and Technological Change 9
- 88-391 Technology and Economic Growth 9
- 88-415 Global Competitiveness: Firms Nations, and Technological Change 9

### 4. International Policy
- **Units**
- 79-278 Rights to Representation: Indigenous People and their Media 9
- 80-247 Ethics and Global Economics 9
- 80-447 Global Justice 9
- 88-362 Diplomacy and Statecraft 9
- 88-384 Conflict and Conflict Resolution in International Relations 9
- 88-408 Attitudes the Media and Conflict in International Relations 9
- 88-411 The Rise of the Asian Economies 9
- 88-414 International and Subnational Security 9

### 5. Political Science and Law
- **Units**
- 70-364 Business Law 9
- 70-365 International Trade and International Law 9
- 73-408 Law and Economics 9
- 79-354 Law, Ethics, and the Life Sciences 9
- 80-235 Political Philosophy 9
- 80-321 Causation, Law, and Social Policy 9
- 88-281 Topics in Law: 1st Amendment 9
- or 88-284 Topics in Law: The Bill of Rights 9
- 88-309 Judicial Politics & Behavior 9
- 88-389 Terrorism and Insurgency 9
- 88-444 Public Policy and Regulation 9

* only one course (either 88-281 or 88-284) may count toward an elective requirement in the Policy and Management major.

**NOTE:** Some courses have additional prerequisites.

This is presented as a two-year (junior-senior) plan for completing major requirements. Its purpose is to show that this program can be completed in as few as two years; not that it must be. Students may enter their major, and begin major course requirements, as early as the start of the sophomore year, and in some instances in the first year. Students should consult their advisor when planning their program. Students who are planning to study abroad or to apply for the Heinz Accelerated Masters Program will have a very different curriculum map and should consult early - and often - with the Academic Advisor.
Students are encouraged to consider the Washington Semester Program as part of their education. Suitable courses will be considered as fulfilling requirements of electives in the major. Please send the course syllabus, along with a note explaining how the course addresses fundamental aspects of policy in one of the five elective categories.

**Additional Major**

Students who elect Policy and Management as an additional major must fulfill all of the requirements of the Policy and Management major.

Students pursuing Decision Science with an additional major in Policy and Management may only count 36-202, 88-220, 88-223, and 88-251 toward the completion of both majors.

Students pursuing International Relations and Politics with an additional major in Policy and Management may only count 36-202, 88-220, and 88-251 toward the completion of both majors.

Additional majors cannot count menu electives toward simultaneously fulfilling more than one major or minor. Students who are interested in an additional major in Policy and Management should see the Academic Advisor of the Policy and Management program.

### The Minor in Policy and Management

Paul Fischbeck, Faculty Director
Office: Porter Hall 208F
Connie Angermeier, Academic Advisor
Office: Porter Hall 208A
Email: cla2@andrew.cmu.edu

Regardless of major, many Carnegie Mellon graduates will face managerial challenges and responsibilities in their professional lives. Whether these are in their area of expertise or in more general settings, these roles will to some degree require assumption of the responsibility for directing the work of others. The Policy and Management minor is intended for students who expect to need these management concepts and skills. At most, one course may be double-counted with another major or minor.

**54 units Curriculum**

**36 units Required Courses**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>88-220</td>

* only one course (either 88-281 or 88-284) may count toward an elective requirement in the Policy and Management minor.

NOTE: Some courses have additional prerequisites.
Carnegie Mellon University Washington Semester Program

Kiron Skinner, Faculty Director; kskinner@andrew.cmu.edu
Emily Half, Academic Program Manager; ehalf@andrew.cmu.edu; 412-268-7082, Baker Hall A60C
Emily Baddock, Program Director in Washington, DC; ebaddock@andrew.cmu.edu; 202-608-8316, 100 Maryland Ave NE, Suite 510, Washington, DC 20002
http://www.cmu.edu/ir/washington-semester-program/index.html

From embassy headquarters to nongovernmental organizations, think tanks to advocacy organizations, and consulting firms to media outlets, Washington, DC is a focal point for many international and public policy activities.

Undergraduates from any course of study who would value firsthand policy experience are invited to apply to the Carnegie Mellon University Washington Semester Program (CMU/WSP), sponsored by the university’s Center for International Relations and Politics. As a member of the University of California Washington Center (UCDC) consortium of schools, CMU/WSP is part of a broad and diverse intellectual community of faculty and students. In this semester-long program, students live, work, and study in Washington, DC, coming into direct contact with political, business, and community leaders and learning about the most pressing policy issues of the day.

CMU/WSP students earn 48 units for their semester in Washington, interning three days per week in any sector or field of interest within Washington, DC, while taking classes two days per week and in the evenings. Courses are offered by Carnegie Mellon and UCDC faculty. The Center for International Relations and Politics sponsors events and a policy forum in Washington for students participating in the program to further enrich their experience and enhance their understanding of how Washington functions as a hub of international and public policy decision making. UCDC also provides policy-oriented events.

Students should contact the academic program manager for more information or to discuss how the CMU/WSP may fit into their curriculum.

Curriculum

All students enroll in the following two courses.
66-321 CMUWSP Internship Seminar 15
66-322/88-450 CMUWSP Policy Forum 9

Students select one core seminar from the following list.

Core Seminar
66-323 Core Seminar: Congress 12
66-324 Core Seminar: Washington Media 12
66-325 Core Seminar: General Research 12
66-326 Core Seminar: The Presidency and Executive Branch 12
66-327 Core Seminar: International Policy and The Global System of the 21st Century 12

Students select one elective seminar from the following list.

Elective Seminar
66-230 Elective Seminar: American Political Journalism 12
66-238 Elective Seminar: Lobbying, Money and Influence in Washington 12
66-248 Elective Seminar: Green Governance 12
66-321 Elective Seminar: Spies! The Politics of Intelligence 12
66-246 Elective Seminar: The Theater of Politics 12
66-284 Elective Seminar: Campaigns and Elections 12
66-355 Elective Seminar: Politics of the Middle East 12

LEE BRANSTETTER, Professor – Ph.D., Harvard University; Carnegie Mellon, 2006–.
STEPHEN BROOME, Assistant Professor – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2011–.
JULIE DOWNS, Associate Research Professor – Ph.D., Princeton University; Carnegie Mellon, 1995–.
PAUL S. FISCHBECK, Professor of Social and Decision Sciences and Engineering and Public Policy and Interim Department Head – Ph.D., Stanford University; Carnegie Mellon, 1990–.
BARUCH FISCHHOFF, Howard Heinz University Professor of Social and Decision Sciences and of Engineering and Public Policy – Ph.D., The Hebrew University of Jerusalem; Carnegie Mellon, 1987–.
CHRISTINA FONG, Senior Research Scientist – Ph.D., University of Massachusetts, Amherst; Carnegie Mellon, 2001–.
RUSSELL GOLMAN, Assistant Professor – Ph.D., The University of Michigan; Carnegie Mellon, 2010–.
CLEOTILDE GONZALEZ, Associate Research Professor of Information and Decision Sciences – Ph.D., Texas Tech University; Carnegie Mellon, 2000–.
DAVID A. HOUNSHELL, David M. Roderick Professor of Technology and Social Change – Ph.D., University of Delaware; Carnegie Mellon, 1991–.
ALEX IMAS, Assistant Professor – Ph.D., University of California, San Diego; Carnegie Mellon, 2014–.
MARK S. KAMLET, andUniversity Professor of Economics and Public Policy and Provost Emeritus – Ph.D., University of California, Berkeley; Carnegie Mellon, 1978–.
KARIM KASSAM, Assistant Professor – Ph.D., Harvard University; Carnegie Mellon, 2010–.
GEORGE F. LOEWENSTEIN, Herbert A. Simon University Professor of Economics and Psychology – Ph.D., Yale University; Carnegie Mellon, 1990–.
JOHN H. MILLER, Professor of Economics and Social Science – Ph.D., The University of Michigan; Carnegie Mellon, 1989–.
KIRON K. SKINNER, Associate Professor of International Relations and Political Science – Ph.D., Harvard University; Carnegie Mellon, 1999–.
ERTE XIAO, Assistant Professor – Ph.D., George Mason University; Carnegie Mellon, 2008–.

Faculty by Courtesy Appointment

LINDA ARGOTE, David and Barbara Kirr Professor of Organizational Behavior – Ph.D., University of Michigan; Carnegie Mellon, 1979–.
KATHLEEN M. CARLEY, Professor of Sociology – Ph.D., Harvard University; Carnegie Mellon, 1984–.
DENNIS N. EPPE, Professor of Economics – Ph.D., Princeton University; Carnegie Mellon, 1974–.
JEFFREY GALAK, Assistant Professor of Marketing – Ph.D., New York University; Carnegie Mellon, 2009–.
JOSEPH B. KADANE, Leonard J. Savage University Professor of Statistics and Social Science – Ph.D., Stanford University; Carnegie Mellon, 1969–.
SARAH B. KIESLER, Professor – Ph.D., The Ohio State University; Carnegie Mellon, 1979–.
DAVID M. KRACKHARDT, Professor of Organizations and Public Policy – Ph.D., University of California, Irvine; Carnegie Mellon, 1991–.
ROBERT E. KRAUT, Heber A. Simon Professor of Human Computer Interaction – Ph.D., Yale University; Carnegie Mellon, 1993–.
JOEL TARR, Richard S. Caliguiri University Professor of History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–.

Emeritus Faculty

WILLIAM R. KEECH, Ph.D. University of Wisconsin-Madison; Carnegie Mellon, 1997–.
Department of Statistics

Chris Genovese, Department Head
Paige Houser, Academic Coordinator
Email: acadcoord@stat.cmu.edu
Department Office: Baker Hall 132

Uncertainty is inescapable: randomness, measurement error, deception, and incomplete or missing information complicate all our lives. Statistics is the science and art of making predictions and decisions in the face of uncertainty. Statistical issues are central to big questions in public policy, law, medicine, industry, computing, technology, finance, and science. Indeed, the tools of Statistics apply to problems in almost every area of human activity where data are collected.

Statisticians must master diverse skills in computing, mathematics, decision making, forecasting, interpretation of complicated data, and design of meaningful comparisons. Moreover, statisticians must learn to collaborate effectively with people in other fields and, in the process, to understand the substance of these other fields. For all these reasons, Statistics students are highly sought-after in the marketplace.

Recent Statistics majors at Carnegie Mellon have taken jobs at leading companies in many fields, including the National Economic Research Association, Boeing, Morgan Stanley, Deloitte, Rosetta Marketing Group, Nielsen, Proctor and Gamble, Accenture, and Goldman Sachs. Other students have taken research positions at the National Security Agency, the U.S. Census Bureau, and the Science and Technology Policy Institute or worked for Teach for America. Many of our students have also gone on to graduate study at some of the top programs in the country including Carnegie Mellon, the Wharton School at the University of Pennsylvania, Johns Hopkins, University of Michigan, Stanford University, Emory University, Yale University, Columbia University, and Georgia Tech.

The Department and Faculty

The Department of Statistics at Carnegie Mellon University is world-renowned for its contributions to statistical theory and practice. Research in the department runs the gamut from pure mathematics to the hottest frontiers of science. Current research projects are helping make fundamental advances in neuroscience, cosmology, seismology, finance, and genetics.

The faculty members are recognized around the world for their expertise and have garnered many prestigious awards and honors. (For example, three members of the faculty have been awarded the COPSS medal, the highest honor given by professional statistical societies.) At the same time, the faculty is firmly dedicated to undergraduate education. The entire faculty, junior and senior, teach courses at all levels. The faculty are accessible and are committed to involving undergraduates in research.

The Department augments all these strengths with a friendly, energetic working environment and exceptional computing resources. Talented graduate students join the department from around the world, and add a unique dimension to the department’s intellectual life. Faculty, graduate students, and undergraduates interact regularly.

How to Take Part

There are many ways to get involved in Statistics at Carnegie Mellon:

- The Bachelor of Science in Statistics in the College of Humanities and Social Sciences (H&SS) is a broad-based, flexible program that helps you master both the theory and practice of Statistics. The program can be tailored to prepare you for a career in Statistics or to complement your interests in almost any field, including Psychology, Physics, Biology, History, Business, Information Systems, and Computer Science.
- The Statistics Minor (or Additional Major in Statistics) is a useful complement to a (primary) major in another Department or College. Almost every field of inquiry must grapple with statistical problems, and the tools of statistical theory and data analysis you will develop in the Statistics minor will give you a critical edge.
- The Bachelor of Science in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. Jointly administered by the Department of Statistics and the Undergraduate Economics Program, the major’s curriculum provides students with a solid foundation in the theories and methods of both fields. (See Dietrich College Interdepartmental Majors as well as later in this section)

- The Statistical and Mathematical Sciences Program (within the Science and Humanities Scholars Program) is an alternative path for the study of Statistics that is jointly administered by the Department of Mathematical Sciences and the Department of Statistics.
- The Statistics Concentration and the OR and Statistics Concentration in the Mathematical Sciences Major (see Department of Mathematical Sciences) are jointly administered by the Department of Mathematical Sciences and the Department of Statistics.
- There are several ongoing exciting research projects in the Department of Statistics, and the department enthusiastically seeks to involve undergraduates in this work. Both majors and non-majors are welcome.
- Non-majors are eligible to take most of our courses, and indeed, they are required to do so by many programs on campus. Such courses offer one way to learn more about the Department of Statistics and the field in general.

Curriculum

Statistics consists of two intertwined threads of inquiry: Statistical Theory and Data Analysis. The former uses probability theory to build and analyze mathematical models of data in order to devise methods for making effective predictions and decisions in the face of uncertainty. The latter involves techniques for extracting insights from complicated data, designs for accurate measurement and comparison, and methods for checking the validity of theoretical assumptions. Statistical Theory informs Data Analysis and vice versa. The Statistics Department curriculum follows both of these threads and helps the student develop the complementary skills required.

Below, we describe the requirements for the Major in Statistics and the different categories within our basic curriculum, followed by the requirements for the Minor in Statistics and the requirements for the Major in Economics and Statistics.

Note: We recommend that you use the information provided below as a general guideline, and then schedule a meeting with a Statistics Undergraduate Advisor (email: acadcoord@stat.cmu.edu) to discuss the requirements in more detail, and build a program that is tailored to your strengths and interests.

B.S. in Statistics

Academic Advisor: Howard Seltman
Office: Baker Hall 132A
Email: acadcoord@stat.cmu.edu

Students in the Bachelor of Science program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the Major in Statistics are detailed below and are organized by categories #1-#7.

28-38 units1. Mathematical Foundations (Prerequisites)

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics.

**Calculus**

Complete one of the following three sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

**Sequence 1**

<table>
<thead>

Students can also take a second 35-46x (see section #5).

Note: Other sequences are possible, and require approval from the undergraduate advisor.

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

**Linear Algebra**: Complete one of the following three courses:
- 21-240 Matrix Algebra with Applications
- 21-241 Matrices and Linear Transformations
- 21-242 Matrix Theory

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

### 45 units2. Data Analysis:

Data analysis is the art and science of extracting insight from data. The art lies in displays or techniques that reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-201 draws examples from many fields and satisfies the H&SS College Core Requirement in Statistical Reasoning. It is therefore the recommended course for students in the College. (Note: A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in business (36-207), engineering and architecture (36-220), and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students’ previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

#### Beginning* Choose one of the following courses:
- 36-201 Statistical Reasoning and Practice
- 36/70-207 Probability and Statistics for Business
- 36-220 Engineering Statistics and Quality Control
- 36-247 Statistics for Lab Sciences

*Or extra statistical elective

Note: Students who enter the program with 36-225 or 36-226 should discuss options with an advisor. Any 36-300 or 36-400 level course that does not satisfy any other requirement for a Statistics Major and Minor may be counted as a Statistical Elective.

#### Intermediate Choose one of the following courses:
- 36-202 Statistical Methods
- 36/70-208 Regression Analysis
- 36-309 Experimental Design for Behavioral and Social Sciences

*Or extra statistical elective

#### Advanced Choose one of the following courses:
- 36-303 Sampling, Survey and Society
- 36-315 Statistical Graphics and Visualization

Students can also take a second 35-46x (see section #5).

and take the following two courses:
- 36-401 Modern Regression
- 36-402 Advanced Methods for Data Analysis

18 units. 3. Probability Theory and Statistical Theory:

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:
- 36-225 Introduction to Probability Theory
- 36-226 Introduction to Statistical Inference
- 36-326 Mathematical Statistics (Honors)

**It is possible to substitute 36-217 or 21-325 for 36-225. (36-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

Comments:

(i) In order to be a Major or a Minor in good standing, a grade of at least a C is required in 36-225, 36-226 and 36-401. In particular, a grade of C or higher is required in order to be able to continue in the major.

(ii) In special cases, and in consultation with the Statistics Advisor, the theory requirement can be satisfied by taking the graduate level course 36-625 Probability and Mathematical Statistics I, which is much more mathematically rigorous. This option should be considered by strong Statistics Majors who are also majoring in Computer Science, Operations Research, or Mathematics and/or who are considering graduate study in Statistics. This option is not open to student who have taken 36-326 and does requires special permission from the advisor. Students who end up satisfying the theory requirement by taking the (single) course 36-625 are required take an additional statistics elective (see category #6, Statistical Electives, below).

4. Statistical Computing:
- 36-350 Statistical Computing

*A higher level Computer Science course approved by your Statistics advisor may be used as a substitute.

9 units. 5. Special Topics:

The Statistics Department offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.). Two of these courses will be offered every year, one per semester. Past topics included Statistical Learning, Data Mining, Statistics and the Law, Bayesian Statistics, Nonparametric Statistics, Statistical Genetics, Multilevel and Hierarchical Models, and Statistical Methods in Epidemiology. The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum.

To satisfy the Special Topics requirement choose one of the 36-46x courses (which are 9 units).

Note: All 36-46x courses require 36-401 as a prerequisite or instructor permission.

9 units. 6. Statistical Elective:

Students are required to take one* elective which can be within or outside the Statistics Department. Courses within statistics can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of courses outside statistics that qualify as electives as they provide intellectual infrastructure that will advance the student’s understanding of statistics and its applications. Other courses may qualify as well; consult with the Statistics Undergraduate Advisor.
- 15-110 Principles of Computing
- 15-121 Introduction to Data Structures
- 15-122 Principles of Imperative Computation
21-127 Concepts of Mathematics 10
21-260 Differential Equations 9
21-292 Operations Research I 9
21-301 Combinatorics 9
21-355 Principles of Real Analysis I 9
80-220 Philosophy of Science 9
80-221 Philosophy of Social Science 9
80-310 Formal Logic 9
85-310 Research Methods in Cognitive Psychology 9
85-320 Research Methods in Developmental Psychology 9
85-340 Research Methods in Social Psychology 9
88-223 Decision Analysis and Decision Support Systems 9
88-302 Behavioral Decision Making 9

Note: Additional prerequisites are required for some of these courses. Students should carefully check the course descriptions to determine if additional prerequisites are necessary.

* Students who enter the program through 36-225 or 36-226 and skip the beginning data analysis course, or students who end up satisfying the theory requirement using the (single) course 36-625, are required to take two electives only one of which can be outside the Statistics Department. (In general, any waived requirement is replaced by a statistical elective.)

36 units. Concentration Area*: The power of Statistics, and much of the fun, is that it can be applied to answer such a wide variety of questions in so many different fields. A critical part of statistical practice is understanding the questions being asked so that appropriate methods of analysis can be used. Hence, a critical part of statistical training is to gain experience applying the abstract tools to real problems. The Concentration Area is a set of four related courses outside of Statistics that prepares the student to deal with statistical aspects of problems that arise in another field. These courses are usually drawn from a single discipline of interest to the student and are chosen in consultation with the Statistics Undergraduate Advisor. For example, students intending to pursue careers in public policy could take further courses in History or Economics, students intending to pursue careers in the health or biomedical sciences could take further courses in Biology or Chemistry, and students intending to pursue graduate work in Statistics could take further courses in advanced Mathematics.

* Note: This requirement is only for students whose primary major is statistics and have no other additional major or minor. The requirement does not apply for students who pursue an additional major in statistics.

Total Number of Units for the Major: 154*
Total Number of Units for the Degree: 360

* Note: This number can vary depending on the calculus sequence a student takes. In addition this number includes the 36 units of the “Concentration Area” category which may not be required (see category 6 above for details).

Recommendations
Students in the College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-201 Statistical Reasoning and Practice by the end of their Freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential to complete this requirement during your junior year at the latest!

Recommendations for Prospective PhD Students
Students interested in pursuing a PhD in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses, perhaps with Mathematical Sciences as the Concentration Area. They should seek a faculty advisor as soon as possible. Students should consider 36-326 Mathematical Statistics (Honors) as an alternative to 36-226. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students considering PhD programs may wish to take 21-241, Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses should include both 21-127 Concepts of Mathematics and 21-355 Principles of Real Analysis I.

Prospective PhD students should also consider additional courses among 21-228 Discrete Mathematics, 21-260 Differential Equations, 21-341 Linear Algebra, and 21-356 Principles of Real Analysis II.

Additional Major in Statistics
Students who elect Statistics as a second or third major must fulfill all Statistics degree requirements except for the Concentration Area requirement. Majors in many other programs would naturally complement a Statistics Major, including Tepper’s undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least five statistics courses that do not count for their primary major. If students do not have at least five, they typically take additional advanced electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major’s requirements overlap with the requirements for a Major in Statistics.

Research
One goal of the Statistics program is to give students experience with statistical research. There is a wide variety of ongoing research projects in the department, and students have several opportunities to get involved in a project that interests them.

Before graduation, students are encouraged to participate in a research project under faculty supervision. Students can do this through projects in specific courses (such as 36-303), through an independent study, or through a summer research position.

Qualified students are also encouraged to participate in an advanced research project through 36-490 Undergraduate Research or independent study under the supervision of a Statistics faculty advisor. Students who maintain a quality point average of 3.25 overall may also apply to participate in the H65 Senior Honors Program (p. 197).

Sample Programs
The following sample programs illustrate two (of many) ways to satisfy the requirements of the Statistics Major. However, keep in mind that the program is flexible enough to support many other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 1, and 21-127 Concepts of Mathematics as a Statistical Elective outside of Statistics.

The second schedule is an example of the case when a student enters the program through 36-225 and 36-226 (and therefore skips the beginning data analysis course). The schedule uses calculus sequence 2, and includes two electives (36-315 and 36-410), both within the Statistics Department. This schedule has more emphasis on statistical theory and probability.

In both schedules, C.A. refers to Concentration Area courses.

Schedule 1

| Fall | Spring |
| 21-120 Differential and Integral Calculus | 21-256 Multivariate Analysis |
| 36-225 Introduction to Probability Theory | 36-226 Introduction to Statistical Inference |
| 21-240 Matrix Algebra with Applications | C.A. |
I. PREREQUISITES 38-39 UNITS

1. Mathematical Foundations 38-39 units

Calculus
- 21-120 Differential and Integral Calculus 10
- and one of the following three:
  - 21-122 Integration and Approximation 10
  - 21-127 Concepts of Mathematics 10
  - 21-257 Models and Methods for Optimization 9
- and one of the following:
  - 21-256 Multivariate Analysis 9
  - 21-259 Calculus in Three Dimensions 9

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Note: Taking both 21-111 and 21-112 is equivalent to 21-120. The Mathematical Foundations total is then 48-49 units. The Economics and Statistics major would then total 201-202 units.

Linear Algebra
- One of the following three courses:
  - 21-240 Matrix Algebra with Applications 10
  - 21-241 Matrices and Linear Transformations 10
  - 21-242 Matrix Theory 10

Note: 21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Economics Foundations 9 units
- 73-100 Principles of Economics 9

3. Statistical Foundations 18 units
- 36-201 Statistical Reasoning and Practice 9
- and one of the following:
  - 36-202 Statistical Methods 9
  - 36-208 Regression Analysis 9
  - 36-309 Experimental Design for Behavioral and Social Sciences 9

Or extra statistical elective**

*Acceptable equivalents for 36-201 are 36-207 (70-207), 36-220 and 36-247.

**Students who enter the program with 36-225/36-226 should discuss options with their advisors.

II. DISCIPLINARY CORE 126 UNITS

1. Economics Core 36 units
- 73-230 Intermediate Microeconomics * 9
- 73-240 Intermediate Macroeconomics 9
- 73-270 Writing for Economists 9
- 73-363 Econometrics 9

*Starting Fall 2015 21-256 or 21-259 will be a prerequisite for 73-230.

2. Statistics Core 36 units
- 36-225 Introduction to Probability Theory *# 9
- and one of the following two courses:
  - 36-226 Introduction to Statistical Inference * 9
  - 36-326 Mathematical Statistics (Honors) * 9
- and both of the following two courses:
  - 36-401 Modern Regression * 9
  - 36-402 Advanced Methods for Data Analysis 9

*In order to be a major in good standing, a grade of C or better is required in 36-225 (or equivalcents), 36-226 or 36-226 and 36-401. Otherwise you will not be allowed to continue in the major.

#It is possible to substitute 36-217 or 21-325 for 36-225. (36-225 is the standard introduction to probability, 36-217 is tailored for engineers and computer scientists, and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

3. Computing 9 units
- 36-350 Statistical Computing * 9

*A higher level Computer Science course approved by your Academic Advisor may be used as a substitute.

4. Advanced Electives 45 units

Students must take three advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-363, 73-407 and 73-450) and two advanced Statistics elective courses (numbered 36-303, 36-315, 36-350 or 36-410 through 36-495).

Total number of units for the major 191-192 units

Total number of units for the degree 360 units

Recommendations for Prospective PhD Students

Students interested in pursuing a PhD in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses, perhaps
with Mathematical Sciences as the Concentration Area. They should see a faculty advisor as soon as possible. Students should consider 36-326 Mathematical Statistics (Honors) as an alternative to 36-226. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students considering PhD programs may wish to take 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead. Additional courses should include both 21-127 Concepts of Mathematics and 21-355 Principles of Real Analysis I.

Prospective PhD students should also consider additional courses among 21-228 Discrete Mathematics, 21-260 Differential Equations, 21-341 Linear Algebra, and 21-356 Principles of Real Analysis II.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

### Freshman

<table>
<thead>
<tr>
<th>Fall</th>
<th>Spring</th>

</tr>
<tr>
<td>73-363</td>
<td>73-240</td>
</tr>
</tbody>
</table>

*In each semester, ----- represents other courses (not related to the major) which are needed in order to complete the 360 units that the degree requires.

Prospective PhD students might add 21-127 fall of sophomore year, replace 21-240 with 21-241, add 21-260 in spring of junior year and 21-355 in fall of senior year.

Students who elect Economics and Statistics as a second major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would normally complement a Statistics Major, including Business Administration, Social and Decision Sciences, Policy and Management, History and Policy, and Psychology. With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics and three Statistics) that do not count for their primary major. If students do not have at least three, they typically take additional advanced electives. Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites.

The Minor in Statistics

Faculty Advisor: Howard Seltman
Office: Baker Hall 132A
Email: acadcoord@stat.cmu.edu

The Minor in Statistics develops skills that complement major study in other disciplines. The program helps the student master the basics of statistical theory and advanced techniques in data analysis. This is a good choice for deepening understanding of statistical ideas and for strengthening research skills.

In order to get a minor in Statistics a student must satisfy all the requirements in categories 1, 2 and 3 of the major requirement (see above) with the exception that in the advanced data analysis part only 36-401 and 36-402 are required. In other words, the requirements for the minor are (read the section about the Major in Statistics for details):

28-38 units. Mathematical Foundations (Prerequisites)
Identical to Major requirements (read relevant section above carefully).

36 units. Data Analysis:
- **Beginning Data Analysis:** 9 units (one course) - see Major requirements above.
- **Intermediate Data Analysis:** 9 units (one course) - see Major requirements above.
- **Advanced Data Analysis:** 18 units - 36-401 and 36-402

18 units. Probability Theory and Statistical Theory:
Identical to Major requirements (read relevant section above carefully).

**Total number of units required**

82 Units

With respect to double-counting courses, it is departmental policy that students must have at least three statistics courses that do not count for their primary major. If students do not have at least three, they typically take additional advanced electives.

Sample Programs for the Minor

The following two sample programs illustrates two (of many) ways to satisfy the requirements of the Statistics Minor. Keep in mind that the program is flexible and can support many other possible schedules.

The first schedule uses calculus sequence 1, and 36-309 to satisfy the intermediate data analysis requirement. The second schedule is an example of the case when a student enters the Minor through 36-226 and 36-225 (and therefore skips the beginning data analysis course). The schedule uses calculus sequence 2, and 36-315 as an elective (to replace the beginning data analysis course).

### Schedule 1

*Fall* | *Spring*
--- | ---
21-111 Calculus I | 21-112 Calculus II
36-201 Statistical Reasoning and Practice | 36-202 Statistical Reasoning and Practice
73-363 Econometrics | Economics Elective

*Schedule 2*

*Fall* | *Spring*
--- | ---
21-120 Differential and Integral Calculus | 21-256 Multivariate Analysis
36-201 Statistical Reasoning and Practice | 36-401 Modern Regression
73-363 Econometrics | 36-402 Advanced Methods for Data Analysis

Substitutions and Waivers

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Statistics Department does not provide approval or permission for substitution or waiver of another department’s requirements.

However, the Statistics Director of Undergraduate Studies will provide advice and information to the student’s advisor about the viability of a proposed substitution. Students should make available as much information as possible concerning proposed substitutions. Students seeking waivers may be asked to demonstrate mastery of the material.

Statistics Majors and Minors seeking substitutions or waivers should speak to the Statistics Director of Undergraduate Studies.
Faculty

STEPHEN E. FIENBERG, University Professor and Maurice Falk Professor of Statistics and Social Sciences – Ph.D., Harvard University; Carnegie Mellon, 1980–.

CHRISTOPHER GENOVESE, Professor of Statistics – Ph.D., University of California, Berkeley; Carnegie Mellon, 1994–.

JOEL B. GREENHOUSE, Professor of Statistics – Ph.D., University of Michigan; Carnegie Mellon, 1982–.

JIASHUN JIN, Professor of Statistics – Ph.D., Stanford University; Carnegie Mellon, 2007–.

BRIAN JUNKER, Professor of Statistics – Ph.D., University of Illinois; Carnegie Mellon, 1990–.

ROBERT E. KASS, Professor of Statistics – Ph.D., University of Chicago; Carnegie Mellon, 1982–.

ANN LEE, Associate Professor – Ph.D., Brown University; Carnegie Mellon, 2005–.

JOHN P. LEHOCZKY, Thomas Lord Professor of Statistics and Dean of the College of Humanities and Social Sciences – Ph.D., Stanford University; Carnegie Mellon, 1969–.

JING LEI, Assistant Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2011–.

REBECCA NUGENT, Associate Teaching Professor – Ph.D., University of Washington; Carnegie Mellon, 2006–.

ALESSANDRO RINALDO, Associate Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 2005–.

KATHRYN ROEDER, Professor of Statistics – Ph.D., Pennsylvania State University; Carnegie Mellon, 1994–.

CHAD M. SCHAFFER, Associate Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–.

MARK J. SCHERVISH, Department Head and Professor of Statistics – Ph.D., University of Minnesota; Carnegie Mellon, 1979–.

TEDDY SEIDENFELD, Herbert A. Simon Professor of Philosophy and Statistics – Ph.D., Columbia University; Carnegie Mellon, 1985–.

COSMA SHALIZI, Associate Professor – Ph.D., University of Wisconsin, Madison; Carnegie Mellon, 2005–.

RYAN TIBSHIRANI, Assistant Professor – Ph.D., Stanford University; Carnegie Mellon, 2011–.

DREW THOMAS, Visiting Assistant Professor – Ph.D., Harvard; Carnegie Mellon, 2009–.

VALERIE VENTURA, Associate Professor – Ph.D., University of Michigan; Carnegie Mellon, 2005–.

LARRY WASSERMAN, Professor of Statistics – Ph.D., University of Toronto; Carnegie Mellon, 1988–.

Emeriti Faculty

GEORGE T. DUNCAN, Professor of Statistics and Public Policy – Ph.D., University of Minnesota; Carnegie Mellon, 1974–.

WILLIAM F. EDDY, John C. Warner Professor of Statistics – Ph.D., Yale University; Carnegie Mellon, 1976–.

JOSEPH B. KADANE, Leonard J. Savage Professor of Statistics and Social Sciences – Ph.D., Stanford University; Carnegie Mellon, 1969–.

Adjunct Faculty

ANTHONY BROCKWELL, – Ph.D., Melbourne University; Carnegie Mellon, 1999–.

BERNIE DEVLIN, – Ph.D., Pennsylvania State University; Carnegie Mellon, 1994–.

TRENT GAUGLER, Visiting Assistant Professor – Ph.D., Pennsylvania State University; Carnegie Mellon, 2011–.
H. John Heinz III College

Ramayya Krishnan, Dean
Office: 1509 Hamburg Hall
http://www.heinz.cmu.edu/

Students entering graduate programs at Carnegie Mellon University's H. John Heinz III College are accomplished, talented and committed to improving the ability of public, non-profit and private organizations to address the most difficult challenges facing society, as well as to strengthen and exploit our cultural resources through skilled leadership and management. Students gain the skills and knowledge necessary to transform that talent and commitment into a successful career and a positive force for change.

Unlike many graduate schools, we are not organized along academic departments. Faculty from our two schools – the School of Public Policy and Management (http://www.heinz.cmu.edu/school-of-public-policy-management) and the School of Information Systems and Management (http://www.heinz.cmu.edu/school-of-information-systems-and-management) -- collaborate on instruction and research, an operating model we believe leads to innovation in research and a superior educational experience. Our strengths span the applied disciplines of empirical methods and statistics, economics, information systems and technology, operations research and organizational behavior.

Heinz College is a dynamic community of scholars and practitioners developing fundamental knowledge about and seeking innovative, applied solutions to today's most critical problems of the public, private and non-profit sectors.

Options for Carnegie Mellon Undergraduates

Heinz College does not offer undergraduate degrees. It does offer two study options, however, for students pursuing Carnegie Mellon undergraduate degrees - 1) Accelerated Master's Program (AMP), and 2) undergraduate minor in Health Care Policy and Management (see below).

Five-Year (Accelerated) Master's Programs

Heinz College's Accelerated Master's Program (AMP) allows qualified students to earn a prestigious master's degree in just five years (CMU undergrads can complete their master's degree in just one additional year of study beyond their bachelor's degree).

The following master's degrees provide an AMP and are open to students from all departments at the university:

- Master of Arts Management (MAM)
- Master of Information Systems Management (MISM)
- Master of Science in Health Care Policy and Management (MSHCPM)
- Master of Science in Information Security Policy and Management (MSISPM)
- Master of Science in Public Policy and Management (MSPPM)

Minor in Health Care Policy and Management

Sponsored by:
H. John Heinz III College
Dietrich College of Humanities and Social Sciences
Mellon College of Science

Faculty Advisors:
Jason D'Antonio, Mellon College of Science
James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of how these changes are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

60 units minimum Curriculum

Seven courses (a minimum of 60 units) are required to complete this minor. Entry into the minor requires completion of 73-100 Principles of Economics or 88-220 Policy Analysis I or the equivalent by approval.

39 units Required Courses

Students are required to take the following courses.

<table>

27 units
Elective Courses
Complete a minimum of 27 units.

Heinz College Courses
- 90-708 Healthcare Ethics 6
- 90-721 Healthcare Management 6
- 90-818 Health Care Quality & Performance Improvement 6
- 90-830 Introduction to Financial Management of Health Care 6
- 90-831 Advanced Financial Management of Health Care 6
- 90-832 Health Law 12
- 90-863 Health Policy II 6
- 94-706 Healthcare Information Systems 12

Humanities and Social Sciences Courses (9 units each)
- 76-494 Healthcare Communications 9
- 79-335 Drug Use and Drug Policy 9
- 79-383 Epidemic, Disease, and Public Health 9
- 80-245 Medical Ethics 9
- 80-247 Ethics and Global Economics 9
- 85-241 Social Psychology 9
- 85-442 Health Psychology 9
- 85-446 Psychology of Gender 9

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

What kinds of careers do Heinz College graduates pursue?
A Heinz College degree opens doors to a wide range of professional careers in government agencies, nonprofit organizations, consulting firms, arts groups, foundations, private businesses and a host of other organizations. Heinz College graduates can get the kind of interesting, exciting jobs they want, because they have the expertise in policy, management, finance, information systems, and decision-making that employers need.

Heinz College's Ph.D. program in particular prepares qualified students from a variety of academic and professional backgrounds for careers in research, academia, government-related organizations and the private sector, in positions where expertise in advanced research is desired. Graduates of the Ph.D. program work as professors, research scientists, research directors and consultants, across diverse areas of public service and management. Some of the jobs that have been held by Heinz College graduates include:

- Budget Analyst, Congressional Budget Office
- President/Chief Executive Officer, Urban League of Philadelphia
- Vice President, Public Finance Division, Donaldson, LuKinn & Jenrette Securities Corp.
- Executive Director, Allegheny Conference on Community Development
- Executive Director, Maryland Small Business Development Financing Authority
- District Manager, AT&T Consumer Information
- Senior Consultant, Ernst and Young
- Director of Marketing, Bardavon 1869 Opera House, Poughkeepsie, NY
- Consultant, Hill Arts and Entertainment
- Special Projects Coordinator, Washington Very Special Projects
- Managing Director, Misnomer Dance Theater

How is Heinz College different?

Diversity
Heinz College's student body is internationally recognized for its diversity in ethnicity, gender and citizenship. It also is diverse in terms of students' academic backgrounds, which include undergraduate degrees in architecture, biology, business administration, computer science, economics, education, engineering, English, fine arts, government, history, information systems, philosophy, political science, sociology and many other fields.

Practical Experience
Heinz College doesn't just teach skills in the classroom:

- Through the systems synthesis project, students work in teams to analyze and develop solutions for current international, national and local problems and present their findings to the real-world client.
- Students complete a summer internship to practice the skills they've learned in school.

Impact on Society
The expertise of a renowned faculty is transferred to society through the education and research mission of Heinz College, as well as the efforts of its policy and research centers. These include the Arts Management and Technology Laboratory, Traffic21, Living Analytics Research Centre, Initiative for Digital Entertainment Analytics (IDEA), Center for Economic Development, and the Center for the Future of Work. Heinz College students can work on projects initiated in these centers or as research assistants for center faculty.

Global Heinz
With multiple locations around the United States and the world, Heinz College offers students the opportunity to gain a global perspective while pursuing their master's degree.

Since 2006, the Adelaide campus has served as the school's Asia Pacific education base and currently offers two master's level degrees - MSPPM and MSIT.

Heinz College's Washington, D.C. center (established in 2008) connects our public policy students with national and international policy makers and organizations. The goal is to create a dynamic and productive network that benefits our community at large and brings the unique strengths of Carnegie Mellon to positively impact the public interest. The office also serves as classroom space for 2nd year MSPPM students in the program's D.C. track.

The Master of Entertainment Industry Management (MEIM) program trains a new generation of leaders in the entertainment industry. Students spend a year in Pittsburgh followed by a year in Los Angeles exploring how management theories and principles are applied in the film and television industries.

Additional information can be found on our website: http://www.heinz.cmu.edu.

The Faculty
Heinz College faculty members have been recognized nationally and internationally for their accomplishments in research and their contributions to public policy. Their backgrounds are in economics, operations research, information systems and technology, fine arts, sociology, public policy, statistics, organizational management and behavior, finance, statistics, labor relations, and demography among other areas. The the right is information on many full-time Carnegie Mellon University faculty members who teach and do research at Heinz College. For a more complete, current list, visit http://www.heinz.cmu.edu/directories/faculty-directory/index.aspx.

Faculty
ALESSANDRO ACQUISTI, Assistant Professor of Information Systems and Public Policy – Ph.D., UC Berkeley; Carnegie Mellon, 2003–.
SHAMENA ANWAR, Assistant Professor of Economics and Public Policy – Ph.D., Yale University; Carnegie Mellon, 2007–.
LINDA BABCOCK, James M. Walton Professor of Economics – Ph.D., University of Wisconsin at Madison; Carnegie Mellon, 1988–.
EDWARD BARR, Associate Teaching Professor – M.S., Indiana University of Pennsylvania; Carnegie Mellon, 2000–.
ALFRED BLUMSTEIN, J. Erik Jonsson University Professor of Urban Systems and Operations Research; Director, National Consortium on Violence Research – Ph.D., Cornell University; Carnegie Mellon, 1969–.
SILVIA BORZUTSKY, Associate Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2001–.
LEE BRANSTETTER, Associate Professor of Economics – Ph.D., Harvard University; Carnegie Mellon, 2006–.
KATHLEEN CARLEY, Professor of Organizational Sociology – Ph.D., Harvard University; Carnegie Mellon, 2011–.
JONATHAN CAULKINS, Professor of Operations Research and Public Policy; Faculty Chair, Master of Public Policy and Management Program – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1990–.
JACK CHOW, Distinguished Service Professor – M.D., University of California at San Francisco School of Medicine; Carnegie Mellon, 2011–.
KAREN CLAY, Assistant Professor of Economics and Public Policy – Ph.D., Stanford University; Carnegie Mellon, 1997–.
JACQUELINE COHEN, Principal Research Scientist – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1982–.
WESLEY COHEN, (Affiliated) Professor of Economics and Social Sciences – Ph.D., Yale University; Carnegie Mellon, 1982–.
LAURA DABBISH, Assistant Professor of Information Technology and Organizations – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–.
GEORGE T. DUNCAN, Professor of Statistics, Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 2011–.
DENNIS EPPLE, (Affiliated) Thomas Lord Professor of Economics – Ph.D., Princeton University; Carnegie Mellon, 1974–.
JENDAYI E. FRAZER, Distinguished Service Professor – Ph.D., Stanford University; Carnegie Mellon, 2011–.
MARTIN GAYNOR, E.J. Barone Professor of Economics and Health Policy; Faculty Chair, Ph.D. Program – Ph.D., Northwestern University; Carnegie Mellon, 1995–.
WILPEN GORR, Professor of Public Policy and Management Information Systems – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1985–.
ROBERT HAMPShIRE, Assistant Professor of Operations Research and Public Policy – Ph.D., Princeton University; Carnegie Mellon, 2007–.
JAMES F. JORDAN, Distinguished Service Professor – M.B.A., Boston University; Carnegie Mellon, 2011–.
MARK S. KAMLET, Provost, CMU; and H. John Heinz III Professor of Economics and Public Policy – Ph.D., University of California at Berkeley; Carnegie Mellon, 1978–.
WILLIAM P. KITTREDGE, Associate Teaching Professor – Ph.D., Maxwell School of Public Affairs and Citizenship; Carnegie Mellon, 2011–.
STEVEN KLEPPER, (Affiliated) Professor of Economics and Social Science – Ph.D., Cornell University; Carnegie Mellon, 1980–.
DAVID KRACKHARDT, Professor of Organizations and Public Policy – Ph.D., University of California at Irvine; Carnegie Mellon, 1991–.
RAMAYYA KRISHNAN, William W. and Ruth F. Cooper Professor of Management Science and Information Systems; Faculty Chair, Master of Information Systems Management Program – Ph.D., University of Texas at Austin; Carnegie Mellon, 1987–.
KRISTIN KURLAND, Associate Teaching Professor (joint with School of Architecture) – B.A., University of Pittsburgh; Carnegie Mellon, 1999–.
LESTER LAVE, James Higgins Professor of Economics and Finance, Professor of Urban and Public Affairs, Professor of Engineering and Public Policy – Ph.D., Harvard University; Carnegie Mellon, 1963–.
GORDON LEWIS, Associate Professor of Sociology; Faculty Chair, Master of Public Management Program – Ph.D., Stanford University; Carnegie Mellon, 1969–.
PAMELA LEWIS, Teaching Professor of Professional Speaking – D.A., Carnegie Mellon University; Carnegie Mellon, 1980–.
ARI LIGHTMAN, Practice Professor, Digital Media and Marketing – M.B.A., Carnegie Mellon University; Carnegie Mellon, 2011–.
PETER MADSEN, Senior Lecturer in Ethics and Public Policy – Ph.D., Duquesne University; Carnegie Mellon, 1988–.
DONALD MARINELLI, (Affiliated) Professor of Drama and Arts Management (College of Fine Arts) – Ph.D., University of Pittsburgh; Carnegie Mellon, 1984–.
DAN MARTIN, Director, Master of Arts Management Program, and Associate Professor (College of Fine Arts) – M.F.A., Brooklyn College/City University of New York; Carnegie Mellon, 1993–.
MICHAEL MCCARTHY, Associate Teaching Professor of Information Systems Management – M.S., University of Pittsburgh; Carnegie Mellon, 1999–.
JOE MERTZ, Associate Teaching Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 1994–.
KARYN MOORE, Assistant Teaching Professor of Information Systems – M.S., Industrial Administration, Carnegie Mellon University; Carnegie Mellon, 2003–.
M. GRANGER MORGAN, Lord Chair Professor of Engineering and Public Policy, and Head, Department of Engineering and Public Policy – Ph.D., University of California at San Diego; Carnegie Mellon, 1974–.
DANIEL NAGIN, Theresa and H. John Heinz III Professor of Public Policy, and Research Director, National Consortium on Violence Research – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1979–.
DANIEL NEIL, Assistant Professor of Information Systems – M.S., University of Pittsburgh; Carnegie Mellon, 2007–.
ERIC NYBERG, Assistant Professor of Computer Science and Public Policy (joint with School of Computer Science) – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1986–.
REMA PADMAN, Professor of Operations Research and Information Management; Faculty Chair, Master of Science in Health Care Policy and Management Program – Ph.D., University of Texas at Austin; Carnegie Mellon, 1993–.
LYNNE PASTOR, Visiting Associate Teaching Professor – M.S., Industrial Administration, Carnegie Mellon University; Carnegie Mellon, 2007–.
SETH RICHARDS-SHUBIK, Assistant Professor of Economics and Public Policy – Ph.D., University of Pennsylvania; Carnegie Mellon, 2011–.
STEPHEN ROEHRIG, Associate Professor of Information Systems and Public Policy – Ph.D., University of Pennsylvania Wharton School; Carnegie Mellon, 1991–.
DENISE ROUSSEAU, H. J. Heinz II Professor of Organizational Behavior (joint with Graduate School of Industrial Administration) – Ph.D., University of California at Berkeley; Carnegie Mellon, 1994–.
KIRON SKINNER, (Courtesy) Assistant Professor of History and Political Science – Ph.D., Harvard University; Carnegie Mellon, 1999–.
DONALD SMITH, Professor of Practice; University Director for Economic Development – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1995–.
KATHLEEN SMITH, Associate Teaching Professor – Ph.D., candidate, University of Pittsburgh; Carnegie Mellon, 1991–.
MICHAEL SMITH, Assistant Professor of Information Technology – Ph.D., Alfred P. Sloan School of the Massachusetts Institute of Technology; Carnegie Mellon, 2000–.
RICHARD STAFFORD, Distinguished Service Professor – M.S., Public Policy and Management, Carnegie Mellon University; Carnegie Mellon, 2005–.
SHELBY STEWMAN, Professor of Sociology and Demography – Ph.D., Michigan State University; Carnegie Mellon, 1973–.
ROBERT STRAUSS, Professor of Economics and Public Policy; Faculty Chair, Master of Science in Educational Technology Management Program – Ph.D., University of Wisconsin; Carnegie Mellon, 1979–.
LAURA SYNNOTT, Associate Teaching Professor, Healthcare Policy and Management – M.S., Health Services Administration, University of Michigan; Carnegie Mellon, 2004–.
JANUSZ SZCZYPULA, Associate Teaching Professor in Information Systems – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2000–.
JOEL TARR, Richard S. Caliguiri Professor of Urban and Environmental History and Policy – Ph.D., Northwestern University; Carnegie Mellon, 1967–.
LOWELL TAYLOR, Professor of Economics and Public Policy; Associate Dean of Faculty – Ph.D., University of Michigan; Carnegie Mellon, 1990–.
RAHUL TELANG, Assistant Professor of Information Systems – Ph.D., Carnegie Mellon; Carnegie Mellon, 2001–.
MARK WESSEL, Dean University of Wisconsin; Carnegie Mellon, 1992–.
TIM ZAK, Associate Teaching Professor – M.B.A., New York University; Carnegie Mellon, 2011–.
Mellon College of Science

Frederick J. Gilman, Dean
Eric W. Grozinger, Associate Dean for Undergraduate Affairs
Undergraduate Office: Doherty Hall 1324
http://www.cmu.edu/mcs/

The Mellon College of Science (MCS) has provided the undergraduate training for many of today's leading scientists. We have earned national recognition for our integration of undergraduate education and research from such organizations as the National Science Foundation, the Howard Hughes Medical Institute, and the Beckman Foundation. MCS students gain a broad education in science, mathematics, and the liberal arts while using state-of-the-art computational approaches in their courses, laboratories, and research activities. Our faculty members are committed to teaching as well as to a wide range of scientific research. This combined emphasis on education and research brings special benefits to students, including increased awareness of current scientific developments that are incorporated in classroom instruction, and, most importantly, opportunities to participate with faculty, graduate students, and other research scientists in a variety of research projects.

In the context of rigorous training in each field, the MCS curriculum emphasizes problem-solving, communication, and analytical skills, and it teaches our students the value of hard work and discipline. Our students go on to highly successful careers in a broad range of fields like astrophysics, biotechnology, computer science, business management, environmental science, health care policy, investment banking, marketing analysis, medicine, patent law, and pharmaceuticals. Our alumni credit their education in science for preparing them for a lifetime of learning and achievement; their employers attest to their ability to succeed and to continue learning in an ever-changing world.

The MCS Departments of Biological Sciences, Chemistry, Mathematical Sciences, and Physics each outline their degree programs and courses in the departmental sections. Each program is based on a core of courses required by the college — two semesters each of calculus and physics and one semester each of chemistry, biology, and computer science. These courses lay a broad foundation in the sciences and not only enable our students to choose a major from any of the programs offered in MCS, but also prepare them for exploration of interdisciplinary aspects of science.

Students select their major in the spring of the first year so that the sophomore year begins with a focus within a department. Most of the courses required within a major are scheduled in the sophomore and junior years, leaving much of the senior year and part of the junior year open for electives. This provides the opportunity to participate in undergraduate research, explore interdisciplinary studies, study abroad, pursue additional majors or minors in other fields, or take other specialty courses oriented toward immediate job placement upon graduation or entry into graduate studies.

Tailoring Your Education

The Mellon College of Science offers students tremendous opportunity for tailoring their education to meet individual professional objectives. Whether you target your degree to a particular field in your discipline via departmental options and concentrations, add a secondary major, minor, or degree to your primary degree program, participate in honors programs, or pursue a master’s degree along with your bachelor’s degree, MCS has much to offer you. Many of these opportunities are outlined below.

Departmental Concentrations

Each department in MCS offers degrees and programs that allow students to explore particular fields within a science discipline. These are outlined below — see the departmental sections for further details.

Biological Sciences
- Biochemistry
- Biophysics
- Cell Biology
- Computational Biology
- Developmental Biology
- Genetics
- Molecular Biology
- Neuroscience

Chemistry
- Biochemistry
- Colloids, Polymers, and Surfaces
- Computational Chemistry
- Environmental Chemistry 15
- Management
- Material Chemistry
- Polymer Science

Mathematical Sciences
- Computational and Applied Mathematics
- Computational Finance
- Discrete Mathematics and Logic
- Mathematics
- Operations Research
- Statistics

Physics
- Applied Physics
- Astrophysics
- Biological Physics
- Chemical Physics
- Computational Physics

Minors, Double Majors, and Double Degrees

As an MCS student, you can pursue additional majors and minors to complement your primary degree, not only within the science college, but also through the other colleges at Carnegie Mellon. Carnegie Mellon offers many exciting interdisciplinary majors and minors, some of which are listed below. In addition, every college and most departments have designed minors or second majors in their discipline so that you can gain expertise in their fields as well.

Some students choose to gain this expertise by following a double degree program. This results in two distinct bachelor’s degrees. Please see the section on Undergraduate Academic Regulations for a more formal definition of these “Multiple Degree” programs.

Interdisciplinary Majors and Minors

Here is a sampling of just a few of the interdisciplinary minors and majors offered at Carnegie Mellon. Please see the appropriate sections elsewhere in this catalog for specific descriptions and course requirements.

- Biological Sciences and Psychology Major
- Computational Biology Major
- Engineering Studies Minor
- Environmental Policy Major
- Health Care Policy and Management Minor
- International Affairs Minor
- Mathematics and Economics Major
- Robotics Minor
- Scientific Computing Minor
- Technology and Policy Minor

For a complete list of the minors offered at Carnegie Mellon, please go to http://coursecatalog.web.cmu.edu/servicesandoptions/undergraduateoptions/undergraduateoptions/

Intercollege Programs

MCS participates in two intercollege programs, the Bachelor of Science and Arts Degree program and the Science and Humanities Scholars program. Enrollment for the Science and Humanities program is by invitation only for incoming first-year students, and by application for current students.
Bachelor of Science and Arts Degree Program (BSA)

Students in the Bachelor of Science and Arts Degree program are jointly admitted to MCS and the College of Fine Arts (CFA). This is a degree program for students who are naturally gifted in both the arts and the sciences, and allows for the combining of talents in these areas. More details can be found at http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/intercollegeprograms/

Science and Humanities Scholars Program (SHS)

Students in the Science and Humanities Scholars Program (SHS) are jointly admitted to MCS and the Dietrich College of Humanities and Social Sciences (DC). Participants in this program follow a special general education core, but have the flexibility to choose a primary major in either of the two colleges. More detail can be found at http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/

Honors Degree Programs in MCS

Several of the departments in MCS offer students an opportunity to participate in a departmental honors degree program. Some of these programs result in a bachelor’s degree along with the bachelor’s degree (see next section on accelerated master’s programs). These programs are listed below; see the department’s section of the catalog for more details.

• Honors Program in Research Biology
• Departmental Honors in Chemistry
• Honors B.S./M.S. Program in Chemistry
• Honors B.S./M.S. Program in Mathematical Sciences

Accelerated Master’s Programs

Carnegie Mellon offers some accelerated master’s programs for motivated students, whereby students complete both the bachelor’s and the master’s degree in four or five years. Some programs are in the student’s home department in MCS as part of an honors program, while others are offered through one of our graduate schools at Carnegie Mellon. Below is a listing of the programs currently available to MCS students; please see the appropriate sections of the catalog for more details.

• Honors B.S./M.S. Program in Chemistry
• Honors B.S./M.S. Program in Mathematical Sciences
• Accelerated Master’s Program in the Heinz College

Pre-Professional Programs

Many students in the Mellon College of Science decide to pursue professional training such as medical school or law school after completing their undergraduate work. Carnegie Mellon offers strong advising services to support these students. Through these programs, students get help with everything from course selection to identification of important experiential opportunities to the application process itself.

Health Professions Program

Faculty Contact: Jason D’Antonio
Please see the Undergraduate Options (p. 63) section for details on the Health Professions Program.

Pre-Law Advising Program

Faculty Contact: Joseph Devine
Please see the Undergraduate Options (p. 65) section for details on the Pre-Law Advising Program.

University Self-Defined Majors

With a well-thought proposal, you may be able to pursue a major you have designed to meet your particular interests and goals. Please see the catalog section on Undergraduate Options at http://coursecatalog.web.cmu.edu/servicesandoptions/undergraduateoptions/

Study Abroad

There are many programs for studying abroad, usually during your junior year. Please see the catalog section on Undergraduate Options for more details, and talk with the Office of International Education to get information and advice specifically for you.

Applying Your Education Through Research

An important feature of education in MCS is the opportunity for undergraduate research experience. This experience may be arranged as a course taken for credit or occasionally as a part-time job. Our web site (www.cmu.edu/mcs) offers a range of useful information including links to faculty research areas, links to undergraduate research programs at other institutions, and ideas on how to get involved. Because of the strong research base of MCS, undergraduate research positions offer an exciting opportunity to apply your theoretical training to participate in the discovery of new knowledge.

Students can earn MCS Research Honors for significant research accomplishments; see the policy outlined below for the requirements.

Mellon College of Science Research

Undergraduates in the Mellon College of Science will be awarded MCS College Honors at the completion of their degree if they have met one of these requirements:

1. Successfully completed the Honors BS/MS program in the Department of Chemistry or Department of Mathematical Sciences.
2. Successfully completed the departmental honors program in the Department of Biological Sciences or the Department of Chemistry.
3. Earned a cumulative grade point average of 3.20 or higher and carried out significant research. Typically, this would consist of an academic project carried out for at least two semesters. However, a single project that spans a summer and a semester or that the research mentor deems to be significant and sustained, even if the student worked for pay rather than credit, will be allowed. In addition, some form of public dissemination of this research, which has been approved by the Associate Dean of MCS, such as a peer reviewed publication, research thesis, or presentation at an external scientific meeting is required.

The Meeting of the Minds by itself is not sufficient and participation in a preapproved judged competition, such as Sigma Xi, is necessary.

Final approval of nominations for MCS Honors will come from the Dean of MCS and the Associate Dean for Undergraduate Affairs.

Research Centers

The Mellon College of Science is home to a number of innovative research centers. These centers are particularly strong because of the interdisciplinary collaboration of their scientists. This interdisciplinary research brings international prestige to the college. Many students conduct undergraduate research with one of these centers.

The Art Conservation Research Center is dedicated to helping museums, libraries and archives improve the ways of caring for their collections. For over 50 years, the Center has been a world leader in discovering the origins of aging problems that threaten cultural property and in developing practical and effective strategies to inhibit or avoid deterioration.

The Bruce and Astrid McWilliams Center for Cosmology joins research efforts in astrophysics and particle physics and partners with computer science, statistics, and other disciplines to unravel the mysteries of the universe.

The Center of Atmospheric Particle Study’s goal is to be the world leader in science, engineering, and policy covering the full role of fine particulate matter in the atmosphere. Our goal in research is to advance the state of knowledge across this spectrum substantially, to provide both policy-relevant research, and to participate directly and actively in the evolution of environmental policy related to particulate matter.

The Center for Computational Finance’s mission is to improve the interaction between academic research and the finance industry.

The Center for Macromolecular Engineering’s goals are to enhance the benefits of polymer science to society by developing new methods to prepare advanced polymer materials, train and develop tomorrow’s scientists, and transfer technology to industry.

The Center of Nano-enabled Device and Energy Technologies’ mission is to work on real-world problems that can be solved potentially with appropriate nano-enabled technologies.
The Center for the Neural Basis of Cognition is a joint program between Carnegie Mellon University and the University of Pittsburgh. It synthesizes the disciplines of basic and clinical neuroscience, cognitive psychology, and computer science, combining neurobiological, behavioral, computational, and brain imaging methods.

The Center for Nonlinear Analysis was established in 1991. A special focus for applications emphasizes new and innovative methods to study contemporary issues in materials science. The center has created a vigorous environment for collaboration among mathematical and allied scientists.

The Center for Nucleic Acids Science and Technology is a community of Carnegie Mellon scientists and engineers unified by interests in the chemistry, biology, and physics of DNA, RNA, and PNA (peptide nucleic acid).

The Institute for Green Science has been established as a research, education, and development center in which a holistic approach to sustainability science is being developed. The focus of the institute is in three areas: renewable energy technologies, chemical feedstocks, and benign alternatives to polluting technologies.

The Molecular Biosensor and Imaging Center uses an interdisciplinary approach to develop reagents, microscopes, and imaging tools and applies them to the investigation of fundamental problems in biology and biotechnology.

The Pittsburgh NMR Center for Biomedical Research is a joint program between Carnegie Mellon University and the University of Pittsburgh. It is supported as a Biotechnology Resource Center by the National Institutes of Health.

The Pittsburgh Supercomputing Center provides information on advanced scientific computing for engineering and research.

The Lane Center for Computational Biology seeks to realize the potential of machine learning for expanding our understanding of complex biological systems. A primary goal of the Center is to develop computational tools that will enable automated creation of detailed, predictive models of biological processes, including automated experiment design and data acquisition.

**First Year for Science Students**

An MCS education is based on a broad foundation in the sciences: two semesters each of calculus and physics and one semester each of biology, chemistry, and computer science. This foundation corresponds to the following courses required for all MCS students.

<table>
<thead>
<tr>
<th>Course Number</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-121</td>
<td>Modern Biology</td>
<td>9</td>
</tr>
<tr>
<td>09-105</td>
<td>Introduction to Modern Chemistry I</td>
<td>10</td>
</tr>
<tr>
<td>15-110</td>
<td>Principles of Computing</td>
<td>10</td>
</tr>
<tr>
<td>or 15-112</td>
<td>Fundamentals of Programming and Computer Science</td>
<td>10</td>
</tr>
<tr>
<td>or 02-201</td>
<td>Programming for Scientists</td>
<td>10</td>
</tr>
<tr>
<td>21-120</td>
<td>Differential and Integral Calculus</td>
<td>10</td>
</tr>
<tr>
<td>21-122</td>
<td>Integration and Approximation</td>
<td>10</td>
</tr>
<tr>
<td>or 21-124</td>
<td>Calculus II for Biologists and Chemists</td>
<td>10</td>
</tr>
<tr>
<td>33-111</td>
<td>Physics I for Science Students</td>
<td>12</td>
</tr>
<tr>
<td>33-112</td>
<td>Physics II for Science Students</td>
<td>12</td>
</tr>
</tbody>
</table>

In the first year, students take two semesters of calculus, 21-120 Differential and Integral Calculus and 21-122 Integration and Approximation or 21-124 Calculus II for Biologists and Chemists. They also take three of the remaining five science core courses. The other two science core courses are completed by the end of the junior year. Additional courses in the first year include one course from the intended major; humanities, social sciences or fine arts courses; and Computing @ Carnegie Mellon, a course that introduces students to the computing environment and ethics of computing at Carnegie Mellon.

With this broad science background, a student is prepared to undertake any of the degree programs offered by the college when selecting a major at the end of the first year.

**Fall Semester 41-50 units**

</tbody>
</table>

**Spring Semester 43-53 units**

21-122 Integration and Approximation 10
or 21-124 Calculus II for Biologists and Chemists 9-12
xx-xxx Science Core Course 9-12
xx-xxx Departmental Elective from Intended Major 9-10
xx-xxx Humanities, Social Sciences, or Fine Arts Course 9
xx-xxx Optional Free Elective Course or Discovery-Based Lab 6-9
xx-xxx Optional First-Year Seminar 3

**Notes:**

1. Departmental electives from the intended major are as follows:

   - **Biological Sciences or Chemistry:**
     - 09-106 Modern Chemistry II (10 units)
   - **Mathematical Sciences**
     - 21-127 Concepts of Mathematics (10 units)
   - **Physics**
     - 33-104 Experimental Physics (9 units)

2. A free elective is any Carnegie Mellon course. However, a maximum of nine units of physical education, military science and/or STUCO courses may be taken as free electives in any MCS degree program. Credit earned for physical education, military science and STUCO courses will not be calculated in a student’s GPA.

3. Students who enter with advanced placement credits will follow a similar schedule with modifications for their AP work

**MCS First-Year Laboratory Courses**

In addition to the basic schedule that was outlined above, students have the option to take one of the following 4 or 6 unit elective inquiry-based laboratory courses:

- **03-115** Phage Genomics Research 6

The Department of Biological Sciences offers a two-semester research course in bacteriophage genomics. If you are interested in biological research, this course may be ideal for you. Genomics research combines experimental and computational approaches for large-scale analysis of the biological information contained in DNA sequences. The most abundant biological entities are bacteriophages. Their enormous diversity and number make bacteriophages important models for the study of gene structure, function and regulation, population genetics and evolution. This program is part of a national project sponsored by the Howard Hughes Medical Institute at selected institutions.

- **03-126** Cellular Response to the Environment 4

This laboratory course provides a multifaceted view of the cell, with the opportunity for new discovery, through microscopic imaging of a cell’s response to environmental changes. We will identify yeast gene products that undergo changes in expression or subcellular localization after simple environmental perturbations or drug treatments. Students will be trained in basic molecular biological methods, including recombinant DNA manipulation, and basics of functional genomic resources.

**Humanities, Social Sciences, and Fine Arts Requirements**

All candidates for the bachelor’s degree must complete a minimum of 72 units offered by the Dietrich College of Humanities and Social Science and/or the College of Fine Arts. These courses for MCS students are to meet the following distribution requirements:

**A. Designated Writing Course (9 units)**

- 76-101 Interpretation and Argument 9

**B. Distributional Course Requirements (27 units)**

Complete three courses, one each from Category 1, Category 2, and Category 3. Listed below are examples of courses that meet the requirement for each category. Students wishing to substitute a course that is not listed should meet with their advisor.

**Category 1: Cognition, Choice and Behavior**

- 80-100 Introduction to Philosophy 9
- 80-130 Introduction to Ethics 9
- 80-150 Nature of Reason 9
- 80-180 Nature of Language 9

### C. Elective Course Requirements (36 units)

Complete non-technical courses totaling 36 units from DC, CFA, and Tepper. These can include language courses and music courses, for instance. In this category, you have the freedom to design how you want to structure your remaining general education requirements. For example, you can use these electives to build a depth sequence of 2-4 courses in a particular area or you can take courses from different areas or some combination of each.

Check our web site for courses from DC, CFA, and Tepper that may NOT be used (http://www.cmu.edu/mcs/undergrad/advising/hss-finearts/deletions.html) to satisfy these requirements because they are too technical in nature, plus a list of courses in other colleges (including SCS, CIT, Tepper, and Heinz College) that do satisfy these requirements (http://www.cmu.edu/mcs/undergrad/advising/hss-finearts/additions.html).

### Transfer into MCS Departments

Undergraduate students admitted to MCS can choose to pursue any major within MCS. This choice must be made prior to the first semester of the sophomore year (normally during the second semester of the first year) and does not require approval by any department.

Undergraduate students admitted to colleges other than MCS and wishing to transfer into an MCS department during their first year should consult with the MCS Associate Dean for Undergraduate Affairs. Students may submit an internal transfer request no earlier than mid-term of the spring semester of the first year. Potential transfer students must also have successfully taken 21-120 Differential and Integral Calculus and, depending on major choice, one of the following: 03-121 Modern Biology, 09-105 Introduction to Modern Chemistry I, or 33-111 Physics I for Science Students.

MCS undergraduate students beyond the first year wishing to transfer into another MCS department may do so if they are not on academic probation and if there is room in the department of their choice. If the demand for any department exceeds the space available, then the department will admit students based on a comparative evaluation of all applicants at the end of each semester, up to the limit of available space.

Undergraduate students not in MCS and wishing to transfer into a department in MCS beyond the first year will be considered for transfer on a space available/academic performance basis. An MCS department may refuse a transfer to a non-MCS student if there are space restrictions and/or if the student’s chance for success is determined to be questionable based on past academic performance.
Procedure for transfer of students from another university into an MCS department:

A student first applies through the Office of Admission. If the Office of Admission believes the applicant is acceptable, the student’s record is sent to the appropriate department for evaluation and a decision on acceptance. The MCS department head has the right to refuse to accept the student if there are space restrictions and/or if the student’s chance for success in the MCS department is determined to be questionable based on past academic performance.

Academic Standards and Actions

MCS Dean’s List
Each semester MCS recognizes those students with outstanding academic records by naming them to the Dean’s List. The criteria for such recognition are as follows:

Dean’s List
The student must earn a quality point average of at least 3.5 while completing a minimum of 36 factorable units and earning no incomplete grades.

Dean’s List High Honors
The student must earn a quality point average of at least 3.75 while completing a minimum of 36 factorable units and earning no incomplete grades.

Probation, Suspension, and Drop
In the first year, quality point averages below 1.75 in either semester invoke an academic action. For all subsequent semesters an academic action will be taken if the semester GPA or the cumulative GPA (excluding the first year) is below 2.00.

The progression between probation, suspension, and drop is typical. However, for example, in unusual circumstances, MCS College Council may choose to suspend or drop a student without prior probation.

Probation
The action of probation will be taken if:

- One semester of the first year is below 1.75 GPA.
- The semester GPA of a student in good standing beyond the first year falls below 2.00. The term of probation is one semester as a full-time student. First-year students are no longer on probation at the end of the second semester if their semester GPA is 1.75 or above.

A student is occasionally continued on probation who has had one semester on probation and is not yet meeting minimum requirements but whose record indicates that the standards are likely to be met at the end of the next semester of study.

Suspension
A student who does not meet minimum standards at the end of one semester of probation will be suspended.

A first-year student will be suspended if the GPA from each semester is below 1.75.

A student in the third or subsequent semester of study will be suspended if the semester factor or the cumulative factor (excluding the first year) is below 2.00 for two consecutive semesters.

The minimum period of suspension is one academic year (two semesters). At the end of that period a student may return to school on probation by:

- Receiving permission in writing from the Associate Dean of MCS.
- Completing a Return from Leave form from Enrollment Services.
- Providing transcripts and clearance forms if the student has been in a degree program at another college or university, even though academic credit earned will not transfer to Carnegie Mellon unless prior approval has been granted by the Associate Dean.

Employment within the university in non-student jobs is possible for students on academic suspension, subject to the hiring criteria of the hiring department. However, a student on academic suspension wishing to accept a job on campus must speak with the Associate Dean of the student’s college to ensure that the employment will not constitute a violation of the terms of suspension. The Associate Dean will generally allow such employment, in consultation with the Dean of Student Affairs. One employment benefit not available to students on academic suspension who accept a full-time job with the University is the option to take courses through tuition remission. The option to take courses becomes available only after the academic suspension is over.

Drop
This is a permanent severance from the Mellon College of Science. Students are dropped when it seems clear that they will never be able to meet minimum standards. A student who has been suspended and who fails to meet minimum standards after returning to school is dropped.

A student who has been academically dropped or academically suspended and who is not employed by the University must absent themselves from campus and is, for the term of the suspension, barred from all activities and affiliations that stem from one’s status as an enrolled student. These include registering or enrolling for courses, sitting in on classes, living in residence halls or Greek houses, membership and participation in student activities, and employment in student jobs. (NOTE: Exceptions to the restriction from student jobs for students on academic suspension will in general be granted for summer employment if the position was accepted prior to the decision to suspend.)

Graduation Requirements
To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative GPA to fall below 2.0, this requirement is modified to be a cumulative GPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative GPA that appears on the student’s final transcript will be calculated based on all grades in all courses taken, including freshman year. Some programs may have additional QPA requirements in order to graduate. Students are encouraged to confirm all graduation requirements with their academic advisor.

A minimum of 360 units must be completed. This will include the MCS Science Core Courses, humanities or fine arts requirements and all departmental course requirements.

Students will be required to meet the residency requirement and to have met all financial obligations to the university before being awarded a degree. The residency requirement is detailed in the Academic Regulations section of the catalog. A student may seek permission to modify graduation requirements by petition to the MCS College Council.

Graduation Honors
There are two types of honors awarded at graduation.

University Honors
University Honors are automatically awarded to students who have earned a cumulative Q.P.A. of 3.5 or better after seven semesters.

College Research Honors
Please see the section “Mellon College of Science Research Honors” for information on how to qualify for College Research Honors.
The Mellon College of Science offers several minors to students interested in broadening their scientific training or acquiring a level of expertise in a particular scientific field. The intercollege minors described below are designed to supplement your degree in science; the departmental minors offer you a means of exploring another field and are open to students throughout the university.

**Intercollege Minors**

Please see the descriptions below.

- Environmental Science
- Health Care Policy and Management
- Scientific Computing

**Departmental Minors in the Mellon College of Science**

For descriptions, please see the departmental sections which follow.

- Biological Sciences
- Chemistry
- Computational Finance
- Discrete Mathematics and Logic
- Mathematical Sciences
- Physics

**Minor in Environmental Science**

Advisor: Eric Grotzinger

The primary mission of the environmental sciences minor is to prepare students in the Mellon College of Science for careers or postgraduate education in the diverse fields of environmental sciences. We feel strongly that these endeavors must be grounded in strong fundamental science; consequently, the program extends majors in the Mellon College of Science. We also award minors to students from other colleges, provided that they can build a course of study with sufficient scientific rigor to meet the standards of the program.

As a capstone program, the minor is built around advanced courses that extend as well as broaden the specialized education associated with the major programs. Environmental sciences are highly interdisciplinary in nature, and while it is necessary that students have an exposure to introductory courses in several of these disciplines, it is by no means sufficient; in-depth knowledge is required. We encourage all students to pursue generally broad studies, including subjects that encompass human interactions with the environment, and will provide guidance to all students interested in the area. We encourage those students who intend to devote focused attention to environmental sciences to pursue this minor.

Environmental Sciences are broadly defined as pursuits designed to extend as well as broaden the specialized education associated with the major programs. Environmental sciences are highly interdisciplinary in nature, and while it is necessary that students have an exposure to introductory courses in several of these disciplines, it is by no means sufficient; in-depth knowledge is required. We encourage all students to pursue generally broad studies, including subjects that encompass human interactions with the environment, and will provide guidance to all students interested in the area. We encourage those students who intend to devote focused attention to environmental sciences to pursue this minor.

**Required Courses:**

- Science Requirements (27 units)

  - 09-217 Organic Chemistry I 9-10
  - 09-218 Organic Chemistry II 9-10
  - 03-231/232 Biochemistry I 9
  - Laboratory Requirement (12 units)

**Statistics Requirement (9 units)**

- 36-217 Probability Theory and Random Processes 9
- 36-225 Introduction to Probability Theory 9
- 36-247 Statistics for Lab Sciences 9

**Additional Course Requirements:**

Complete one course from each of the following groups (substitutions can be made with the approval of the Environmental Science Advisor).

**Science (Mechanism)**

- 09-542 Molecular Biology 9
- 09-510 Introduction to Green Chemistry 9
- 09-520 Global Atmospheric Chemistry: Fundamentals and Data Analysis Methods 9
- 06-630 Atmospheric Chemistry, Air Pollution and Global Change 12

**Course credit may be assigned for research, fieldwork, or coursework performed outside of CMU at the discretion of the minor advisor.**

**Engineering (Process)**

- 12-100 Introduction to Civil and Environmental Engineering 12
- 12-201 Geology 9
- 12-351 Environmental Engineering 9
- 12-651 Air Quality Engineering 9
- 19-440 Combustion and Air Pollution Control Policy 9
- 19-448 Energy and the Environment 9
- 73-148 Environmental Economics 9
- 73-358 Economics of the Environment and Natural Resources 9
- 79-372 Perspectives on the Urban Environment 9
- 79-381 Petrocultures: How Oil Changed the World 9
- 79-375 China's Environmental Crisis 9
- 80-344 Management, Environment, and Ethics 9
- 99-238 Materials, Energy and Environment 9

**Minor in Health Care Policy and Management**

**Sponsored by:**

- H. John Heinz III College
- Dietrich College of Humanities and Social Sciences
- Mellon College of Science

**Faculty Advisors:**

- Jason D’Antonio, Mellon College of Science
- James F. Jordan, H. John Heinz III College

The face of health care is changing. The practice of medicine is being fundamentally altered by the forces of change in public policy, health care organizations and in the industry as a whole. The role of individual professionals in this industry is changing as rapidly as the industry itself. Traditional career paths have disappeared overnight to be replaced by new opportunities that require new skills. New organizations are placing new demands on their professional and medical staffs. The criteria of efficiency and financial stability are entering the domains of diagnosis and treatment.

This minor is designed to provide students considering a career in the health professions with an understanding of these changes that are likely to affect their careers. Students will become familiar with the critical policy and management issues and will begin to learn to operate effectively in the emerging health care environment. The curriculum combines economic, organizational, managerial, historical and psychological perspectives on
these issues to provide a foundation for a deepened understanding of the changing structure of health care organizations and policy.

60 units minimum

Curriculum

Seven courses (a minimum of 60 units) are required to complete this minor. Entry into the minor requires completion of 73-100 Principles of Economics or 88-220 Policy Analysis I or the equivalent by approval.

39 units Required Courses

Students are required to take the following courses.

Please note that some of these courses have prerequisites that will not count toward the completion of the requirements for this minor.

Minor in Scientific Computing

Advisor: Eric Grotzinger

Sometimes called “computational science,” scientific computing is the application of high-performance computers and modern computational technologies to problems in the sciences and engineering. Research in this area is inherently multidisciplinary, requiring strong ties with a scientific discipline.

MCS students can easily build on their scientific training with this applied computational program. The curriculum consists of five areas of concentration, which span the natural sciences, mathematics, programming and research. The curriculum is structured to allow flexibility in choosing courses that meet students’ particular interests or best compliment their major. The minor is also a natural choice for students majoring in any technical area.

Required Courses

Students must meet the requirements of the following categories:

A. Non-Introductory Science Requirement (9-12 units)
Complete 1 course from Biological Sciences, Chemistry, or Physics at the 200 level or higher, excluding those courses listed below as part of the requirements of the minor. Courses with a significant science component from other colleges may be substituted with approval from the program administrator.

B. Computational Science Requirement (18-24 units)
Complete 2 of the following courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-250</td>
<td>Introduction to Computational Biology</td>
<td>12</td>

</tr>
<tr>
<td>09-560</td>
<td>Computational Chemistry</td>
<td>12</td>
</tr>
</tbody>
</table>
A major revolution is occurring in the field of biological sciences. Biology is undergoing unprecedented technological advances in biochemistry, biophysics, cell biology, genetics, molecular biology, developmental biology, neuroscience, and computational biology. Carnegie Mellon's Department of Biological Sciences is nationally recognized as one of the outstanding departments in these areas. Advances in basic research are already being used to solve problems, not only in medicine and public health, but also in areas such as agriculture, forestry, mining, energy, and in industrial and pharmaceutical manufacturing processes. The department provides its students with an education that has both intellectual breadth and depth of exposure to modern research biology. This education can be used to gain employment immediately after graduation in government, industry or academic research laboratories, or to pursue graduate studies in a variety of areas such as science, medicine, public health, law, or business. A degree in biological sciences provides excellent preparation for medical school or other graduate programs in the health professions. These students are aided by the Carnegie Mellon Health Professions Program (HPP), an advisory and resource service for all Carnegie Mellon students who are considering careers in the health care field. (See the HPP, http://coursecatalog.web.cmu.edu/servicesandoptions/undergraduateoptions/healthprofessionsprogram) section in this catalog or www.cmu.edu/hpp for more information.)

The department offers a Bachelor of Science (B.S.) degree in Biological Sciences. This program has a distinctive core curriculum that provides a foundation in biology, chemistry, computer science, mathematics, and physics. In addition to the core courses, the program includes six biology electives, five free electives as well as eight humanities, social science and fine arts electives. With these electives, students can shape a degree program according to their own interests and career goals. For students who have an interest in a particular field of biology and wish to have a specialized focus, the department offers options in biochemistry, biophysics, cell biology, computational biology, developmental biology, genetics, molecular biology, neuroscience that provide the relevant training in each area. The options are especially recommended for students who are considering graduate school in one of these areas. The B.S. in Biological Sciences/Neuroscience Track is available to those students who wish to pursue an in-depth study of neuroscience.

In this exciting era that includes the influence of biology and the life sciences on many fields from medicine to law, the opportunity to pursue in-depth exposure to multiple disciplines provides opportunities for students to prepare for involvement at the forefront of emerging fields, markets, and policy changes. The Department of Biological Sciences at Carnegie Mellon is working at these new interfaces through interdisciplinary research and educational programs. Innovative interdisciplinary degrees which are offered by the department include the inter-college B.S. degrees in Computational Biology and Neuroscience as well as an unified B.S. degree in Biological Sciences and Psychology. Students also explore interdisciplinary studies through the Science and Humanities Scholars program, or pursue interests at the interface between the arts and sciences through the Bachelor of Science and Arts (B.S.A.) degree program combining biological sciences with a discipline in the College of Fine Arts. A stand-alone Bachelor of Arts (B.A.) degree is available for students who wish to expand their educational training in other fields. Many students choose to broaden their education by pursuing minors and additional majors in disciplines throughout the university, not just within the Mellon College of Science.

One of the most important features of the Department of Biological Sciences is the opportunity for undergraduate students to interact with faculty. Providing a solid foundation to scientific practice is critical; therefore, the department offers first-year students a variety of inquiry-based, hands-on courses that incorporate a wide range of topics and interests within Biological Sciences. These courses kick-start the transformation of science students to scientists. We encourage our students to get to know their faculty through one of these courses, or through mentored, independent research projects in the faculty laboratories. Our faculty members are prominent research scientists who also teach beginning and advanced courses. The upper level teaching laboratories are located in the same building as the faculty research laboratories and share scientific equipment. We encourage students to make themselves aware of the research areas of the faculty and to design research projects with faculty. While such research is usually most important in the senior year, it may begin earlier in a student's undergraduate training. The department has an Honors Program in Research Biology to facilitate a more intensive involvement in research for eligible students. During the past four years, more than 80 percent of the undergraduate biology majors have worked with faculty on their research and, in some cases, have been co-authors of research papers and have given presentations at national meetings.

As of the fall of 2011, the Department of Biological Sciences offers B.S. degrees in Biological Sciences as well as Computational Biology at Carnegie Mellon University in Doha, Qatar. Students enrolled in either of these degree programs will also complete the requirements outlined below. However, a limited number of required courses for the CMU-Qatar program are offered through a collaboration with the Weill Cornell Medical College in Qatar. For a listing of how the degree requirements are fulfilled for students enrolled in Doha, please consult the CMU-Qatar website (https://www.qatar.cmu.edu/curriculum-bs).

B.S. Biological Sciences

The Bachelor of Science (B.S.) in Biological Sciences is built around a core program and elective units as detailed in the following section.

Degree Requirements:

<table>
<thead>
<tr>
<th>Biological Sciences</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-121 Modern Biology</td>
<td>9</td>
</tr>
<tr>
<td>03-231 Biochemistry I</td>
<td>9</td>
</tr>
<tr>
<td>03-240 Cell Biology</td>
<td>9</td>
</tr>
<tr>
<td>03-201/202 Undergraduate Colloquium for Sophomores</td>
<td>2</td>
</tr>
<tr>
<td>03-250 Introduction to Computational Biology</td>
<td>12</td>
</tr>
<tr>
<td>or 03-251 AND 03-252</td>
<td>12</td>
</tr>
<tr>
<td>03-330 Genetics</td>
<td>9</td>
</tr>
<tr>
<td>03-343 Experimental Techniques in Molecular Biology</td>
<td>12</td>
</tr>
<tr>
<td>03-344 Experimental Biochemistry</td>

**360 Minimum number of units required for degree:**

### Biological Sciences Electives

The following specifications apply to Biological Sciences electives:

- At least 18 units must be at the 03-3xx level or above, exclusive of 03-445 Undergraduate Research and 03-370 Principles of Biotechnology.
- Up to three interdisciplinary electives may count as biology electives.
- Up to 18 units of 03-445 Undergraduate Research may count as general biology electives; a maximum of 36 units can count for the minimum units required for graduation.
- Courses in biology taken through cross-registration or study abroad at another university may count as electives if prior permission is obtained from the Carnegie Mellon Department of Biological Sciences advisor.

**Interdisciplinary Electives Group**

Up to three of the following courses may count as biology electives:

- 09-518 Bioorganic Chemistry: Nucleic Acids and Carbohydrates 9
- 09-519 Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry 9
- 09-521 Bioinorganic Chemistry 9
- 09-535 Applied topics in Macromolecular and Biophysical Techniques 9
- 15-211 Fundamental Data Structures and Algorithms 12
- 21-127 Concepts of Mathematics 10
- 21-259 Calculus in Three Dimensions 9
- 21-260 Differential Equations 9
- 36-201 Statistical Reasoning and Practice 9
- 36-247 Statistics for Lab Sciences 9
- 42-202 Physiology 9
- 85-219 Biological Foundations of Behavior 9

### Options for the B.S. in Biological Sciences

Students who wish to specialize in a particular area of biology can do so through a set of departmentally defined options. A student who completes the required biology electives for any option can have up to two noted on his or her transcript. Options need not be declared. The elective courses required for each of the options are listed below.

#### Biochemistry Option

**Required Biology Electives:**

- 03-740 Advanced Biochemistry 12
- 21-259 Calculus in Three Dimensions 9
- or 21-260 Differential Equations 9

**Any ONE of the following courses:**

- 09-518 Bioorganic Chemistry: Nucleic Acids and Carbohydrates 9
- 09-519 Bioorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry 9
- 09-521 Bioinorganic Chemistry 9

**Recommended Biology Electives:**

- 03-442 Molecular Biology 9
- 03-534 Biological Imaging and Fluorescence Spectroscopy 9
- 03-439 Introduction to Biophysics 9
- 03-871 Structural Biophysics 12

#### Biophysics Option

**Required Biology Electives:**

- 03-740 Advanced Biochemistry 12
- 03-439 Introduction to Biophysics 9
- 21-259 Calculus in Three Dimensions 9
- or 21-260 Differential Equations 9

**Recommended Biology Electives:**

- 03-534 Biological Imaging and Fluorescence Spectroscopy 9
- 03-871 Structural Biophysics 12

#### Cell Biology Option

**Required Biology Electives:**

- 03-350 Developmental Biology 9
- 03-741 Advanced Cell Biology 12

**Any ONE of the following courses:**

- 03-791 Advanced Microbiology 12
- 03-871 Structural Biophysics 12
## Required Biology Electives:

**Neuroscience Option**

Required Biology Electives:

- 03-711 Computational Molecular Biology and Genomics 12
- 15-210 Parallel and Sequential Data Structures and Algorithms 12

Any ONE of the following courses:

- 36-247 Statistics for Lab Sciences 9
- 21-260 Differential Equations 9
- 21-241 Matrices and Linear Transformations 10

Recommended Biology Electives:

- 03-512 Computational Methods for Biological Modeling and Simulation 9
- 15-451 Algorithm Design and Analysis 12
- 09-560 Computational Chemistry 12

**Developmental Biology Option**

Required Biology Electives:

- 03-350 Developmental Biology 9
- 03-442 Molecular Biology 9
- 03-751 Advanced Developmental Biology 12

Recommended Biology Electives:

- 03-326 Evolution of Regulatory Genomics 4.5
- 03-741 Advanced Cell Biology 12

**Genetics Option**

Required Biology Electives:

- 03-326 Evolution of Regulatory Genomics 4.5
- 03-327 Phylogenetics 9
- 03-442 Molecular Biology 9
- 03-730 Advanced Genetics 3 12

Recommended Biology Electives:

- 03-391 Microbiology 9

**Molecular Biology Option**

Required Biology Electives:

- 03-442 Molecular Biology 9
- 09-518 Bioorganic Chemistry: Nucleic Acids and Carbohydrates 9
- 03-726 Evolution of Regulatory Genomics 6
- 03-727 Phylogenetics 12

Recommended Biology Electives:

- 03-390 Molecular and Cellular Immunology 9
- 03-391 Microbiology 9
- 03-730 Advanced Genetics 12

**Neuroscience Option**

Required Biology Electives:

- 03-362 Cellular Neuroscience 9
- 03-363 Systems Neuroscience 9

Any ONE of the following courses:

- 42-202 Physiology 9
- 03-260 Neurobiology of Disease 9
- 03-350 Developmental Biology 9
- 03-364 Developmental Neuroscience 9
- 03-534 Biological Imaging and Fluorescence Spectroscopy 9
- 85-219 Biological Foundations of Behavior 9

---

### B.S. Biological Sciences/Neuroscience Track

The Bachelor of Science in Biological Sciences/Neuroscience Track provides an option for those Biological Sciences majors who are interested in an intensive curricular focus in neuroscience. The requirements of the Track are the same as those listed for the B.S. in Biological Sciences with the following changes to the biological sciences elective requirements:

**Degree Requirements:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-362</td>
<td>Cellular Neuroscience 9</td>
</tr>
<tr>
<td>03-363</td>
<td>Systems Neuroscience 9</td>
</tr>
<tr>
<td>03-761</td>
<td>Neural Plasticity 9</td>
</tr>
</tbody>
</table>

Plus three of the following electives:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-260</td>
<td>Neurobiology of Disease 9</td>
</tr>
<tr>
<td>03-350</td>
<td>Developmental Biology 9</td>
</tr>
<tr>
<td>03-364</td>
<td>Developmental Neuroscience 9</td>
</tr>
<tr>
<td>03-534</td>
<td>Biological Imaging and Fluorescence Spectroscopy 9</td>
</tr>
<tr>
<td>15-385</td>
<td>Introduction to Computer Vision 6</td>
</tr>
<tr>
<td>15-386</td>
<td>Neural Computation 9</td>
</tr>
<tr>
<td>42-202</td>
<td>Physiology 9</td>
</tr>
<tr>
<td>85-211</td>
<td>Cognitive Psychology 9</td>
</tr>
<tr>
<td>85-213</td>
<td>Human Information Processing and Artificial Intelligence 9</td>
</tr>
<tr>
<td>85-219</td>
<td>Biological Foundations of Behavior 9</td>
</tr>
</tbody>
</table>

---

### B.S. Computational Biology

The Bachelor of Science in Computational Biology is listed in the Intercollege (p. 73) section of this catalog. It is a joint degree program offered between the Mellon College of Science and the School of Computer Science. Current MCS students interested in pursuing this degree should contact Dr. Maggie Braun (DH 1320). More information can also be found on the CMU Computational Biology website (http://lane.compbio.cmu.edu).

**B.S. Neuroscience**

The Bachelor of Science in Neuroscience is listed in the Intercollege (p. 73) section of this catalog. It is a joint degree program offered between the Mellon College of Science and the Dietrich College of Humanities and Social Sciences. Current MCS students interested in pursuing this degree should contact Dr. Maggie Braun (DH 1320). More information can also be found on the CMU Neuroscience website (http://www.cmu.edu/neuro).

### B.S. Biological Sciences and Psychology

This major is intended to reflect the interdisciplinary nature of current research in the fields of biology and psychology, as well as the national trend in some professions to seek individuals broadly trained in both the social and natural sciences.

**Note:** Students entering from the College of Humanities and Social Sciences will earn a Bachelor of Science in Psychology and Biological Sciences. Students in the Mellon College of Science will earn a Bachelor of Science in Biological Sciences and Psychology. Students in the joint Science and Humanities Scholars (SHS) program can complete the SHS educational core and choose either departmental order for their diploma.

Depending on a student’s home college (H&SS or MCS), General Education (GenEd) requirements will be different. GenEd requirements for H&SS (p. 196) and MCS (p. 293) are found on their respective Catalog pages.

**Degree Requirements:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-121</td>
<td>Modern Biology 9</td>
</tr>
<tr>
<td>03-231</td>

<td>Cell Biology 9</td>
</tr>
<tr>
<td>03-330</td>
<td>Genetics 9</td>
</tr>
</tbody>
</table>
Minimum number of units required for degree: 360

### B.A. Biological Sciences

The Department of Biological Sciences offers a Bachelor of Arts (B.A.) degree that is intended for students who wish to combine their interest in science with their interest(s) in other discipline(s) across campus. The requirements for the B.A. degree are distributed as follows:

**Degree Requirements:**

<table>
<thead>
<tr>
<th>Biological Sciences</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-121 Modern Biology</td>
<td>9</td>
</tr>
<tr>
<td>03-231 Biochemistry I</td>

Total Elective units: 69-72

360 Minimum number of units required for degree:

### Masters Degree in Computational Biology

Students who are interested in more advanced training in this emerging field may want to consider the Master of Science Program in Computational Biology. For more information about this program, contact the Biological Sciences Graduate Programs Office (bio-gradoffice@andrew.cmu.edu).

### Honors Program in Research Biology

The departmental Honors Program offers an opportunity to become extensively involved in research. The program requires students to conduct an independent project and to prepare a formal thesis that is written and defended in the senior year. This program does not preclude a student from completing any of the options within the department nor is it the only way.
in which students can participate in undergraduate research, although it is excellent preparation for graduate studies.

Minor in Biological Sciences

All university students are eligible to pursue a minor in biological sciences in conjunction with a major in any other department in the university. A minimum of six biological sciences courses (and two chemistry prerequisites) must be completed to fulfill the minor in biological sciences.

The curriculum includes four required courses and two elective courses as specified below. Units awarded for undergraduate research are not applicable to elective courses. Courses taken in other departments or colleges will be considered on an individual basis.

Courses for the Minor in Biological Sciences

Prerequisites:

<table>

</tr>
</tbody>
</table>

73 Minimum number of units required for the Minor in Biological Sciences:

Minor in Neuroscience

The curriculum within the Neuroscience minor will allow students from various disciplines to gain fundamental knowledge of neuroscience concepts. The interdisciplinary nature of the coursework echoes the nature of the field itself; students will select courses from the natural, social, and computer sciences. Neuroscientists not only require foundational knowledge of molecular, cellular, and systems neuroscience, but they should also understand the behavioral significance and appreciate how computational work and imaging techniques can aid in clarifying normal and abnormal functioning of these fundamental processes.

Students pursuing the minor in Neuroscience will:

• Acquire foundational knowledge of the basic biological foundations of the nervous system, from the cellular through systems levels.
• Understand the effects of basic neurological function on behavior, including cognition.
• Gain an appreciation of the interdisciplinary nature of the field of neuroscience.

NOTE: Because the curriculum within this minor may overlap with some degree requirements, no more than 2 courses fulfilling Neuroscience Minor requirements may count towards the requirements of a student’s major or other minor.

Courses required for the Neuroscience minor

Required courses (4):

Transfer credit for Modern Biology

Students wishing to transfer credit for 03-121 Modern Biology from another institution must meet the following requirements:

1. The course in question should have at least an 80% match in topics with 03-121. Topics in 03-121 cover the genetic, molecular, cellular, developmental, and evolutionary mechanisms that underlie biological processes and include: Cell theory; Cell chemistry; Cell structure; Function and structure of proteins, DNA, RNA, lipids and carbohydrates; Cell respiration and fermentation; The cell cycle; Cell-cell interactions and communication; Transcription; Translation; RNA processing in Eukaryotes; DNA replication and repair; Meiosis; Mitosis; and Regulation of Gene Expression.

This information is sometimes available in the course description, but more detail is often found in a course syllabus.

3. Introductory level courses that focus on other biology areas (i.e. anatomy, physiology, ecology, evolution, and/or development) will not be accepted for 03-121 credit. These courses may receive credit for a general biology elective.

4. Students should contact their departmental academic advisor for the transfer credit approval process in their college.

Faculty

ALISON L. BARTH, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2002–.

MOHAMED BOUAOUINA, Assistant Teaching Professor – Ph.D., Carnegie Mellon, 2013–.

DANIEL BRASIER, Lecturer – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–.

MAGGIE BRAUN, Assistant Teaching Professor and Assistant Department Head for Undergraduate Affairs – Ph.D., University of Pittsburgh; Carnegie Mellon, 2013–.

MARCEL BRUCHEZ, Associate Professor in Biological Sciences and Chemistry, Associate Director of MBIC – Ph.D., University of California, Berkeley; Carnegie Mellon, 2000–.

AMY L. BURKERT, Teaching Professor and Vice Provost for Education – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1997–.

JASON M. D’ANTONIO, Lecturer and Director of the Health Professions Program – Ph.D., University of Pittsburgh School of Medicine; Carnegie Mellon, 2013–.

CARRIE B. DOONAN, Teaching Professor and Director of Undergraduate Laboratories – Ph.D., University of Connecticut; Carnegie Mellon, 1993–.

EMILY DRILL, Assistant Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 2012–.

M. DANNIE DURAND, Associate Professor – Ph.D., Columbia University; Carnegie Mellon, 2000–.

CHARLES A. ETTENSOHN, Professor – Ph.D., Yale University; Carnegie Mellon, 1987–.

ARYN GITTIS, Assistant Professor – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–.
ERIC W. GROTZINGER, Teaching Professor and Associate Dean of Undergraduate Affairs for MCS – Ph.D., University of Pittsburgh; Carnegie Mellon, 1979–.

DAVID D. HACKNEY, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 1978–.

VERONICA F. HINMAN, Associate Professor – Ph.D., University of Queensland; Carnegie Mellon, 2006–.

CHIEN HO, Professor and Director of NMR Center of Pittsburgh – Ph.D., Yale University; Carnegie Mellon, 1979–.

JEFFREY O. HOLLINGER, Professor of Biological Sciences and Biomedical Engineering – Ph.D., D.D.S., University of Maryland; Carnegie Mellon, 2000–.

KEN HOVIS, Assistant Teaching Professor, Carnegie Mellon-Qatar – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2011–.

VALENTIN ILYIN, Associate Teaching Professor of Computational Biology at CMU-Qatar – Ph.D., Carnegie Mellon, 2012–.

JONATHAN W. JARVIK, Associate Professor – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1978–.

LINDA R. KAUFFMAN, Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 1977–.

SANDRA KUHLMAN, Assistant Professor – Ph.D., University of Kentucky; Carnegie Mellon, 2012–.

A. JAVIER LOPEZ, Associate Professor – Ph.D., Duke University; Carnegie Mellon, 1989–.

BROOKE M. MCCARTNEY, Associate Professor – Ph.D., Duke University; Carnegie Mellon, 2006–.

C. JOEL McMANUS, Assistant Professor – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2011–.

ROBERT W. KIGER, Distinguished Service Professor and Botany Professor and the History of Science Director and Principal Research Scientist for the Hunt Institute for Botanical Documentation – Ph.D., University of Wisconsin; Carnegie Mellon, 1979–.

ROBERT W. KIGER, Distinguished Service Professor and Botany Professor and the History of Science Director and Principal Research Scientist for the Hunt Institute for Botanical Documentation – Ph.D., University of Wisconsin; Carnegie Mellon, 1979–.

CHIEN HO, Professor and Director of NMR Center of Pittsburgh – Ph.D., Duke University; Carnegie Mellon, 1979–.

LINDA VISOMIRSKI-ROBIC, Lecturer – Ph.D., Case Western Reserve University; Carnegie Mellon, 2002–.

SHOBA SUBRAMANIAN, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2002–.

DAVID D. HACKNEY, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 1979–.

AARON P. MITCHELL, Professor – Ph.D., University of Wisconsin-Madison; Carnegie Mellon, 2010–.

KARL KANDLER, Professor of Otolaryngology and Neurobiology at the University of Pittsburgh – Ph.D., University of Tübingen, Germany; Carnegie Mellon, 2006–.

JON W. JOHNSON, Professor of Neuroscience at the University of Pittsburgh – Ph.D., Stanford University; Carnegie Mellon, 2006–.

VALERIE H. WOOD, Associate Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of California, Berkeley; Carnegie Mellon, 1977–.

GE YANG, Assistant Professor of Biomedical Engineering and the Lane Center for Computational Biology – Ph.D., University of Minnesota, Twin Cities; Carnegie Mellon, 2010–.

Adjunct Faculty

WILLIAM R. MCCLURE, Professor Emeritus – Ph.D., University of Wisconsin; Carnegie Mellon, 1981–.

JOHN F. NAGLE, Professor of Biological Sciences and Physics – Ph.D., Yale University; Carnegie Mellon, 1967–.

JAMES F. WILLIAMS, Professor Emeritus – Ph.D., University of Toronto; Carnegie Mellon, 1976–.

Emeriti Faculty

PETER B. BERGET, Professor Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 1986–.

DAVID M. HANSON, Professor Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 1967–.

D. LANSING TAYLOR, President and Chief Executive Officer of Cellumen, Inc. – Ph.D., State University of New York at Albany; Carnegie Mellon, 1982–.

EDDA THIELS, Assistant Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Minnesota, Twin Cities; Carnegie Mellon, 2010–.

CHISTOPHER J. LANGMEAD, Associate Professor of Computer Science – Ph.D., Dartmouth College; Carnegie Mellon, 2004–.

PHIL R. LEDUC, Professor of Mechanical Engineering – Ph.D., The Johns Hopkins University; Carnegie Mellon, 2002–.

T.D. JACOBSEN, Assistant Director and Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington State University; Carnegie Mellon, 1996–.

ROBERT W. KIGER, Distinguished Service Professor and Botany Professor and the History of Science Director and Principal Research Scientist for the Hunt Institute for Botanical Documentation – Ph.D., University of Wisconsin; Carnegie Mellon, 1979–.

PHIL G. CAMPBELL, Research Professor at the Institute for Complex Engineering Systems – Ph.D., Pennsylvania State University; Carnegie Mellon, 1999–.

KARL KANDLER, Professor of Otolaryngology and Neurobiology at the University of Pittsburgh – Ph.D., University of Tübingen, Germany; Carnegie Mellon, 2006–.

CYNTHIA LANCE-JONES, Associate Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Massachusetts; Carnegie Mellon, 2006–.

CYNTHIA M. HUNT, Associate Curator and Head of Botany at the Carnegie Museums of Natural History – Ph.D., New York Botanical Garden/CUNY; Carnegie Mellon, 2002–.

PHIL G. CAMPBELL, Associate Professor of Computer Science and Machine Learning – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2003–.

M. ROBERT STRICK, Co-Director of CNAST and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–.

HUNTER T. BROWN, Professor of Biological Sciences and Biomedical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1990–.

CHRISTOPHER J. LANGMEAD, Associate Professor of Computer Science – Ph.D., Dartmouth College; Carnegie Mellon, 2004–.

PHILIP R. LEDUC, Professor of Mechanical Engineering – Ph.D., The Johns Hopkins University; Carnegie Mellon, 2002–.

CARL R. OLSON, Professor of the CNBC – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–.

FREDERICK H. UTECH, Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington University; Carnegie Mellon, 1977–.

ERIC P. XING, Associate Professor of Computer Science, Language Technologies Institute, and Machine Learning – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–.

GE YANG, Assistant Professor of Biomedical Engineering and the Lane Center for Computational Biology – Ph.D., University of Minnesota, Twin Cities; Carnegie Mellon, 2010–.

Adjunct Faculty

JON W. JOHNSON, Professor of Neuroscience at the University of Pittsburgh – Ph.D., Stanford University; Carnegie Mellon, 2006–.

M. ROBERT STRICK, Co-Director of CNAST and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–.

PHILIP R. LEDUC, Professor of Mechanical Engineering – Ph.D., The Johns Hopkins University; Carnegie Mellon, 2002–.

CARL R. OLSON, Professor of the CNBC – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–.

FREDERICK H. UTECH, Principal Research Scientist at the Hunt Institute for Botanical Documentation – Ph.D., Washington University; Carnegie Mellon, 1977–.

ERIC P. XING, Associate Professor of Computer Science, Language Technologies Institute, and Machine Learning – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–.

GE YANG, Assistant Professor of Biomedical Engineering and the Lane Center for Computational Biology – Ph.D., University of Minnesota, Twin Cities; Carnegie Mellon, 2010–.

Emeriti Faculty

PETER B. BERGET, Professor Emeritus – Ph.D., University of Minnesota; Carnegie Mellon, 1986–.

WILLIAM R. MCCLURE, Professor Emeritus – Ph.D., University of Wisconsin; Carnegie Mellon, 1981–.

JOHN F. NAGLE, Professor of Biological Sciences and Physics – Ph.D., Yale University; Carnegie Mellon, 1967–.

JAMES F. WILLIAMS, Professor Emeritus – Ph.D., University of Toronto; Carnegie Mellon, 1976–.

Ph.D., University of California; Carnegie Mellon, 2006–.

D. LANSING TAYLOR, President and Chief Executive Officer of Cellumen, Inc. – Ph.D., State University of New York at Albany; Carnegie Mellon, 1982–.

EDDA THIELS, Assistant Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Minnesota, Twin Cities; Carnegie Mellon, 2010–.

CYNTHIA M. HUNT, Associate Curator and Head of Botany at the Carnegie Museums of Natural History – Ph.D., New York Botanical Garden/CUNY; Carnegie Mellon, 2002–.

PHIL G. CAMPBELL, Associate Professor of Computer Science and Machine Learning – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2003–.

M. ROBERT STRICK, Co-Director of CNAST and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–.

HUNTER T. BROWN, Professor of Biological Sciences and Biomedical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1990–.

M. ROBERT STRICK, Co-Director of CNAST and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–.

HUNTER T. BROWN, Professor of Biological Sciences and Biomedical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 1990–.

M. ROBERT STRICK, Co-Director of CNAST and Distinguished Professor of Neurobiology at the University of Pittsburgh – Ph.D., University of Pennsylvania; Carnegie Mellon, 2000–.

C. ROY WORTHINGTON, Professor Emeritus – Ph.D., Adelaide University; Carnegie Mellon, 1969–.
Department of Chemistry

Hyung J. Kim, Head
Karen H. Stump, Director of Undergraduate Studies
Office: Doherty Hall 1316
http://www.chem.cmu.edu

Carnegie Mellon provides a family-like but very vibrant and interdisciplinary environment for science students. One of our major strengths is that most of our undergraduate students in related fields get involved in research in faculty labs early on and get hands-on experience in cutting-edge research, some even as freshmen. Our curriculum is both fluid and innovative to give students a broad background and in-depth knowledge in chemistry and interdisciplinary areas. — Dr. Hyung J. Kim

Chemistry is an area of science involved with the study of the properties and reactions of substances ranging from the smallest particles to subatomic particles. It is at the center of many sciences and technical fields, providing the fundamental knowledge and tools needed to address many of society’s needs and to explore the unknown. Fields as diverse as genetic engineering, materials science, nanotechnology look to chemistry as they look to the future, for that is where the ultimate in understanding — the molecular level — resides.

The chemistry profession is extraordinarily diverse, with career opportunities available in the chemical, petroleum, renewable energy, nuclear power, plastics, metals, and pharmaceutical industries. Chemistry plays an increasingly important role in society, expanding biological and biotechnology industries. In addition to careers in industry and academia, many chemists find challenging careers in the public sector in the laboratories of the National Institutes of Health, the Department of Agriculture, the Environmental Protection Agency, the National Institute of Standards and Technology, and the Department of Energy as well as in consulting. Chemistry alumni also find employment in technical fields unrelated to science but where their problem solving and communication skills are highly valued.

Chemistry is a particularly suitable major for pre-medical and other pre-health profession students. Medical schools look favorably on the rigorous reasoning skills chemists develop, as evidenced by an excellent record for student admission to advanced education in these areas. An increasing number of our graduates are seeking careers in dentistry, pharmacy or pharmacology. The Health Professions Program advises all Carnegie Mellon students considering careers in health fields. (See Health Professions Program description in this catalog for more information.) Chemistry is particularly attractive to pre-law majors anticipating a career in a legal department in the chemical industry, in patent, intellectual property or environmental law. Students interested in industrial careers often combine their chemistry program with undergraduate courses in business administration or eventually go on to study for an M.B.A.

The Department offers three Bachelor’s degrees: the B.S. in Chemistry, The B.S. in Chemistry/Biological Chemistry Track and the B.A. One third of the chemistry core for the B.A. degree are free electives that may be taken in any of the departments of the University and therefore offers a high degree of flexibility. For the B.S. degrees, electives normally are technical courses in chemistry or related fields of science, technology and engineering, such as biology, physics, mathematics, chemical, biomedical or materials science engineering or computer science, although they can be in other non-technical areas as well. It is possible to have all of the technical requirements completed after the junior year in the B.S. and B.A. degree programs, allowing students the flexibility to combine electives in the senior year into a focused program of specialization or to allow for additional breadth in their undergraduate experience. Students interested in graduate studies in chemistry may enroll in graduate courses. Those desiring immediate job placement may be interested in one or more of the formal options that supplement the chemistry B.S. degree. These are described in detail later. Carnegie Mellon has one of the strongest polymer science programs in the world and the undergraduate polymer science, materials chemistry or silicates / polymers and sciences options offer training that is particularly valuable for an industrial career. The Computational Chemistry option provides students with expertise in scientific computing that is highly sought after by employers in the pharmaceutical industry.

The overlap between the fields of chemistry and biological sciences continues to grow with increased emphasis on synthetic chemicals that are used as probes or reporters of biological function and diagnostic and/or therapeutic agents. In addition, the application of sophisticated spectroscopic, structural and scanning probe/force methods on scales as low as a few molecules is driving innovation at the chemical/biology interface. Based on these trends the department is offering a new Bachelor’s degree, the B.S. in Chemistry/Biological Chemistry Track, to better prepare students for advanced studies and a job market that values knowledge and skills from both disciplines. A combination of advanced research-focused lecture course offerings and a new laboratory course allows students to build the strong foundation typical of a successful chemistry major, while expanding out into applications of chemistry in the biological sciences. Students who complete the track will have been exposed to the latest research accomplishments and unanswered questions in biological chemistry while also gaining experience in experimental methods unique to research at this interface.

An honors program is offered for highly motivated undergraduates. It is designed primarily for students who wish to undertake a strong research-intensive program of study in contemporary chemistry. The program B.S. in Chemistry with Departmental Honors requires the completion of at least one graduate level course in chemistry, a research project, and the writing and defense of a bachelor’s level honors thesis. An advanced track leading to the B.S. in Chemistry with Departmental Honors together with a Masters Degree in Chemistry involves completion of five graduate level courses and a more extensive thesis research project. This track is especially attractive to students who plan to pursue an industrial career. With enough advanced placement credit or by carrying heavier than usual course loads, students can complete the Honors/M.S. degree program in 8 semesters. The majority of openings in the chemical industry presently are at the Bachelors and Masters degree levels.

Additional majors (double majors) are available with nearly all other departments provided the student can fit the required courses into the schedule. Generally, all the requirements for both departments must be met for an additional major (except for some courses with similar content). Programs are also available that lead to the degree B.S. in Chemistry with a minor in another discipline such as biological sciences, physics, mathematics, computer science, engineering studies, business administration and certain departments in the Dietrich College of Humanities and Social Sciences. Requirements for most minor programs are described by individual departments in this catalog. However, it is recommended that students who are interested in pursuing a minor as part of their degree consult with the department involved for current requirements and further guidance. Dual degree programs are available in which students receive two separate undergraduate degrees from two different departments in the University. These require students to complete at least 90 units of work per additional degree in addition to the units required for the first degree and the core curriculum from both colleges if the programs are in different units. Several five-year programs have been developed to allow a Carnegie Mellon undergraduate student to earn both a B.S. in Chemistry and a Master of Science degree in fields such as Health Care Policy and Management or Biomedical Engineering.

Study abroad programs are available for chemistry majors and programs of one to two semesters can generally be accommodated without delaying time to graduation beyond 8 semesters. One example of a formal exchange program is spending two semesters at École Polytechnique Fédérale de Lausanne (EPFL) in Switzerland. Study abroad is encouraged by the chemistry department and also can be arranged on an individual basis at universities throughout the world including Europe, Asia, Africa, New Zealand, and Australia during the academic year, the summer and winter or spring breaks. Students interested in study abroad should consult with their academic advisor and the MCS Study Abroad Advisor.

One of the most attractive features of the Department of Chemistry is the opportunity for students to interact with prominent research scientists in entry-level as well as advanced courses and in research. Since the spring of 2003, undergraduate laboratory instruction takes place in a new state-of-the-art facility located in Doherty Hall. Participation in undergraduate research is encouraged and qualified students may begin projects as early as their second year. Chemistry majors interested in beginning research should consult with the Director of Undergraduate Studies to begin the process of identifying a research mentor. Approximately 90 to 98% of the graduating chemistry majors during the past ten years have taken part in research either for credit or for the purposes of their undergraduate training. Chemistry majors have been very successful in obtaining Small Undergraduate Research Grants (SURG) and Summer Undergraduate Research Fellowships (SURF) from the University to help support their research projects. Undergraduate and research laboratory facilities are equipped with the latest scientific instrumentation. The use of computational tools is emphasized throughout the curriculum.
Program Outcomes
The faculty members of the Department of Chemistry have approved the following as a statement of our learning outcomes for recipients of an undergraduate degree in chemistry.

Upon graduation recipients of the BS or BA degree in Chemistry will:

Foundational knowledge/theory
- Have a firm foundation in the quantitative and computational thinking that underlies chemistry, including use of modern computational tools.
- Have a firm foundation in the theories and models that form the basis for reasoning about molecular systems.
- Understand how the different subdisciplines of chemistry relate to and complement one another.
- Be able to apply chemical reasoning across disciplines, such as biology, environmental science, materials science, nanotechnology, and engineering.

Practical/Experimental
- Understand that chemistry is fundamentally an experimental science, and be able to identify or create an appropriate model, formulate a hypothesis, choose an appropriate set of tools and techniques, and design an experiment that tests the hypothesis and analyze the results from that experiment drawing sound scientific conclusions from the results obtained.
- Be proficient in the use of both classical and modern tools for analysis of chemical systems.
- Be able to design and carry out synthesis of both organic and inorganic systems.
- Be able to use experience and knowledge gained through theoretical and practical design projects to conduct further research.
- Know and follow the proper procedures and regulations for safe handling and use of chemicals and chemical equipment.

Communication
- Be able to convey information, both orally and in writing, to a range of audience levels and for a variety of purposes.
- Understand how scientific information is shared between peers in modern science, including responsible conduct for acknowledging prior and current contributions.
- Be able to locate, identify, understand and critically evaluate the chemical literature.
- Develop the interpersonal skills to function cooperatively in a team setting.

Society and ethics
- Understand the opportunities and consequences of chemistry for the environment and society for both the short term and for long-term sustainability.
- Understand and apply ethics and values to all professional activities.

Professional development
- Develop an understanding of career opportunities both within and outside of chemistry, including through contacts with faculty, the career and professional development center and alumni.
- Be prepared to pursue a life and career that builds on their experiences at Carnegie Mellon to achieve their personal goals and to contribute positively to society.

B.S. in Chemistry
The majority of undergraduate degrees awarded by the Department of Chemistry are Bachelor of Science degrees. This degree program provides the most appropriate preparation for further graduate study and for research and development or analytical positions in industry. The curriculum provides a strong foundation in the fundamental areas of study in chemistry: organic, physical, inorganic and analytical chemistry, along with a rich set of research-focused, instrumentation intensive laboratory experiences aligned with those areas. Students interested in less technical areas of employment or graduate study in areas such as business, policy or law may find the Bachelor of Arts degree a more suitable alternative.

Curriculum - B.S. in Chemistry and Requirements for an Additional Major in Chemistry
The MCS curriculum requires seven Science Core Courses to be completed by the end of the junior year. These are: 21-120 Differential and Integral Calculus, 21-122 Integration and Approximation or 21-124 Calculus II for Biologists and Chemists, 33-111 Physics I for Science Students, 33-112 Physics II for Science Students, 09-105 Introduction to Modern Chemistry I, 03-121 Modern Biology, and 15-110 Principles of Computing. In the sample curriculum given below for chemistry majors, six of these are in the first year. Students should take the last Science Core Course as early as possible and if possible by the end of their sixth semester.

This fall semester is challenging with 4 required chemistry classes. There are ways to alleviate the load by moving classes into the senior year. 09-321 could be moved to the fall of the senior year. Since Lab III is not a prerequisite for 09-322 Laboratory IV this change will not require that Lab IV be delayed until the senior year. 09-331 and/or 09-344 can also be moved into the fall of the senior year. However both classes are prerequisites for 09-322 Laboratory IV: Molecular Spectroscopy and Dynamics, so delaying either would move 09-322 to the second semester of the senior year. It is best to discuss your options with your advisor in order to craft a plan that is best for you.

Certain non-technical courses from Business Administration, Heinz College, and EPP also may be used to fulfill the non-technical elective requirement. A listing of approved and non-approved courses for the H&SS/CFA electives is available at the following web site, www.cmu.edu/mcs/education/edu_HSSFA.html, or see the Mellon College of Science section in this catalog for the Humanities and Social Sciences and Fine Arts Requirements. For example accounting, finance, production, and statistics courses may NOT be used. Also, 09-321 Biological Foundations of Behavior may NOT be used as an elective in the H&SS/CFA category. These courses are considered to be technical classes. If in doubt, check with your advisor.

**Distribution of Units for the B.S. in Chemistry and Requirements for An Additional Major in Chemistry**

Minimum Total Chemistry Units 163; See distribution below

- **Required Chemistry Courses**
  - 09-105: Introduction to Modern Chemistry I 10
  - 09-106: Modern Chemistry II 10
  - 09-204: Professional Communication Skills in Chemistry 3
  - 09-219: Modern Organic Chemistry 10
  - 09-220: Modern Organic Chemistry II 10
  - 09-231: Mathematical Methods for Chemists 9
  - 09-331: Modern Analytical Instrumentation 9
  - 09-344: Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry 9
  - 09-345: Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry 9
  - 09-348: Inorganic Chemistry 10
  - 09-221: Laboratory I: Introduction to Chemical Analysis 12
  - 09-222: Laboratory II: Organic Synthesis and Analysis 12
  - 09-321: Laboratory III: Molecular Design and Synthesis 12
  - 09-322: Laboratory IV: Molecular Spectroscopy and Dynamics 12
  - 09-xxx: Chemistry Seminars 8
  - 09-xxx: Chemistry Electives 18

* These, plus 33-111 Physics I for Science Students and 33-112 Physics II for Science Students, are the required courses for students earning an additional major in chemistry.

09-107 Honors Chemistry: Fundamentals Concepts and Applications, may be taken instead of 09-105.

Students who transfer into the department and have taken 09-217 Organic Chemistry I and/or 09-218 Organic Chemistry II, will be required to complete units of 09-435 Independent Study Chemistry, 1 unit per course, under the supervision of the instructor(s) for 09-219 and/or 09-220 in order to master the course content missed in this course sequence.

Chemistry courses required for the BS degree and the additional major in chemistry that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

</tbody>
</table>

Minimum number of units required for the degree: 360.

The above B.S. curriculum recommends a range of 40-51 units/semester to meet the minimum degree requirement. Students are strongly encouraged to take extra elective courses (except in the first semester of the freshman year) in whatever subjects they wish in order to enrich their backgrounds and enhance their educational experience.

**Notes on Electives**

**Chemistry Electives**

A minimum of 18 units of chemical electives is required.

Chemistry electives can be satisfied by 09-445 Undergraduate Research, or by most other chemistry courses 09-3xx or higher, undergraduate or graduate level, for which the student has the necessary prerequisites, or by 03-231/03-232 Biochemistry. 09-435 Independent Study Chemistry may only be used to fulfill this requirement with permission of the Director of Undergraduate Studies. Certain interdisciplinary courses (e.g. 39-xxx) relating to chemistry can also be used with the approval of the Director of Undergraduate Studies. The scheduling of these electives can vary and students should check with the department offering the course to see which courses are offered in any given year or semester and with the Director of Undergraduate Studies in the Department of Chemistry to ascertain whether the course is an acceptable chemistry elective.

**Free Electives**

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education, StuCo and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

**B.S. in Chemistry/Biological Chemistry Track**

This degree is ideal for students who wish to better prepare themselves for advanced studies in biological chemistry or biomedical fields and a job market that values knowledge and skills from both disciplines. A combination of advanced research-focused lecture course offerings and a new laboratory course will allow students to build the strong...
Curriculum - B.S. in Chemistry/Biological Chemistry Track

The MCS curriculum requires seven Science Core Courses to be completed by the end of the junior year. These are: 21-120 Differential and Integral Calculus, 21-122 Integration and Approximation or 21-124 Calculus II for Biologists and Chemists, 33-111 Physics I for Science Students, 33-112 Physics II for Science Students, 09-105 Introduction to Modern Chemistry I, 03-121 Modern Biology, and 15-110 Principles of Computing. In the sample curriculum given below for chemistry majors, six of these are in the first year. Students should take the last Science Core Course as early as possible and if possible by the end of their sixth semester.

Students interested in majoring in chemistry should consider enrolling in the 3-unit lab course 09-101 Introduction to Experimental Chemistry, in the fall or spring semester of the first year. Although not required, the laboratory course is recommended for chemistry majors.

**Total: 49 Units**

This fall semester is challenging with 4 required chemistry classes. There are ways to alleviate the load by moving classes into the senior year. 09-323 could be moved to the fall of the senior year. Since the Bioorganic Lab is not a prerequisite for 09-322, this change will not require that Lab IV be delayed until the senior year. 09-331 and/or 09-344 can also be moved into the fall of the senior year. However both classes are prerequisites for 09-322 Laboratory IV: Molecular Spectroscopy and Dynamics, so delaying either would move 09-322 to the second semester of the senior year. It is best to discuss your options with your advisor in order to craft a plan that is best for you.

Carnegie Mellon
## Notes on Electives

### Biological Chemistry Electives

A minimum of three biological chemistry electives for a total of 27 units or more is required.

A list of currently approved electives is provided below. One semester of 09-445 for 9 or more units may be used for 1 biological chemistry elective with the approval of the Undergraduate Advising and Curriculum Committee.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>

<td>9</td>
</tr>
<tr>
<td>or 09-519</td>
<td>Biorganic Chemistry: Peptides, Proteins and Combinatorial Chemistry</td>
<td></td>
</tr>
</tbody>
</table>

### Free Electives

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education, StuCo and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

### Options for the B.S. in Chemistry

The curriculum for the degree Bachelor of Science in Chemistry permits students to take a number of elective courses in chemistry and other fields, particularly in the junior and senior years. Students may wish to complete a group of elective courses from several specialty areas, called “options,” to complement their technical education. Each option will complement the Bachelor’s degree in Chemistry and will provide students with expertise in a specific area not covered by the normal undergraduate curriculum. Options are noted on the student’s transcript but not on the diploma.

For each of the following options, the student should refer to the previous description of the curriculum for the B.S. in chemistry. Required courses are unchanged, and the courses that should be taken as electives for each option are listed below. Chemistry courses within an option also count towards fulfillment of the chemistry elective requirement for the B.S. degree.

A student who completes the recommended courses for any of these options will receive a certificate from the Department of Chemistry at Commencement as formal evidence of the accomplishment and a notation of this will be made on the student’s transcript.

### Polymer Science Option

<table>
<thead>
<tr>
<th>Course Code</th>

</tr>
</tbody>
</table>
Students will be encouraged to do more than the minimum amount of research (18 units) and one be 09-455 Honors Thesis (taken for 6 units). That of the remaining electives required, at least two be undergraduate as possible. The honors program specifies that one of the two chemistry presentation and defense of a bachelor's honors thesis to a Thesis contact in an individual research project, concluding with the student's program combines a modified B.S. curriculum with close faculty-student relationship.

Outstanding students with an interest in research are encouraged to apply for admission to the B.S./M.S. Honors program as early as they can, but only after having made some progress on a research project that could eventually be suitable for publication of a Master's level thesis. Please note that this degree is available only with the B.S. in chemistry and cannot be obtained by students pursuing a B.A. degree in chemistry. Most commonly, applications are submitted during the second half of the sophomore year or early in the junior year. Applications are available through the Director of Undergraduate Studies. Participants will have the opportunity to earn in four years not only the degree B.S. in Chemistry with Departmental Honors, but also the degree Master of Science in Chemistry. This program is highly research intensive and is not appropriate for all students. Requirements include completing five graduate level courses as electives. (See notes on Honors B.S./M.S. electives.)

The schedule of courses for the B.S./M.S. program generally moves as many courses as possible forward in the curriculum, thus the four year requirement. When possible, all Science Core Courses should be completed in the freshman year. This gives the student the following advantages: 1) greater perspective in selection of a research advisor, 2) greater maturity in performing independent research, and 3) the possibility of initiating the graduate course sequence in the junior year. Students can achieve this accelerated schedule through advanced placement or summer school though neither is a requirement.

Upon acceptance into the program, a Thesis Committee must be identified, which will monitor the progress of the student. The committee shall consist of at least one member of the Honors Committee appointed by the committee chair, the student's research advisor and a third faculty member agreed upon by the student and advisor. This third member can be from another department or institution and can be tenure track, teaching track or research track faculty. It is the student's responsibility to contact the proposed third member of their committee and confirm their participation.

A written thesis suitable for an Honors B.S. degree is required and should be a clear exposition in proper scientific format of a research project done for at least 18 units of credit in 09-445 Undergraduate Research. The thesis should describe a substantive new contribution to a particular field of research. This could include, but is not limited to, the discovery of a new phenomenon, studies that enhance our understanding of a previously reported phenomenon, or the development of a new method or technique. The student's Thesis Committee will evaluate the thesis and will require that each student participate in a public oral presentation or defense of the thesis before it approves the Honors degree. The written thesis must be supplied to the members of the student's Thesis Committee no later than 1 week prior to the scheduled public defense. The defense is usually scheduled to take place during April or early May of the senior year and the Director of Undergraduate Studies will coordinate the selection of a suitable date. Students completing the B.S. with Departmental Honors in Chemistry will receive MCS College Honors as well.

The designations of MCS College Honors and Departmental Honors are noted on the transcript but not on the diploma. Only University Honors are noted on the diploma.
their research at least once at the Sigma Xi competition at Meeting of the
Minds, the annual Carnegie Mellon undergraduate research symposium,
typically at the end of the junior year. In addition students must meet with
their Thesis Committee each fall to update the committee on their progress
and in the fall of the senior year must prepare a written summary of their
research progress to date (5 pages) and their plans for the academic year
(1 page). This report must state clearly what stage the work is in; it must be
clear what work is complete and ready for publication.

At the start of the spring semester of the senior year, the student must
submit a draft of the introduction for their thesis and a detailed outline
of their methods, results and discussion sections to the Director of
Undergraduate Studies who also chairs the Honors Committee. This will
be distributed by the department and reviewed by the student’s Thesis
Committee.

Each student is required to submit a formal Masters Degree dissertation
to the Chemistry Department in April of the senior year or at least one
week prior to the date set for the thesis defense. The Thesis Committee
will evaluate the written thesis and students are required to present their final
oral defense of the project before the Thesis Committee. The defense is
usually scheduled to take place during April or early May of the senior year
and the Director of Undergraduate Studies will coordinate the selection of
a suitable date. The public defense is followed by a private question and
answer session with the Thesis Committee.

The dissertation, written in proper scientific format, should describe the
research project in considerable detail and must withstand the scrutiny of
the Thesis Committee with respect to completeness. It need not be as
extensive nor contain the element of student originality characteristic of a
Ph.D. thesis; however it must contain results and conclusions that are of
a high enough quality to be accepted as a publication in a respected
research journal. The student should refer to the ACS Style Guide for
recommendations on appropriate presentation and formatting of written
text, tables, graphs, and figures. As for all M.S. degree candidates in the
Department, the dissertation must be approved by the faculty member in
charge of the work.

Research productivity is the most important criterion for success at the
evaluation points, but GPA is a strong secondary criterion. While we expect
that most students will maintain a GPA of 3.5, a minimum of 3.2 must be
maintained to remain in the program and will be acceptable only with a
strong record of research. Candidates must also maintain a GPA of at least
3.0 in the five graduate level courses required for the degree.

Students who complete this program will receive the designations of
Departmental Honors and MCS College Honors. These are designated on the
transcript, not on the diploma. Only University Honors are denoted on the
diploma.

Students completing the requirements for this degree receive two diplomas,
one for the B.S. degree and another for the M.S. degree. Since this is a
combined degree program both degrees are awarded at the same time; the
awarding of the two degrees cannot be separated in time.

Notes on Honors B.S./M.S. Electives

The B.S./M.S. Honors degree requires the completion of five graduate
level courses. These normally are 12-unit courses. However, in order not
to penalize interdisciplinary studies which may be essential to a good
thesis, up to three of the five required graduate chemistry courses may
be advanced undergraduate (9-unit) courses in MCS and/or approved CIT
departments. All advanced undergraduate level courses used to satisfy this
requirement must be approved by the Director of Undergraduate Studies.

Certain non-technical courses from Business Administration, Heinz College, and EPP also may be used to fulfill the non-technical elective requirement. A listing of approved and non-approved courses for the H&SS/CFA electives is available at the following web site, www.cmu.edu/mcs/education/edu_HSSFA.html, or see the Mellon College of Science section in this catalog for the Humanities and Social Sciences and Fine Arts Requirements. For example accounting, finance, production, and statistics courses may NOT be used. Also, 85-219 Biological Foundations of Behavior may NOT be used as an elective in the H&SS/CFA category. These courses are considered to be technical classes. If in doubt, check with your advisor.

Distribution of Units for the B.S. with Departmental Honors/M.S. Degrees

Minimum Total Chemistry Units (250, See distribution below)

Required Chemistry Courses Units
09-105 Introduction to Modern Chemistry I 10
09-106 Modern Chemistry II 10
09-204 Professional Communication Skills in Chemistry 3
09-219 Modern Organic Chemistry 10
09-220 Modern Organic Chemistry II 10
09-231 Modern Analytical Instrumentation 9
09-334 Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry 9
09-345 Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry 9
09-348 Inorganic Chemistry 10
09-221 Laboratory I: Introduction to Chemical Analysis 12
09-222 Laboratory II: Organic Synthesis and Analysis 12
09-321 Laboratory III: Molecular Design and Synthesis 12
09-322 Laboratory IV: Molecular Spectroscopy and Dynamics 12
09-xxx Chemistry Seminars 8
Undergraduate Research (2 summers also recommended) 30
Graduate chemistry courses (see Notes on B.S./M.S. Electives) 51-60
09-455 Honors Thesis 15
09-107 Honors Chemistry: Fundamentals Concepts and Applications, may be taken instead of 09-105.

Students who transfer into the department and have taken 09-217 Organic Chemistry I, and/or 09-218 Organic Chemistry II, will be required to complete units of 09-435 Independent Study Chemistry, 1 unit per course, under the supervision of the instructor(s) for 09-219 and/or 09-220 in order to master the course content missed in this course sequence.

Chemistry courses required for the B5/MS degree that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

Other Requirements Units
Biology 9

Minimum number of units required for degrees: 388

B.A. in Chemistry

The curriculum for the B.A. degree provides students with the opportunity to take a substantial number of elective and non-technical courses. Certain chemistry, math, and other technical courses required for the B.S. degree are replaced by free electives, making this degree an ideal choice for those who wish to earn an additional major with one of the departments in the College of Humanities and Social Sciences, College of Fine Arts, or with the Business Administration program, though this is not a requirement. It is also attractive for students wishing to pursue careers in dentistry or pharmacy, career paths that require a broader preparation at the undergraduate level. It is not possible to combine the B.A. degree in chemistry with an additional B.A. degree in another department in MCS (e.g. Biological Sciences).

Students may earn one or more of the options as described for B.S. degree candidates, providing they complete the courses listed.

The suggested curriculum recommends that the required technical courses be completed at the earliest opportunity, however students have considerable flexibility to postpone these courses in favor of electives, allowing compatibility with the programs of other departments. In designing such programs for a minor or additional major with chemistry, students should note that certain required chemistry courses only are offered in specific semesters, not both. These include the Fall-only courses 09-219 Modern Organic Chemistry and 09-321 Laboratory III: Molecular Design and Synthesis and the Spring-only courses 09-214 Physical Chemistry, 09-220 Modern Organic Chemistry II, 09-348 Inorganic Chemistry, and 09-204 Professional Communication Skills in Chemistry. Also, in some cases, a course that is normally scheduled for the fall may be changed to a spring course (or the reverse) due to a departmental curriculum change.

Curriculum - B.A. in Chemistry

First Year

Fall Units
09-105 Introduction to Modern Chemistry I 10
21-120 Differential and Integral Calculus 10
33-111 Physics I for Science Students 12
76-101 Interpretation and Argument 9
99-101 Computing @ Carnegie Mellon 3
44
Inorganic Chemistry

Students interested in majoring in chemistry should consider enrolling in the 3-unit lab course 09-101 Introduction to Experimental Chemistry, in the Fall or Spring semester of the freshman year. Although not required, the laboratory course is recommended for chemistry majors.

Spring Units
09-106 Modern Chemistry II 10
21-122 Integration and Approximation 10
or 21-124 Calculus II for Biologists and Chemists 12
33-112 Physics II for Science Students 12
xx-xxx H&SS Distribution Course 1 9
15-110 Principles of Computing 10
51

Sophomore Year

Fall Units
09-201 Undergraduate Seminar I 1
09-219 Modern Organic Chemistry 10
09-221 Laboratory I: Introduction to Chemical Analysis 12
xx-xxx Free Elective 9
xx-xxx H&SS Distribution Course 2 9
41

Spring Units
09-202 Undergraduate Seminar II: Safety and Environmental issues for Chemists 1
09-204 Professional Communication Skills in Chemistry 3
09-220 Modern Organic Chemistry II 10
09-222 Laboratory II: Organic Synthesis and Analysis 12
09-214 Physical Chemistry 9
xx-xxx H&SS Distribution Course 3 9
44

Junior Year

Fall Units
09-301 Undergraduate Seminar III 1
09-321 Laboratory III: Molecular Design and Synthesis 12
or 09-323 Bioorganic Chemistry Laboratory 12
03-121 Modern Biology 9
Chemistry courses required for the B.A. degree that are numbered 09-2xx or higher must be taken at Carnegie Mellon University. Exceptions must be requested of and approved by the Director of Undergraduate Studies. In general such requests will be approved only under unusual or extenuating circumstances.

</table>

Chemical electives can be satisfied by 09-445 Undergraduate Research, or by most other chemistry courses 09-xxx or higher, undergraduate or graduate, for which the student has the necessary prerequisites, or by 03-231/03-232 Biochemistry I. 09-435 Independent Study Chemistry, may only be used to fulfill this requirement with permission of the Director of Undergraduate Studies. Certain interdisciplinary courses (e.g. 39-xxx) relating to chemistry can also be used with permission by the Director of Undergraduate Studies. The scheduling of these electives can vary and students should check with the department offering the course to see which courses are offered in any given year or semester and with the Director of Undergraduate Studies in the Department of Chemistry to ascertain whether the course is an acceptable chemistry elective.

**Free Electives**

Free electives are defined as including any course offered by Carnegie Mellon except those in science or engineering fields that are primarily intended for non-majors. A maximum of 9 units total of Physical Education and/or ROTC courses combined can be counted as free elective units. The Chemistry Department does not require technical electives.

### Requirements for a Minor in Chemistry

In order for a student to receive a minor in Chemistry in conjunction with a B.S. or B.A. degree from another (primary) department, the successful completion of six courses as distributed below is required. Students pursuing the minor must inform the Chemistry Department of their intentions in writing using the MCS form for declaration of a minor so that the minor designation can be approved prior to graduation. The form may be obtained in the department office, DH 1317 or from the MCS undergraduate web page, http://www.cmu.edu/mcs/undergrad/advising/forms/index.html. It should be completed and submitted to the department office, DH 1317, no later than the end of the course add period of the final semester prior to graduation. If you decide at a later date not to complete the minor, it would be helpful to notify the Director of Undergraduate Studies, ks01@andrew.cmu.edu, so that it can be removed from your record. Minors are listed on the transcript but not on the diploma.

#### A. Four Required Core Courses

| 09-106 Modern Chemistry II | 10    |
| 09-221 Laboratory I: Introduction to Chemical Analysis | 12    |
| 09-217 Organic Chemistry I | 9-10  |
| or 09-219 Modern Organic Chemistry | 9     |

#### Choice of one of the following courses:

| 09-214 Physical Chemistry | 9     |
| 09-344 Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry | 9     |
Courses in this group that are not used to satisfy Part A core courses may be used to satisfy elective course requirements in part B below, if they are not required by the student’s primary department. However the only combination of physical chemistry courses (09-344, 09-345, 09-347 and 09-214) that is allowed is 09-344 and 09-345.

Enrollment in 09-347 is only open to students majoring in chemical engineering.

B. Two Elective Courses from the following list.

<table>

<td></td>
</tr>
</tbody>
</table>

Courses in this section (part B above) can not be counted toward the minor if they are required in any way by the student’s primary department or towards an additional major or minor other than as a free elective. For example, students majoring in Biological Sciences can not double count 03-231 (or 03-232), 09-222, or 09-218 (or 09-220) toward the elective courses for the minor in chemistry. Chemical engineering majors can not count 03-231 (or 03-232) or a chemistry course that is used to satisfy that department's required chemistry or advanced chem/biochem elective. Also, chemical engineering majors can not use 09-344, 09-345 or 09-214 due to the similarity of these courses to 09-347 Advanced Physical Chemistry, which is required by the chemical engineering department.

09-231 Mathematical Methods for Chemists, does not count towards the minor in chemistry. The undergraduate research courses 09-445 Undergraduate Research and 09-435 Independent Study Chemistry cannot be used for the minor.

Transfer credit will be accepted only for 09-106 and 09-217. All other classes towards the chemistry minor must be completed at Carnegie Mellon University.

Other Programs

As part of the undergraduate degree program, chemistry majors have the opportunity to pursue various special programs at Carnegie Mellon to enrich their academic experience. These include but are not limited to: programs with the College of Fine Arts, Humanities and Social Sciences, the H. John Heinz College of Public Policy and Management; Interdisciplinary Majors and Minors including Health Care Policy and Management. For more details, see the Tailoring Your Education portion of the Mellon College of Science section in this catalog.

Transfer Credit for Chemistry Courses

1. Requests for transfer credit for chemistry classes taken at other institutions should be made to Karen Stump, the Director of Undergraduate Studies in the Department of Chemistry. Students making such requests should follow the policies and procedures in place within their home colleges in assembling materials for such requests. Consult with your advisor on the appropriate steps.

2. At minimum requests must be accompanied by a complete syllabus including the textbook that will be used, a detailed list of topic areas and an indication of whether or not the course is part of the curriculum for science majors at the other institution.

3. No transfer credit will be awarded for the laboratory classes required for the chemistry major at Carnegie Mellon University, 09-221, 09-222, 09-321 and 09-322. Requests for transfer credit for 09-101, Introduction to Experimental Chemistry, will be accepted with the appropriate documentation.

4. In assessing the suitability of courses for transfer credit, the following factors are considered:

   • The rigor of the course must be comparable to that offered at Carnegie Mellon. This is usually assessed via the textbook used and the amount of time spent on topic areas.
   • The topic areas should match to a degree of at least 80% those covered in the comparable course at Carnegie Mellon University.

5. 09-105 Introduction to Modern Chemistry I focuses primarily on structure and bonding. Detailed topics include the following:
   • History and Conceptual Basis of Modern Chemistry
   • Radiation, Quantum Mechanics, and Atomic Structure
   • Periodic Table and Trends in Elemental Properties (including discussion of exceptions to trends)
   • Bonding (bond polarity)
   • Lewis Structures (octet rule and exceptions; formal charge)
   • Resonance Structures
   • Molecular shapes
   • Molecular Polarity
   • Naming compounds
   • Interparticle (intermolecular) forces and comparing physical properties from them
   • Valence Bond (Localized Electron) and Molecular Orbital Theory
   • Determining number of moles and chemical formulas
   • Writing and balancing chemical equations (in particular completing combustion and double displacement reactions – including acid-base and precipitation reactions)
   • Stoichiometry – limiting reactant and percentage yield
   • Gases (mainly ideal) and stoichiometric applications involving them
   • Phase transitions
   • Solutions (determining concentrations, dilution problems, stoichiometric applications, application of solubility rules to determine if a precipitate forms)
   • Acid-base reactions and tautomers
   • Oxidations Numbers and Redox Reactions/Titrations (including balancing redox reactions)
   • Colligative Properties; Mixtures and Distillation
   • Transition Metal Complexes and Crystal Field Theory (including crystal field stabilization energy and optical properties)

6. 09-106 Modern Chemistry II focuses primarily on thermodynamics, kinetics and equilibrium. Detailed topic areas include the following:
   • Thermochemistry and Thermodynamics (First, Second, and Third Laws, with gas expansion/compression applications, including reversible, adiabatic processes)
   • Internal energy, enthalpy, entropy, Gibbs Free energy, and determination of spontaneity
   • Kinetics : Determination of rate, order, rate laws (including application of pseudo-rate laws, application of integrated rate law to determine order, relationship between time and amount in a reaction, and half-life)
   • Reaction mechanisms – applying fast equilibrium and steady-state approximations to determine rate law consistent with mechanism
   • Chemical Equilibrium : determination of Q and K expressions, determination of direction in which reaction proceeds to achieve equilibrium (using Q and Le Chatelier’s principles, quantitative calculations to determine K or amounts at various stages, dependence of K on temperature, relationship between Gibbs Free energy, Q, and K)
   • Acid-Base Equilibria: writing dissociation equilibrium reactions and acid-base “neutralization” reactions, autoionization of water (determination of pH and pOH, use of K_ow), writing K_a and K_b expressions from dissociation equilibria, quantitative equilibrium calculations for weak acids and bases, titrations between strong species, strong-weak species, and weak-weak species, buffers (calculations of pH and amounts, including how to make a buffer), polyprotic species (quantitative applications and titrations), solubility and precipitation equilibria, determination of K_sp expressions and quantitative applications of those expressions, complex ion formation equilibria, emphasis is placed on equilibrium problems that involve multiple types of simultaneous equilibria
   • Electrochemistry: Electrochemical cell notation and writing half-reactions from it, Faraday constant to connect number of moles of electrons / reaction amounts with current, connection of Gibbs Free Energy to cell voltage (potential) at equilibrium and non-equilibrium conditions, determination of K’s (acid-base, solubility constants) or amounts using Nernst equation in concentration cells (K for cell reaction)
Faculty

CATALINA ACHIM, Professor of Chemistry – Ph.D., Carnegie Mellon; Carnegie Mellon, 2001–.

BRUCE A. ARMITAGE, Professor of Chemistry, Co-Director Center for Nucleic Acids Science and Technology – Ph.D., University of Arizona; Carnegie Mellon, 1997–.

STEPHAN BERNHARD, Professor of Chemistry – Ph.D., University of Fribourg (Switzerland); Carnegie Mellon, 2009–.

MARK E. BIER, Research Professor and Director, Center for Molecular Analysis – Ph.D., Purdue University; Carnegie Mellon, 1996–.

EMILLE BOMINAAR, Associate Research Professor – Ph.D., University of Amsterdam (The Netherlands); Carnegie Mellon, 1994–.

MARCEL P. BRUCHEZ, Associate Professor of Chemistry and Biological Sciences, Associate Director, Molecular Biosensor and Imaging Center – Ph.D., University of California, Berkeley; Carnegie Mellon, 2006–.

TERRENCE J. COLLINS, Teresa Heinz Professor in Green Chemistry, Director, Institute for Green Science – Ph.D., University Auckland, (New Zealand); Carnegie Mellon, 1988–.

SUBHA R. DAS, Associate Professor of Chemistry – Ph.D., Auburn University; Carnegie Mellon, 2006–.

NEIL M. DONAHUE, Professor of Chemistry, Chemical Engineering and Engineering and Public Policy, Director, Center for Atmospheric Particle Studies – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2000–.

REBECCA FREELAND, Associate Dean for Special Projects, Mellon College of Science and Associate Head, Department of Chemistry – Ph.D., Carnegie Mellon; Carnegie Mellon, 1993–.

ROBERTO GIL, Research Professor and Director, NMR Facility – Ph.D., Córdoba National University (Argentina); Carnegie Mellon, 2002–.

SUSAN T. GRAUL, Assistant Teaching Professor – Ph.D., Purdue University; Carnegie Mellon, 1992–.

YISONG (ALEX) GUO, Assistant Professor of Chemistry – Ph.D., University of California at Davis; Carnegie Mellon, 2013–.

MICHAEL P. HENDRICH, Professor of Chemistry – Ph.D., University of Illinois; Carnegie Mellon, 1994–.

RONGCHAO JIN, Associate Professor of Chemistry – Ph.D., Northwestern University; Carnegie Mellon, 2006–.

HYUNG J. KIM, Professor of Chemistry and Head, Department of Chemistry – Ph.D., State University of New York at Stony Brook; Carnegie Mellon, 1992–.

TOMASZ KOWALEWSKI, Professor of Chemistry – Ph.D., Polish Academy of Sciences (Poland); Carnegie Mellon, 2000–.

MARIA KURNIKOVA, Associate Professor of Chemistry – Ph.D., University of Pittsburgh; Carnegie Mellon, 2003–.

DANITH LY, Associate Professor of Chemistry – Ph.D., Georgia Tech; Carnegie Mellon, 2001–.

MAUMITA MANDAL, Assistant Professor of Chemistry – Ph.D., Center for Cellular and Molecular Biology (India); Carnegie Mellon, 2009–.

KRZYSZTOF MATYASZEWSKI, J.C. Warner University Professor of Natural Sciences and Director, Center for Macromolecular Engineering – Ph.D., Polish Academy of Sciences (Poland); Carnegie Mellon, 1986–.

TERRANCE B. MURPHY, Teaching Professor at Carnegie Mellon University-Qatar – Ph.D., University of Washington; Carnegie Mellon, 2008–.

ECKARD MÜNCK, Professor of Chemistry – Ph.D., Technical University of Darmstadt, (Germany); Carnegie Mellon, 1990–.

KEVIN NOONAN, Assistant Professor of Chemistry – Ph.D., University of British Columbia (Canada); Carnegie Mellon, 2011–.

HUNAID NULWALA, Assistant Research Professor – Ph.D., University of California at Santa Barbara; Carnegie Mellon, 2013–.

GARY D. PATTERSON, Professor of Chemistry – Ph.D., Stanford University; Carnegie Mellon, 1984–.

LINDA A. PETEANU, Professor of Chemistry – Ph.D., University of Chicago; Carnegie Mellon, 1992–.

GLORIA SILVA, Assistant Teaching Professor – Ph.D., Universidad Nacional de Córdoba (Argentina); Carnegie Mellon, 2002–.

KAREN H. STUMP, Teaching Professor and Director of Undergraduate Studies and Laboratories – M.S., Carnegie Mellon University; Carnegie Mellon, 1983–.

RYAN SULLIVAN, Assistant Professor of Chemistry and Mechanical Engineering – Ph.D., University of California, San Diego; Carnegie Mellon, 2012–.

LEONARD VUOCOLO, Assistant Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2006–.

GARRY F. P. WARNOCK, Associate Teaching Professor – Ph.D., University of Minnesota; Carnegie Mellon, 1997–.

NEWELL WASHBURN, Associate Professor of Chemistry and Biomedical Engineering – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–.

DAVID YARON, Professor of Chemistry – Ph.D., Harvard University; Carnegie Mellon, 1992–.

Emeriti

GUY C. BERRY, University Professor of Chemistry and Polymer Science, Emeritus – Ph.D., University of Michigan; Carnegie Mellon, 1960–.

AKSEL A. BOTHNER-BY, Professor of Chemistry, Emeritus – Ph.D., Harvard University; Carnegie Mellon, 1958–.

ALBERT A. CARETTO JR., Professor of Chemistry, Emeritus – Ph.D., University of Rochester; Carnegie Mellon, 1959–.

JOSEF DADOK, Professor of Chemical Instrumentation, Emeritus – Ph.D., Czechoslovak Academy of Sciences; Carnegie Mellon, 1967–.

PAUL J. KAROL, Professor of Chemistry – Ph.D., Columbia University; Carnegie Mellon, 1969–.

ROBERT L. KAY, Professor of Chemistry, Emeritus – Ph.D., University of Toronto; Carnegie Mellon, 1963–.

MIGUEL LLINAS, Professor of Chemistry – Ph.D., University of California at Berkeley; Carnegie Mellon, 1976–.

STUART W. STALEY, Professor of Chemistry, Emeritus – Ph.D., Yale University; Carnegie Mellon, 1986–.

ROBERT F. STEWART, Professor of Chemistry, Emeritus – Ph.D., California Institute of Technology; Carnegie Mellon, 1978–.

CHARLES H. VAN DYKE, Associate Professor of Chemistry, Emeritus – Ph.D., University of Pennsylvania; Carnegie Mellon, 1963–.

Adjunct Faculty

COLIN HORYNITZ, Adjunct Research Professor of Chemistry and Chief Technology Officer, GreenOx Catalysts and Deputy Director, Institute for Green Science – Ph.D., Northwestern University; Carnegie Mellon, 1993–.

JOHN PETERSON MYERS, CEO and Chief Scientist of Environmental Health Services – Ph.D., University of California at Berkeley; Carnegie Mellon, 2010–.

Courtesy

MICHAEL BOCKSTALLER, Associate Professor of Materials Science Engineering and Faculty of Chemistry – Ph.D., Johannes Gutenberg University (Germany); Carnegie Mellon, 2005–.

ALEX EVILEVITCH, Associate Professor of Physics and Faculty of Chemistry – Ph.D., Lund University; Carnegie Mellon, 2009–.

ANDREW GELLMAN, Thomas Lord Professor of Chemical Engineering and Head, Department of Chemical Engineering and Professor of Materials Science Engineering and Chemistry – Ph.D., University of California, Berkeley; Carnegie Mellon, 1992–.

GORDON RULE, Professor of Biological Sciences and Faculty of Biomedical Engineering and Chemistry – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1995–.

JAMES SCHNEIDER, Professor of Chemical Engineering and Faculty of Biomedical Engineering and Chemistry – Ph.D., University of Oregon; Carnegie Mellon, 1999–.

ALAN S. WAGGONER, Maxwell H. & Gloria C. Connan Professor of Biological Sciences, Director, Molecular Biosensor and Imaging Center and Faculty of Biomedical Engineering and Chemistry – Ph.D., University of Oregon; Carnegie Mellon, 1982–.
LYNN WALKER, Professor of Chemical Engineering and Faculty of Chemistry
– Ph.D., University of Delaware; Carnegie Mellon, 1997–.

JOHN L. WOOLFORD JR., Professor of Biological Sciences and Co-Director of
CNAST – Ph.D., Duke University; Carnegie Mellon, 1979–.
The Department of Mathematical Sciences

Mathematics provides much of the language and quantitative underpinnings of the natural and social sciences, and mathematical scientists have been responsible for the development of many of the most commonly used tools in business management as well as for laying the foundation for computational and computer science. The name of the Department of Mathematical Sciences reflects its tradition of outstanding research and teaching of applicable mathematics relating to these areas. Indeed, the Department contains highly ranked research groups in Applied Mathematics, Discrete Mathematics, Logic, and Mathematical Finance. These research strengths are reflected in the variety of options that the Department provides for its undergraduate majors.

The B.S. in Mathematics Curriculum is the least structured of our programs, in recognition of the wide variety of interests that can be productively coupled with the study of mathematical sciences. It can be an appropriate choice for students planning for graduate study in mathematics or seeking to design their curriculum to take advantage of the many opportunities for a second major from another department in the University.

The Operations Research and Statistics Concentration prepares students to enter the area of operations research, which is expected to be among the growth occupations over the next decade. Mathematicians with a background in operations research are especially valuable in such diverse activities as project planning, production scheduling, market forecasting and finance. Such applications are found in virtually all industrial and governmental settings.

The Statistics Concentration prepares students to contribute to a wide variety of research areas. Applications range from experimental design and data analysis in the physical and social sciences, medicine and engineering, to modeling and forecasting in business and government, to actuarial applications in the financial and insurance industries. This is also a useful second major for students planning for graduate study in mathematics and research in subject areas requiring a strong statistical background.

The Discrete Mathematics and Logic Concentration provides a background in discrete mathematics, mathematical logic, and theoretical computer science. This concentration prepares the student to do research in these and related fields, or to apply their ideas elsewhere.

Finally, the Computational and Applied Mathematics Concentration provides the background needed to support the computational and mathematical analysis needs of a wide variety of businesses and industries and is well suited to students with an interest in the physical sciences and engineering.

The Department places great emphasis on the advising of students. This is critical if students are to make the most of their years at the University. Students are urged to work carefully with their advisor and other faculty to formulate their degree programs. Study abroad is encouraged, and an interested student should investigate the opportunities available in the Undergraduate Options section of the catalog.

Special options within the Department

The Department offers special opportunities for the exceptionally well-prepared and intellectually ambitious student. These options are available to students from any department in the University.

Matrix Theory and Vector Analysis

For selected Freshmen entering the University, we offer the Fall/Spring sequence of 21-242 Matrix Theory and 21-269 Vector Analysis, which includes a rigorous introduction to proofs and abstract mathematics. Typically, a student choosing this sequence has mastered the operational aspects of high school mathematics and now seeks a deeper conceptual understanding.

Mathematical Studies

Following the 21-242/21-269 sequence, we offer Mathematical Studies Analysis I/II and Mathematical Studies Algebra I/II. These courses provide excellent preparation for graduate study, with many of the participants taking graduate courses as early as their Junior year. The typical enrollment of about 15 students allows for close contact with faculty. Admission to Mathematical Studies is by invitation, and interested students should apply during the Spring of their Freshman year.

Honors Degree Program

This demanding program qualifies the student for two degrees: The Bachelor of Science and the Master of Science in Mathematical Sciences. This program typically includes the Mathematical Studies option. For students who complete the Mathematical Studies sequence, the Master of Science degree in Mathematical Sciences may be earned together with a Bachelor of Science from another department.

Interdisciplinary Programs

Several interdisciplinary options enable a student to combine mathematics with other disciplines.

- The Bachelor of Science and Arts (p. 101) program allows a student to combine mathematics with study in any of the five schools in the College of Fine Arts.
- The Science and Humanities Scholars (p. 82) program includes an option shared with the Statistics Department in the Humanities and Social Sciences College that leads to a B5 in Mathematics and Statistics.
- The Bachelor of Science in Mathematics and Economics (p. 365) is a flexible program which allows students to develop depth in both fields of study. Note: for students whose home college is Dietrich College, this major is known as the Bachelor of Science in Economics and Mathematical Sciences.
- Finally, a joint program with the Heinz College of Public Policy and Management and the Tepper School of Business leads to the degree Bachelor of Science in Computational Finance (http://coursecatalog.web.cmu.edu/servicesandoptions/intercollegeprograms/#bachelorofscienceincomputationalfinance). (p. 73)

Curricula

For each concentration, we provide a list of the requirements and a suggested schedule that takes prerequisites into account. A Mathematical Sciences, Computer Science, Physics, Statistics Elective refers to any course from the Departments of Mathematical Sciences, Computer Science, Physics, Statistics, respectively, satisfying the following restrictions: a mathematical sciences course must be at the 21-300 level or above or 21-270 or 21-292, a computer science course must be at the 15-200 level or above, a physics course must be at the 33-300 level or above, and a statistics course must have at least 36-225 as a prerequisite.

Mathematical Sciences majors are required to complete an introductory computer science course, either 15-110 or 15-112. Students who plan to take further computer science courses must complete 15-112.

An H&SS Elective refers to a course in the Dietrich College of Humanities and Social Sciences requirements as described in the catalog section for the Mellon College of Science. A course listed as an Elective is a free elective with the only restriction that the maximum total of ROTC, STUCO, and Physical Education units that will be accepted for graduation is nine.

For a list of courses required for all MCS students see “First Year for Science Students.” (p. 296)

In addition to the courses in the suggested schedules below, a student majoring in mathematical sciences also takes the one unit course 21-201 Undergraduate Colloquium each semester of the Sophomore year. This course plays an important role in introducing students to career opportunities, graduate school preparation, and student and faculty research in the Department.

Mathematics Degree

This program is the most flexible available to our majors. The flexibility to choose eight electives within the major plus seven humanities courses and seven free electives allows the student to design a program to suit his or
Mathematical Sciences Courses (required)
The alternative courses 21-242, 21-261, and 21-268 (or 21-269) are particularly recommended for a student planning to pursue graduate work.

Courses\n\begin{array}{ll}
21-120 & \text{Differential and Integral Calculus} \quad 10 \\
21-122 & \text{Integration and Approximation} \quad 10 \\
21-127 & \text{Concepts of Mathematics} \quad 10 \\
21-201 & \text{Undergraduate Colloquium} \quad 1 \\
& \text{(Taken twice in Sophomore year.)} \\
21-228 & \text{Discrete Mathematics} \quad 9-12 \\
& \text{or 15-251} \\
& \text{Great Theoretical Ideas in Computer Science} \\
21-241 & \text{Matrices and Linear Transformations} \quad 10 \\
21-242 & \text{Matrix Theory} \\
36-225 & \text{Introduction to Probability Theory} \quad 9 \\
& \text{or 31-325} \\
& \text{Probability} \\
21-259 & \text{Calculus in Three Dimensions} \quad 9-10 \\
& \text{or 21-268} \\
21-260 & \text{Multidimensional Calculus} \quad 9-10 \\
& \text{or 21-269} \\
& \text{Vector Analysis} \\
& \text{or 21-261} \\
& \text{Introduction to Ordinary Differential Equations} \\
& \text{or 33-231} \\
& \text{Physical Analysis} \\
21-341 & \text{Linear Algebra} \quad 9 \\
21-355 & \text{Principles of Real Analysis I} \quad 9 \\
21-356 & \text{Principles of Real Analysis II} \quad 9 \\
21-373 & \text{Algebraic Structures} \quad 9 \\
\end{array}

113-118

Forty-five units of (required) Mathematical Sciences electives (at the 21-300 level or above or 21-270 or 21-292).

Three (required) Mathematical Sciences (at the 21-300 level or above or 21-270 or 21-292), or Computer Science (at the 15-200 level or above), or Physics (at the 33-300 level or above), or Statistics (must have at least 36-225 as a prerequisite) electives.

MCS General Education (required)
MCS or SHS humanities, social sciences, and science core (114 units)

Mathematical Sciences Electives for Students Intending Graduate Studies
Students preparing for graduate study in mathematics should consider the following courses as Mathematical Sciences electives, choosing among them according to the desired area of graduate study:

\begin{array}{ll}
21-301 & \text{Combinatorics} \quad 9 \\
21-371 & \text{Functions of a Complex Variable} \quad 9 \\
21-372 & \text{Partial Differential Equations and Fourier Analysis} \quad 9 \\
21-374 & \text{Field Theory} \quad 9 \\
21-441 & \text{Number Theory} \quad 9 \\
21-465 & \text{Topology} \quad 9 \\
21-467 & \text{Differential Geometry} \quad 9 \\
21-470 & \text{Selected Topics in Analysis} \quad 9 \\
21-476 & \text{Introduction to Dynamical Systems} \quad 9 \\
21-484 & \text{Graph Theory} \quad 9 \\
21-600 & \text{Mathematical Logic I} \quad 12 \\
21-602 & \text{Introduction to Set Theory I} \quad 12 \\
21-603 & \text{Model Theory I} \quad 12 \\
21-610 & \text{Algebra I} \quad 12 \\
21-620 & \text{Real Analysis} \quad 6 \\
21-621 & \text{Introduction to Lebesgue Integration} \quad 6 \\
21-630 & \text{Ordinary Differential Equations} \quad 12 \\
21-640 & \text{Introduction to Functional Analysis} \quad 12 \\
21-651 & \text{General Topology} \quad 12 \\
21-660 & \text{Introduction to Numerical Analysis I} \quad 12 \\
21-701 & \text{Discrete Mathematics} \quad 12 \\
21-720 & \text{Measure and Integration} \quad 12 \\
21-721 & \text{Probability} \quad 12 \\
21-737 & \text{Probabilistic Combinatorics} \quad 12 \\
21-738 & \text{Extremal Combinatorics} \quad 12 \\
\end{array}

Note that courses 21-600 and above carry graduate credit. Courses at the 600 level are designed as transitional courses to graduate study. A student preparing for graduate study should also consider undertaking independent work. The Department offers 21-499 Undergraduate Research Topic and 21-599 Undergraduate Reading and Research for this purpose.

Courses 21-700 and above can be used with the permission of both the instructor and the department.

360 Minimum number of units for the degree:

Operations Research and Statistics Concentration

An operations research professional employs quantitative and computational skills toward enhancing the function of an organization or process. Students choosing this concentration will develop problem-solving abilities in mathematical and statistical modeling and computer-based simulation in areas such as network design, transportation scheduling, allocation of resources and optimization. In addition to courses in mathematics and statistics, a basic background in economics and accounting is included. Since problems in business and industry are often solved by teams, the program also includes a group project to be undertaken in the Senior year. Students choosing this concentration may not pursue an additional major or minor in Statistics in the Humanities and Social Sciences College.

The requirements for the concentration in Operations Research and Statistics are:

Mathematical Sciences Courses (required)
The alternative courses 21-242, 21-261, and 21-268 (or 21-269) are particularly recommended for a student planning to pursue graduate work.

Courses Units
21-120 Differential and Integral Calculus 9
21-122 Integration and Approximation 9
21-127 Concepts of Mathematics 10
21-201 Undergraduate Colloquium 1
21-228 Discrete Mathematics 9-12
or 15-251 Great Theoretical Ideas in Computer Science 9
21-241 Matrices and Linear Transformations 10
or 21-242 Matrix Theory 10
21-259 Calculus in Three Dimensions 9-10
or 21-268 Multidimensional Calculus 9-10
or 21-269 Vector Analysis 9-10
21-260 Differential Equations 9-10
or 21-261 Introduction to Ordinary Differential Equations 9-10
or 33-231 Physical Analysis 9-10
21-292 Operations Research I 9
21-369 Numerical Methods 9
21-393 Operations Research II 9
95-100

Statistics Courses (required)
Courses Units
36-301 Modern Regression 9
36-402 Advanced Methods for Data Analysis 9
36-410 Introduction to Probability Modeling 9
45

Economics, Business, and Computer Science Courses (required)
Courses Units
15-110 Principles of Computing 10
70-122 Introduction to Accounting 9
73-100 Principles of Economics 9
73-230 Intermediate Microeconomics 9
73-240 Intermediate Macroeconomics 9
46

Depth Electives (required)
Five depth electives (required), to be chosen from the list below. The course 21-355 is particularly recommended for a student planning to pursue graduate work.

Courses Units
15-122 Principles of Imperative Computation 10
15-150 Principles of Functional Programming 10
15-210 Parallel and Sequential Data Structures and Algorithms 12
21-270 Introduction to Mathematical Finance 9
21-301 Combinatorics 9
21-341 Linear Algebra 9
21-355 Principles of Real Analysis I 9
21-356 Principles of Real Analysis II 9
21-365 Projects in Applied Mathematics 9
21-366 Topics in Applied Mathematics 9
21-370 Discrete Time Finance 9
21-373 Algebraic Structures 9
21-420 Continuous-Time Finance 9
21-484 Graph Theory 9
36-461 Special Topics 9
36-462 Special Topics: Data Mining 9
36-463 Special Topics: Multilevel and Hierarchical Models 9
36-464 Special Topics: Applied Multivariate Methods 9
70-371 Operations Management 9
70-460 Mathematical Models for Consulting 9
70-471 Supply Chain Management 9

MCS General Education (required)
MCS or SHS humanities, social sciences, and science core (114 units)
Note that 73-100, 73-230, and 73-240 satisfy requirements from the MCS general education core.

Suggested Schedule

Freshman Year
Fall Units

or 21-242 Matrix Theory 10
33-112 Physics II for Science Students 12
xx-xxx H&SS Elective 9
51
The courses 36-225 Introduction to Probability Theory and 36-226 Introduction to Statistical Inference taken in the junior year serve as the basis for all further statistics courses. The course 21-325 is a more mathematical alternative to 36-225.

The Statistics Concentration is jointly administered by the Department of Mathematical Sciences and the Department of Statistics. The Department of Statistics considers applications for the master’s program from undergraduates in the junior year. Students who are accepted are expected to finish their undergraduate studies, using some electives in the senior year to take courses recommended by the Department of Statistics. This will ensure a strong background to permit completion of the master’s program in one year beyond the baccalaureate. The requirements for the Statistics Concentration are:

### Mathematical Sciences Courses (required)

360Minimum number of units required for the degree:

Discrete Mathematics and Logic Concentration

Discrete mathematics is the study of finite and countable structures and algorithms for the manipulation and analysis of such structures, while mathematical logic is the study of axiomatic systems and their mathematical applications. Both are flourishing research areas and have close ties with computer science.

The Discrete Mathematics and Logic Concentration provides a firm background in discrete mathematics and mathematical logic, together with the elements of theoretical computer science. It prepares the student to pursue research in these fields, or to apply their ideas in the many disciplines (ranging from philosophy to hardware verification) where such ideas have proved relevant.

The requirements for the Discrete Mathematics and Logic Concentration are:

Mathematical Sciences and Computer Science Courses (required)

The alternative course 21-242 is particularly recommended for a student planning to pursue graduate work. Students who plan to pursue graduate study in mathematical logic are strongly advised to take 21-300.

xx-xxx H&SS Elective 9

Spring
15-122 Principles of Imperative Computation 10
15-150 Principles of Functional Programming 10
15-210 Parallel and Sequential Data Structures and Algorithms 12
21-120 Differential and Integral Calculus 10
21-122 Integration and Approximation 10
21-127 Concepts of Mathematics 10
21-201 Undergraduate Colloquium (Taken twice in Sophomore year.) 1
21-241 Matrices and Linear Transformations 10
or 21-242 Matrix Theory 10
21-228 Discrete Mathematics 9-12
or 15-251 Great Theoretical Ideas in Computer Science 9-12
21-300 Basic Logic 9
or 15-317 Constructive Logic 9
21-301 Combinatorics 9
21-341 Linear Algebra 9
21-355 Principles of Real Analysis I 9
Computer Science electives (required)
Any two courses at the 300 level or above. The following are specifically suggested:

- 15-312 Foundations of Programming Languages (12 units)
- 15-451 Algorithm Design and Analysis (12 units)
- 15-453 Formal Languages, Automata, and Computability (9 units)

Students pursuing this concentration who minor in Computer Science must take two additional Computer Science courses at the 300 level or above to avoid excessive double counting.

Mathematical Sciences Electives (required)
Seven courses from lists 1 and 2 below, including at least three chosen from list 1.

**List 1 (Discrete Mathematics and Logic Electives)**
- 21-325 Probability (9 units)
- 21-329 Set Theory (9 units)
- 21-374 Field Theory (9 units)
- 21-441 Number Theory (9 units)
- 21-484 Graph Theory (9 units)
- 21-602 Introduction to Set Theory I (12 units)
- 21-603 Model Theory I (12 units)
- 21-700 Mathematical Logic II (12 units)
- 80-405 Game Theory (9 units)
- 80-411 Proof Theory (9 units)

**List 2 (General Mathematics Electives)**
- 21-259 Calculus in Three Dimensions (9-10 units)
- 21-260 Multidimensional Calculus (9-10 units)
- 21-269 Vector Analysis (9-10 units)
- 21-268 Differential Equations (9-10 units)
- 21-261 Introduction to Ordinary Differential Equations (9-10 units)
- 21-292 Operations Research I (9 units)
- 21-356 Principles of Real Analysis I (9 units)
- 21-370 Functions of a Complex Variable (9 units)
- 21-372 Partial Differential Equations and Fourier Analysis (9 units)
- 21-393 Operations Research II (9 units)
- 21-465 Topology (9 units)
- 21-467 Differential Geometry (9 units)
- 21-476 Introduction to Dynamical Systems (9 units)

MCS General Education (required)
MCS or SHS humanities, social sciences, and science core (114 units)

**Suggested Schedule**

**Freshman Year**

**Fall**
- 15-112 Fundamentals of Programming and Computer Science (12 units)
- 21-120 Differential and Integral Calculus (10 units)
- 33-111 Physics I for Science Students (12 units)
- 76-101 Interpretation and Argument (9 units)
- 99-101 Computing @ Carnegie Mellon (3 units)

**Units**: 46

**Spring**
- 15-122 Principles of Imperative Computation (10 units)
- 21-122 Integration and Approximation (10 units)
- 21-127 Concepts of Mathematics (10 units)
- 21-241 Matrices and Linear Transformations (10 units)

**Units**: 46

**Sophomore Year**

**Fall**
- 15-150 Principles of Functional Programming (10 units)
- 21-268 Multidimensional Calculus (10 units)
- 21-373 Algebraic Structures (9 units)
- 21-201 Undergraduate Colloquium (1 unit)
- xx-xxx H&SS Elective (9 units)

**Units**: 52

**Spring**
- 03-121 Modern Biology (9 units)
- 09-105 Introduction to Modern Chemistry I (10 units)
- 15-210 Parallel and Sequential Data Structures and Algorithms (12 units)
- xx-xxx Discrete Math/Logic Elective (9 units)
- 21-201 Undergraduate Colloquium (1 unit)
- xx-xxx Mathematics Elective (9 units)
- xx-xxx H&SS Elective (9 units)

**Units**: 46

**Junior Year**

**Fall**
- 15-xxx Computer Science Elective (9 units)
- 21-300 Basic Logic (9 units)
- 21-355 Principles of Real Analysis I (9 units)
- xx-xxx H&SS Elective (9 units)
- xx-xxx Free Elective (9 units)

**Units**: 45

**Spring**
- 15-xxx Computer Science Elective (9 units)
- 21-341 Linear Algebra (9 units)
- xx-xxx H&SS Elective (9 units)
- xx-xxx H&SS Elective (9 units)
- xx-xxx Free Elective (9 units)

**Units**: 45

**Senior Year**

**Fall**
- xx-xxx Discrete Math/Logic Elective (9 units)
- xx-xxx Mathematics Elective (9 units)
- xx-xxx H&SS Elective (9 units)
- xx-xxx Free Elective (9 units)

**Units**: 45

**Spring**
- xx-xxx Discrete Math/Logic Elective (9 units)
- xx-xxx Mathematics Elective (9 units)
- xx-xxx H&SS Elective (9 units)
- xx-xxx Free Elective (9 units)

**Units**: 45

**Minimum number of units required for degree:**

**360**

**Computational and Applied Mathematics Concentration**

This concentration is designed to prepare students for careers in business or industry which require significant analytical, computational and problem solving skills.
solving skills. It also prepares students with interest in computational and applied mathematics for graduate school.

The students in this concentration develop skills to choose the right framework to quantify or model a problem, analyze it, simulate and in general use appropriate techniques for carrying the effort through to an effective solution. The free electives allow the student to develop an interest in a related area by completing a minor in another department, such as Engineering Studies, Economics, Information Systems or Business Administration.

The requirements for the Computational and Applied Mathematics Concentration are:

Mathematical Sciences Courses (required)
The alternative courses 21-242, 21-261, and 21-268 (or 21-269) are particularly recommended for a student planning to pursue graduate work.

Note that courses 21-600 and above carry graduate credit. 600 level courses are designed as transitional courses to graduate study.

A student preparing for graduate study should also consider undertaking independent work. The Department offers 21-499 Undergraduate Research Topic and 21-599 Undergraduate Reading and Research for this purpose. These courses can be taken as part of satisfying the Depth Elective requirement, but require permission of both the instructor and the department.

Courses 21-700 and above can be used with the permission of both the instructor and the department.

MCS General Education (required)

MCS or SHS humanities, social sciences, and science core (114 units).

Students not in MCS are required to take 15-110 Principles of Computing (10 units).

The Minor in Discrete Mathematics and Logic

This minor develops the fundamentals of discrete mathematics and logic necessary to understand the mathematical foundations of many computer related disciplines. Required courses are:

- **21-300** Basic Logic 9
- or **15-317** Constructive Logic 9
- **21-301** Combinatorics 9

Four of the following:

- **21-329** Set Theory 9
- **21-341** Linear Algebra 9

Electives may not also count toward the student's major. To avoid excessive double counting, the two Mathematical Sciences Electives may not also count toward the student's major.

The Minor includes six courses. 21-127 Concepts of Mathematics is a prerequisite for 21-228 and recommended for 21-241. The minimum preparation required for 21-355 Principles of Real Analysis I is 21-122 and 21-127 or equivalent courses.

<table>
<thead>
<tr>
<th>Fall</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>21-127</td>
<td>10</td>

<td>21-3xx</td>
<td></td>
</tr>
<tr>
<td>21-3xx</td>
<td></td>
</tr>
<tr>
<td>21-3xx</td>
<td></td>
</tr>
</tbody>
</table>

To avoid excessive double counting, the two Mathematical Sciences Electives may not also count toward the student's major.

### The Honors Degree Program

This demanding program leads to an M.S. in Mathematical Sciences, normally in four years, in addition to the student's B.S. degree. The key element in the program is usually the Mathematical Studies sequence. Admission to the Honors Program, in the Junior year, requires an application while admission to the Math Studies sequences is by invitation only. In the application process the Department will hold to the same high standards which apply to admission to any graduate program.

The core undergraduate honors courses are:

#### Freshman Year

<table>

### Five graduate mathematics courses: 60 units

Each student in the honors degree program will have a thesis advisor in addition to his or her academic advisor. In practice, the student must start thinking about the thesis as early as possible. For this reason we include some thesis work, 3 units of 21-901 Masters Degree Research. The student must give a public presentation and will be examined on the thesis and related mathematics.

The five graduate courses must include at least one course from each of the following areas:

- **Analysis:** for example, Measure and Integration, Complex Analysis, Functional Analysis
- **Algebra, Logic, Geometry and Topology:** for example, Mathematical Logic I, Algebra I, General Topology, Discrete Mathematics, Commutative Algebra, Differential Geometry
Faculty

PETER B. ANDREWS, Emeritus – Ph.D., Princeton University; Carnegie Mellon, 1963–.

JEREMY AVIGAD, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 1996–.

EGON BALAS, University Professor – Ph.D., University of Brussels; Carnegie Mellon, 1968–.

ALBERT A. BLANK, Emeritus – Ph.D., New York University; Carnegie Mellon, 1969–.

MANUEL BLUM, University Professor – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1999–.

THOMAS BOHMAN, Professor – Ph.D., Rutgers University; Carnegie Mellon, 1998–.

DEBORAH BRANDON, Associate Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1991–.

BORIS BUKH, Assistant Professor – Ph.D., Princeton University; Carnegie Mellon, 2012–.

CHARLES V. COFFMAN, Emeritus – Ph.D., Johns Hopkins University; Carnegie Mellon, 1962–.

CLINTON CONLEY, Assistant Professor – Ph.D., University of California Los Angeles; Carnegie Mellon, 2009–.

GERARD CORNUEJOLS, University Professor – Ph.D., Cornell University; Carnegie Mellon, 1978–.

JAMES CUMMINGS, Professor – Ph.D., Cambridge University; Carnegie Mellon, 1996–.

HASAN DEMIRKOPARAN, Assistant Teaching Professor – Ph.D., Michigan State University; Carnegie Mellon, 2005–.

TIMOTHY FLAHERTY, Assistant Teaching Professor – Ph.D., University of Pittsburgh; Carnegie Mellon, 1999–.

IRENE M. FONSECA, University Professor – Ph.D., University of Minnesota; Carnegie Mellon, 1987–.

ALAN M. FRIEZE, Professor – Ph.D., University of London; Carnegie Mellon, 1987–.

IRINA GHEorghiciuc, Assistant Teaching Professor – Ph.D., University of Pennsylvania; Carnegie Mellon, 2007–.

JAMES M. GREENBERG, Emeritus – Ph.D., Brown University; Carnegie Mellon, 1995–.

RAMI GROSSBERG, Professor – Ph.D., Hebrew University of Jerusalem; Carnegie Mellon, 1988–.

MORTON E. GURTIN, Emeritus – Ph.D., Brown University; Carnegie Mellon, 1966–.

DAVID HANDRON, Associate Teaching Professor – Ph.D., Rice University; Carnegie Mellon, 1999–.

WILLIAM J. HRUSA, Professor – Ph.D., Brown University; Carnegie Mellon, 1982–.

GAUTAM IYER, Assistant Professor – Ph.D., University of Chicago; Carnegie Mellon, 2009–.

GREGORY JOHNSON, Assistant Teaching Professor – Ph.D., University of Maryland; Carnegie Mellon, 2009–.

DAVID KINDERLEHRER, Professor – Ph.D., University of California at Berkeley; Carnegie Mellon, 1990–.

NATASHA KOMAROV, Visiting Assistant Professor – Ph.D., Dartmouth College; Carnegie Mellon, 2013–.

DMITRY KRAMKOV, Professor – Ph.D., Steklov Mathematical Institute; Carnegie Mellon, 2000–.

KASPER LARSEN, Associate Professor – Ph.D., University of Southern Denmark; Carnegie Mellon, 2007–.

JOHN P. LEHOczKY, Professor – Ph.D., Stanford University; Carnegie Mellon, 1969–.

GIOVANNI LEONI, Professor – Ph.D., University of Minnesota; Carnegie Mellon, 2002–.

PO-SHEN LOH, Assistant Professor – Ph.D., Princeton University; Carnegie Mellon, 2009–.

JOHN W. SCHAEFFER, Professor – Ph.D., Indiana University; Carnegie Mellon, 1983–.

JUAN J. SCHÄFFER, Professor – Ph.D., Universität Zürich; Carnegie Mellon, 1968–.

ERNEST SCHIMMERLING, Professor – Ph.D., University of California at Los Angeles; Carnegie Mellon, 1998–.

DANA SCOTT, Emeritus – Ph.D., Princeton University; Carnegie Mellon, 1981–.

ROBERT F. SEKERKA, University Professor – Ph.D., Harvard University; Carnegie Mellon, 1969–.

STEVEN E. SHREVE, University Professor – Ph.D., University of Illinois; Carnegie Mellon, 1980–.

DEJAN SLEPEČEV, Associate Professor – Ph.D., University of Texas at Austin; Carnegie Mellon, 2006–.

RICHARD STATMAN, Professor – Ph.D., Stanford University; Carnegie Mellon, 1984–.

SHLOMO TA’ASAN, Professor – Ph.D., Weizmann Institute; Carnegie Mellon, 1994–.

LUC TARTAR, University Professor of Mathematics Emeritus – Ph.D., University of Paris; Carnegie Mellon, 1987–.

IAN TICE, Assistant Professor – Ph.D., New York University; Carnegie Mellon, 2012–.

RUSSELL C. WALKER, Teaching Professor – D.A., Carnegie Mellon University; Carnegie Mellon, 1984–.

NOEL S. WALKINGTON, Professor – Ph.D., University of Texas at Austin; Carnegie Mellon, 1989–.

WILLIAM O. WILLIAMS, Emeritus – Ph.D., Brown University; Carnegie Mellon, 1966–.

CARL YERGER, Shelly Visiting Assistant Professor – Ph.D., Georgia Institute of Technology; Carnegie Mellon, 2010–.
Physics, one of the basic sciences, has its origin in the irrepressible human curiosity to explore and understand the natural world. This fundamental urge to discover has led to the detailed understanding of a remarkable variety of physical phenomena. Our knowledge now encompasses the large-scale movements of galaxies, the minute motions within atoms and nuclei, and the complex structure of the assemblies of molecules that make life possible. The spectacular expansion of our comprehension of the physical world forms an impressive part of the intellectual and cultural heritage of our times. The opportunity to add to this heritage is an important source of motivation for young physicists. The application of discoveries in physics to the solution of complex modern technological problems offers a vast field in which physicists make decisive contributions. The interplay of pure and applied physics has always been fruitful and today ensures many rewarding career opportunities for physics students.

Carnegie Mellon's undergraduate curriculum in physics has been carefully designed to provide a firm knowledge of the basic principles of physics, an appreciation of a wide range of physical problems of current interest, and the capacity to formulate and solve new problems. In addition to classwork and problem solving, the curriculum includes studying physical phenomena in the laboratory. Physics students are strongly encouraged to go beyond the formal theoretical and experimental course work and become involved in research projects under the guidance of individual faculty members.

Students may choose from a variety of degree options:

- B.S. in Physics
- B.A. in Physics
- B.S. in Physics with Tracks in:
  - Applied Physics
  - Astrophysics
  - Biological Physics
  - Chemical Physics
  - Computational Physics

The objectives and requirements for each of these options are described in the paragraphs below. Each allows considerable latitude in the choice of electives.

Through the judicious choice of elective courses, a double major program combining physics and another discipline can be readily achieved. A minor in physics is also offered for those students who major in other disciplines. The student, with the help of their faculty advisors, can easily build a program that aims at specific career objectives.

The Department maintains an active and wide-ranging program of advising. Beyond aiding in academic planning, the department advisors can also assist students in finding research work during the academic year, technical jobs and internships for the summer, as well as planning and executing the necessary steps for gaining employment or continuing their studies beyond the bachelor's degree. Whether students follow a standard curriculum or not, they should consult their academic advisor at least once every semester.

**B.S. in Physics**

B.S. degree candidates can choose studies in not only a wide variety of intermediate and advanced topics in physics but also a range of material in other science or engineering fields. The B.S. degree provides a solid foundation for students wishing to go on to graduate work in physics or any of a large number of fields in pure or applied science or engineering, for which a sound grasp of physics and mathematics is essential. This program also provides excellent preparation for careers in teaching, for work in industrial or governmental research and development, or for other employment in business or industry with a significant scientific component.

Degree Requirements are as follows:

- **Carnegie Mellon University Requirements**
  - A minimum of 360 units is required.
  - 99-101, 99-102, or 99-103 Computing @ Carnegie Mellon

- **MCS Core Science Requirements**
  - 33-111 Physics I for Science Students or 33-131 Matter and Interaction I
  - 33-112 Physics II for Science Students or 33-132 Matter and Interactions II
  - 03-121 Modern Biology
  - 09-105 Introduction to Modern Chemistry I
  - 21-120 Differential and Integral Calculus
  - 21-122 Integration and Approximation

- **MCS Core Courses must be completed by end of junior year.**

- **MCS Humanities & Social Sciences and Fine Arts Requirements**
  - Common Course Requirement (Writing/Expression)
  - Distributional Course Requirements
  - 4 non-technical courses of at least 9 units each from any of the departments in H&S, CFA, or BA.

- **Electives**
  - 8 courses of at least 9 units each from any of the departments in H&S, CFA, or BA.

- **Additional Core Physics/Math Courses**
  - 33-104 Experimental Physics
  - 33-211 Physics III: Modern Essentials
  - 33-228 Electronics I
  - 33-231 Physical Analysis
  - 33-232 Mathematical Methods of Physics
  - 33-234 Quantum Physics
  - 33-331 Physical Mechanics I
  - 33-338 Intermediate Electricity and Magnetism I
  - 33-340 Modern Physics Laboratory
  - 33-341 Thermal Physics I
  - 21-259 Calculus in Three Dimensions

- **Physics Colloquium Courses**
  - 33-201 Physics Sophomore Colloquium I
  - 33-202 Physics Sophomore Colloquium II
  - 33-301 Physics Upperclass Colloquium I
  - 33-302 Physics Upperclass Colloquium II

- **Physics, Mathematics and Technical Electives**
  - 8 courses of at least 9 units each
  - Allowed courses depend on track chosen: see below.

- **Free Electives**
  - Approximately 26 units: actual number depends on track chosen and satisfying 360 total units
  - A free elective is any Carnegie Mellon course; however, a maximum of 9 units of physical education and/or military science and/or StuCo courses may be taken as free electives.

We offer a Physics Major with or without a track. A track is like a "menu deal" at a fast-food restaurant: when one chooses a track, one gets a package of physics and other required courses and electives. The specialized electives for each of the tracks are described below:
Physics Breadth Elective need to be chosen. Some of these courses are included in particular tracks. Then, no additional Physics "breadth" Elective course to be chosen from the following:

- 33-332 Physical Mechanics II
- 33-339 Intermediate Electricity and Magnetism II
- 33-445 Adv Quantum Physics I
- 33-446 Advanced Quantum Physics II

Qualifying Electives in Physics

The following courses qualify as specialized Physics Electives for the B.S. and B.A. degrees and the Minor of Physics:

- 33-114 Physics of Musical Sound (B.A. and minor only)
- 33-120 Science and Science Fiction (B.A. and minor only)
- 33-224 Stars, Galaxies and the Universe (Fall)
- 33-241 Introduction to Computational Physics (Fall)
- 33-332 Physical Mechanics II (Spring)
- 33-339 Intermediate Electricity and Magnetism II (Spring)
- 33-342 Thermal Physics II (Spring)
- 33-350 Undergraduate Research
- 33-353 Intermediate Optics (Alt. Fall - F14, F16)
- 33-355 Nanoscience and Nanotechnology (Alt. Fall - F13, F15)
- 33-398 Special Topics
- 33-441 Introduction to BioPhysics (Fall)
- 33-444 Introduction to Nuclear and Particle Physics (Spring)
- 33-445 Adv Quantum Physics I (Fall)
- 33-446 Advanced Quantum Physics II (Spring)
- 33-448 Introduction to Solid State Physics (Spring)
- 33-451 Senior Research
- 33-456 Advanced Computational Physics (Spring)
- 33-466 Extragalactic Astrophysics and Cosmology (Spring)
- 33-467 Astrophysics of Stars and the Galaxy (Fall)
- 33-499 Supervised Reading
- 33-650 General Relativity (Fall)
- 33-658 Quantum Computation and Quantum Information Theory (Alt. Spring - S14, S16)
- 33-7xx Physics Graduate Level Courses (see list below)

Only one of the two courses - 33-114 and 33-120 may be used for BA.

Only one of the two courses - 33-350 (at least 9 units), 33-451 (at least 9 units), and 33-499 (at least 9 units) - may be used to satisfy as a Qualifying Elective in Physics. Any exceptions must be pre-approved by the Assistant Head for Undergraduate Affairs.

Physics Breadth Electives

A Physics Major with or without a track, one of the Physics electives must be a Physics "breadth" Elective course to be chosen from the following:

- 33-353 Intermediate Optics (Alt. Fall - F14, F16)
- 33-355 Nanoscience and Nanotechnology (Alt. Fall - F13, F15)
- 33-441 Introduction to BioPhysics (Fall)
- 33-444 Introduction to Nuclear and Particle Physics (Spring)
- 33-448 Introduction to Solid State Physics (Spring)
- 33-466 Extragalactic Astrophysics and Cosmology (Spring)
- 33-467 Astrophysics of Stars and the Galaxy (Fall)
- 33-650 General Relativity (Fall)
- 33-658 Quantum Computation and Quantum Information Theory (Alt. Spring - S14, S16)

Some of these courses are included in particular tracks. Then, no additional Physics Breadth Elective need to be chosen.

Physics Graduate Courses

- 33-755 Quantum Mechanics I
- 33-756 Quantum Mechanics II
- 33-758 Quantum Computation and Quantum Information Theory
- 33-759 Introduction to Mathematical Physics I
- 33-761 Classical Electrodynamics I
- 33-762 Classical Electrodynamics II
- 33-765 Statistical Mechanics
- 33-767 Biophysics: From Basic Concepts to Current Research
- 33-769 Quantum Mechanics III: Many Body and Relativistic Systems
- 33-770 Field Theory I
- 33-771 Field Theory II
- 33-777 Introductory Astrophysics
- 33-779 Introduction to Nuclear and Particle Physics
- 33-780 Nuclear and Particle Physics II
- 33-783 Solid State Physics

B.S. in Physics – Sample Schedule (No Track)

**First Year**

**Fall**

- 33-111 Physics I for Science Students 12
- 15-110 Principles of Computing 10-12
- 21-120 Differential and Integral Calculus 10
- 99-101 Computing @ Carnegie Mellon 3
- 76-101 Interpretation and Argument (MCS Core 1 of 8) 9

**Spring**

- 33-112 Physics II for Science Students 12
- 33-104 Experimental Physics 9
- 21-122 Integration and Approximation 10
- xx-xxx Humanities, Social Sciences, or Fine Arts Course (MCS Core 2 of 8) 9
- xx-xxx Any course 9

**Sophomore Year**

**Fall**

- 33-211 Physics III: Modern Essentials 10
- 33-231 Physical Analysis 10
- 33-201 Physics Sophomore Colloquium I 2
- 21-259 Calculus in Three Dimensions 9
- 09-105 Introduction to Modern Chemistry I 10
- xx-xxx Dietrich College/FA Course (MCS Core 3 of 8) 9

**Spring**

- 33-232 Mathematical Methods of Physics 10
- 33-228 Electronics I 10
- 33-234 Quantum Physics 10
- 33-202 Physics Sophomore Colloquium II 2
- 03-121 Modern Biology 9
- xx-xxx Dietrich College/FA Course (MCS Core 4 of 8) 9

**Junior Year**

**Fall**

- 33-331 Physical Mechanics I 10
- 33-338 Intermediate Electricity and Magnetism I 10
- 33-341 Thermal Physics I 10
- 33-301 Physics Sophomore Colloquium I 1
- xx-xxx Dietrich College/FA Course (MCS Core 5 of 8) 9
- xx-xxx Physics, Technical, or Free Elective (1 of 10) 9

**Spring**

- 33-340 Modern Physics Laboratory 10
- 33-302 Physics Sophomore Colloquium II 1
- xx-xxx Physics, Technical or Free Elective (2 of 10) 9
B.A. in Physics

The Bachelor of Arts degree in Physics offers a flexible program that allows students to combine the study of Physics with the opportunity to do intensive work in substantive areas such as liberal arts, teaching, business or law. With 82 units of free electives, it is feasible for students to obtain, for example, a double major with a department in the College of Humanities and Social Sciences, the College of Fine Arts, or the Tepper School of Business. It is expected that students will focus their elective courses in a well defined academic area. Students must meet with the Assistant Head for undergraduate Affairs and construct an approved plan of study.

The requirements for the B.A. degree are the same as for the B.S. degree, except that the 8 Physics, Mathematics and Technical Electives in the B.S. are replaced by Free Electives in the BA program.

Degree Requirements are as follows:

- **Carnegie Mellon University Requirements**
  - A minimum of 360 units is required.
  - 99-101, 99-102, or 99-103 Computing @ Carnegie Mellon

- **MCS Core Science Requirements**
  - 33-111 Physics I for Science Students or 33-131 Matter and Interaction I
  - 33-112 Physics II for Science Students or 33-132 Matter and Interactions II
  - 03-121 Modern Biology
  - 09-105 Introduction to Modern Chemistry I
  - 21-120 Differential and Integral Calculus
  - 21-122 Integration and Approximation
  - MCS Core Courses must be completed by end of junior year.

- **MCS Humanities & Social Sciences and Fine Arts Requirements**
  - Common Course Requirement (Writing/Expression)
    - 76-101 Interpretation and Argument
  - Distributional Course Requirements
    - 1 course from Category 1: Cognition, Choice and Behavior ([http://www.cmu.edu/mcs/undergrad/advising/hss-finearts](http://www.cmu.edu/mcs/undergrad/advising/hss-finearts))
    - 1 course from Category 2: Economic, Political and Social Institutions ([http://www.cmu.edu/mcs/undergrad/advising/hss-finearts](http://www.cmu.edu/mcs/undergrad/advising/hss-finearts))
    - 1 course from Category 3: Cultural Analysis ([http://www.cmu.edu/mcs/undergrad/advising/hss-finearts](http://www.cmu.edu/mcs/undergrad/advising/hss-finearts))
  - Electives
    - 4 non-technical courses ([http://www.cmu.edu/mcs/undergrad/advising/hss-finearts](http://www.cmu.edu/mcs/undergrad/advising/hss-finearts)) of at least 9 units each from any of the departments in H&S, SCS, CFA, or BA.

- **Additional Core Physics/Math Courses**
  - 33-104 Experimental Physics(by fall of sophomore year)
  - 33-211 Physics III: Modern Essentials
  - 33-228 Electronics I
  - 33-231 Physical Analysis
  - 33-232 Mathematical Methods of Physics

  - 33-234 Quantum Physics
  - 33-331 Physical Mechanics I
  - 33-338 Intermediate Electricity and Magnetism I
  - 33-341 Thermal Physics I
  - 21-259 Calculus in Three Dimensions

- **Physics Colloquium Courses**
  - 33-201 Physics Sophomore Colloquium I
  - 33-202 Physics Sophomore Colloquium II
  - 33-301 Physics Upperclass Colloquium I
  - 33-302 Physics Upperclass Colloquium II

- **Qualifying Physics Electives**
  - 2 courses of at least 9 units each
  - Free Electives
    - Approximately 82 units: actual number depends on satisfying 360 total units
  - A free elective is any Carnegie Mellon course; however, a maximum of 9 units of physical education and/or military science and/or StuCo courses may be taken as free electives.

**Physics Breadth Electives for Different Tracks**

A Physics Major with or without a track, one of the Physics electives must be a Physics "breadth" Elective course to be chosen from the following:

- 33-353 Intermediate Optics (Alt. Fall- F14, F16)
- 33-355 Nanoscience and Nanotechnology (Alt. Fall- F13, F15)
- 33-441 Introduction to BioPhysics (Fall)
- 33-444 Introduction to Nuclear and Particle Physics (Spring)
- 33-448 Introduction to Solid State Physics (Spring)
- 33-466 Extragalactic Astrophysics and Cosmology (Spring)
- 33-467 Astrophysics of Stars and the Galaxy (Fall)
- 33-650 General Relativity (Fall)
- 33-658 Quantum Computation and Quantum Information Theory (Alt. Spring- S14, S16)

Some of these courses are included in particular tracks. Then, no additional Physics Breadth Elective need to be chosen.

**B.S. in Physics / No Track**

The 8 Physics, Mathematics and Technical courses for the B.S. in the Physics without a track are as follows:

- **Physics Electives**
  - 4 courses of at least 9 unit each
  - must be chosen from the Qualifying Physics Electives (p. 329), at least one of which must be chosen from Physics Breadth Electives (p. 329)

- **Math Elective**
  - 1 course of at least 9 units
  - chosen from any 21-2xx or higher level courses except 21-350

- **Technical Electives**
  - 3 courses of at least 9 units each
  - Technical electives are any courses in MCS, SCS, Statistics, CIT, and others explicitly approved by the Assistant Head for Undergraduate Affairs.

**B.S. in Physics / Applied Physics Track**

The B.S. in Physics/Applied Physics Track is designed primarily for the student who wants to prepare for a career path that takes advantage of the diverse and expanding opportunities for employment in industrial and government laboratories with a B.S. degree. The program provides a solid foundation in the concepts of physics, as well as giving the student the experience and understanding of the application of these concepts. The track is intended to enhance computing and laboratory skills, and to introduce the application of physics to those subjects of particular interest to the student. Since the possible subject areas for study are so varied, the track will be tailored to each student's needs within the framework described below.
The 8 Physics, Mathematics and Technical courses for the B.S. in the Applied Physics Track are as follows:

- Physics/Technical Courses
  - 33-448 Introduction to Solid State Physics
  - One course (at least 9 units) which strengthens the student’s ability to use the computer as a tool in the research environment
  - Two courses (at least 18 units), at least one of them in another department, which broaden the student’s laboratory skills
  - Two courses (at least 18 units), at least one of them in another department, which give the student experience in applying basic physics principles to a variety of problems
  - One research course: either 33-350 or 33-451
    - the research topic must be applied physics related and must be approved by the Assistant Head for Undergraduate Affairs.

- Math Elective
  - One course of at least 9 units
    - chosen from any 21-2xx or higher level course except 21-350.

Details of what may constitute the elective courses in the Physics/Technical Courses Requirement are decided after consultation with, and approved by, the Assistant Head for Undergraduate Affairs.

**B.S. in Physics / Astrophysics Track**

The B.S. in Physics/Astrophysics Track provides an option for those Physics majors who either want to specialize in this subfield or plan careers in astronomy or astrophysics. Career paths may include postgraduate training in astronomy or astrophysics or proceeding directly to jobs in these fields. The program provides a thorough foundation in the core physics program with electives concentrating in astrophysics.

The 8 Physics, Mathematics and Technical courses for the B.S. in the Astrophysics Track are as follows:

- Astrophysics Courses
  - 33-224 Stars, Galaxies and the Universe
  - 33-466 Extragalactic Astrophysics and Cosmology
  - 33-467 Astrophysics of Stars and the Galaxy
  - 1 research course: either 33-350 or 33-451
    - the research topic must be astrophysics related and must be approved by the Assistant Head for Undergraduate Affairs.

- Math Elective
  - 1 course of at least 9 units
    - chosen from any 21-2xx or higher level course except 21-350.

- Technical Electives
  - 3 courses of 9 units each
    - Technical electives are any courses in MCS, SCS, Statistics, CIT, and others explicitly approved by the Physics Department.

**B.S. in Physics / Biological Physics Track**

The B.S. in Physics/Biological Physics Track combines a rigorous foundation in undergraduate physics with courses in Biological Physics and Chemistry. It is particularly suitable for students preparing for post-baccalaureate careers in the expanding areas of biological and medical physics or for graduate study in biophysics. The program is sufficiently flexible that it can be readily adapted to the requirements of individual students. The student will first meet with the Assistant Head for Undergraduate Affairs to discuss interests and career goals and then choose electives which fulfill the requirements of the track.

The Biological Physics Track includes a number of courses which are also requirements for the pre-medical program. Students interested in both the Biological Physics Track and the pre-medical program should consult with both the Assistant Head for Undergraduate Affairs in the Physics Department and the Director of the Health Professions Program for help in planning their programs.

The 8 Physics, Mathematics and Technical courses for the B.S. in the Biological Physics Track are as follows:

- Physics Courses
  - 33-441/03-439 Introduction to Biophysics
  - One course of at least 9 units
    - must be chosen from the Qualifying Physics Electives (p. 329)

- Math Elective
  - One course of at least 9 units
    - chosen from any 21-2xx or higher level course except 21-350.

- Biological Sciences/Chemistry Courses
  - 03-231 Biochemistry I
  - 09-217 Organic Chemistry I
  - 09-218 Organic Chemistry II
  - 2 courses (18 units) in Biological Sciences

Details of what may constitute the elective courses in Biological Sciences are decided after consultation with, and approved by, the Assistant Head for Undergraduate Affairs.

**B.S. in Physics / Chemical Physics Track**

The B.S. in Physics/Chemical Physics Track is designed for students wishing to have a strong grounding in physics along with a specialization in physical chemistry and/or chemical physics. It is particularly suitable for those students planning on graduate studies in physics with an emphasis on chemical physics or chemistry. The program is sufficiently flexible that it can be readily adapted to the requirements of individual students. The student will first meet with the Assistant Head for Undergraduate Affairs to discuss interests and career goals and then choose electives that fulfill the requirements of the track.

The Chemical Physics Track incorporates a number of courses which are also requirements for the pre-medical program. Students interested in both the Chemical Physics Track and the pre-medical program should consult both with their Physics Department advisor and the Director of the Health Professions Program for help in planning their programs.

The 8 Physics, Mathematics and Technical courses for the B.S. in the Chemical Physics Track are as follows:

- Physics Course
  - 1 course of at least 9 units
    - must be chosen from the Physics Breadth Electives for Different Tracks. (p. 329)

- Math Elective
  - One course of at least 9 units
    - chosen from any 21-2xx or higher level course except 21-350.

- Chemistry Courses
  - 09-106 Modern Chemistry II
  - 09-344 Physical Chemistry (Quantum): Microscopic Principles of Physical Chemistry
  - 09-345 Physical Chemistry (Thermo): Macroscopic Principles of Physical Chemistry
  - 3 courses (27 units) in Chemistry

Details of what may constitute the elective courses in Chemistry are decided after consultation with, and approved by, the Assistant Head for Undergraduate Affairs.

**B.S. in Physics / Computational Physics Track**

The B.S. in Physics/Computational Physics Track is intended to fill the increasing demand for physics graduates who are skilled in computational and numerical techniques which are used in the analysis of physical problems and in subjects ranging from control and real-time programming to software engineering and compiler and operating systems design. The degree provides the student with a rigorous grounding in physics as well as in the foundations and practice of computer use as applied to scientific problems. Work is done on machines ranging from high level workstations through supercomputers.

The track program includes additional courses from the Mathematics and Computer Science Departments as well as special courses in computational physics from the Physics Department. The program is sufficiently flexible that it can be readily adapted to the requirements of individual students. The student will first meet with the Assistant Head for Undergraduate Affairs to discuss interests and career goals and then choose electives that fulfill the requirements of the track.

The 8 Physics, Mathematics and Technical courses for the B.S. in the Computational Physics Track are as follows:

- Physics Courses
  - 33-441/03-439 Introduction to Biophysics
  - One course of at least 9 units
    - must be chosen from the Qualifying Physics Electives (p. 329)
• **Physics Courses**
  - 33-241 Introduction to Computational Physics
  - 33-456 Advanced Computational Physics
  - Two courses of at least 9 units each
    • Must be chosen from the Qualifying Physics Electives (p. 329), at least one of which must be chosen from Physics Breadth Electives for Different Tracks (p. 330).
  - **Mathematics and Computer Science Courses**
    - 21-127 Concepts of Mathematics
    - 21-369 Numerical Methods
    - 15-122 and 15-150
    • However, the student must check with the Assistant Head for Undergraduate Affairs for the latest required Computer Science courses for this track.

**Double Major or a Dual Degree in Physics with a Degree in another Department**

Physics may be taken as a second major or for a degree in another department granting the primary degree. The rules of the Physics Department for these two options are distinct, as discussed below.

**Double Major**
In order to receive a Double Major in Physics, with another department granting the primary degree — with a B.S. or B.A., alone or with any track — all requirements of the Physics degree and the particular physics track, as listed in the previous sections, must be fulfilled except:

- No units of Technical Electives are required
- No units of Free Advantages are required
- No H6SS/FA courses are required
- The following courses in the MCS core are not required: 03-121 Modern Biology, 09-105 Introduction to Modern Chemistry I
- However, 15-110 Principles of Computing or 15-112 Fundamentals of Programming and Computer Science (or equivalent as pre-approved by the Associate Dean of Mellon College of Science) is still required.

**Dual Degree**
In order to receive a Dual Degree in another subject and Physics, with another department granting the primary degree — with a B.S. or B.A. alone or with any track — all requirements of the Physics degree and the particular physics track, as listed in the previous sections, must be fulfilled. The non-technical requirement is as per the Mellon College of Science; however, any course used for another department's or college's core requirement may be double counted for this purpose. The number of units required is 90 more than the total units required by the department requiring the fewer total units.

**Minor in Physics**
The Minor in Physics is designed to provide a solid foundation in physics at the introductory level, followed by elective courses which will familiarize the student with areas of modern physics, and the concepts and techniques employed therein. The Physics minor requires seven courses of at least 9 units each, of which four are required and three are electives.

• **Required Courses**
  - Introductory Physics I (one of 33-106, 33-111, 33-131)
  - Introductory Physics II (one of 33-107, 33-112, 33-132)
  - Physics III: Modern Essentials (33-211)
  - Experimental Physics (33-104)

• **Electives**
  - 3 physics electives, chosen from the Qualifying Physics Electives (https://coursescatalog-new.web.cmu.edu/melloncollegeofscience/departmentofphysics/qualifyingelectivesinphysics) list
  - choice requires prior approval by the Assistant Head for Undergraduate Affairs

The minor is open to all students of the university, although students with non-calculus based majors should be aware of the mathematics requirements for many physics courses (21-120, 21-122, 21-259).

**Faculty**

**DAVID ANDERSON, Assistant Professor of Physics – Ph.D., University of York (UK); Carnegie Mellon, 2008–.**

**ROY A. BRIERE, Professor of Physics – Ph.D., University of Chicago; Carnegie Mellon, 1999–.**

**RUPERT CROFT, Professor of Physics – Ph.D., Oxford University; Carnegie Mellon, 2001–.**

**MARKUS DESERNO, Associate Professor of Physics – Ph. D., University of Mainz, Germany; Carnegie Mellon, 2007–.**

**TIZIANA DI MATTEO, Professor of Physics – Ph.D., University of Cambridge; Carnegie Mellon, 2004–.**

**ALEX EVILEVITCH, Associate Professor of Physics – Ph.D., Lund University, Sweden; Carnegie Mellon, 2009–.**

**RANDALL M. FEENSTRA, Professor of Physics – Ph.D., California Institute of Technology; Carnegie Mellon, 1995–.**

**THOMAS A. FERGUSON, Professor of Physics – Ph.D., University of California at Los Angeles; Carnegie Mellon, 1985–.**

**RAFAEL FLAUGER, Assistant Professor of Physics – Ph.D., University of Texas; Carnegie Mellon, 2009–.**

**GRogg B. FRANKLIN, Professor of Physics – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1984–.**

**STEPHEN GAROFF, Professor of Physics; Head, Department of Physics – Ph.D., Harvard University; Carnegie Mellon, 1989–.**

**KUNAL GHOSH, Teaching Professor of Physics, Assistant Head for Undergraduate Affairs, Department of Physics – Ph.D., Iowa State University; Carnegie Mellon, 2001–.**

**FREDERICK J. GILMAN, Buhl Professor of Physics; Dean, Mellon College of Science – Ph.D., Princeton University; Carnegie Mellon, 1995–.**

**SHIRLEY HO, Assistant Professor of Physics – Ph.D., Princeton University; Carnegie Mellon, 2012–.**

**RICHARD F. HOLMAN, Professor of Physics – Ph.D., Johns Hopkins University; Carnegie Mellon, 1987–.**

**BENJAMIN HUNT, Assistant Professor of Physics – Ph.D., Cornell University; Carnegie Mellon, 2009–.**

**GEORGE KLEIN, Associate Teaching Professor of Physics – Ph.D., New York University; Carnegie Mellon, 1993–.**

**MICHAEL J. LEVINE, Professor of Physics, Director of Pittsburgh Supercomputer Center – Ph.D., California Institute of Technology; Carnegie Mellon, 1968–.**

**MATHIAS LOSCHE, Professor of Physics – Ph.D., Technical University of Munich; Carnegie Mellon, 2005–.**

**BARRY B. LUOKKALA, Teaching Professor of Physics – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1980–.**

**SARA A. MAJETICH, Professor of Physics – Ph.D., University of Georgia; Carnegie Mellon, 1990–.**

**RACHEL MANDELBAUM, Falco-DeBenedetti Career Development Associate Professor in Physics – Ph.D., Princeton University; Carnegie Mellon, 1988–.**

**CURTIS A. MEYER, Professor of Physics – Ph.D., University of California, Berkeley; Carnegie Mellon, 1993–.**

**COLIN J. MORNINGSTAR, Professor of Physics – Ph.D., University of Toronto; Carnegie Mellon, 2000–.**

**MANFRED PAULINI, Professor of Physics – Ph.D., University of Erlangen, Germany; Carnegie Mellon, 2000–.**

**JEFFREY B. PETERSON, Professor of Physics – Ph.D., University of California, Berkeley; Carnegie Mellon, 1993–.**

**BRIAN P. QUINN, Professor of Physics – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1985–.**

**IRA Z. ROTHSTEIN, Professor of Physics – Ph.D., University of Maryland at College Park; Carnegie Mellon, 1997–.**

**JAMES S. RUSS, Professor of Physics – Ph.D., Princeton University; Carnegie Mellon, 1967–.**

**REINHARD A. SCHUMACHER, Professor of Physics – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1987–.**
ROBERT M. SUTER, Professor of Physics – Ph.D., Clark University; Carnegie Mellon, 1981–.
ROBERT H. SWENDSEN, Professor of Physics – Ph.D., University of Pennsylvania; Carnegie Mellon, 1984–.
HY TRAC, Assistant Professor of Physics – Ph.D., University of Toronto; Carnegie Mellon, 2010–.
HELmut Vogel, Professor of Physics – Ph.D., University of Erlangen-Nuremberg; Carnegie Mellon, 1983–.
MATTHEW WALKER, Assistant Professor of Physics – Ph.D., University of Michigan; Carnegie Mellon, 2013–.
MICHAEL WIDOM, Professor of Physics – Ph.D., University of Chicago; Carnegie Mellon, 1985–.
DI XIAO, Assistant Professor of Physics – Ph.D., University of Texas, Austin; Carnegie Mellon, 2012–.

Emeriti Faculty
LUC BERGER, Professor of Physics, Emeritus – Ph.D., University of Lausanne, Switzerland; Carnegie Mellon, 1960–.
RICHARD M. EDElSTEIN, Professor of Physics, Emeritus – Ph.D., Columbia University; Carnegie Mellon, 1960–.
ARNOlD ENGler, Professor of Physics, Emeritus – Ph.D., University of Berne, Switzerland; Carnegie Mellon, 1962–.
JOHN G. FETKOvICH, Professor of Physics, Emeritus – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1959–.
RICHARD GRIFFITHS, Professor of Physics, Emeritus – Ph.D., University of Leicester, U.K.; Carnegie Mellon, 1996–.
ROBERT GRIFFITHS, Professor of Physics, Emeritus – Ph.D, Stanford University; Carnegie Mellon, 1962–.
LEONARD S. KISSLINGER, Professor of Physics, Emeritus – Ph.D., Indiana University; Carnegie Mellon, 1969–.
ROBERT W. KRAEMER, Professor of Physics, Emeritus – Ph.D., Johns Hopkins University; Carnegie Mellon, 1965–.
UNG-FONG LI, Professor of Physics, Emeritus – Ph.D., University of Pennsylvania; Carnegie Mellon, 1974–.
JOHN F. NAGLE, Professor of Physics, Emeritus – Ph.D., Yale University; Carnegie Mellon, 1967–.
JOHN A. RAYNE, Professor of Physics, Emeritus – Ph.D., University of Chicago; Carnegie Mellon, 1963–.
ROBERT T. SCHUMACHER, Professor of Physics, Emeritus – Ph.D., University of Illinois; Carnegie Mellon, 1957–.
ROBERT F. SEKERKA, University Professor of Physics and Mathematics, Emeritus – Ph.D., Harvard; Carnegie Mellon, 1969–.
NED S. VANDER VEN, Professor of Physics, Emeritus – Ph.D., Princeton University; Carnegie Mellon, 1961–.
LINCOLN WOLFENSTEIN, University Professor of Physics, Emeritus – Ph.D., University of Chicago; Carnegie Mellon, 1948–.

Joint Appointments and Courtesy Appointments
SHELLEY ANNA, Associate Professor of Mechanical Engineering – Ph.D., Harvard University; Carnegie Mellon, 2003–.
DAVID GREVE, Professor of Electrical & Computer Engineering – Ph.D., Lehigh University; Carnegie Mellon, 1982–.
MOHAMMOd F. ISLAM, Assistant Professor of Materials Science & Engineering – Ph.D., University of Pennsylvania; Carnegie Mellon, 2005–.
CLAIR MALoney, Assistant Professor of Civil and Environmental Engineering – Ph.D., University of California, Santa Barbara; Carnegie Mellon, 2007–.
MAUMITA MANDAL, Assistant Professor of Chemistry – Ph.D., Hyderabad, India; Carnegie Mellon, 2009–.
MICHAEL E. MCHENRY, Professor of Materials Science and Engineering – Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1989–.
ANTHONY D. ROLLETT, Professor of Materials Science & Engineering – Ph.D., Drexel University; Carnegie Mellon, 1995–.
JIAN-GANG ZHU, Professor of Electrical and Computer Engineering – Ph.D., University of California San Diego; Carnegie Mellon, 1997–.
School of Computer Science

Andrew Moore, Dean
Klaus Sutner, Associate Dean for Undergraduate Education
Thomas Cortina, Assistant Dean for Undergraduate Education

Undergraduate Office: GHC 4115
http://www.csd.cs.cmu.edu/education/bcs/  

Carnegie Mellon founded one of the first Computer Science departments in the world in 1965. Today, the Computer Science Department forms the centerpiece of the School of Computer Science, and is joined by the Human-Computer Interaction Institute, the Institute for Software Research, the Lane Center for Computational Biology, the Language Technologies Institute, the Machine Learning Department, and the Robotics Institute. Together, these units make the School of Computer Science a world leader in research and education.

The B.S. program in Computer Science combines a solid core of Computer Science courses with the ability to gain substantial depth in another area through a required minor in a second subject. In addition, the curriculum provides numerous choices for science, engineering, humanities and fine arts courses. As computing is a discipline with strong links to many fields, this provides students with unparalleled flexibility to pursue allied (or non-allied) interests. The curriculum's mathematics and probability component ensures that students have the formal tools to remain current as technologies and systems change, rather than be limited by a narrow focus on programming alone. At the same time, students gain insight into the practical issues of building and maintaining systems by participating in intensive project-oriented courses. Due to the tremendous number of ongoing research projects within the School, many students obtain part-time or summer jobs, or receive independent study credit, working on research while pursuing their undergraduate degree. Students seeking a research/graduate school career may pursue an intensive course of research, equivalent to four classroom courses, culminating in the preparation of a senior research thesis.

Students apply to, and are directly admitted into, the undergraduate program in Computer Science and, upon successful completion, are awarded a Bachelor of Science in Computer Science. Suitably prepared students from other Carnegie Mellon colleges are eligible to apply for transfer if space is available. Computer-oriented programs are also available within the Departments of Biology, Chemistry, Physics, Electrical and Computer Engineering, Information Systems, Philosophy, Psychology, and Design. We also offer a B.S. degree in Computational Biology and joint degrees with the College of Fine Arts in Computer Science and Arts as well as Music and Technology. SCS offers double majors in Computer Science (for non-CS majors), Human-Computer Interaction, and Robotics, and minors in Computational Biology, Computer Science (for non-CS majors), Language Technologies, Machine Learning, Neural Computation, Robotics, and Software Engineering.

Two Computer Science electives: Units 18

These electives can be from any SCS department; 200-level or above, at least 9 units each: Computer Science [15-], Lane Center for Computational Biology [02-], Human Computer Interaction Institute [05-], Institute for Software Research [08-,17-], Machine Learning [10-], Language Technologies Institute [11-], and Robotics Institute [16-]. (NOTE: The following courses do NOT count as Computer Science electives: 02-223, 02-250, 02-261, 08-200, 15-351. Consult with a CS undergraduate advisor before registration to determine eligibility for this requirement.)

Consult with a CS undergraduate advisor about any course to be used for 
[18-6xx, 18-7xx, 18-8xx, 18-9xx] cannot be used for this requirement. 

In addition, all Electrical and Computer Engineering graduate courses 

The following MCS and CIT courses cannot be used to satisfy the 

The following courses from the Lane Center for Computational Biology can 

Four engineering or science courses are required, of which at least one 

must have a laboratory component and at least two must be from the same 

department. At present, courses meeting the lab requirement are: 

02-261 Quantitative Cell and Molecular Biology 
03-124 Modern Biology Laboratory 
09-101 Introduction to Experimental Chemistry  
(Thiss 3 unit lab together with 09-105 satisfies the 
lab requirement.) 
09-221 Laboratory I: Introduction to Chemical Analysis 
15-321 Research Methods for Experimental Computer 
Science 
27-100 Engineering the Materials of the Future 
33-104 Experimental Physics 
42-203 Biomedical Engineering Laboratory 
85-310 Research Methods in Cognitive Psychology 

The following courses can be used to satisfy the Science and Engineering requirement and can 
be paired with a Biology [03-1] course for two courses from one department: 

02-223 Personalized Medicine: Understanding Your Own 
Genome 
02-250 Introduction to Computational Biology  
(or 02-251 + 02-252) 
02-261 Quantitative Cell and Molecular Biology 

Laboratory 

The following MCS and CIT courses cannot be used to satisfy the 

Engineering and Natural Sciences requirement: 

06-262 Mathematical Methods of Chemical Engineering 
09-103 Atoms, Molecules and Chemical Change 
09-104 Fundamental Aspects of Organic Chemistry and 
Biochemistry 
09-231 Mathematical Methods for Chemists 
18-090 Introduction to Signal Processing for Creative 
Practice 
18-202 Mathematical Foundations of Electrical 
Engineering 
18-345 Introduction to Telecommunication Networks 
18-411 Computational Techniques in Engineering 
18-487 Introduction to Computer & Network Security & 
Applied Cryptography 
19-101 Introduction to Engineering and Public Policy 
19-211 Ethics and Policy Issues in Computing 
19-350 SP TP: Research Methods & Statistics for 
Engineering & Public Policy Analysis 
19-402 Telecommunications Technology, Policy & 
Management 
19-403 Policies of Wireless Systems and the Internet 
19-411 Global Competitiveness: Firms, Nations and 
Technological Change 
19-448 Science, Technology & Ethics 
33-100 Basic Experimental Physics 
33-115 Physics for Future Presidents 
33-124 Introduction to Astronomy 
33-232 Mathematical Methods of Physics 
39-100 Special Topics: WHAT IS ENGINEERING? 
39-200 Business for Engineers 

In addition, all Electrical and Computer Engineering graduate courses 
[18-6xx, 18-7xx, 18-8xx, 18-9xx] cannot be used for this requirement. 
Consult with a CS undergraduate advisor about any course to be used for the Science and Engineering requirement before registration.

Humanities and Arts 
All candidates for the bachelor's degree must complete a minimum of 63 
units offered by the College of Humanities & Social Sciences and/or the 
College of Fine Arts as prescribed below: 

A. Writing Requirement (9 units) 
Complete the following course: 
76-101 Interpretation and Argument 

B. Breadth Requirement (27 units) 
Complete three courses, one each from Category 1, Category 2, and 
Category 3: 
Category 1: Cognition, Choice and Behavior - this requirement explores the process of thinking, decision making, and behavior 
in the context of the individual: 
70-311 Organizational Behavior 
80-130 Introduction to Ethics 
80-150 Nature of Reason 
80-180 Nature of Language 
80-221 Philosophy of Social Science 
80-230 Ethical Theory 
80-241 Ethical Judgments in Professional Life 
80-270 Philosophy of Mind 
80-271 Philosophy and Psychology 
80-275 Metaphysics 
80-281 Language and Thought 
85-102 Introduction to Psychology 
85-211 Cognitive Psychology 
85-221 Principles of Child Development 
85-241 Social Psychology 
85-251 Personality 
85-261 Abnormal Psychology 
88-120 Reason, Passion and Cognition 
88-260 Organizations 

Category 2: Economic, Political and Social Institutions - this requirement explores the processes by which institutions 
organize individual preferences and actions into collective 
outcomes. 
19-101 Introduction to Engineering and Public Policy 
36-303 Sampling, Survey and Society 
70-332 Business, Society and Ethics 
73-100 Principles of Economics 
73-230 Intermediate Microeconomics 
73-240 Intermediate Macroeconomics 
79-300 History of American Public Policy 
79-331 Body Politics: Women and Health in America 
79-335 Drug Use and Drug Policy 
80-135 Introduction to Political Philosophy 
80-136 Social Structure, Public Policy & Ethics 
80-235 Political Philosophy 
80-244 Environmental Ethics 
80-245 Medical Ethics 
80-341 Computers, Society and Ethics 
88-104 Decision Processes in American Political 
Institutions 
88-110 Experiments with Economic Principles 
88-205 Comparative Politics 
88-210 Comparative Political Systems 
88-220 Policy Analysis I 

Category 3: Cultural Analysis - this requirement seeks to 
recognize cultures that have shaped and continue to shape the 
human experience; courses in this category are usually either 
broad in place, time, or cultural diversity. 
57-173 Survey of Western Music History 
60-205 Modern Visual Culture 1789-1960 
70-342 Managing Across Cultures 
76-232 African American Literature 
76-239 Introduction to Film Studies 
76-241 Introduction to Gender Studies
79-104 Global Histories
79-207 Development of European Culture
79-222 Between Revolutions: The Development of Modern Latin America
79-226 Introduction to African History: Earliest Times to 1780
79-230 Arab-Israeli Conflict and Peace Process since 1948
79-240 The Development of American Culture
79-241 African American History: Africa to the Civil War
79-242 African American History: Reconstruction to the Present
79-255 Irish History
79-281 Introduction to Religion
79-282 Europe and the World since 1800
79-311 Introduction to Anthropology
79-345 The Roots of Rock and Roll, 1870-1970
79-350 Early Christianity
79-395 The Arts in Pittsburgh
79-396 Music and Society in 19th and 20th Century Europe and the U.S.
80-100 Introduction to Philosophy
80-250 Ancient Philosophy
80-251 Modern Philosophy
80-253 Continental Philosophy
80-254 Analytic Philosophy
80-255 Pragmatism
80-261 Empiricism and Rationalism
80-276 Philosophy of Religion
82-273 Introduction to Japanese Language and Culture
82-293 Introduction to Russian Culture
82-303 French Culture
82-304 The Francophone World
82-333 Introduction to Chinese Language and Culture
82-342 Spain: Language and Culture
82-343 Latin America: Language and Culture
82-344 U.S. Latinos: Language and Culture
82-345 Introduction to Hispanic Literary and Cultural Studies

C. Humanities and Arts Electives (27 units)
Complete 3 non-technical courses of at least 9 units each from any of the departments in the College of Humanities & Social Sciences or the College of Fine Arts. Some of the courses taught in these units are considered technical courses and may not be used to satisfy this requirement. Additionally, a select set of courses from Business Administration and from Environmental and Public Policy can also count for this requirement.

Free Electives

A free elective is any Carnegie Mellon course. However, a maximum of nine units of Physical Education and/or Military Science (ROTC) and/or Student-Led (StuCo) courses may be used toward fulfilling graduation requirements.

Required Minor

A sequence of courses proscribed by the requirements of the particular department. Completion of a second major (or double degree) also satisfies this requirement. If permitted by the minor or second major department, courses taken in satisfaction of the minor or second major may also count toward any category other than Computer Science and Mathematics. Consult with a CS undergraduate advisor and an advisor from the department of the minor (or double major) for specific restrictions on double counting.

Computing @ Carnegie Mellon

The following course is required of all students to familiarize them with the campus computing environment:

99-10x Computing @ Carnegie Mellon

9

![Table]

### 360Minimum number of units required for the degree:

The flexibility in the curriculum allows many different schedules, of which the above is only one possibility. Some elective courses are offered only once per year (Fall or Spring). Constrained CS electives (algorithms/complexity, logic/languages, systems and applications) may be taken in any order and in any semester if prerequisites are met and seats are available. Constrained electives are specified in the specific semesters in the schedule above as an example only. Students should consult with their academic advisor to determine the best elective options depending on course availability, their academic interests and their career goals. Additionally, the School of Computer Science offers a Double Major in Human-Computer Interaction and a Double Major in Robotics, as well as numerous computing-oriented Minors available to majors and non-majors alike.

### Undergraduate Research Thesis

Students considering going on to graduate school in Computer Science should take a wide variety of Computer Science and Mathematics courses, as well as consider getting involved in independent research as early as possible. This would be no later than the junior year and can begin even earlier. Students interested in graduate school are strongly encouraged to participate in the Undergraduate Research Thesis program. Additionally, graduate CS courses can be taken with permission of the instructor and in consultation with an academic advisor.

The goal of the Undergraduate Research Thesis Program is to introduce students to the breadth of tasks involved in independent research, including library work, problem formulation, experimentation, analysis, writing, and speaking. In particular, students write a survey paper summarizing prior results in their desired area of research, present a public poster session in December describing their current progress, present their final results in an oral summary in the year-end university-wide Undergraduate Research Symposium (Meeting of the Minds) and submit a written thesis at the end of their senior year. Students work closely with faculty advisors to plan and carry out their research. The Undergraduate Research Thesis (15-599) can start as early as the Spring semester of the junior year, and spans the entire senior year. Students receive a total of 36 units of academic credit for the thesis work. Up to 18 units can be counted toward CS elective requirements (9 per semester). For most students, the thesis program requires at least one semester with 18 units of thesis work, so students in this program are advised to plan their schedules carefully to ensure they have ample time to perform the required research for the thesis. Students interested in research are urged to consult with their CS undergraduate advisor and Assistant Dean no later than the start of their junior year in order to plan their workload effectively.

### Computer Science Additional Majors and Minors

The School of Computer Science offers an Additional Major in Computer Science, Human-Computer Interaction, and Robotics. It also offers Minors in Computer Science, Computational Biology, Human-Computer Interaction, Language Technologies, Neural Computation, Robotics, and Software Engineering.

To see the additional majors and minors other than Computer Science, see Additional Majors and Minors in SCS (http://coursecatalog.web.cmu.edu/schoolofcomputerscience/addmajorsminors).

### Computer Science Additional Major

Students interested in pursuing an additional major in Computer Science should first consult with an advisor in the CS Undergraduate Office after completion of prerequisites and at least two of the core courses for application requirements and availability of seats.

The following courses are required for the Additional Major in Computer Science:

**Prerequisites:**

- 15-112 Fundamentals of Programming and Computer Science | Units
- 15-122 Principles of Imperative Computation (requires 21-127 as a co-requisite) | 10
- 15-150 Principles of Functional Programming | 10
- 21-120 Differential and Integral Calculus | 10
- 21-122 Integration and Approximation | 10
- 21-127 Concepts of Mathematics | 10

**Computer Science core:**

- 15-210 Parallel and Sequential Data Structures and Algorithms | 12
- 15-213 Introduction to Computer Systems | 12
- 15-251 Great Theoretical Ideas in Computer Science | 12
- 15-451 Algorithm Design and Analysis | 12

- One of the following Matrix Algebra courses:
  - 21-241 Matrices and Linear Transformations | 10
  - 21-242 Matrix Theory | 10

- One of the following Probability courses:
  - 15-359 Probability and Computing | 12
  - 21-325 Probability | 9
  - 36-217 Probability Theory and Random Processes | 9
  - 36-225 Introduction to Probability Theory | 9

- One Communications course:
  - 15-221 Technical Communication for Computer Scientists | 9

- One Algorithms & Complexity elective:
  - 15-354 Computational Discrete Mathematics | 12
  - 15-355 Modern Computer Algebra | 9
  - 15-453 Formal Languages, Automata, and Computability | 9
  - 15-455 Undergraduate Complexity Theory | 9
  - 15-456 Computational Geometry | 9
  - 21-301 Combinatorics | 9
  - 21-484 Graph Theory | 9
  - others as designated by the CS Undergraduate Program

- One Logics & Languages elective:
  - 15-312 Foundations of Programming Languages | 12
  - 15-317 Constructive Logic | 9
  - 15-424 Foundations of Cyber-Physical Systems | 12
  - 21-300 Basic Logic | 9
  - 80-310 Formal Logic | 9
  - 80-311 Undecidability and Incompleteness | 9
  - others as designated by the CS Undergraduate Program

- One Software Systems elective:
  - 15-410 Operating System Design and Implementation | 12
  - 15-411 Compiler Design | 12
  - 15-418 Parallel Computer Architecture and Programming | 12
  - 15-440 Distributed Systems | 12
  - 15-441 Computer Networks | 12
  - others as designated by the CS Undergraduate Program

- One Applications elective:
  - 02-510 Computational Genomics | 12
  - 05-391 Designing Human Centered Software | 12
  - 10-601 Introduction to Machine Learning | 12
  - 11-411 Natural Language Processing | 12
computational skills and knowledge in biological sciences that are central to computational biology.

**Why Minor in Computational Biology?**

Computational Biology is concerned with solving biological and biomedical problems using mathematical and computational methods. It is recognized as an essential element in modern biological and biomedical research. There have been fundamental changes in biology and medicine over the past two decades due to spectacular advances in high throughput data collection for genomics, proteomics and biomedical imaging. The resulting availability of unprecedented amounts of biological data demands the application of advanced computational tools to build integrated models of biological systems, and to use them to devise methods of prevent or treat disease. Computational Biologists inhabit and expand the interface of computation and biology, making them integral to the future of biology and medicine.

A minor in Computational Biology will position students well for entering the job market and graduate school in this exciting and growing field.

**Admission**

Students must apply for admission no later than November 30 of their senior years; an admission decision will usually be made within one month. Students are encouraged to apply as early as possible in their undergraduate careers so that the advisor of the computational biology minor can provide advice on their curriculum.

To apply, send email to Dr. Ziv Bar-Joseph <zivj@andrew.cmu.edu> and Dr. Karen Thickman <krt@cmu.edu>. Include in your email:

- Full name
- Andrew ID
- Preferred email address (if different)
- Your class and College/School at Carnegie Mellon
- Semester you intend to graduate
- All (currently) declared majors and minors
- Statement of purpose (maximum 1 page) — Describes why you want to take this minor and how it fits into your career goals
- Proposed schedule of courses for the minor (this is your plan, NOT a commitment)

**Curriculum**

The minor in computational biology requires a total of five courses: 3 core courses, 1 biology elective, and 1 computer science elective, for a **total of at least 45 units.**

### Prerequisites

<table>
<thead>
<tr>
<th>Prerequisites</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>03-121 Modern Biology</td>
<td>9</td>

Human-Computer Interaction Additional Major

The undergraduate major in HCI is available only as an additional major. If you have questions, please contact the Academic Program Coordinator at hci.bachelors@cs.cmu.edu.

Human-Computer Interaction (HCI) is devoted to the design, implementation, and evaluation of interactive computer-based technology. Examples of HCI products include intelligent computer tutors, wearable computers, and highly interactive web sites. Constructing an HCI product is a cyclic, iterative process that involves at least three stages.

Human-Computer Interaction Minor

The Minor in Human-Computer Interaction will give students core knowledge about techniques for building successful user interfaces, approaches for conceiving, refining, and evaluating interfaces that are useful and useable, and techniques for identifying opportunities for computational technology to improve the quality of people’s lives. The students will be able to effectively collaborate in the design, implementation, and evaluation of easy-to-use, desirable, and thoughtful interactive systems. They will be prepared to contribute to multi-disciplinary teams that create new interactive products, services, environments, and systems.

The key concepts, skills and methods that students will learn in the HCI Minor include:

- Fieldwork for understanding people’s needs and the influence of context
- Generative approaches to imagining many possible solutions such as sketching and “bodystorming”
- Iterative refinement of designs
- Basic visual design including typography, grids, color, and the use of images
- Implementation of interactive prototypes
- Evaluation techniques including discount and empirical evaluation methods

The HCI minor is targeted at undergraduates who expect to get jobs where they design and/or implement information technology-based systems for end users, and as students with an interest in learning more about the design of socio-technical systems. It is appropriate for students with majors in Computer Science and Information Systems, as well as students in less software-focused majors, including Design, Architecture, Art, Business Administration, Psychology, Statistics, Decision Science, Mechanical Engineering, Electrical Engineering, English and many others in the university.

Curriculum

The only prerequisite for this Minor is an introductory-level college programming course (such as 15-110, 15-112, 15-121, or 51-257) and to be in good standing with the University.

In addition to the programming prerequisite, the Minor has required two courses—05-391 Designing Human Centered Software (DHCS) and 05-4xx Interaction Design Overview (IDO)—and four electives from an approved list. The student will be required to get a grade of “C” or better in each course in order for it to count as part of the Minor. There is no final project or research required for the Minor.

Required Courses

- 05-391 Designing Human Centered Software (DHCS): This course provides an overview of the most important methods taught in the Additional Major in HCI, such as Contextual Inquiry, Prototyping and Iterative Design, Heuristic Evaluation, and Think Aloud User Studies. It covers in a more abbreviated form the content of 05-410 User-Centered Research and Evaluation, 05-430 Programming Usable Interfaces, and 05-433 User Interface Lab.
- 05-392 (IDO): This is a new design course that will combine material from 05-651 and 05-650 for students who do not have any previous experience with design, in a form that will fit appropriately in to a one-semester format. It will be first offered in Spring 2014.

Electives

The HCI minor requires four electives from the pre-approved list of electives (http://www.hcii.cmu.edu/undergraduate-electives) made available at the HCII website.

Double Counting

Students may double count up to two (2) of the required courses or electives with their primary major.

relationship between the BHCI Major and Minor

Admission

- BHCI Major: Application and admissions required, information on the HCII website (http://staging.cs.cmu.edu/undergraduate-major/applying).

Prerequisites

- BHCI Major:
  - Freshman-level programming (51-257 or 15-110 or 15-112 or 15-121).
  - Statistics (introductory)
  - Cognitive Psychology
  - Interaction Design Fundamentals or Communication Design Fundamentals
- BHCI Minor:
  - Freshman-level programming (51-257 or 15-110 or 15-112 or 15-121).

Core Courses

- BHCI Major:
  - Interaction Design Studio (IDS)
  - User Centered Research & Evaluation (UCRE)
  - HCI Programming (PUI/SSUI) and Lab
  - BHCI Project
- BHCI Minor:
  - Interaction Design Overview (IDO)
  - Designing Human Centered Systems (DHCS)

Electives

- BHCI Major: Four (4) electives (2 from defined list and 2 free electives approved by the director of the BHCI major)
- BHCI Minor: Four (4) electives (from defined list)

Double Counting

- BHCI Major: Two (2) courses with primary major.
- BHCI Minor: Two (2) courses with primary major.

Footnotes

1 Alternatively, a student can take both the BS/MHCI empirical methods course (05-410) and the BS/MHCI core-programming course (either
05-430 Programming Usable Interfaces or 05-431 Software Structures for User Interfaces, along with its associated 05-433 User Interface Lab. If students take this course sequence, they would get credit for fulfilling this requirement plus one elective.

2 Alternatively, students can fulfill the design requirement by taking 05-650 and 05-651. If students take this course sequence, they would get credit for fulfilling this requirement plus one elective.

These alternative ways of fulfilling the requirements for the HCI minor are designed for students who are in the HCI 2nd major who want to “downgrade” to the minor. These students can use some of the courses completed for the HCI 2nd major as a way of fulfilling the requirements for the minor.

Students who are in the HCI minor right from the start are strongly encouraged to follow the regular requirements outlined above and are strongly discouraged from trying these alternative ways of fulfilling the requirements. It can be extremely difficult to get into any of the alternative courses. This is true especially for 05-650, but for other courses as well. The fact that a student in the minor has already taken 05-651 will not give priority for getting into Studio.

Language Technologies Minor

Chair: Alan W. Black
E-mail: awb@cs.cmu.edu
Website: http://www.lti.cs.cmu.edu/lti_minor

Human language technologies have become an increasingly central component of Computer Science in the last decade. Information retrieval, machine translation and speech technology are used daily by the general public, while text mining, natural language processing, and language-based tutoring are used regularly within more specialized professional or educational environments. The Language Technologies Minor allows students to learn about language technologies and apply them through a directed project.

</tbody>
</table>

Project

A semester-long directed research project OR paper to provide hands-on experience and an in-depth study of a topic (in same area as a chosen elective) 12

Double Counting of Courses

SCS undergraduates may use 11-721 Grammars and Lexicons as an elective for their CS degree and also as a required course for the LT minor. Courses in the minor may not be counted towards another SCS minor.

Machine Learning Minor

Chair: William W. Cohen
E-mail: ml-minor@cs.cmu.edu
Website: http://www.ml.cmu.edu/prospective-students/minor-in-machine-learning.html

Machine learning and statistical methods are increasingly used in many application areas including natural language processing, speech, vision, robotics, and computational biology. The Minor in Machine Learning allows undergraduates to learn about the core principles of this field.
