Department of Mechanical Engineering

Jonathan Cagan, Interim Department Head and George Tallman and Florence Barrett Ladd Professor in Engineering
Location: Wean Hall 4128
www.cmu.edu/me (http://www.cmu.edu/me/)

General Overview

Mechanical engineers use their knowledge of mechanical systems to describe phenomena, propose solutions to problems, and build those solutions. Conceived with the principles of force, energy and motion, they use their knowledge of physical systems, design, manufacture, and operational processes to advance the world around us. Mechanical engineers work in a variety of sectors: small start-up companies, multinational corporations, government agencies, national laboratories, consulting firms, and universities.

The Carnegie Mellon Mechanical Engineering curriculum emphasizes engineering theory, hands-on experience, and technical skills. Our students learn how to solve practical problems and analyze situations by converting ideas into reliable and cost-effective devices and processes.

A strong foundation in mechanical engineering fundamentals culminates in a design capstone class where student teams develop prototypes for new products. These projects expose students to the design process, from concept to product, and emphasize effective communication and presentations skills.

Our curriculum is intended to allow ample opportunity for students to pursue areas of personal interest. A student may choose to pursue a minor offered by departments in other colleges, or one of the designated minor programs offered in the College of Engineering, or to pursue an additional major. Students are encouraged to participate in research with department faculty members, explore their chosen field through internships, and take advantage of opportunities to study abroad and be exposed to other cultures. Students may also choose to pursue the Integrated Master’s Bachelor’s Program (IMB) which allows students to earn both a bachelor’s and a master’s degree with an additional semester or year of study.

Mechanical Engineering students access TechSpark for hands-on projects in multiple courses. TechSpark is the cornerstone of the College of Engineering’s maker ecosystem having an integrated set of resources where faculty and students create and develop new ideas, concepts, and products for technology innovation. The space houses a simulation cluster, 3D printers, laser machines, electronics stations, PCB fabrication, manual & CNC mills, metal welding, wood working, CNC Router, polymer composite fabrication, paint booth, and more to allow students, faculty, and staff to design and prototype in a multi-disciplinary environment.

Accreditation

The Mechanical Engineering Undergraduate Program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org/).

Educational Objectives

According to ABET (http://www.abet.org/), which evaluates applied science, computing, engineering and technology programs for accreditation, "program educational objectives are broad statements that describe what graduates are expected to attain within a few years of graduation.

The core objective of our undergraduate program is to provide our students an education that enables them to be productive, impactful, and fulfilled professionals throughout their careers. In light of this vision, the objectives of the Bachelor of Science in Mechanical Engineering at Carnegie Mellon are to produce graduates who:

- distinguish themselves as effective problem solvers by applying fundamentals of Mechanical Engineering.
- are innovative and resourceful in their professional activities.
- excel in multidisciplinary team settings.
- become leaders in their organizations, their profession, and in society.
- conduct themselves in a professional and ethical manner in the workplace.
- excel in diverse career paths within and beyond the engineering profession, including in industry and academia.

Educational Outcomes

The undergraduate curriculum in the Department of Mechanical Engineering offers students significant opportunities to pursue directions of personal interest, including minors, double majors, participation in research projects, and study abroad. Design and teamwork experiences occur at regular intervals in the curriculum, and graduates have significant hands-on experience through laboratories and projects.

Carnegie Mellon’s Mechanical Engineering faculty members are in support of the following set of skills and outcomes put forth by ABET:

- an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- an ability to communicate effectively with a range of audiences
- an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Curriculum

Minimum units required for B.S. in Mechanical Engineering: 382

The following outline lists the four-year B.S. program through the standard and recommended course sequence. To ensure that prerequisites are completed and to prevent scheduling conflicts, students should discuss any changes to this sequence with their department academic advisor. Students need a minimum of 382 units to complete the B.S. degree. Since there are variable units for some core requirements, additional units can be made up with free electives.

First Year Curriculum Notes:

1. During the first year, students complete 24-101 Fundamentals of Mechanical Engineering and one other introductory engineering course. 24-101 Fundamentals of Mechanical Engineering is a prerequisite for sophomore courses 24-261 Mechanics I: 2D Design and 24-251 Electronics for Sensing and Actuation, as well as junior course 24-351 Dynamics. Students who are not able to take 24-101 in their first year will push the 24-261 Mechanics I and 24-262 Mechanics II sequence into their junior year. If 24-101 is taken in fall of sophomore year, students can take 24-251 Electronics for Sensing and Actuation and 24-351 Dynamics in sophomore spring to continue progress towards the Mechanical Engineering degree.

2. All Mathematics courses (21-xxx) required for the engineering degree must have a minimum grade of C in order to fulfill the graduation
requirement for the BS engineering degree and to count as a prerequisite for engineering core classes.

3. Students must pass the following three courses before they begin the core Mechanical Engineering courses in the fall of their sophomore year:
   - 21-120 Differential and Integral Calculus
   - 21-122 Integration and Approximation
   - 33-141 Physics I for Engineering Students

**Capstone Courses:**
- Mechanical Engineering students complete one capstone class either fall or spring of senior year. This course is the culmination of the knowledge gained over the previous years in mechanical engineering core classes. To fulfill your capstone requirement, you can complete 24-441 Product Design (FALL OR SPRING), 24-671 Electromechanical Systems Design (FALL OR SPRING), or 24-631 Thermal Design (SPRING ONLY).
- Capstone course can be taken either Fall or Spring of senior year, with the exception of 24-631 Thermal Design (SPRING ONLY).
- Biomedical Engineering and Robotics Double Majors may use the capstone for their double major instead of the above listed MechE capstone classes.

**New Course Descriptions**

These courses will be added to the sophomore semester before they will be offered for the first time.

**24-262 Mechanics II: 3D Design**

This is the second course in a three-semester sequence that integrates the principles of mechanics with hands-on projects that have students apply those principles in a design context. In the second semester, students extend their foundation in 2D statics to the analysis of 3D engineering systems, including determination of reactions at connections and internal loads. Friction, shear stress, and shear strain are introduced, followed by a study of stresses and deformation in torsion. Multiaxial stresses, such as those occurring in combinations of torsion and bending or in pressure vessels, are studied. Stress transformations are introduced, as well as the formulation of simple failure criteria. Students will expand their engineering design skills through team-based hands-on and computational projects that utilize stress and failure analysis of 3D
engineered systems. In addition, students will learn elementary aspects of machine design and catalog selection to support projects. Altogether, students will learn to express ideas in sketches, interpret and create engineering drawings, model detailed shapes with CAD tools, analyze product performance with CAE tools, choose materials and manufacturing schemes, and create and test prototypes.

**24-370 Mechanical Design: Methods and Applications**

This is the third course in a three-semester sequence that integrates the principles of mechanics with hands-on projects that have students apply those principles in a design context. Building on the principles and design methodology introduced in the first two courses, this course consists of a detailed study of typical loading conditions and resulting stresses and deflections in commonly used machine elements, such as shafts, gears, power screws, fasteners, brakes/couplings, flywheels, and bearings, and best practices in their design and application. Machine design against static and dynamic failure will be considered with focus on the effect of material properties, manufacturability, and cost considerations. Students will also learn the connections between theory and analytical methods, available computational tools, and field design. Learning objectives will be assessed through homework, class exams, and the conduct of the group projects.

**Mechanical Engineering Technical Electives**

Students must take at least one approved non-core Mechanical Engineering course labeled as “Mechanical Engineering Technical Elective” in the example course sequence. The course must be an approved 24-xxx course (9-unit minimum) at the 300 level or above to fulfill the technical elective requirement. 24-291 Environmental Systems on a Changing Planet and 24-292 Renewable Energy Engineering are the only 200 level courses that may be used as a Mechanical Engineering Technical Elective.

Students can also take mechanical engineering graduate courses to fulfill the technical elective requirement. However, students must have the appropriate prerequisites and the instructor must approve taking the course. Undergraduates do not have priority for graduate level courses. Students can find a list of graduate courses we offer on the Carnegie Mellon Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/).

Course offerings are variable, please check the Schedule of Classes (https://enr-apps.as.cmu.edu/open/SOC/SOCServlet/) to see the most current list of classes.

Students cannot use research or project courses to fulfill the technical elective requirement. However, these courses, with limitations, will count as free elective units. Up to 27 units of project/research may be counted in the free electives. Project/research courses that do not fulfill the technical elective requirements are:
- 24-391 / 24-392 Mechanical Engineering Project
- 24-491 / 24-492 Department Research Honors
- 39-xxx CIT series courses

**Free Electives**

A Free Elective is defined as any graded course offered by any academic unit of the university (including research institutes such as the Robotics Institute (http://www.ri.cmu.edu/) and the Software Engineering Institute (http://www.sei.cmu.edu/)). Free electives offer students the opportunity to add additional majors and minors, pursue additional interests or deepen their experience in Mechanical Engineering. Typically, once the core requirements are completed, there remain about 45 units of free electives to reach the minimum of 382 to complete the degree.

Up to 9 units of Student Taught Courses (StuCO) and Physical Education courses, or other courses taken as Pass/Fail, may also be used toward Free Electives.

**Guidance on Engineering Electives**

The Mechanical Engineering department offers several elective courses for undergraduates seeking further knowledge and experience in specialty areas of mechanical engineering. These courses (with approval) can fulfill for your Mechanical Engineering Technical Elective, Free Electives, and/or additional major or minor requirements.

**Robotics and Automation**

**Fundamental Courses**
- 24-291 Introduction to Vibrations with Applications
- 24-451 Feedback Control Systems
- 24-677 Modern Control Theory
- 24-760 Robot Dynamics and Analysis
- 24-773 Multivariable Linear Control
- 24-776 Non Linear Control

**Application Courses**
- 24-614 Microelectromechanical Systems
- 24-671 Electromechanical Systems Design
- 24-673 Soft Robots: Mechanics, Design and Modeling
- 24-753 Special Topics: Robotic Materials: Designs, Principles & Mechanics
- 24-774 Advanced Control Systems Integration
- 24-775 Special Topics: Robot Design and Experimentation
- 24-778 Mechatronic Design

**Energy, Environment, and Thermal Fluid Systems**

**Fundamental Courses**
- 24-711 Fluid Dynamics
- 24-718 Computational Fluid Dynamics
- 24-721 Advanced Thermodynamics
- 24-722 Energy System Modeling
- 24-730 Advanced Heat Transfer

**Application Courses**
- 24-292 Renewable Energy Engineering
- 24-421 Internal Combustion Engines
- 24-425 Combustion and Air Pollution Control
- 24-428 Computational Analysis of Transport Phenomena
- 24-623 Molecular Simulation of Materials
- 24-626 Air Quality Engineering
- 24-628 Energy Transport and Conversion at the Nanoscale
- 24-629 Direct Solar and Thermal Energy Conversion
- 24-631 Thermal Design
- 24-643 Energy Storage Materials and Systems

**Product Design and Development**

**Fundamental Courses**
- 24-651 Material Selection for Mechanical Engineers
- 24-681 Computer-Aided Design
- 24-683 Design for Manufacture and the Environment
- 24-688 Introduction to CAD and CAE Tools

**Application Courses**
- 24-632 Special Topics: Additive Manufacturing Processing and Product Development
- 24-633 Additive Manufacturing Laboratory
- 24-672 Special Topics in DIY Design and Fabrication
- 24-680 Quantitative Entrepreneurship: Analysis for New Technology Commercialization
- 24-682 Special Topics: Design for the Fourth Industrial Revolution
- 24-687 Grand Challenge Innovation
- 24-691 Mechanical Engineering Project Management
- 24-692 Special Topics: Engineering a Startup: How to Start and Grow a Hardware Company

**Autonomous Systems and Machine Learning**

**Fundamental Courses**
- 24-451 Feedback Control Systems
- 24-480 Special Topics: Artificial Intelligence and Machine Learning for Engineering
- 24-677 Modern Control Theory
- 24-704 Probability and Estimation Methods for Engineering Systems
- 24-786 Special Topics: Bayesian Machine Learning for Scientists and Engineers
- 24-787 Machine Learning and Artificial Intelligence for Engineers
- 24-789 Special Topics: Deep Learning for Engineers

**Application Courses**
- 24-774 Advanced Control Systems Integration
students include Engineering and Public Policy, Biomedical Engineering and Robotics.

A complete description of majors and minors in engineering can be found on the College of Engineering website (https://engineering.cmu.edu/education/undergraduate-programs/curriculum/majors-minors.html).

Internships and Co-operative Education Program

The Mechanical Engineering Department considers experiential learning opportunities important educational options for its undergraduate students. Students in Mechanical Engineering are encouraged to undertake professional internships during summer breaks.

Another option is cooperative education, which provides a student with an extended period of exposure with a company. All co-ops must be at least 6 consecutive months in length, and must be a full-time, paid position with a single company.

Study Abroad

In today’s global society, a study abroad experience can be an integral part of an undergraduate engineering education. An academic experience abroad is encouraged and assistance is provided for course choices and curriculum sequencing. The Mechanical Engineering department offers scholarships for international experiences to support and encourage students to take advantage of study and work abroad experiences.

Integrated Master's/Bachelor's Program (IMB)

Interested undergraduates may plan a course of study that leads to both the Bachelor's and Master's in Mechanical Engineering. Beyond eight semesters, at least one semester of full-time graduate student status is required. Please refer to the Integrated Master's/Bachelor’s Degree Program section in the most recent Master of Science in Mechanical Engineering Handbook (https://www.meche.engineering.cmu.edu/education/graduate-programs/handbooks.html) for additional information.

Quality Point Average Requirements

To be eligible to graduate, undergraduate students must complete all course requirements for their program with a cumulative Quality Point Average of at least 2.0 for all courses taken. For undergraduate students who enrolled at Carnegie Mellon as freshmen and whose freshman grades cause the cumulative QPA to fall below 2.0, this requirement is modified to be a cumulative QPA of at least 2.0 for all courses taken after the freshman year. Note, however, the cumulative QPA that appears on the student's final transcript will be calculated based on all grades in all courses taken, including freshman year. The Mechanical Engineering Department requires that students attain a quality point average of 2.00 or higher for all required Mechanical Engineering core courses.

Pursuant to university rules, students can repeat a course in which a grade below C was attained in order to achieve the QPA requirement. When a course is repeated, all grades will be recorded on the official academic transcript and will be calculated in the student's QPA. For all required Mechanical Engineering core courses, the highest grade obtained between the original and the repeated class will be used to calculate the Mechanical Engineering QPA.

Credit Overload Policy

Mechanical Engineering students can register for a maximum of 54 units per semester. A student can request additional units from the Undergraduate Education Committee based on their QPA. The policy is outlined in the Mechanical Engineering Undergraduate Handbook (https://www.meche.engineering.cmu.edu/education/undergraduate-education/undergraduate-handbooks.html).

Double Majors and Minors

Mechanical Engineering students may pursue double majors and minors in a variety of subjects, taking advantage of the free elective courses to satisfy the requirements for the major or minor. The College of Engineering has added designated minors to promote flexibility and diversity among engineering students. Common double majors for Mechanical Engineering
SHAWN LITSTER, Professor of Mechanical Engineering - Ph.D., Stanford University; Carnegie Mellon, 2008–

CARMEL MAJIDI, Clarence H. Adamson Professor of Mechanical Engineering - Ph.D., University of California at Berkeley; Carnegie Mellon, 2011–

JONATHAN A. MALEN, Professor of Mechanical Engineering - Ph.D., University of California at Berkeley; Carnegie Mellon, 2009–

CHRISTOPHER MCCOMB, Associate Professor of Mechanical Engineering - Ph.D., Carnegie Mellon University; Carnegie Mellon, 2021–

ALAN J.H. MCGAUGHEY, Trustee Professor of Mechanical Engineering - Ph.D., University of Michigan; Carnegie Mellon, 2005–

JEREMY J. MICHALEK, Professor of Mechanical Engineering - Ph.D., University of Michigan; Carnegie Mellon, 2005–

O. BURAK OZDOGANLAR, Ver Planck Professor of Mechanical Engineering - Ph.D., University of Michigan; Carnegie Mellon, 2004–

RAHUL PANAT, Russell V. Trader Career Development Associate Professor of Mechanical Engineering - Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2017–

SNEHA PRABHA NARRA, Assistant Professor of Mechanical Engineering - Ph.D., Carnegie Mellon University; Carnegie Mellon, 2021–

ALBERT PRESTO, Research Professor of Mechanical Engineering - Ph.D., Carnegie Mellon University; Carnegie Mellon, 2012–

YOED RABIN, Professor of Mechanical Engineering - D.Sc., Technion-Israel Institute of Technology; Carnegie Mellon, 2000–

ALLEN L. ROBINSON, Director, Raymond J. Lane Distinguished University Professor of Mechanical Engineering, Associate Dean for International Programs in Africa - Ph.D., University of California at Berkeley; Carnegie Mellon, 1998–

EDWARD STEPHEN RUBIN, Alumni Chair Professor of Environmental Engineering and Science - Ph.D., Stanford University; Carnegie Mellon, 1969–

SHENG SHEN, Professor of Mechanical Engineering - Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 2011–

KENJI SHIMADA, Theodore Ahrens Professor of Engineering - Ph.D., Massachusetts Institute of Technology; Carnegie Mellon, 1996–

SATBIR SINGH, Teaching Professor of Mechanical Engineering - Ph.D., University of Wisconsin at Madison; Carnegie Mellon, 2012–

PAUL S. STEIF, Associate Department Head and Professor of Mechanical Engineering - Ph.D., Harvard University; Carnegie Mellon, 1983–

RYAN SULLIVAN, Professor of Mechanical Engineering - Ph.D., University of California at San Diego; Carnegie Mellon, 2012–

REBECCA TAYLOR, Associate Professor of Mechanical Engineering - Ph.D., Stanford University; Carnegie Mellon, 2016–

CONRAD TUCKER, Arthur Hamerschlag Career Development Professor of Mechanical Engineering – Ph.D., University of Illinois at Urbana-Champaign; Carnegie Mellon, 2019–

VENKAT VISWANATHAN, Associate Professor of Mechanical Engineering - Ph.D., Stanford University; Carnegie Mellon, 2014–

DOUGLAS WEBER, Akhtar and Bhutta Professor of Mechanical Engineering - Ph.D., Arizona State University; Carnegie Mellon, 2020–

VICTORIA WEBSTER-WOOD, Assistant Professor of Mechanical Engineering - Ph.D., Case Western Reserve University; Carnegie Mellon, 2018–

KATE S. WHITEFOOT, Associate Professor of Mechanical Engineering - Ph.D., University of Michigan; Carnegie Mellon, 2016–

NORMAN CHIGIER, Emeritus Professor of Mechanical Engineering - Sc.D., University of Cambridge; Carnegie Mellon, 1981–

Emeriti

ADNAN AKAY, Lord Emeritus Professor of Mechanical Engineering - Ph.D., North Carolina State University; Carnegie Mellon, 1992–

EDWARD STEPHEN RUBIN, Alumni Chair Professor of Environmental Engineering and Science - Ph.D., Stanford University; Carnegie Mellon, 1969–
