Design at Carnegie Mellon

Design is the thoughtful activity that humanizes our environment through visual communication and the shaping of products that help us in our daily lives. Whether in magazines and posters and exhibitions, video and film, human-computer interactions, or any of the myriad of everyday products such as furniture, consumer goods, vehicles, or medical equipment, designers play an important role in shaping the form and content of our experience.

Designers are concerned with aesthetics, but they are equally concerned with serving people. This requires more than skill in the fine arts. It also requires knowledge about the needs, desires, expectations, and capabilities of human beings. It requires skills of observation and interpretation that help us understand the people that we want to serve. More than this, however, designers must also understand the technological issues that stand behind effective products. They must understand the materials, tools, and production processes of the modern world. An education in design is an education for the mind as well as the eye and hand.

The undergraduate program enables students to develop specialized skills in the areas of Product (Industrial) Design, Communication (Graphic) Design and Design for Environments (design for physical and digital environments), while providing them with a solid foundation in design studies. Students study systems thinking; the ability to see and solve problems at multiple levels of scale, and situate their work within larger social and environmental contexts.

The over-arching theme of the curricula is design for interactions, which acknowledges that ‘ecologies’ of products and communications often come together within complex physical and digital environments. Coursework balances making and theory with the integration of new, emergent technologies. Students are encouraged to explore the scope of design as well as the responsibility and ethics involved in the design of interactions between people, the built world, and the environment.

The curriculum is one that provides students with the ability to customize their degree: they may choose to specialize in one of three areas offered (Products, Communications, Environments), but also have the option of combining any two, to create a unique, interdisciplinary design degree.

The undergraduate curriculum also introduces students to three important areas of design focus: design for service, design for social innovation and transition design. These represent both new and established design approaches to framing and solving problems. In their senior year, students bring their disciplinary specialty (communications, products or environments) to projects that are situated within the areas of design for service and/or design for social innovation.

The School offers a Bachelor of Design with tracks in Communications, Products, or Environments.

Communications

The ability to communicate and shape meaning is one of the most powerful and ubiquitous forms of design in today’s world. Students learn to design effective communications across a wide variety of media that always exist within complex webs of interactions between people, products, and environments. Areas of study include narrative and storytelling, information design, and a variety of analog and digital visualization techniques. Students develop the ability to identify specific audiences and communicate to them through effective visual, verbal and aural communications that educate, inform and delight.

They study the dynamic and ‘emergent’ characteristics of communications in a globally networked society where technologies and modes of individual and mass communication are constantly changing. Students learn systems thinking and engage in an iterative, multi-disciplinary and collaborative design process that involves research, observation, prototyping and rigorous evaluation. Students develop the ability to identify and communicate to specific audiences through effective visual and verbal communications that educate, inform, delight and invite participation.

Products

Students learn to design products and their interactions within the context of human needs and they develop a deep understanding of the ways in which products shape behavior. Our curriculum acknowledges that no product exists in isolation—it is always part of a larger system comprised of people, communications and environments. Within the context of design for service, products exist as ‘touchpoints’ in a service ecology. For this reason, students learn systems thinking and engage in an iterative, multi-disciplinary and collaborative design process that involves research, observation, modeling/prototyping and rigorous evaluation.

Students are introduced to current production and manufacturing processes as well as sustainable approaches, such as cradle-to-cradle, lifecycle analysis and the use of new, more environmentally friendly materials. The School has a well-equipped analog and digital prototyping facility where students work with traditional materials such as wood and metal and learn to design and prototype using CAD software and 3D digital printers.

Environments

Students learn to design for complex environments that exist in the digital, physical and multi-modal realms. Most of the products and communications we interact with are situated within complex physical spaces (our homes, classrooms, places of business, shopping malls, even amusement parks). We also interact with complex online environments such as large websites, social networking and virtual reality environments. And increasingly we interact in ‘smart’ physical spaces with multi-modal communications in a combination of the analog and the digital.

In our curriculum, environments are seen as integrated and dynamic systems that require the design of interactions at multiple levels of scale. Students acquire a diverse set of skills that includes a deep understanding of systems thinking and design methods with and for emerging, multi-media technologies and an understanding of the cognitive challenges presented by multi-modal spaces.

Students who focus on the design of environments delve deep into systems thinking and design methods and spend time learning to collaborate and lead within multi-disciplinary teams (solving large problems involving complex spaces almost always involves teams of people from different disciplines).

Design Minor Program

The School also offers a minor in Design for well-qualified students. Further information on the minor program is provided here (https://design.cmu.edu/node/122/).

The Design Curriculum

Minimum units required for Bachelor of Design 360

The design curriculum is for students who are interested in full-time undergraduate study leading to entry-level professional employment or advanced graduate study in the areas of Communication Design, Product Design, or Design for Environments. The first year is a period of discovery, where students explore studio projects and supporting courses in the ideas and methods of design practice as well as courses in design studies. The second and third years are a period of concentration and development primarily within the student’s area(s) of specialization. The fourth year is a period of integration and advanced study, with studio projects involving teams of students from all areas of design. There are studio courses throughout all four years, supported by departmental electives in the ideas and methods of design practice and other courses in the history, theory, and criticism of design. In addition, the School also requires all students to take a substantial number of general education courses offered by other departments throughout the university. General education is an essential part of the education of a professional designer.

Foundation Year

In their freshmen year, students are introduced to all three areas of design specialty: Product (Industrial), Communication (Graphic) and digital and physical Environments. Here, they explore these unique and complementary areas of design and gain a wide range of skill sets such as systems thinking, iterative process, collaboration and visualization, and work in both two and three dimensional materials as well as digital media.

At the end of their freshman year, students are given the opportunity to begin to focus their interests in two of three design areas (products/communications/environments) and will eventually decide upon a single area of focus or a dual path of study.

This is the first-year curriculum for all design students.
First Year

Fall
Studio
51-101    Studio: Survey of Design                  Units  9
Ideas and Methods
51-121    Visualizing                              Units  4.5
Design Studies
51-171    Placing                                  Units  4.5
General Education
76-101    Interpretation and Argument              Units  9
85-102    Introduction to Psychology               Units  9
99-101    Computing @ Carnegie Mellon             Units  9

Spring
Studio
51-102    Design Lab                               Units  9
Ideas and Methods
51-122    Collaborative Visualizing                Units  9
51-132    Introduction to Photo Design             Units  9
Design Studies
51-172    Systems                                  Units  9
General Education
79-104    Global Histories                         Units  9
or 76-241  Introduction to Gender Studies          Units  9

Second Year

Following the first-year program, students select two out of three areas of interest: Products[P], Communications[C], Environments[E]. In the fourth semester students select one of the two areas to study more deeply. Students investigate the relationships people form with designed artifacts and the roles that physical, visual, and digital forms play in our lives. They apply what they learn to the design of products, communications, and environments that facilitate interactions. Students are also required to take general education courses to gain a broad vision of many disciplines and fields of knowledge that are relevant to design.

Second Year

Fall
Studio
51-225    Communications Studio I: Understanding Form & Context Units  4.5, 4.5
or 51-245  Products Studio I: Understanding Form & Context
or 51-265  Environments Studio I: Understanding Form & Context
Ideas and Methods
51-227    Prototyping Lab I: Communications (Pick two corresponding labs) Units  4.5, 4.5
or 51-247  Prototyping Lab I: Products
or 51-267  Prototyping Lab I: Environments
51-221    Color for Communications, Products, Environments Units  9
or 51-229  Digital Photographic Imaging
or 51-242  How Things Work: Mechanics and Electronics
Design Studies
51-271    How People Work                           Units  9
General Education
xx-xxx    Academic Elective                         Units  9

Spring
Studio
51-228    Communications Studio II: Designing Units  9
51-248    Communications for Interactions
or 51-268  Products Studio II: Designing Products for Interactions
or 51-266  Environments Studio II: Designing Environments for Interaction
Ideas and Methods
51-208    Research Methods                         Units  4.5
51-239    Prototyping Lab II: Communications       Units  9
or 51-249  Prototyping Lab II: Products
or 51-269  Prototyping Lab II: Environments
Design Studies
51-272    Cultures                                 Units  4.5
General Education
xx-xxx    Academic Elective                         Units  9

Third Year

In the fifth and sixth semesters, students may choose to continue their fourth semester area of focus, or they may choose to study their second area of study from the third semester. Students study how design functions at various levels of scale and degrees of complexity situated in specific contexts. They design products, communications, and environments that function as cohesive systems that live within the built and social worlds.

Third Year

Fall
Studio
51-323    Communications Studio III: Designing for Units  9
51-343    Complex Communication Systems
or 51-363  Products Studio III: Designing for Complex Products Systems
or 51-365  Environments Studio III: Designing for Complex Environment Systems
Ideas and Methods (Select one Design Elective)
51-321    Design Center: Photographic Narrative Units  9
51-231    Design Center: Calligraphy I
51-349    Visual Notation/Journaling
51-322    Advanced Digital Imaging
51-359    Tools for UX Design
51-355    Experimental Sketching
51-399    Junior Independent Study
51-341    How Things are Made
Design Studies
51-371    Futures I                                  Units  4.5
51-373    Futures II                                Units  4.5
General Education
xx-xxx    Academic Elective                         Units  9
xx-xxx    Free Elective                             Units  9

Spring
Studio
51-330    Communications Studio IV: Designing Units  9
51-350    Communications for Social Systems
or 51-360  Products Studio IV: Designing Products for Social Systems
or 51-365  Environments Studio IV: Designing Environments for Social Systems
Ideas and Methods (Select one Design Elective)
51-322    Advanced Digital Imaging
51-329    Design Center: Design for Digital Systems Units  9
51-344    Advanced Digital Prototyping
51-346    Production Prototyping
Fourth Year

In the senior year, students work to identify their next steps in professional practice, entrepreneurship, or in academia. They apply their design skills and knowledge to client-based and/or self-defined projects that focus on the design of services or social innovation.

The fall semester features the Design Research Studio, a semester-long project where students work in teams applying skill and knowledge learned in Products, Communications, and/or Environments. In the spring the Capstone Project challenges students to work independently on a semester-long project, deepening their understanding of service or social innovation design principles.

Other Requirements

General education courses should be selected from other departments throughout the university. Students are strongly advised to select a balanced set of general education electives-in addition to Interpretation and Argument, Global Histories and Introduction to Psychology - from three broad areas of study: arts and humanities, social and behavioral sciences, and natural sciences and engineering, including mathematics. While free electives may include studio courses in other departments, academic electives are non-studio (lecture) courses in other departments. Specific recommendations (and general requirements) for electives in all of these areas are available from advisors in the School of Design. The School places strong emphasis on the value of general education for personal growth as well as professional development. General education electives allow a student to obtain a minor in another department or program, such as business, human-computer interaction, IDEATE, engineering, professional and technical writing, or architecture.

Students may enroll for no more than 18 units of independent study courses, and no more than one independent study per semester. A minimum 3.0 GPA is required for independent study. Independent study is permitted only in the third and fourth years of the program. Proposals for independent study courses must be developed jointly by the student and a faculty advisor. Guidelines are available from the School. A minimum GPA of 2.0 is required to maintain Professional Program status. Grades lower than “C” in required Design courses will result in academic probation, suspension, or drop from the School of Design.

Full-time students are required to enroll for a minimum of 36 units per semester, with 45 units required for expected degree progress (typically five courses per semester). The minimum number of units required for graduation in Design is 360.

Academic Standards

The design curriculum adheres closely to the fundamental professional entry-level standards established by the two leading national design organizations: the American Institute of Graphic Arts (AIGA) and the Industrial Designers Society of America (IDISA).

Applications

The School of Design accepts applications from students who are completing secondary education or who wish to transfer from within Carnegie Mellon University. The School also accepts applications from students who wish to transfer from other institutions. Students applying for the program are asked to submit a digital portfolio as evidence of design ability. This is considered in balance with evidence of academic ability, based on secondary school grades, SAT scores, class rank, and letters of recommendation. The School also accepts applications for the design minors program for a limited number of spaces. Details are available on the Design website.

Faculty

ERIC ANDERSON, Associate Professor – M.A., Ohio State University; Carnegie Mellon, 1998–
MARK BASKINGER, Associate Professor – M.F.A., University of Illinois; Carnegie Mellon, 2003–
CHARLEE MAE BRODSKY, Professor – Ph.D, Yale University; Carnegie Mellon, 1998–
STUART CANDY, Associate Professor – Ph.D, University of Hawaii at Manoa; Carnegie Mellon, 2017–
JOSEPH CURRAN, Associate Professor – Ph.D, University of California; Carnegie Mellon, 2017–
WAYNE CHUNG, Associate Professor – Ph.D, University of California; Carnegie Mellon, 2001–
DINA EL-ZANFALY, Assistant Professor – Ph.D, MIT; Carnegie Mellon, 2019–
BRUCE HANINGTON, Professor & Head of School – M.E.Des., University of Calgary; Carnegie Mellon, 1998–
KRISTIN HUGHES, Associate Professor – M.F.A., Virginia Commonwealth University; Carnegie Mellon, 2003–
TERRY IRWIN, Professor – M.S., Schumacher College; Carnegie Mellon, 2009–
DAN LOCKTON, Assistant Professor – Ph.D, Brunel University; Carnegie Mellon, 2016-
MARK MENTZER, Professor – B.F.A., Carnegie Mellon University; Carnegie Mellon, 1975-
DAPHNE PETERS, Assistant Teaching Professor – M.Des., Elisava, Escola Superior de Disseny; Carnegie Mellon, 2017-
STACIE ROHRBACH, Associate Professor – M.GD, North Carolina State University; Carnegie Mellon, 2003-
PETER SCIPELLI, Associate Professor & Nierenberg Chair – MDes & Ph.D, Carnegie Mellon; Carnegie Mellon, 2011-
KYUHA SHIM, Assistant Professor – M.F.A., Rhode Island School of Design; Carnegie Mellon, 2015-
STEPHEN J. STADELMEIER, Associate Professor – M.S., Cornell University; Carnegie Mellon, 1977-
MOLLY WRIGHT STEENSON, Associate Professor – Ph.D, Princeton University; Carnegie Mellon, 2015-
ANDREW TWIGG, Assistant Teaching Professor – B.A., Allegheny College; Carnegie Mellon, 2014-
DYLAN VITONE, Associate Professor – M.F.A., Massachusetts College of Art; Carnegie Mellon, 2004-
BRETT YASKO, Assistant Teaching Professor – B.A., The American University, Washington D.C.; Carnegie Mellon, 2019-
MATT ZYWICA, Associate Teaching Professor – B.F.A., University of Illinois; Carnegie Mellon, 2014-

Emeriti Faculty
THOMAS L. MERRIMAN, Teaching Professor Emeritus – B.F.A., Carnegie Mellon University; Carnegie Mellon, 1985-2020-
ROBERT O. SWINEHART, Professor Emeritus – M.F.A., Northern Illinois University; Carnegie Mellon, 1974-2010-

Special Faculty
GIDEON KOSSOFF, Special Faculty – Ph.D, University of Dundee, Scotland; Carnegie Mellon, 2017-

Courtesy Appointments
DARAGH BYRNE, Associate Teaching Professor – School of Architecture & the Integrated Innovation Institute,
JONATHAN CAGAN, George Tallman Ladd Professor of Mechanical Engineering – College of Engineering,
JODI FORLIZZI, Professor & Director – Human-Computer Interaction Institute,
STEFAN GRUBER, Associate Professor – School of Architecture,
SUGURU ISHIZAKI, Associate Professor of Rhetoric and Visual Design – Department of English,
DAVID S. KAUFER, Professor of English and Rhetoric – Department of English,
