Overview
Uncertainty is inescapable: randomness, measurement error, deception, and incomplete or missing information complicate all our lives. Statistics is the science and art of making predictions and decisions in the face of uncertainty. Statistical issues are central to big questions in public policy, law, medicine, industry, computing, technology, finance, and science. Indeed, the tools of Statistics apply to problems in almost every area of human activity where data are collected.

Statisticians must master diverse skills in computing, mathematics, decision making, forecasting, interpretation of complicated data, and design of meaningful comparisons. Moreover, statisticians must learn to collaborate effectively with people in other fields and, in the process, to understand the substance of these other fields. For all these reasons, Statistics & Data Science students are highly sought-after in the marketplace.

Recent Statistics majors at Carnegie Mellon have taken jobs at leading companies in many fields, including the National Economic Research Association, Boeing, Morgan Stanley, Deloitte, Rosetta Marketing Group, Nielsen, Proctor and Gamble, Accenture, and Goldman Sachs. Other students have taken research positions at the National Security Agency, the U.S. Census Bureau, and the Science and Technology Policy Institute or worked for Teach for America. Many of our students have also gone on to graduate study at some of the top programs in the country including Carnegie Mellon, the Wharton School at the University of Pennsylvania, Johns Hopkins, University of Michigan, Stanford University, Harvard University, Duke University, Emory University, Yale University, Columbia University, and Georgia Tech.

The Department and Faculty
The Department of Statistics & Data Science at Carnegie Mellon University is world-renowned for its contributions to statistical theory and practice. Research in the department spans the gamut from pure mathematics to the hottest frontiers of science. Current research projects are helping make fundamental advances in neuroscience, cosmology, public policy, finance, and genetics.

The faculty members are recognized around the world for their expertise and have garnered many prestigious awards and honors. (For example, three members of the faculty have been awarded the COPSS medal, the highest honor given by professional statistical societies.) At the same time, the faculty is firmly dedicated to undergraduate education. The entire faculty, junior and senior, teach courses at all levels. The faculty are accessible and are committed to involving undergraduates in research.

The Department augments all these strengths with a friendly, energetic working environment and exceptional computing resources. Talented graduate students join the department from around the world, and add a unique dimension to the department’s intellectual life. Faculty, graduate students, and undergraduates interact regularly.

How to Take Part
There are many ways to get involved in Statistics at Carnegie Mellon:

• The Bachelor of Science in Statistics in the Dietrich College of Humanities and Social Sciences (DC) is a broad-based, flexible program that helps you master both the theory and practice of Statistics. The program can be tailored to prepare you for later graduate study in Statistics or to complement your interests in almost any field, including Psychology, Physics, Biology, History, Business, Information Systems, and Computer Science.

• The Minor (or Additional Major) in Statistics is a useful complement to a (primary) major in another Department or College. Almost every field of inquiry must grapple with statistical problems, and the tools of statistical theory and data analysis you will develop in the Statistics minor (or Additional Major) will give you a critical edge.

• The Bachelor of Science in Economics and Statistics provides an interdisciplinary course of study aimed at students with a strong interest in the empirical analysis of economic data. Jointly administered by the Department of Statistics & Data Science and the Undergraduate Economics Program, the major’s curriculum provides students with a solid foundation in the theories and methods of both fields. (See Dietrich College Interdepartmental Majors as well later in this section)

• The Bachelor of Science in Statistics and Machine Learning is a program housed in the Department of Statistics & Data Science and is jointly administered with the Department of Machine Learning. In this major students take courses focused on skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. The program is geared toward students interested in statistical computation, data science, and “big data” problems.

• The Statistics Concentration and the Operations Research and Statistics Concentration in the Mathematical Sciences Major (see Department of Mathematical Sciences) are administered by the Department of Mathematical Sciences with input from the Department of Statistics & Data Science.

• There are several ongoing exciting research projects in the Department of Statistics & Data Science, and the department enthusiastically seeks to involve undergraduates in this work. Both majors and non-majors are welcome.

• Non-majors are eligible to take most of our courses, and indeed, they are required to do so by many programs on campus. Such courses offer one way to learn more about the Department of Statistics & Data Science and the field in general.

Curriculum
Statistics consists of two intertwined threads of inquiry: Statistical Theory and Data Analysis. The former uses probability theory to build and analyze mathematical models of data in order to devise methods for making effective predictions and decisions in the face of uncertainty. The latter involves techniques for extracting insights from complicated data, designs for accurate measurement and comparison, and methods for checking the validity of theoretical assumptions. Statistical Theory informs Data Analysis and vice versa. The Department of Statistics & Data Science curriculum follows both of these threads and helps the student develop the complementary skills required.

Throughout the sections of this catalog, we describe the requirements for the Major in Statistics and the different categories within our basic curriculum, followed by the requirements for the Major in Economics and Statistics, the Major in Statistics and Machine Learning, and the Minor in Statistics.

Note: We recommend that you use the information provided below as a general guideline, and then schedule a meeting with a Statistics Undergraduate Advisor (statadvising@stat.cmu.edu) to discuss the requirements in more detail, and build a program that is tailored to your strengths and interests.

B.S. in Statistics
Glenn Clune, Academic Program Manager
Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Bachelor of Science program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the Major in Statistics are detailed below and are organized by categories #1-7.
Curriculum

1. Mathematical Foundations (Prerequisites)  
29–39 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics.

Calculus*:
Complete one of the following three sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

**Sequence 1**
- 21-111 Calculus I 10
- 21-112 Calculus II 10
  
  and one of the following
  
  - 21-256 Multivariate Analysis 9
  - 21-259 Calculus in Three Dimensions 9
  - 21-268 Multidimensional Calculus 10

**Sequence 2**
- 21-120 Differential and Integral Calculus 10
  
  and one of the following
  
  - 21-256 Multivariate Analysis 9
  - 21-259 Calculus in Three Dimensions 9
  - 21-268 Multidimensional Calculus 10

Notes:
- Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

Linear Algebra**:
Complete one of the following three courses:

- 21-240 Matrix Algebra with Applications 10
- 21-241 Matrices and Linear Transformations 10
- 21-242 Matrix Theory 10

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis:  
36–45 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the DC College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the College. (Note: A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in engineering and architecture (36-220) and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students’ previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)

**Beginning**

Choose one of the following courses:
- 36-200 Reasoning with Data 9
- 36-220 Engineering Statistics and Quality Control 9
- 36-247 Statistics for Lab Sciences 9

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

**Intermediate**

Choose one of the following courses:
- 36-202 Methods for Statistics & Data Science ** 9
- 36-309 Experimental Design for Behavioral & Social Sciences 9
- 36-290 Introduction to Statistical Research Methodology 9

*Or extra data analysis course in Statistics

** Must take prior to 36-401, if not, an additional Advanced Data Analysis Elective is required

Advanced Data Analysis Elective

Choose one of the following courses:
- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
- 36-463 Special Topics: Multilevel and Hierarchical Models 9
- 36-464 Special Topics: Applied Multivariate Methods 9
- 36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
- 36-466 Special Topics: Statistical Methods in Finance 9
- 36-467 Special Topics: Data over Space & Time 9
- 36-468 Special Topics: Text Analysis 9
- 36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
- 36-490 Undergraduate Research 9
- 36-493 Sports Analytics Capstone 9
- 36-497 Corporate Capstone Project 9

Students can also take a second 36-46x (see section #5). and take the following two courses:
- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9

Sequence 2 (For students beginning later in their college career)

Advanced Data Analysis Electives

Choose two of the following courses:
- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
- 36-463 Special Topics: Multilevel and Hierarchical Models 9
- 36-464 Special Topics: Applied Multivariate Methods 9
- 36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
- 36-466 Special Topics: Statistical Methods in Finance 9
- 36-467 Special Topics: Data over Space & Time 9
- 36-468 Special Topics: Text Analysis 9

Notes:
- Complete one of the following electives:
  - 36-309 Experimental Design for Behavioral & Social Sciences
  - 36-290 Introduction to Statistical Research Methodology

- Choose one of the following courses:
  - 36-303 Sampling, Survey and Society
  - 36-311 Statistical Analysis of Networks
  - 36-313 Statistics of Inequality and Discrimination
  - 36-315 Statistical Graphics and Visualization
  - 36-318 Introduction to Causal Inference
  - 36-461 Special Topics: Statistical Methods in Epidemiology
  - 36-462 Special Topics: Methods of Statistical Learning
  - 36-463 Special Topics: Multilevel and Hierarchical Models
  - 36-464 Special Topics: Applied Multivariate Methods
  - 36-465 Special Topics: Conceptual Foundations of Statistical Learning
  - 36-466 Special Topics: Statistical Methods in Finance
  - 36-467 Special Topics: Data over Space & Time
  - 36-468 Special Topics: Text Analysis

- Choose one of the following courses:
  - 36-303 Sampling, Survey and Society
  - 36-311 Statistical Analysis of Networks
  - 36-313 Statistics of Inequality and Discrimination
  - 36-315 Statistical Graphics and Visualization
  - 36-318 Introduction to Causal Inference
  - 36-461 Special Topics: Statistical Methods in Epidemiology
  - 36-462 Special Topics: Methods of Statistical Learning
  - 36-463 Special Topics: Multilevel and Hierarchical Models
  - 36-464 Special Topics: Applied Multivariate Methods
  - 36-465 Special Topics: Conceptual Foundations of Statistical Learning
  - 36-466 Special Topics: Statistical Methods in Finance
  - 36-467 Special Topics: Data over Space & Time
  - 36-468 Special Topics: Text Analysis

- Choose one of the following courses:
  - 36-303 Sampling, Survey and Society
  - 36-311 Statistical Analysis of Networks
  - 36-313 Statistics of Inequality and Discrimination
  - 36-315 Statistical Graphics and Visualization
  - 36-318 Introduction to Causal Inference
  - 36-461 Special Topics: Statistical Methods in Epidemiology
  - 36-462 Special Topics: Methods of Statistical Learning
  - 36-463 Special Topics: Multilevel and Hierarchical Models
  - 36-464 Special Topics: Applied Multivariate Methods
  - 36-465 Special Topics: Conceptual Foundations of Statistical Learning
  - 36-466 Special Topics: Statistical Methods in Finance
  - 36-467 Special Topics: Data over Space & Time
  - 36-468 Special Topics: Text Analysis
3. Probability Theory and Statistical Theory: 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

- 36-225 Introduction to Probability Theory 9
- 36-235 Probability and Statistical Inference I * 9
- 36-236 Probability and Statistical Inference II ** 9
- 36-326 Mathematical Statistics (Honors) 9
- 36-327 Introduction to Statistical Inference 9
- 36-328 Advanced Regression Analysis 9
- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9

*It is possible to substitute 36-218, 36-219, 36-225, or 36-325 for 36-225. 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students, and 36-325 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

Comment:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent), and 401.

4. Statistical Computing: 9 units

36-350 Statistical Computing 9

5. Special Topics 9 units

The Department of Statistics and Data Science offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.). The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum. Note that all Special Topics are not offered every semester, and new Special Topics are regularly added.

To satisfy the Special Topics requirement choose one of the 36-46x courses (which are 9 units).

Note: All 36-46x courses require 36-401 as a prerequisite or corequisite.

6. Statistical Elective: 9-10 units

Students are required to take one elective which can be within or outside the Department of Statistics and Data Science. Courses within Statistics can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of courses outside Statistics that qualify as electives as they provide the intellectual infrastructure that will advance the student’s understanding of statistics and its applications. Other courses may qualify as well; consult with the Statistics Undergraduate Advisor.

- 15-110 Principles of Computing 10
- 15-112 Fundamentals of Programming and Computer Science 12
- 15-121 Introduction to Data Structures 10
- 15-122 Principles of Imperative Computation 10
- 10-301 Introduction to Machine Learning (Undergrad) 12
- 10-315 Introduction to Machine Learning (SCS Majors) 12
- 15-388 Practical Data Science 9
- 21-127 Concepts of Mathematics 9
- 21-260 Differential Equations 9
- 21-292 Operations Research I 9
- 21-301 Combinatorics 9
- 21-355 Principles of Real Analysis I 9
- 80-220 Philosophy of Science 9
- 80-221 Philosophy of Social Science 9
- 80-319 Formal Logic 9
- 85-310 Research Methods in Cognitive Psychology 9
- 85-320 Research Methods in Developmental Psychology 9
- 88-223 Decision Analysis 12
- 88-302 Behavioral Decision Making 9

Note: Additional prerequisites are required for some of these courses. Students should carefully check the course descriptions to determine if additional prerequisites are necessary.

7. Concentration Area

Self-Defined Concentration Area (with advisor's approval) 36 units

The power of Statistics, and much of the fun, is that it can be applied to answer such a wide variety of questions in so many different fields. A critical part of statistical practice is understanding the questions being asked so that appropriate methods of analysis can be used. Hence, a critical part of statistical training is to gain experience applying abstract tools to real problems.

The Concentration Area is a set of four related courses outside of Statistics that prepares the student to deal with statistical aspects of problems that arise in another field. These courses are usually drawn from a single discipline of interest to the student and must be approved by the Statistics Undergraduate Advisor. While these courses are not in Statistics, the concentration area must complement the overall Statistics degree.

For example, students intending to pursue careers in the health or biomedical sciences could take further courses in Biology or Chemistry, or students intending to pursue graduate work in Statistics could take further courses in advanced Mathematics.

The concentration area can be fulfilled with a minor or additional major, but not all minors and additional majors fulfill this requirement. Please make sure to consult the Undergraduate Statistics Advisor prior to pursuing courses for the concentration area. Once the concentration area is approved, any changes made to the previously agreed upon coursework require re-approval by the Undergraduate Advisor.

Concentration Approval Process

- Submit the below materials to the Undergraduate Statistics Advisor
- List of possible coursework to fulfill the concentration*
- 150-200 word essay describing how the proposed courses complement the Statistics degree.

* These courses can be amended later but must be re-approved by the Statistics Undergraduate Advisor if amended.

* Note: The concentration/track requirement is only for students whose primary major is statistics and has no other additional major or minor. The requirement does not apply for students who pursue an additional major in statistics.

Recommendations

Students in the College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 by the end of their Freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential to complete this requirement during your junior year at the latest.
Additional Major in Statistics

Students who elect Statistics as a second or third major must fulfill all Statistics degree requirements except for the Concentration Area requirement. Majors in many other programs would naturally complement a Statistics Major, including Tepper’s undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology. 

With respect to double-counting courses, it is departmental policy that students must have at least five statistics courses that do not count for their primary major. If students do not have at least five, they will need to take additional advanced data analysis electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major’s requirements overlap with the requirements for a Major in Statistics.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department Statistics does not provide approval or permission for substitution or waiver of another department’s requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Research

One goal of the Statistics program is to give students experience with statistical research. The department gives students research experience through various courses focused on real-world experiences and applications. There is a variety of research projects in the department as well, and students who would like to pursue working on a project with faculty will need to contact that faculty directly to discuss that possibility.

Before graduation, students are encouraged to participate in a research project under faculty supervision. Students mostly do this through projects in specific courses, such as 36-290, 36-303, 36-490, 36-493, and/or 36-497. Students can also pursue an independent study or a summer research position.

Qualified students are also encouraged to participate in an advanced research project through 36-490 Undergraduate Research, 36-493 Sports Analytics Capstone, or 36-497 Corporate Capstone Project. Note that these courses require an application. Students who maintain a quality point average of 3.25 overall may also apply to participate in the Dietrich College Senior Honors Program (http://coursecatalog.web.cmu.edu/schools-colleges/dietrichcollegeofhumanitiesandsocialsciences/#collegeservicesandprograms) to gain research experience.

Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements of the Statistics Major. However, keep in mind that the program is flexible enough to support many other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 1.

The second schedule is an example of the case when a student enters the program through 36-235 and 36-236 (and therefore skips the beginning data analysis sequence). This schedule has more emphasis on statistical theory and probability.

In these schedules, C.A. refers to Concentration Area courses.

</tr>
<tr>
<td>21-268</td>
<td>Multidimensional Calculus</td>
</tr>
</tbody>
</table>

Notes:
• Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

**Linear Algebra**: Complete one of the following three courses:
- 21-240 Matrix Algebra with Applications 10
- 21-241 Matrices and Linear Transformations 10
- 21-242 Matrix Theory 10

*It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

### 2. Data Analysis: 36-45 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the DC College Core Requirement in Statistical Reasoning. This course is therefore recommended for students in the College. (Note: A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in engineering and architecture (36-220) and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students’ previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

**Sequence 1 (For students beginning their freshman or sophomore year)**

**Beginning***

Choose one of the following courses:
- 36-200 Reasoning with Data 9
- 36-220 Engineering Statistics and Quality Control 9
- 36-247 Statistics for Lab Sciences 9

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

**Intermediate***

Choose one of the following courses:
- 36-202 Methods for Statistics & Data Science ** 9
- 36-309 Experimental Design for Behavioral & Social Sciences 9
- 36-290 Introduction to Research Methodology 9

*Must take prior to 36-401, if not, an additional Advanced Data Analysis Elective is required

**Advanced Data Analysis Elective**

Choose one of the following courses:
- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
- 36-463 Special Topics: Multilevel and Hierarchical Models 9

36-464 Special Topics: Applied Multivariate Methods 9
36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
36-466 Special Topics: Statistical Methods in Finance 9
36-467 Special Topics: Data over Space & Time 9
36-468 Special Topics: Text Analysis 9
36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
36-490 Undergraduate Research 9
36-493 Sports Analytics Capstone 9
36-497 Corporate Capstone Project 9

Students can also take a second 36-46x (see section #5), and take the following two courses:

- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9

**Sequence 2 (For students beginning later in their college career)**

**Advanced**

Choose two of the following courses:
- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
- 36-463 Special Topics: Multilevel and Hierarchical Models 9
- 36-464 Special Topics: Applied Multivariate Methods 9
- 36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
- 36-466 Special Topics: Statistical Methods in Finance 9
- 36-467 Special Topics: Data over Space & Time 9
- 36-468 Special Topics: Text Analysis 9
- 36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
- 36-490 Undergraduate Research 9
- 36-493 Sports Analytics Capstone 9
- 36-497 Corporate Capstone Project 9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

and take the following two courses:

- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9

**3. Probability Theory and Statistical Theory: 18 units**

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

- 36-235 Probability and Statistical Inference I * 9
  - and one of the following three courses:
    - 36-226 Introduction to Statistical Inference 9
    - 36-236 Probability and Statistical Inference II ** 9
    - 36-326 Mathematical Statistics (Honors) 9

* It is possible to substitute 36-218, 36-219, 36-225, or 21-325 for 36-235. 36-235 is the standard (and recommended) introduction to probability. 36-219 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced (students need prior approval
to enroll), and 21-235 is a rigorous probability theory course offered by the Department of Mathematics.

**It is possible to substitute 36-226 or 36-326 (honors course) for 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.**

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 will be required to take 36-226 afterward, they will not be eligible to take 36-236.

**Comment**

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent), and 36-401.

4. **Statistical Computing:** 9 units

36-350  Statistical Computing 9

5. **Special Topics** 9 units

The Department of Statistics and Data Science offers advanced courses that focus on specific statistical applications and advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.). The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum. Note that all Special Topics are not offered every semester, and new Special Topics are regularly added.

To satisfy the Special Topics requirement choose one of the 36-46x courses (which are 9 units). Note: All 36-46x courses require 36-401 as a prerequisite or co-requisite.

6. **Statistical Elective:** 9–10 units

Students are required to take one elective which can be within or outside the Department of Statistics and Data Science. Courses within Statistics can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of courses outside Statistics that qualify as electives as they provide the intellectual infrastructure that will advance the student's understanding of statistics and its applications. Other courses may qualify as well; consult with the Statistics Undergraduate Advisor.

And two of the following:

**Recommendations**

Students in the College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 by the end of their Freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential to complete this requirement during your junior year at the latest.

**Recommendations for Prospective PhD Students**

Students interested in pursuing a PhD in Statistics or Biostatistics (or related programs) after completing their undergraduate degree are strongly recommended to pursue the Mathematical Statistics Track.

**Additional Major in Statistics (Mathematical Science Track)**

Students who elect Statistics (Mathematical Science Track) as an additional major must fulfill all Statistics (Mathematical Science Track) degree requirements. With respect to double-counting courses, it is departmental policy that students must have at least five statistics courses that do not count for their primary major. If students do not have at least five, they typically take additional advanced data analysis electives.

Students are advised to begin planning their curriculum (with appropriate advisement) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major’s requirements overlap with the requirements for a Major in Statistics (Mathematical Science Track).

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics does not provide approval or permission for substitution or waiver of another department’s requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

**Research**

One goal of the Statistics program is to give students experience with statistical research. The department gives students research experience through various courses focused on real-world experiences and application. There is a variety of research projects in the department as well, and students who would like to pursue working on a project with faculty will need to contact that faculty directly to discuss that possibility.

Before graduation, students are encouraged to participate in a research project under faculty supervision. Students mostly do this through projects in specific courses, such as 36-290, 36-303, 36-490, 36-493, and/or 36-497. Students can also pursue an independent study or a summer research position.

Qualified students are also encouraged to participate in an advanced research project through 36-490 Undergraduate Research, 36-493 Sports Analytics Capstone, or 36-497 Corporate Capstone Project. Note that both of these courses require an application. Students who maintain a quality point average of 3.25 overall may also apply to participate in the Dietrich College Senior Honors Program (http://coursescatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/#collegeservicesandprograms) for additional research experience.
Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements of the Statistics Major. However, keep in mind that the program is flexible enough to support many other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 1.

The second schedule is an example of the case when a student enters the program through 36-235 and 36-236 (and therefore skips the intermediate data analysis course). This schedule has more emphasis on statistical theory and probability.

B.S. in Statistics (Statistics and Neuroscience Track)

Glenn Clune, Academic Program Manager  
Location: Baker Hall 129  
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Bachelor of Science program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. The requirements for the Major in Statistics (Neuroscience Track) are detailed below and are organized by categories 1-7.

### Curriculum

1. **Mathematical Foundations (Prerequisites)**  
   **29–39 units**

   Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics.

   **Calculus**:  
   Complete one of the following three sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

   **Sequence 1**
   - 21-111 Calculus I  
   - 21-112 Calculus II  
   and one of the following  
   - 21-256 Multivariate Analysis  
   - 21-259 Calculus in Three Dimensions  
   - 21-268 Multidimensional Calculus  

   **Sequence 2**
   - 21-120 Differential and Integral Calculus  
   and one of the following  
   - 21-256 Multivariate Analysis  
   - 21-259 Calculus in Three Dimensions  
   - 21-268 Multidimensional Calculus

   **Notes:**
   - Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.

   **Linear Algebra**:  
   Complete one of the following three courses:
   - 21-240 Matrix Algebra with Applications  
   - 21-241 Matrices and Linear Transformations  
   - 21-242 Matrix Theory

   **Notes:**  
   - It is recommended that students complete the calculus requirement during their freshman year.
   - The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.
   - 21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. **Data Analysis:**  
   **36-45 units**

   Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

   The Beginning Data Analysis courses draw on students’ previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.
Sequence 1 (For students beginning their freshman or sophomore year)

**Beginning**

Choose one of the following courses:

- 36-200 Reasoning with Data 9
- 36-220 Engineering Statistics and Quality Control 9
- 36-247 Statistics for Lab Sciences 9

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

**Intermediate**

Choose one of the following courses:

- 36-202 Methods for Statistics & Data Science ** 9
- 36-309 Experimental Design for Behavioral & Social Sciences 9
- 36-290 Introduction to Statistical Research Methodology 9

*Or extra data analysis course in Statistics

** Must take prior to 36-401, if not, an additional Advanced Data Analysis Elective is required.

Advanced Data Analysis Electives

Choose one of the following courses:

- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
- 36-463 Special Topics: Multilevel and Hierarchical Models 9
- 36-464 Special Topics: Applied Multivariate Methods 9
- 36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
- 36-466 Special Topics: Statistical Methods in Finance 9
- 36-467 Special Topics: Data over Space & Time 9
- 36-468 Special Topics: Text Analysis 9

Students can also take a second 36-46x (see section #5).

and take the following two courses:

- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9

Sequence 2 (For students beginning later in their college career)

Advanced Data Analysis Electives

Choose two of the following courses:

- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
- 36-463 Special Topics: Multilevel and Hierarchical Models 9
- 36-464 Special Topics: Applied Multivariate Methods 9
- 36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
- 36-466 Special Topics: Statistical Methods in Finance 9
- 36-467 Special Topics: Data over Space & Time 9
- 36-468 Special Topics: Text Analysis 9

36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
- 36-490 Undergraduate Research 9
- 36-493 Sports Analytics Capstone 9
- 36-497 Corporate Capstone Project 9

** All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.

and take the following two courses:

- 36-401 Modern Regression 9
- 36-402 Advanced Methods for Data Analysis 9

3. Probability Theory and Statistical Theory: 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses:

- 36-235 Probability and Statistical Inference I 9
- 36-236 Probability and Statistical Inference II ** 9

* It is possible to substitute 36-218, 36-219, 36-225 or 21-325 for 36-235. 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced (students need advisor approval to enroll), and 21-325 is a rigorous probability theory course offered by the Department of Mathematics.

** It is possible to substitute 36-226 or 36-326 (honors course) in place of 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

**Comment:**

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent) and 36-401.

4. Statistical Computing: 9 units

- 36-350 Statistical Computing 9

5. Special Topics: 9 units

The Department of Statistics and Data Science offers advanced courses that focus on specific statistical applications or advanced statistical methods. These courses are numbered 36-46x (36-461, 36-462, etc.). The objective of the course is to expose students to important topics in statistics and/or interesting applications which are not part of the standard undergraduate curriculum. Note that all Special Topics are not offered every semester, and new Special Topics are regularly added.

To satisfy the Special Topics requirement choose one of the 36-46x courses (which are 9 units).

Note: All 36-46x courses require 36-401 as a prerequisite or corequisite.

6. Statistical Elective: 9–10 units

Students are required to take one elective which can be within or outside the Department of Statistics and Data Science. Courses within Statistics can be any 300 or 400 level course (that is not used to satisfy any other requirement for the statistics major).

The following is a partial list of courses outside Statistics that qualify as electives as they provide the intellectual infrastructure that will advance the student's understanding of statistics and its applications. Other courses may qualify as well, consult with the Statistics Undergraduate Advisor.
15-110 Principles of Computing 10
15-112 Fundamentals of Programming and Computer Science 12
15-121 Introduction to Data Structures 10
15-122 Principles of Imperative Computation 10
10-301 Introduction to Machine Learning (Undergrad) 12
10-315 Introduction to Machine Learning (SCS Majors) 12
15-388 Practical Data Science 9
21-127 Concepts of Mathematics 12
21-260 Differential Equations 9
21-292 Operations Research I 9
21-301 Combinatorics 9
21-355 Principles of Real Analysis I 9
80-220 Philosophy of Science 9
80-221 Philosophy of Social Science 9
80-310 Formal Logic 9
85-310 Research Methods in Cognitive Psychology 9
85-320 Research Methods in Developmental Psychology 9
85-340 Research Methods in Social Psychology 9
88-223 Decision Analysis 12
88-302 Behavioral Decision Making 9

Statistics and Neuroscience Track 45-54 units
85-211 Cognitive Psychology 9
85-219 Biological Foundations of Behavior 9

And three electives (at least one from Methodology and Analysis and at least one within the Neuroscience Background listed below):

Methodology and Analysis
36-700 Probability and Mathematical Statistics 12
10-301 Introduction to Machine Learning (Undergrad) 12
18-290 Signals and Systems 12
85-314 Cognitive Neuroscience Research Methods 9
42/86-631 Neural Data Analysis 12

Neuroscience Background
03-362 Cellular Neuroscience 9
03-363 Systems Neuroscience 9
15-386 Neural Computation 9
85-414 Cognitive Neuropsychology 9
85-419 Introduction to Parallel Distributed Processing 9

Total Number of Units for the Major: 146-185*
Total Number of Units for the Degree: 360

* Note: This number can vary depending on the calculus sequence and on the concentration area a student takes. In addition this number includes the 36 units of the "Concentration Area" category which may not be required (see category 7 above for details).

Addtional Major in Statistics (Neuroscience Track)

Students who elect Statistics (Neuroscience Track) as an additional major must fulfill all Statistics (Neuroscience Track) degree requirements. With respect to double-counting courses, it is departmental policy that students must have at least five statistics courses that do not count for their primary major. If students do not have at least five, they take additional data analysis electives.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major's requirements overlap with the requirements for a Major in Statistics (Neuroscience Track).

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics & Data Science does not provide approval or permission for substitution or waiver of another department's requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Research

One goal of the Statistics program is to give students experience with statistical research. The department gives students research experience through various courses focused on real world experiences and application. There is a variety of research projects in the department as well, and students who would like to pursue working on a project with faculty will need to contact that faculty directly to discuss that possibility.

Before graduation, students are encouraged to participate in a research project under faculty supervision. Students mostly do this through projects in specific courses, such as 36-290, 36-303, 36-490, 36-493, and/or 36-497. Students can also pursue an independent study, or a summer research position.

Qualified students are also encouraged to participate in an advanced research project through 36-490 Undergraduate Research, 36-493 Sports Analytics Capstone, or 36-497 Corporate Capstone Project. Note that these courses require an application. Students who maintain a quality point average of 3.25 overall may also apply to participate in the Dietrich College Senior Honors Program (http://coursescatalog.web.cmu.edu/dietrichcollegeofhumanitiesandsocialsciences/ #collegeservicesandprograms), for additional research experience.

Sample Programs

The following sample programs illustrate three (of many) ways to satisfy the requirements of the Statistics Major. However, keep in mind that the program is flexible enough to support many other possible schedules and to emphasize a wide variety of interests.

The first schedule uses calculus sequence 2.

The second schedule is an example of the case when a student enters the program through 36-235 and 36-236 (and therefore skips the intermediate data analysis course). This schedule has more emphasis on statistical theory and probability.

</table>
I. Prerequisites 38-39 units

1. Mathematical Foundations 38-39 units

Calculus
21-120 Differential and Integral Calculus 10
and one of the following:
21-256 Multivariate Analysis 9
21-259 Calculus in Three Dimensions 9
21-268 Multidimensional Calculus 10

Note: Passing the MSC 21-120 assessment test is an acceptable alternative to completing 21-120.
36-493 Sports Analytics Capstone 9
36-497 Corporate Capstone Project 9

Sequence 2 (For students beginning later in their college career)

Advanced Statistics Electives
Choose three of the following courses:

36-303 Sampling, Survey and Society 9
36-311 Statistical Analysis of Networks 9
36-313 Statistics of Inequality and Discrimination 9
36-315 Statistical Graphics and Visualization 9
36-318 Introduction to Causal Inference 9
36-461 Special Topics: Statistical Methods in Epidemiology 9
36-462 Special Topics: Methods of Statistical Learning 9
36-463 Special Topics: Multilevel and Hierarchical Models 9
36-464 Special Topics: Applied Multivariate Methods 9
36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
36-466 Special Topics: Statistical Methods in Finance 9
36-467 Special Topics: Data over Space & Time 9
36-468 Special Topics: Text Analysis 9
36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
36-490 Undergraduate Research 9
36-493 Sports Analytics Capstone 9
36-497 Corporate Capstone Project 9

**All Special Topics are not offered every semester, and new Special Topics are regularly added. See section 5 for details.**

III. Disciplinary Core 126 units

1. Economics Core 45 units

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>73-230 Intermediate Microeconomics</td>
<td>9</td>
</tr>
<tr>
<td>73-240 Intermediate Macroeconomics</td>
<td>9</td>
</tr>
<tr>
<td>73-270 Professional Communication for Economists</td>
<td>9</td>
</tr>
<tr>
<td>73-265 Economics and Data Science</td>
<td>9</td>
</tr>
<tr>
<td>73-274 Econometrics I</td>
<td>9</td>
</tr>
<tr>
<td>73-374 Econometrics II</td>
<td>9</td>
</tr>
</tbody>
</table>

2. Statistics Core 36 units

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>36-235 Probability and Statistical Inference I *#</td>
<td>9</td>
</tr>
<tr>
<td>36-236 Probability and Statistical Inference II **</td>
<td>9</td>
</tr>
<tr>
<td>36-401 Modern Regression</td>
<td>9</td>
</tr>
<tr>
<td>36-402 Advanced Methods for Data Analysis</td>
<td>9</td>
</tr>
</tbody>
</table>

*In order meet the prerequisite requirements for the major, a grade of C or better is required in 36-235 (or equivalents), 36-236 or 36-326 and 36-401.

#It is possible to substitute 36-218, 36-219, 36-225or 21-325 for 36-235. 36-235 is the standard introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced Statistics students (Statistics students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.

**It is possible to substitute 36-226 or 36-326 for 36-236. 36-236 is the standard introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-236 to fulfill their major requirements. Students who choose to take 36-226 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

3. Statistical Computing 9 units

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>36-350 Statistical Computing</td>
<td>9</td>
</tr>
</tbody>
</table>

4. Advanced Electives 36 units

Students must take two advanced Economics elective courses (numbered 73-300 through 73-495, excluding 73-374) and two (or three - depending on previous coursework, see Section 3) advanced Statistics elective courses (numbered 36-203, 36-311, 36-313, 36-315, 36-318, 36-46x, 36-490, 36-493 or 36-497).

Total number of units for the major 191-201 units

Total number of units for the degree 360 units

Professional Development

While not required, students are strongly encouraged to take advantage of professional development opportunities and/or coursework. One option is 73-210 Economics Colloquium I, a fall-only course that provides information about careers in Economics, job search strategies, and research opportunities. The Department of Statistics and Data Science also offers a series of workshops pertaining to resume preparation, graduate school applications, careers in the field, among other topics. Students should also take advantage of the Career and Professional Development Center.

Additional Major in Economics and Statistics

Students who elect Economics and Statistics as an additional major must fulfill all Economics and Statistics degree requirements. Majors in many other programs would naturally complement an Economics and Statistics Major, including Tepper’s undergraduate business program, Social and Decision Sciences, Policy and Management, and Psychology.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Economics (73-xxx) and three Statistics (36-xxx)) that do not count for their primary major. If students do not have at least three ECON and three STA classes, they will need to take additional advanced data analysis or economics electives, depending on where the double-counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major’s requirements overlap with the requirements for a Major in Economics and Statistics.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department’s requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Economics and Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Economics and Statistics.

Sample Program

The following sample program illustrates one way to satisfy the requirements of the Economics and Statistics Major. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule).

B.S. in Statistics and Machine Learning
Amanda Mitchell, Academic Program Manager
Location: Baker Hall 129
statadvising@andrew.cmu.edu (statadvising@stat.cmu.edu)

Students in the Statistics and Machine Learning program develop and master a wide array of skills in computing, mathematics, statistical theory, and the interpretation and display of complex data. In addition, Statistics and Machine Learning majors gain experience in applying statistical tools to real problems in other fields and learn the nuances of interdisciplinary collaboration. This program is geared towards students interested in statistical computation, data science, or “Big Data” problems. The requirements for the Major in Statistics and Machine Learning are detailed below and are organized by categories.

Curriculum

1. Mathematical Foundations (Prerequisites)  
   49-59 units

Mathematics is the language in which statistical models are described and analyzed, so some experience with basic calculus and linear algebra is an important component for anyone pursuing a program of study in Statistics and Machine Learning.

Calculus*: Complete one of the following sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

**Sequence 1**
- 21-111 Calculus I 10
- 21-112 Calculus II 10

and one of the following:
- 21-256 Multivariate Analysis 9
- 21-259 Calculus in Three Dimensions 9
- 21-268 Multidimensional Calculus 10

**Sequence 2**
- 21-120 Differential and Integral Calculus 10

and one of the following:
- 21-256 Multivariate Analysis 9
- 21-259 Calculus in Three Dimensions 9
- 21-268 Multidimensional Calculus 10

**Notes:**
- Passing the Mathematical Sciences 21-120 assessment test is an acceptable alternative to completing 21-120

Integration and Approximation
- 21-122 Integration and Approximation 10

Linear Algebra**: Complete one of the following three courses:
- 21-240 Matrix Algebra with Applications 10
- 21-241 Matrices and Linear Transformations 10
- 21-242 Matrix Theory 10

* It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be completed before taking 36-401 Modern Regression.

Prospective PhD students are advised to add 21-127 fall of sophomore year, replace 21-240 with 21-241, and add 21-260 in spring of junior year and 21-355 in fall of senior year.

2. Data Analysis  
   45-54 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples emphasized. 36-200 draws examples from many fields and serves as the Dietrich College Core Requirement in Statistical Reasoning. One of these courses is therefore recommended for students in the College. (Note: A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in engineering and architecture (36-220) and the laboratory sciences (36-247).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

**Sequence 1 (For students beginning their freshman or sophomore year)**

**Beginning** Choose one of the following courses:
- 36-200 Reasoning with Data 9
- 36-220 Engineering Statistics and Quality Control 9
- 36-247 Statistics for Lab Sciences 9

Note: Students who enter the program with 36-235 or 36-236 should discuss options with an advisor.

**Intermediate** Choose one of the following courses:
- 36-202 Methods for Statistics & Data Science ** 9
- 36-309 Experimental Design for Behavioral & Social Sciences 9
- 36-290 Introduction to Statistical Research Methodology 9

*Or extra data analysis course in Statistics
**Must take prior to 36-401 or will need to take an additional Advanced Data Analysis Elective

**Advanced Data Analysis Electives**
Choose two of the following courses:
- 36-303 Sampling, Survey and Society 9
- 36-311 Statistical Analysis of Networks 9
- 36-313 Statistics of Inequality and Discrimination 9
- 36-315 Statistical Graphics and Visualization 9
- 36-318 Introduction to Causal Inference 9
- 36-461 Special Topics: Statistical Methods in Epidemiology 9
- 36-462 Special Topics: Methods of Statistical Learning 9
3. Probability Theory and Statistical Theory 18 units

The theory of probability gives a mathematical description of the randomness inherent in our observations. It is the language in which statistical models are stated, so an understanding of probability is essential for the study of statistical theory. Statistical theory provides a mathematical framework for making inferences about unknown quantities from data. The theory reduces statistical problems to their essential ingredients to help devise and evaluate inferential procedures. It provides a powerful and wide-ranging set of tools for dealing with uncertainty.

To satisfy the theory requirement take the following two courses**:

- 36-235 Probability and Statistical Inference I * 9
- 36-236 Probability and Statistical Inference II ** 9

And one of the following three courses:

- 36-226 Introduction to Statistical Inference 9
- 36-229 Mathematical Statistics (Honors) 9

*It is possible to substitute 36-218, 36-219, 36-225or 21-325 for 36-235. 36-235 is the standard (and recommended) introduction to probability, 36-219 is tailored for engineers and computer scientists, 36-218 is a more mathematically rigorous class for Computer Science students and more mathematically advanced (students need advisor approval to enroll), and 21-325 is a rigorous Probability Theory course offered by the Department of Mathematics.)

**It is possible to substitute 36-226 or 36-226(honors course) for 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who take 36-235 are expected to take 36-236 to complete their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

Comments:

(i) In order to meet the prerequisite requirements, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent) and 36-401.

4. Statistical Computing 9 units

36-350 Statistical Computing 9

5. Machine Learning/Computer Science 46-48 units

Statistical modeling in practice nearly always requires computation in one way or another. Computational algorithms are sometimes treated as “black-boxes”, whose inners the statistician need not pay attention to. But this attitude is becoming less and less prevalent, and today there is much to be gained from a strong working knowledge of computational tools. Understanding the strengths and weaknesses of various methods allows the data analyst to select the right tool for the job; understanding how they can be adapted to work in new settings greatly extends the realm of problems that he/she can solve. While all Majors in Statistics are given solid grounding in computation, extensive computational training is really what sets the Major in Statistics and Machine Learning apart.

- 15-112 Fundamentals of Programming and Computer Science 12
- 15-122 Principles of Imperative Computation 10
- 15-351 Algorithms and Advanced Data Structures 12
  or 15-451 Algorithm Design and Analysis
- 10-301 Introduction to Machine Learning (Undergrad) 12
  or 10-315 Introduction to Machine Learning (SCE Majors)

and take one of the following Machine Learning Advanced Electives:

- 05-434 Machine Learning in Practice 12
- 10-403 Deep Reinforcement Learning & Control 12
- 10-703 Deep Reinforcement Learning & Control 12
- 10-405 Machine Learning with Large Datasets 12
  (Undergraduate)
- 10-605 Machine Learning with Large Datasets 12
- 10-417 Intermediate Deep Learning 12
- 10-418 Machine Learning for Structured Data 12
- 10-707 Advanced Deep Learning 12
- 11-344 Machine Learning in Practice 12
- 11-411 Natural Language Processing 12
- 11-441 Machine Learning for Text and Graph-based Mining 9
- 11-485 Introduction to Deep Learning 9
- 11-661 Language and Statistics 12
- 11-761 Language and Statistics 12
- 15-281 Artificial Intelligence: Representation and Problem Solving 12
- 15-386 Neural Computation 9
- 15-387 Computational Perception 9
- 16-311 Introduction to Robotics 12
- 16-385 Computer Vision 12
- 16-720 Computer Vision 12

*PhD level ML course as approved by Statistics advisor

** Independent research with an ML faculty member as approved by Statistics Advisor

***This is not an exhaustive list. Please contact your Academic Advisor if there is a course you are considering taking that is not on this list.

Total number of units for the major 176-198 units
Total number of units for the degree: 360 units

Recommendations

Students in the Dietrich College of Humanities and Social Sciences who wish to major or minor in Statistics are advised to complete both the calculus and linear algebra requirement (one Mathematical Foundations calculus sequence) and the Beginning Data Analysis course 36-200 Reasoning with Data by the end of their freshman year.

The linear algebra requirement is a prerequisite for the course 36-401. It is therefore essential to complete this requirement during your junior year at the latest!

Recommendations for Prospective PhD Students

Students interested in pursuing a PhD in Statistics or Machine Learning (or related programs) after completing their undergraduate degree are strongly recommended to take additional Mathematics courses. They should see a faculty advisor as soon as possible. Students should consider 36-326 Mathematical Statistics (Honors) as an alternative to 36-236. Although 21-240 Matrix Algebra with Applications is recommended for Statistics majors, students interested in PhD programs should consider taking 21-241 Matrices and Linear Transformations or 21-242 Matrix Theory instead.

Additional courses to consider are 21-228 Discrete Mathematics, 21-260 Differential Equations, 21-341 Linear Algebra, 23-355 Principles of Real Analysis I, and 21-356 Principles of Real Analysis II.

Additional experience in programming and computational modeling is also recommended. Students should consider taking more than one course from the list of Machine Learning electives provided under the Computing section.

Additional Major in Statistics and Machine Learning

Students who elect Statistics and Machine Learning as a second or third major must fulfill all degree requirements.

With respect to double-counting courses, it is departmental policy that students must have at least six courses (three Computer Science/Machine Learning and three Statistics) that do not count for their primary major. If students do not have at least six, they will need to take additional advanced data analysis or ML electives, depending on where the double counting issue is.

Students are advised to begin planning their curriculum (with appropriate advisors) as soon as possible. This is particularly true if the other major has a complex set of requirements and prerequisites or when many of the other major’s requirements overlap with the requirements for a Major in Statistics and Machine Learning.

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department’s requirements.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics and Machine Learning major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics and Machine Learning.

Sample Programs

The following sample programs illustrate one way to satisfy the requirements of the Statistics and Machine Learning program. Keep in mind that the program is flexible and can support other possible schedules (see footnotes below the schedule). Sample program 1 is for students who have not satisfied the basic calculus requirements. Sample program 2 is for students who have satisfied the basic calculus requirements and choose option 2 for their data analysis courses (see section #2)

The Minor in Statistics

Sylvie Aubin, Undergraduate Academic Advisor
Location: Baker Hall 129
statadvising@stat.cmu.edu

The Minor in Statistics develops skills that complement major study in other disciplines. The program helps the student master the basics of statistical theory and advanced techniques in data analysis. This is a good choice for deepening understanding of statistical ideas and for strengthening research skills.

In order to get a minor in Statistics a student must satisfy all of the following requirements:
1. Mathematical Foundations (Prerequisites)  
29–39 units

Calculus:*
Complete one of the following two sequences of mathematics courses at Carnegie Mellon, each of which provides sufficient preparation in calculus:

Sequence 1
21-111 Calculus I 10
21-112 Calculus II 10
and one of the following:
21-256 Multivariate Analysis 9
21-259 Calculus in Three Dimensions 9
21-268 Multidimensional Calculus 10

Sequence 2
21-120 Differential and Integral Calculus 10
and one of the following:
21-256 Multivariate Analysis 9
21-259 Calculus in Three Dimensions 9
21-268 Multidimensional Calculus 10

Note: Passing the Mathematical Sciences 21-120 assessment test if an acceptable alternative to completing 21-120.

Linear Algebra:
Complete one of the following three courses:
21-240 Matrix Algebra with Applications 10
21-241 Matrices and Linear Transformations 10
21-242 Matrix Theory 10

*It is recommended that students complete the calculus requirement during their freshman year.

**The linear algebra requirement needs to be complete before taking 36-401 Modern Regression or 36-46X Special Topics.

21-241 and 21-242 are intended only for students with a very strong mathematical background.

2. Data Analysis  
36 units

Data analysis is the art and science of extracting insight from data. The art lies in knowing which displays or techniques will reveal the most interesting features of a complicated data set. The science lies in understanding the various techniques and the assumptions on which they rely. Both aspects require practice to master.

The Beginning Data Analysis courses give a hands-on introduction to the art and science of data analysis. The courses cover similar topics but differ slightly in the examples they emphasize. 36-200 draws examples from many fields and satisfy the DC College Core Requirement in Statistical Reasoning. One of these courses is therefore recommended for students in the College. (Note: A score of 5 on the Advanced Placement (AP) Exam in Statistics may be used to waive this requirement). Other courses emphasize examples in engineering and architecture (36-220 ), and the laboratory sciences (36-247 ).

The Intermediate Data Analysis courses build on the principles and methods covered in the introductory course, and more fully explore specific types of data analysis methods in more depth.

The Advanced Data Analysis and Methodology courses draw on students' previous experience with data analysis and understanding of statistical theory to develop advanced, more sophisticated methods. These core courses involve extensive analysis of real data with emphasis on developing the oral and writing skills needed for communicating results.

Sequence 1 (For students beginning their freshman or sophomore year)
Beginning Data Analysis*
Choose one of the following courses:
36-200 Reasoning with Data 9
36-220 Engineering Statistics and Quality Control 9
36-247 Statistics for Lab Sciences 9

Intermediate Data Analysis*
Choose one of the following courses:
36-202 Methods for Statistics & Data Science ** 9
36-290 Introduction to Statistical Research Methodology 9
36-309 Experimental Design for Behavioral & Social Sciences 9

*The Beginning and Intermediate Data Analysis sequence (i.e. 36-200 and 36-202, or equivalents as listed above) can be replaced with an additional Advanced Analysis and Methodology course, shown below in Sequence 2.

**Must take the Intermediate Data Analysis requirement prior to 36-401, if not, an additional Advanced Analysis and Methodology course is required.

Advanced Data Analysis and Methodology
Take the following course:
36-401 Modern Regression 9

and one of the following courses:
36-402 Advanced Methods for Data Analysis 9
36-410 Introduction to Probability Modeling 9
36-461 Special Topics: Statistical Methods in Epidemiology 9
36-462 Special Topics: Methods of Statistical Learning 9
36-463 Special Topics: Multilevel and Hierarchical Models 9
36-464 Special Topics: Applied Multivariate Methods 9
36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
36-466 Special Topics: Statistical Methods in Finance 9
36-467 Special Topics: Data over Space & Time 9
36-468 Special Topics: Text Analysis 9
36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
36-490 Undergraduate Research 9
36-493 Sports Analytics Capstone 9
36-497 Corporate Capstone Project 9

Special Topics rotate and new ones are regularly added.

Sequence 2 (For students beginning later in their college career)
Advanced Data Analysis and Methodology
Take the following course:
36-401 Modern Regression 9

and take two of the following courses (one of which must be 400-level):
36-303 Sampling, Survey and Society 9
36-311 Statistical Analysis of Networks 9
36-313 Statistics of Inequality and Discrimination 9
36-315 Statistical Graphics and Visualization 9
36-318 Introduction to Causal Inference 9
36-402 Advanced Methods for Data Analysis 9
36-410 Introduction to Probability Modeling 9
36-461 Special Topics: Statistical Methods in Epidemiology 9
36-462 Special Topics: Methods of Statistical Learning 9
36-463 Special Topics: Multilevel and Hierarchical Models 9
36-464 Special Topics: Applied Multivariate Methods 9
36-465 Special Topics: Conceptual Foundations of Statistical Learning 9
36-466 Special Topics: Statistical Methods in Finance 9
36-467 Special Topics: Data over Space & Time 9
36-468 Special Topics: Text Analysis 9
36-469 Special Topics: Statistical Genomics and High Dimensional Inference 9
36-490 Undergraduate Research 9
36-493 Sports Analytics Capstone 9
36-497 Corporate Capstone Project 9

Special Topics rotate and new ones are regularly added.
3. Probability Theory and Statistical Theory  18 units

To satisfy the theory requirement take the following two courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Fall</th>
<th>Spring</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>36-235</td>
<td>Probability and Statistical Inference I</td>
<td></td>
<td>*</td>
</tr>
<tr>
<td>36-226</td>
<td>Introduction to Statistical Inference</td>
<td></td>
<td></td>
</tr>
<tr>
<td>36-236</td>
<td>Probability and Statistical Inference II</td>
<td></td>
<td>**</td>
</tr>
<tr>
<td>36-326</td>
<td>Mathematical Statistics (Honors)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*It is possible to substitute 36-218, 36-219, 36-225 or 21-325 for 36-235.
**It is possible to substitute 36-226 or 36-326 (honors course) for 36-236. 36-236 is the standard (and recommended) introduction to statistical inference.

Please note that students who complete 36-235 are expected to take 36-226 to fulfill their theory requirements. Students who choose to take 36-225 instead will be required to take 36-226 afterward, they will not be eligible to take 36-236.

Comments:

(i) In order to be in good standing and to continue with the minor, a grade of at least a C is required in 36-235 (or equivalent), 36-236 (or equivalent), and 36-401.

Double Counting

With respect to double-counting courses, it is departmental policy that students must have at least three statistics courses (36-xxx) that do not count for their primary major. If students do not have at least three, they need to take additional advanced electives. Make sure to consult your Statistics Minor advisor regarding double counting.

Sample Programs for the Minor

The following two sample programs illustrate two (of many) ways to satisfy the requirements of the Statistics Minor. Keep in mind that the program is flexible and can support many other possible schedules.

The first schedule uses calculus sequence 1, and 36-202 to satisfy the intermediate data analysis requirement. The second schedule is an example of the case when a student enters the Minor through intermediate data analysis requirement. The second schedule is an example of the case when a student enters the Minor through intermediate data analysis requirement.

Schedule 1

<table>
<thead>
<tr>
<th>Course</th>
<th>Fall</th>
<th>Spring</th>

Substitutions and Waivers

Many departments require Statistics courses as part of their Major or Minor programs. Students seeking transfer credit for those requirements from substitute courses (at Carnegie Mellon or elsewhere) should seek permission from their advisor in the department setting the requirement. The final authority in such decisions rests there. The Department of Statistics and Data Science does not provide approval or permission for substitution or waiver of another department’s requirements.

However, the Statistics Director of Undergraduate Studies will provide advice and information to the student’s advisor about the viability of a proposed substitution. Students should make available as much information as possible concerning proposed substitutions. Students seeking waivers may be asked to demonstrate mastery of the material.

If a waiver or substitution is made in the home department, it is not automatically approved in the Department of Statistics and Data Science. In many of these cases, the student will need to take additional courses to satisfy the Statistics major requirements. Students should discuss this with a Statistics advisor when deciding whether to add an additional major in Statistics.

Statistics Majors and Minors seeking substitutions or waivers should speak to the Academic Advisor in Statistics.

Faculty

Eli Ben-Michael, Assistant Professor (Joint Faculty with Heinz College)
Zachary Branson, Assistant Teaching Professor - Ph.D. in Statistics, Harvard University; Carnegie Mellon, 2019-
David Choi, Assistant Professor of Statistics and Information Systems - Ph.D., Stanford University; Carnegie Mellon, 2004-
Alexandra Couldechova, Assistant Professor of Statistics and Public Policy - Ph.D., Stanford University; Carnegie Mellon, 2014-
Rebecca Doerge, Dean of Mellon College of Science, Professor of Statistics - Ph.D., North Carolina State University; Carnegie Mellon, 2016-
Peter Freeman, Associate Teaching Professor; Director of Undergraduate Studies - Ph.D., University of Chicago; Carnegie Mellon, 2004-
Max G’sell, Associate Professor - Ph.D., Stanford University; Carnegie Mellon, 2014-
Christopher R. Genovese, Professor of Statistics - Ph.D., University of California, Berkeley; Carnegie Mellon, 1994-
Joel B. Greenhouse, Professor of Statistics - Ph.D., University of Michigan; Carnegie Mellon, 1982-
Amelia Haviland, Professor of Statistics and Public Policy - Ph.D., Carnegie Mellon University; Carnegie Mellon, 2003-
Jiashun Jin, Professor of Statistics - Ph.D., Stanford University; Carnegie Mellon, 2007-
Brian Junker, Professor of Statistics - Ph.D., University of Illinois; Carnegie Mellon, 1990-
Robert E. Kass, Maurice Falk Professor of Statistics & Computational Neuroscience - Ph.D., University of Chicago; Carnegie Mellon, 1981-
Edward Kennedy, Associate Professor - Ph.D., University of Pennsylvania; Carnegie Mellon, 2016-
Arun Kuchibhotla, Assistant Professor - PhD, University of Pennsylvania; Carnegie Mellon, 2020-
Mikael Kujusela, Assistant Professor – PhD, Ecole Polytechnique Federale de Lausanne; Carnegie Mellon, 2018-
Ann Lee, Professor, Co-Director of PhD program - Ph.D., Brown University; Carnegie Mellon, 2005-
Jing Lei, Professor - Ph.D., University of California, Berkeley; Carnegie Mellon, 2011-
Robin Mejia, Assistant Research Professor - PhD, UC Berkeley; Carnegie Mellon, 2018-

MATEY NEYKOV, Associate Professor – Ph.D., Harvard University; Carnegie Mellon, 2017–

NYNKE NIEZINK, Assistant Professor – Ph.D., University of Groningen; Carnegie Mellon, 2017–

REBECCA NUGENT, Department Head, Stephen E. and Joyce Fienberg Professor of Statistics & Data Science – Ph.D., University of Washington; Carnegie Mellon, 2006–

AADITYA RAMDAS, Assistant Professor – PhD, Carnegie Mellon; Carnegie Mellon, 2018–

ALEX REINHART, Assistant Teaching Faculty – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2018–

ALESSANDRO RINALDO, Associate Dean for Research, Professor – Ph.D., Carnegie Mellon; Carnegie Mellon, 2005–

KATHRYN ROEDER, UPMC Professor of Statistics and Life Sciences – Ph.D., Pennsylvania State University; Carnegie Mellon, 1994–

CHAD M. SCHAFER, Professor – Ph.D., University of California, Berkeley; Carnegie Mellon, 2004–

TEDDY SEIDENFELD, Herbert A. Simon Professor of Philosophy and Statistics – Ph.D., Columbia University; Carnegie Mellon, 1985–

COSMA SHALIZI, Associate Professor – Ph.D., University of Wisconsin, Madison; Carnegie Mellon, 2005–

WILL TOWNES, Assistant Professor

VALERIE VENTURA, Professor, Co-Director of PhD program – Ph.D., University of Oxford; Carnegie Mellon, 1997–

ISABELLA VERDINELLI, Professor in Residence – Ph.D., Carnegie Mellon University; Carnegie Mellon, 1991–

LARRY WASSERMAN, UPMC Professor of Statistics – Ph.D., University of Toronto; Carnegie Mellon, 1988–

RON YURKO, Assistant Teaching Professor – Ph.D.,

Emeriti Faculty

GEORGE T. DUNCAN, Professor of Statistics and Public Policy – Ph.D., University of Minnesota; Carnegie Mellon, 1974–

WILLIAM F. EDDY, John C. Warner Professor of Statistics – Ph.D, Yale University; Carnegie Mellon, 1976–

JOSEPH B. KADANE, Leonard J. Savage Professor of Statistics and Social Sciences – Ph.D., Stanford University; Carnegie Mellon, 1969–

JOHN P. LEHOCZKY, Thomas Lord Professor of Statistics – Ph.D, Stanford; Carnegie Mellon, 1969–

MARK J. SCHERVISH, Professor of Statistics – Ph.D., University of Illinois; Carnegie Mellon, 1979–

DALENE STANGL, Teaching Professor – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2017–

Adjunct Faculty

OLGA CHILINA, Lecturer – MS, University of Toronto; Carnegie Mellon, 2016–

Special Faculty

JAMIE MCGOVERN, Director of the Master’s in the Statistical Practice ProgramCarnegie Mellon, 2020–

GORDON WEINBERG, Senior Lecturer – M.A. Mathematics, University of Pittsburgh; Carnegie Mellon, 2004–

Affiliated Faculty

ANTHONY BROCKWELL – Ph.D., Melbourne University; Carnegie Mellon, 1999–

BERNIE DEVLIN – Ph.D., Pennsylvania State University; Carnegie Mellon, 1994–

SAM VENTURA – Ph.D., Carnegie Mellon University; Carnegie Mellon, 2015–
